FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By Title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.S.C. 717(c)), and August 28, 1958 (72 Stat. 941 at 947, 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731); the Fort Peck Act, approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the thirty-first of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered, January 1, 1964 to June 30, 1964, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITY OF CHESTER, ILLINOIS, DOCKET NO. G-16398

ORDER AMENDING ORDER ISSUED FEBRUARY 6, 1959

(Issued January 2, 1964)

On November 1, 1963, Mississippi River Fuel Corporation (Mississippi) filed an application to amend the Commission's order issued February 6, 1959, in Docket No. G-16398 (Docket No. G-14857, *et al.*) by deleting therefrom the maximum volume limitation of 1,518 Mcf at 14.73 psia on deliveries of natural gas to the City of Chester, Illinois, (Chester) all as more fully set forth in the application to amend.

The order of February 6, 1959, adopted the decision of the presiding examiner wherein Mississippi was directed, pursuant to Section 7(a) of the Natural Gas Act, to establish physical connection of its transportation facilities with the proposed facilities of Chester and to sell and deliver to Chester up to a maximum volume of 1,518 Mcf of natural gas per day at 14.73 psia (1,501 Mcf at 14.9 psia). Mississippi requests that this limitation on Chester's stated demand be deleted so that Chester will be on an equal basis with Mississippi's other resale customers in regard to stated demand increases. Mississippi's other resale customers can increase their stated demands pursuant to Section 11(b) of the General Terms and Conditions of Mississippi's applicable FPC Gas Tariff.

On October 2, 1963, Mississippi tendered for filing a service agreement, dated September 25, 1963, and its proposed Twentieth Revised Sheet No. 25 to its FPC Gas Tariff, Original Volume No. 1, providing, among other things, for an increase in the stated demand for Chester to 1,650 Mcf (at 14.9 psia).

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 3, 1963 (28 F.R. 12840). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 6, 1959, in Docket No. G-16398 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 6, 1959, in Docket No. G-16398 be and the same is hereby amended by deleting therefrom the maximum volume limitation imposed on deliveries of natural gas to the City of Chester, all as hereinbefore described and as set forth in the subject application to amend.

(B) Mississippi's proposed Twentieth Revised Sheet No. 25 to its FPC Gas Tariff, Original Volume No. 1 and the service agreement between Mississippi and Chester, dated September 25, 1963, are hereby accepted for filing to become effective on the date this order issues.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CHICAGO DISTRICT PIPELINE COMPANY, DOCKET NO. RP64-5

ORDER PERMITTING WITHDRAWAL OF JOINT PETITION TO INTERVENE AND MODIFYING ORDER

(Issued January 2, 1964)

By order issued December 16, 1963, the Commission ordered a preliminary hearing to be held on the issue of the Coal Interests'[1] standing to intervene in this proceeding, which issue was joined by documents filed with the Commission by the Coal Interests and Chicago District Pipeline Company (CDP).[2] In that order, the Commission established the procedure for the preliminary hearing and required the Coal Interests to file their direct testimony and exhibits in support of their joint petition to intervene on or before January 6, 1964. Additionally, the Commission ordered a prehearing conference to convene on this preliminary matter, on January 15, 1964, "for the purpose of establishing such procedures that will result in the most expeditious determination of this matter." The order also provided that the Presiding Examiner would issue his initial decision together with his proposed findings on the intervention issue directly upon completion of the record and the filing of briefs. The hearing on CDP's proposed rate form change—the subject of this proceeding—was deferred until after the Commission had issued its decision on this intervention issue.

On December 23, 1963, Coal Interests filed a notice of withdrawal of their joint petition to intervene in this proceeding. In the notice of withdrawal, Coal Interests state that they "do not believe that the facts and circumstances of this case are of sufficient importance to the coal industry to justify the considerable expenditures of finances and personnel time of Petitioners and the Commission which would be required for the hearings upon the proposed change in rate form and the preliminary hearing on intervention."

The Commission finds:

Good cause exists to permit Coal Interests to withdraw their joint petition to intervene and to modify our order of December 16, 1963; as hereinafter ordered.

The Commission orders:

(A) Coal Interests are hereby permitted to withdraw their joint petition to intervene filed herein on October 7, 1963.

(B) The order issued herein on December 16, 1963, is hereby modified in the following respects: The procedures prescribed by ordering paragraphs (A), (B), and (E) are hereby terminated. Ordering paragraph (C) is modified to provide that, at the prehearing conference to be held on January 15, 1964, the Presiding Examiner, in keeping with our expressed intent that the proceeding be expedited to the fullest extent possible, shall set dates for service of testimony and exhibits on cost allocation, rate form, rate design, and rebuttal evidence and for convening of hearing.

---

[1] Consisting of Fuels Research Council, Inc.; National Coal Association; United Mine Workers of America; and Mid-West Coal Producers Institute, Inc.

[2] Joint petition seeking leave to intervene filed by Coal Interests on October 7, 1963; answer, motion to strike, and applications for subpoenas filed by CDP on October 16, 1963; answer filed by Coal Interests on October 28, 1963; amended applications for subpoenas filed by CDP on November 8, 1963; and answer filed by Coal Interests on November 21, 1963.

(C) In all other respects, the order issued herein on December 16, 1963, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITIES SERVICE GAS COMPANY AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64–89; LONE STAR GAS COMPANY, DOCKET NO. G–8763

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 2, 1964)

On October 9, 1963, Cities Service Gas Company (Cities) and Natural Gas Pipeline Company of America (Natural) filed in Docket No. CP64–89 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the exchange of up to 40,000 Mcf of natural gas per day for a period terminating May 1, 1964, all as more fully set forth in the joint application.

Cities proposes to deliver a total daily maximum of 40,000 Mcf of natural gas to Natural at two exchange points. A daily maximum of 10,000 Mcf will be delivered through an existing interconnection of the two systems in Carson County, Texas; the remaining volumes will be delivered by Cities through a herein proposed interconnection in Beaver County, Oklahoma.

Lone Star Gas Company (Lone Star) will deliver gas to Cities for the account of Natural at the Lindsay, Maysville and Antioch gasoline plants in Garvin County, Oklahoma. Such volumes will be deducted by Lone Star from the volumes it is obligated and has been authorized to deliver to Natural by the Commission's order issued December 4, 1956, as amended, in Docket No. G–8763, at a point in Stephens County, Oklahoma.*

Cities proposes to tap its 26-inch pipeline at the Beaver Exchange Point and construct and operate 50 feet of connecting 10-inch pipeline to Natural's 36-inch pipeline, as well as appurtenant meter and regulator equipment. Natural proposes to tap its 36-inch line at the Beaver Exchange Point.

The proposed exchange of natural gas will be made pursuant to an agreement among Cities, Lone Star and Natural, dated September 30, 1963.

The total cost of the proposed facilities is estimated to be $10,005 of which $7,405 is attributable to Cities and $2,600 is attributable to Natural. Cities and Natural will finance the cost out of treasury cash.

The joint application indicates that the purpose of the proposed exchange arrangement is to assure Cities' ability to meet the demands of its customers during the 1963–64 heating season.

Cities and Natural propose to retain the subject facilities as an emergency interconnection after the cessation of the exchange arrangements. They state that said facilities will add flexibility of operation and continuity of service in the event of an emergency on the system of either company.

---

*Cities now purchases gas at the above-mentioned plants but from parties other than Lone Star. No new facilities will be required to effectuate the proposed deliveries and receipts at said plants.

On November 6, 1963, Lone Star filed in Docket No. G–8763 an application to amend further the Commission's order issued December 4, 1956, as amended, in said docket, to authorize Lone Star to make the deliveries of natural gas to Cities for the account of Natural, as contemplated by the proposed exchange arrangement in Docket No. CP64–89, all as more fully set forth in the application to amend.

The order of December 4, 1956, as amended, authorized Lone Star to construct and operate certain facilities and to sell and deliver an average of 100,000 Mcf of natural gas per day and up to a maximum of 125,000 Mcf of natural gas per day to Natural at a point in Stephens County, Oklahoma. Lone Star will deduct from these authorized volumes in Docket No. G–8763 the volumes proposed to be delivered by it to Cities for the account of Natural at the plant sites in Garvin County, Oklahoma.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on December 31, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, Natural Gas Pipeline Company of America, a Delaware Corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(3) The facilities hereinbefore described, as more fully described in the joint application in Docket No. CP64–89 are to be used in the exchange and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the exchange and delivery of natural gas by Cities and Natural are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Cities and Natural are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the proposed exchange and delivery of natural gas by Cities and Natural are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Cities' and Natural's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued December 4, 1956, as amended, in Docket No. G-8763 be further amended as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, Cities Service Gas Company and Natural Gas Pipeline Company of America, jointly, to construct and operate the proposed facilities and to exchange and deliver natural gas for a period terminating May 1, 1964, as hereinbefore described, all as more fully described in the joint application in Docket No. CP64-89, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Cities' and Natural's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in paragraph (A) above shall be constructed and placed in actual operation and the exchange and delivery of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 2 months from the date on which this order issues.

(D) The Commission's order issued December 4, 1956, as amended, in Docket No. G-8763 be and the same is hereby further amended to authorize Lone Star to deliver natural gas to Cities for the account of Natural for a period terminating May 1, 1964, all as hereinbefore described and as set forth in the subject application to amend.

(E) In all other respects said orders, as amended, shall remain in full force and effect.

(F) Cities, Natural and Lone Star shall tender for filing appropriate rate schedules covering the subject services pursuant to the applicable Commission Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE GAS SERVICE COMPANY, DOCKET NO. CP64-52

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued January 2, 1964)

On August 26, 1963, as supplemented on October 2 and October 31, 1963, The Gas Service Company (Applicant) filed in Docket No. CP64-52 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in Drexel, Missouri, and environs, and to customers along the connecting pipeline which Applicant proposes to construct and operate, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate approximately 10 miles of 4-inch lateral pipeline from the proposed point of delivery by Panhandle extending to Drexel, as well as a distribution system in Drexel. Applicant's estimated third year peak day and annual natural gas requirements are 525 Mcf and 52,500 Mcf, respectively.

The total estimated cost of transmission and distribution facilities for the proposed project is $206,798, which cost will be financed by treasury cash.

It appears that Applicant has received appropriate authorizations from Drexel and the Public Service Commission of Missouri.

On October 30, 1963, Panhandle filed an answer to the subject application stating that it had no objection to the issuance of an order directing the proposed sale and physical connection of facilities.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 12, 1963 (28 F.R. 12840). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, The Gas Service Company, is a corporation duly organized and existing under the laws of the State of Delaware and is authorized by the Public Service Commission of Missouri to engage in the business of distributing and selling natural gas within Drexel, and environs.

(3) It is necessary and desirable in the public interest that Panhandle Eastern Pipe Line Company be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 525 Mcf of natural gas per day to Applicant, as set forth in the application, as supplemented and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Panhandle, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Panhandle in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Panhandle serve Applicant, as proposed, will not place any undue burden upon Panhandle nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 525 Mcf of natural gas per day to Applicant, as hereinbefore described and as set forth in the application, as supplemented.

(B) Panhandle shall report to the Commission in writing the date of commencement of service to Applicant.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Panhandle, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Panhandle in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. CP62-144 AND CP62-145

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 2, 1964)

On November 29, 1963, Natural Gas Pipeline Company of America (Applicant) filed in Docket Nos. CP62-144 and CP62-145 an application to amend further the Commission's order issued June 8, 1962, as amended, to extend to December 31, 1964, the authorization to sell and deliver natural gas, all as more fully set forth in the application to amend on file with the Commission.

The order of June 8, 1962, as amended, authorized Applicant (formerly Natural Gas Storage Company of Illinois) in Docket No. CP62-144 to acquire certain underground storage rights and to construct and operate facilities for the evaluation of the characteristics and capabilities of an underground natural gas storage reservoir, described as the Cairo Storage Area, in Louisa County, Iowa. Said order limited the maximum inventory of gas stored in the Cairo Storage Area to 2,800,000 Mcf of 1,000 Btu gas at 14.65 psia. The same order also authorized Applicant in Docket No. CP62-145 to construct and operate certain facilities and to sell and deliver to Natural Gas Storage Company of Illinois (the then Applicant in Docket No. CP62-144) until December 31, 1963, a maximum volume of 2,800,000 Mcf of natural gas.

The application shows that as of October 31, 1963, only 580,000 Mcf of gas was injected into the proposed reservoir and, therefore, Applicant states that a proper evaluation cannot be made by December 31, 1963.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued June 8, 1962, as amended, in Docket Nos. CP62-144 and CP62-145 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued June 8, 1962, as amended, in Docket Nos. CP62-144 and CP62-145 be and the same is hereby further amended to extend to December 31, 1964, the time to sell and deliver the remaining volumes of the 2,800,000 Mcf maximum limitation not sold and delivered by December 31, 1963, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. RP64-15

ORDER ACCEPTING RATE REDUCTION FOR FILING, WAIVING STATUTORY NOTICE AND APPROVING STATEMENT OF INTENTION

(Issued January 2, 1964)

In a letter to Northern Natural Gas Company (Northern), from the Executive Director of the Commission, dated August 12, 1963, Northern was advised that a study of its 1962 earnings indicated an excessive rate of return on its jurisdictional business for that year. Discussions were held between Northern and representatives of the staff on September 3, September 17, October 25, December 19, December 20, December 27, and on December 30, 1963.

As a result of these conferences between representatives of Northern Natural Gas Company and the staff, Northern on December 30, 1963 filed with the Commission revised tariff sheets[1] which effect a reduction of its jurisdictional rates in the sum of approximately $1,505,000 annually to become effective as of December 27, 1963. The rates in the revised tariff sheets will reduce Northern's currently effective demand charge in each of Northern's firm rate schedules by 7.9¢ per Mcf.

There was included as a part of the filing a "Statement of Intention" (attached hereto as an exhibit)* which, briefly stated, contains the following provisions:

(1) The conditions in Section IV of the Statement of Proposed Settlement attached to the Northern rate settlement order in Docket No. G–19040 issued December 21, 1961, shall remain in full force and effect.

(2) If the Internal Revenue Code is amended to reduce the Federal corporate income tax rate to be effective during the year 1964, Northern will further reduce the demand component of its rates to reflect the annual reduction in Federal income taxes of such changes in the tax rate to the extent it is applicable to Northern's jurisdictional business. (If the corporate income tax rate is reduced from 52% to 50%, Northern will reduce the demand component of its rates equal to an annual reduction of $1,500,000 in jurisdictional revenue.)

(3) Northern will pass on to its jurisdictional customers that portion of any refunds and interest received from its natural gas suppliers as a result of producer rate increase filings subsequent to December 27, 1961 for gas purchased from such producers subsequent to January 1, 1964, until the date the "Statement of Intention" ceases to be effective.

(4) Northern will further reduce its jurisdictional rates to reflect reduced costs in purchased gas to the extent such reduced costs are not offset by increases in the cost of gas to Northern.

(5) Northern agrees, as long as the "Statement of Intention" remains in effect, not to effectuate any increases in its jurisdictional rates before June 27, 1965, provided, however, that if, as a result of a proceeding by the Commission resulting from a change in Commission policy applicable to other pipeline companies generally, Northern is required to reduce its rates, the moratorium provision shall be considered terminated.

The Statement further provides that it shall terminate on the date after June 27, 1965, upon which Northern makes increased rates effective under Section 4 of the Natural Gas Act or on the date the Commission institutes a rate proceeding against Northern or one of its subsidiaries other than one resulting from a change in Commission policy applicable as well to other pipeline companies generally.

The filing by Northern was subject to Commission acceptance of a request for waiver of the statutory 30-day notice period, and further, subject to the Commission's not imposing any condition on the acceptance for filing of such revised tariff sheets contrary to the "Statement of Intention".

---

[1] Sixth Revised Sheets Nos. 18h, 18i, 18j, 18–1.1, 18–1.2, 18p, and 18q. Superseding Fifth Revised Sheets Nos. 18h, 18i, 18j, 18–1.1, 18–1.2, 18p, and 18q.

Seventh Revised Sheets Nos. 18d and 18e. Superseding Sixth Revised Sheets Nos. 18d and 18e.

Eighth Revised Sheet No. 18c. Superseding Seventh Revised Sheet No. 18c.

Ninth Revised Sheets Nos. 18m and 18n. Superseding Eighth Revised Sheets Nos. 18m and 18n.

Eleventh Revised Sheets Nos. 4, 5, 6, 9, 10, 11, 14, 15, and 16. Superseding Tenth Revised Sheets Nos. 4, 5, 6, 9, 10, 11, 14, 15, and 16.

*Omitted in printing.

This order is not intended as a determination of disposition of refunds, if any, applicable to purchases of natural gas during the period from December 27, 1961, through December 31, 1963, resulting from supplier increases which Northern began paying after December 27, 1961, nor is this order intended to prejudice the position Northern or any proper party may assert respecting such refunds.

The Commission finds:

(1) The revised tariff sheets tendered for filing by Northern with the Commission on December 30, 1963, should be accepted for filing.

(2) Good cause exists for waiving the 30-day notice requirement of Section 154.22 of the Commission's Regulations under the Natural Gas Act in order that the tariff sheets filed by Northern on December 30, 1963, may become effective as of December 27, 1963, as hereinafter ordered.

(3) The conditions within the "Statement of Intention" filed by Northern on December 30, 1963, concurrently with its rate reduction filing, are reasonable, proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be approved as hereinafter ordered.

The Commission orders:

(A) The revised tariff sheets filed with the Commission by Northern on December 30, 1963, are hereby accepted for filing.

(B) The 30-day notice provision of Section 154.22 of the Commission's Regulations under the Natural Gas Act is hereby waived and the revised tariff sheets accepted for filing in ordering paragraph (A) above are hereby permitted to become effective as of December 27, 1963, subject to the conditions of this order and the "Statement of Intention" filed by Northern with this Commission on December 30, 1963.

(C) The conditions within the "Statement of Intention" filed by Northern on December 30, 1963, concurrently with its rate reduction filing, are hereby approved and made effective as proposed therein.

(D) Northern shall comply with each of the provisions of the "Statement of Intention" relating to future rate reductions and refunds.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

FALCON SEABOARD DRILLING COMPANY (OPERATOR), ET AL., DOCKET NO. G-17229; FALCON SEABOARD DRILLING COMPANY, ET AL., DOCKET NO. G-19253

ORDER ACCEPTING OFFERS OF SETTLEMENT REQUIRING FILING OF NOTICES OF CHANGE AND CONTRACT AMENDMENTS, REQUIRING REFUNDS AND TERMINATING PROCEEDINGS

(Issued January 3, 1964)

On October 18 and 21, 1963, Falcon Seaboard Drilling Company (Operator), *et al.* (Falcon) submitted Offers of Settlement in the above-designated proceedings, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure covering jurisdictional sales of natural gas to Tennessee Gas Transmission Company (Tennessee) from Texas District Nos. 2 and 3 under its FPC

Gas Rate Schedule Nos. 1 and 6, respectively. The pertinent details are as follows:

Rate schedule No.	Supplement No.	Docket No.	Suspended rate cents per Mcf [1]	Effective date	Settlement rate (cents)
6	2	G–17229	[2] 15.95016	6/8/60	[2] 14.6
1	3	G–19253	15.33333	(3)	14.6

[1] At 14.65 p.s.i.a. pressure base.
[2] Subject to deduction of 0.21931 cents for dehydration by buyer as contractually provided.
[3] Proposed rate not placed in effect subject to refund.

Under the terms of the offers, Falcon proposes to delete the favored-nation and price redetermination provisions from the rate schedules involved, and to revise the periodic escalations in conformity with the provisions of the Second Amendment. Falcon proposes to establish settlement rates of 14.6¢ per Mcf,[1] inclusive of present tax reimbursement. Further, Falcon proposes to refund to Tennessee all monies collected in excess of 14.6¢ per Mcf in Docket No. G–17229. No refunds are involved in Docket No. G–19253 because the proposed rate was not placed in effect subject to refund. Refunds would be approximately $27,000, exclusive of interest, in Docket No. G–17229. No protests have been filed to the instant offers.

In support of its offers, Falcon cites the deletion of the favored-nation and price redetermination provisions from its gas purchase contracts with Tennessee and states that such provisions were important elements of consideration required by Falcon under the contracts for the long-term commitment of its gas reserves to the performance of the contracts. Tennessee has concurred in the offers and has agreed to execute the contract amendments provided for therein.

Since the proposed settlement rates of 14.6¢ per Mcf at 14.65 psia are acceptable under the provisions of the Second Amendment[2] to the Commission's Statement of General Policy No. 61–1,[3] for jurisdictional sales of natural gas in Texas Railroad Commission District Nos. 2 and 3. It is believed that the public interest will best be served by accepting Falcon's proposed settlements as hereinafter set forth. The proposed settlement rates should be made effective as of the date of issuance of this order.

However, we desire to make it clear that acceptance of the Offers of Settlement shall not be construed as approval of any future increased rates proposed by Falcon.

The Commission finds:

The proposed settlements of the above-designated proceedings, on the basis described herein, as more fully set forth in the Offers of Settlement filed by Falcon with the Commission on October 18 and 21, 1963, are in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offers of Settlement filed by Falcon with the Commission on October 18 and 21, 1963, are hereby approved in accordance with the provisions of this order.

---

[1] The settlement rate under Rate Schedule No. 6 is subject to the deduction for dehydration.

[2] Issued December 20, 1960, 24 FPC 1107; amended by Order No. 264, in Docket No. R–234, issued March 27, 1963, 29 FPC 589.

[3] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

(B) Falcon shall file, within 30 days from the date of issuance of this order notices of change providing for the 14.6¢ per Mcf settlement rates, inclusive of present tax reimbursement,[4] and contractual amendments to its FPC Gas Rate Schedule Nos. 1 and 6, respectively, which Falcon shall execute with Tennessee in conformity with Falcon's Offers of Settlement in all respects. Both the notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Falcon shall refund to Tennessee all amounts collected under its FPC Gas Rate Schedule No. 6, in Docket No. G-17229, in excess of the settlement rate of 14.6¢ per Mcf, inclusive of present tax reimbursement[4] together with simple interest at the rate of 7% per annum, from the date of receipt of such excess amounts by Falcon to the date of refund. Falcon shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this order, Falcon shall report to the Commission in writing and under oath, the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from Tennessee with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that Falcon has complied with the terms and conditions of this order, the rates and charges of 14.6¢ per Mcf, including present tax reimbursement,[4] specified in the Offers of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceedings shall be deemed terminated, and Falcon's refund obligations with respect to Docket No. G-17229 shall be deemed discharged.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against Falcon.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP61-257

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 3, 1964)

On March 30, 1961, as supplemented on May 19, 1961, October 30, 1961, and September 10, 1963, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP61-257 an application pursuant to Subsections (b) and (c) of Section 7 of the Natural Gas Act for:

(1) permission and approval to abandon certain lateral connections to its main pipeline (with meters and appurtenances) all in the State of Illinois, in accordance with a letter agreement dated August 4, 1960, providing for the sale of said facilities to Illinois Power Company (Illinois Power);

(2) a certificate of public convenience and necessity to construct and operate certain new measuring and regulating stations made necessary by the proposal in subparagraph (1) above;

as hereinafter described, and as more fully described in the application.

---

[4] The 14.6¢ rate under FPC Gas Rate Schedule No. 6 is subject to deduction of 0.29931¢ for dehydration by buyer as contractually provided.

The application includes the proposed abandonment and sale of the Galesburg lateral and appurtenances, which is contingent upon the final disposition of Docket No. CP60–60. Applicant has requested that the application be considered in two separate phases with Phase I (all proposals excepting Galesburg) to be considered at this time. The facilities which Applicant wishes to include in Phase I are:

(a) the 41,557 foot Abingdon lateral with standard appurtenances (including metering facilities),

(b) the 596-foot Knoxville lateral with standard appurtenances (including metering facilities),

(c) 33,791 feet of the Clinton lateral with standard appurtenances (including metering facilities),

(d) 1,362 feet of the Danville lateral with standard appurtenances, and

(e) 15,920 feet of the Champagne lateral with standard appurtenances (including metering facilities).

Illinois Power will pay Applicant the depreciated original cost of the facilities.

In lieu of the above-mentioned metering facilities to be abandoned, Applicant proposes to construct three new metering facilities at points of connection with the facilities to be acquired by Illinois Power.

Applicant estimates the cost of the three new metering stations at $104,600, which will be financed from current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 31, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities proposed to be constructed as hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Appli-

cant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) The abandonment of the aforementioned facilities is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company to construct and operate the facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) Permission and approval be and the same are hereby granted to abandon the facilities as hereinbefore described, all as more fully described in the application in this proceeding.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be installed, and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within sixty days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

REALITOS OIL COMPANY, DOCKET NOS. G-19884 AND RI61-15

ORDER ACCEPTING OFFER OF SETTLEMENT REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued January 3, 1964)

On September 25, 1963, Realitos Oil Company (Realitos) submitted an Offer of Settlement in the above-designated proceedings, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, covering the jurisdictional sale of natural gas to Tennessee Gas Transmission Company (Tennessee) from Texas District No. 4 under its FPC Gas Rate Schedule No. 1. The pertinent details are as follows:

Supplement No.	Docket No.	Suspended rate cents per Mcf	Effective date	Settlement rate (cents)
1	G-19884	15.0052	6/17/60	14.6
2	RI61-15	17.24347	9/19/61	14.6

Under the terms of the offer, Realitos proposes to delete the favored-nation and price redetermination provisions from the rate schedule involved, and to adjust its periodic escalations in conformity with the Second Amendment. Realitos proposes to establish a settlement rate of 14.6¢ per Mcf, inclusive of present tax reimbursement. Further, Realitos proposes to refund to Tennessee all monies collected in excess of 14.6¢ per Mcf in these proceedings. Realitos' annual revenues would be decreased about $925 from the currently effective rate. Refunds would be approximately $2,150, exclusive of interest. No protests have been filed to the instant offer.

Since the proposed settlement rate of 14.6¢ per Mcf at 14.65 psia is acceptable under the provisions of the Second Amendment[1] to the Commission's Statement of General Policy No. 61–1,[2] for jurisdictional sales of natural gas in Texas Railroad Commission District No. 4, it is believed that the public interest will best be served by accepting Realitos' proposed settlement as hereinafter set forth. The proposed settlement rate should be made effective as of the date of issuance of this order.

However, we desire to make it clear that acceptance of the Offer of Settlement shall not be construed as approval of any future increased rate proposed by Realitos.

The Commission finds:

The proposed settlement of the above-designated proceedings on the basis described herein, as more fully set forth in the Offer of Settlement filed by Realitos with the Commission on September 25, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Realitos with the Commission on September 25, 1963, is hereby approved in accordance with the provisions of this order.

(B) Realitos shall file, within 30 days from the date of issuance of this order a notice of change providing for the 14.6¢ per Mcf settlement rate, inclusive of present tax reimbursement, and a contractual amendment to its FPC Gas Rate Schedule No. 1, which Realitos shall execute with Tennessee in conformity with Realitos' Offer of Settlement in all respects. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Realitos shall refund to Tennessee all amounts collected under its FPC Gas Rate Schedule No. 1, in Docket Nos. G–19884 and RI61–15, in excess of the settlement rate of 14.6¢ per Mcf, inclusive of present tax reimbursement, together with simple interest at the rate of 7% per annum, from the date of receipt of such excess amounts by Realitos to the date of refund. Realitos shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this order, Realitos shall report to the Commission in writing and under oath, the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from Tennessee with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that Realitos has complied with the terms and conditions of this order, the rate and charge of 14.6¢ per Mcf, including present tax reimbursement, specified in the Offer of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceedings shall be deemed terminated, and Realitos refund obligations with respect to the above-designated proceedings shall be deemed discharged.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against Realitos.

---

[1] Issued December 20, 1960, 24 FPC 1107, amended by Order No. 264, in Docket No. R–234, issued March 27, 1963, 29 FPC 589.

[2] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–17526; SUN OIL COMPANY (OPERATOR), ET AL., DOCKET NO. G–17923

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 3, 1964)

The United Gas Improvement Company (UGI) on December 4, 1963, filed an application for rehearing of the order issued November 19, 1963, under the lead docket of Texaco Inc., Docket No. G–17613 insofar as it relates to the above-entitled proceedings. In our order of November 19, we held, *inter alia*, that the producers in Docket Nos. G–17526 and G–17923 had the contractual right to file favored-nation increased rates of 23.55¢ at least during the period prior to April 1, 1963. Consequently, the motions filed by UGI to reject, cancel and dismiss the producers' rate filings in these proceedings were denied. The application for rehearing presents nothing which was not fully argued and carefully considered prior to the November 19 order, and we therefore adhere to our order for the reasons set forth therein.

The Commission finds:

No new facts or principles of law have been presented by UGI in its application for rehearing which either were not fully considered by the Commission prior to its order herein, or, having now been considered, warrant further hearing, modification, or revocation of said order.

The Commission orders:

The application for rehearing filed herein by UGI is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64–49

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 3, 1964)

On August 26, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP64–49 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the rendition of service as hereinafter described, subject to the jurisdiction of the Commission, all as more fully set forth in the application.

The application seeks authority to construct and operate a sales meter station and appurtenant equipment to be located in Pittsylvania County, Virginia, at milepost 1425.69 on Applicant's main 36-inch transmission line. The meter station will be utilized as an additional point of delivery for natural gas service to Lynchburg Gas Company (Lynchburg Gas), an existing customer, for resale.

Lynchburg Gas has requested the proposed new delivery point in order that natural gas service can be provided to the Virginia Towns of Altavista and Hurt, and to two industrial plants in the area, Burlington Industries at Altavista and Klopmen Mills, Inc., at Hurt. Firm service will be provided to the communities while interruptible service would go to the industries for use in a fabric direct-drying process. Physical deliveries of the volumes purchased by Lynchburg Gas at the proposed point of delivery will be made into the facilities of Lynchburg Pipe Line Company (Lynchburg Pipe), its wholly owned subsidiary. Lynchburg Pipe will then buy the gas and transport it to the Altavista and Hurt areas for resale to municipal distributors. The volumes of natural gas involved are estimated at a maximum daily requirement of 1,575 Mcf, of which 240 Mcf will be on a firm basis, all out of allocations previously authorized by the Commission. No steam generation in either of the industrial plants is contemplated.

Lynchburg Gas and Lynchburg Pipe, respectively, filed on December 6, 1963, certificates of the State Corporation Commission of Virginia indicating that it has regulatory jurisdiction over the rates and services of the two companies, and is exercising such jurisdiction.

Lynchburg Pipe itself or through its parent, Lynchburg Gas, will construct and operate all facilities between the proposed sales meter station and the Altavista-Hurt area consumers. Exhibit X-2 to the application indicates that the State Corporation Commission of Virginia has authorized the construction and operation of the proposed facilities to both the communities of Hurt and Altavista.

Applicant estimates that the proposed facilities will cost approximately $17,000 which will be initially financed from Applicant's general funds. Lynchburg Gas will reimburse Applicant in full for the cost of the proposed meter station.

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 29, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the sale and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas

Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within thirty days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP64-36

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 3, 1964)

On August 5, 1963, as supplemented on September 4 and 27, 1963, Transwestern Pipeline Company (Applicant) filed in Docket No. CP64-36 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of two line taps and two metering stations on Applicant's existing pipeline system and the sale of natural gas therefrom to Consolidated Utilities, Incorporated, (Consolidated) for resale for domestic and commercial use in the towns of Follett and Darrouzett, Lipscomb County, Texas.

The construction cost of the facilities above described is estimated to be $19,935.

The annual volumes of natural gas to be delivered by Applicant to Consolidated are estimated at 50,000 Mcf for each of the first three years and the service agreements provide for peak day deliveries of 3,000 Mcf to each of the two communities named.

A service agreement was executed with Consolidated on May 16, 1963, by Applicant providing for gas service under its presently effective F.P.C. Rate Schedule SG-1.

On November 14, 1963, a temporary authorization was granted to Applicant by the Commission.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 31, 1963 the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G–14871, *et al.*, (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CONTINENTAL OIL COMPANY, DOCKET NO. G–18755

ORDER GRANTING MOTION FOR TERMINATION IN ACCORDANCE WITH SETTLEMENT OFFER AND REQUIRING REFUNDS

(Issued January 6, 1964)

On June 9, 1959, Continental Oil Company (Continental) filed an application for a certificate of public convenience and necessity in Docket No. G–18755 seeking authorization pursuant to Section 7 of the Natural Gas Act to sell natural gas in interstate commerce on an interim basis to Southern Natural Gas Company (Southern) from acreage in the Bayou Pigeon Field, Iberia Parish, south Louisiana. Temporary authorization was issued to Continental on June 25, 1959, which provided that Continental was obligated to refund to Southern ". . . any amounts in excess of the amounts resulting from the rate finally determined to be proper in Docket No. G–18755."

The subject acreage was originally dedicated under a long term contract between Continental and Hope Natural Gas Company (Hope). Continental's application for a certificate to make the sale to Hope was granted on August 10, 1959, in Docket No. G–17554.[1] However, the leasing agreement provided for termination if production had not commenced prior to July 1, 1959. Since Hope could not take the subject gas at that time, the interim agreement was entered into with Southern. The sales under the interim agreement commenced on June 30, 1959, and terminated on December 15, 1959, at which time the sales to Hope commenced under the long term contract in Docket No. G–17554. The initial rate in the sales to both Southern and Hope was 23.67¢ per Mcf.[2]

On December 8, 1960, the order issuing the certificate to Continental in Docket No. G–17554 was judicially remanded (*Public Service Commission of New York v. F.P.C.*, 287 F. 2d 146 (CADC)); the matter was finally settled by Commission order on July 30, 1962 (*Texaco Inc.*, 28 FPC 247).

Continental, in its motion filed herein on August 26, 1963, proposes to settle the matter in Docket No. G–18755 on the same terms, insofar as they are applicable, as the settlement in Docket No. G–17554, *supra*.

Continental proposes to refund to Southern two-thirds of the difference between the amount collected from Southern for sales under Supplement No. 1 to Rate Schedule No. 166 and the amount that would have been collected at the rate of 20.625¢ per Mcf. Continental will pay interest on all amounts to be refunded at a rate of 6 percent per annum, such interest to accrue through August 31, 1963, the last day of the month in which the Continental motion was filed.

Continental proposes that upon payment of the refunds, the proceeding in Docket No. G–18755 be terminated, because under the circumstances, Continental no longer seeks a certificate to make a sale.

Notice of Continental's application, motion for termination and settlement proposal was issued on November 29, 1963 (28 F.R. 13325).

No protest, petitions to intervene, notices of intervention or requests for hearing have been received.

We are of the view that it is in the public interest to dispose of this long pending matter in which the dollar effect is *de minimis* on the terms proposed by Continental.

The Commission orders:

(A) Continental Oil Company, a natural-gas company within the meaning of the Natural Gas Act, shall refund to Southern Natural Gas Company, within 45 days from the date of issuance of this order, two-thirds of the difference between the dollar amounts actually collected under Supplement No. 1 to Rate Schedule No. 166 and the amount that would have been collected at a rate of 20.625¢ per Mcf, together with interest, as proposed.

(B) Within 30 days after making the refunds required by this order, Continental shall report to the Commission, in triplicate, the amount of the refund made to Southern, showing separately the amount of principal and interest so paid and the basis used for such determination, together with a release from Southern showing receipt of the refund in conformity with the terms of Continental's settlement offer and this order.

---

[1] *Texas Gas Transmission Corporation*, 22 FPC 378.

[2] All rates expressed inclusive of tax reimbursement and all volumes expressed at 15.025 psia.

(C) Upon full compliance of Continental with all the terms of this order, Continental shall be relieved of any further refund obligations in this certificate proceeding and said proceeding shall terminate.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UTAH POWER & LIGHT COMPANY, PROJECT NO. 765

ORDER AMENDING LICENSE (TRANSMISSION LINE) AND DISMISSING APPLICATION IN PART

(Issued January 6, 1964)

Utah Power & Light Company, licensee for transmission line Project No. 765, situated in Wasatch, Utah and Grand Counties, Utah, and affecting lands of the United States within the Uinta and Wasatch National Forests and other lands of the United States, filed the following applications for amendment of its license for the project:

(1) Application filed on May 8, 1961 seeks to exclude from the license the remaining portion of the Snake Creek-Mary Ellen Mine 11 KV line, extending from the licensee's Snake Creek Power Plant in Section 21, T. 3 S., R. 4 E., S.L.M., to the Live Yankee Tunnel in unsurveyed Section 20, T. 3 S., R. 3 E., S.L.M., and crossing lands of the United States for a distance of 3.906 miles with a 40-foot wide right-of-way within the Uinta (formerly Wasatch) National Forest.

(2) Application filed on October 12, 1961 seeks to exclude from the license a portion of the Columbia-Green River-Sego 44 KV three-phase transmission line in Grand County, Utah, extending from a point on the line in the NW¼NW¼ Sec. 21, T. 21 S., R. 20 E., S.L.M., near Thompson, Utah, to the Chesterfield Coal Company Substation near Sego, Utah, in the SW¼NW¼ Sec. 27, T. 20 S., R. 20 E., S.L.M., and crossing 0.673 mile of 100-foot wide right-of-way on lands of the United States; and

(3) Application filed on February 5, 1963 seeks to: (a) exclude from the license portions of the Big Cottonwood-Park City District System 12.5 KV line, extending from Station 88+81.9 in the NW¼NE¼ Sec. 21, T. 2 S., R. 2 E., S.L.M., to Station 259+62.8 in the SW¼NE¼ Sec. 13, T. 2 S., R. 2 E., S.L.M., totaling 3.24 miles in length, of which 2.66 miles are within the Wasatch National Forest; and (b) to include in the license a proposed relocated portion of the line which will cross 2.02 miles of lands of the United States within the Wasatch National Forest.

In support of the applications referred to in (1) and (2) above, the licensee advised that the lines therein described have been dismantled because mining operations served by the lines have been discontinued and there are no other customers served by the lines. In support of the application referred to in (3) (a) above, the licensee advises that the portion of the line therein described is being relocated because construction of a highway requires its removal and upon completion of construction of the highway, the portion of line must be rebuilt as recited in (3) (b) above.

With further reference to the line described in (1) above, the Department of the Interior raises no objection to excluding the portion of the line herein involved, and the U.S. Forest Service has reported that that section of line has been removed and the National Forest lands formerly occupied by the portion of line have been restored to a condition satisfactory to the Service.

With further reference to the line described in (2) above, the Department of the Interior advises that the lands of the United States formerly occupied by the line have been restored to a condition satisfactory to the Department.

With further reference to the line described in (3) above, the U.S. Forest Service has reported that the National Forest lands formerly occupied by the portion of line which was removed have been restored to a condition satisfactory to the Service.

The effect of the amendments will be a reduction of lands of the United States occupied by transmission line Project No. 765 as follows: 3.906 miles of National Forest lands of 40-foot wide right-of-way by removal of the Snake Creek-Mary Ellen Mine Line; 0.673 mile of 100-foot wide right-of-way of lands of the United States of removal of a portion of the Columbia-Green River-Sego 44 KV line; and 2.266 miles of 100-foot wide right-of-way by removal of a portion of the Big Cotton-Park City District System line 12.5 KV line within the Wasatch National Forest. The amount of annual charges presently specified in the license for Project No. 765 would correspondently be reduced by $36.20, from $784.99 to $748.79.

By letter dated January 4, 1944, the Commission advised the licensee that with the exceptions of the 44-KV and 11-KV circuits joining the Ashton, Idaho hydro plant with the interconnected system near the St. Anthony plant, the transmission lines included under the license for Project No. 765 are not primary lines and are not part of a "project" as defined in Section 3(11) of the Federal Power Act. The lines referred to in items 1, 2, and 3 above, are not part of a "project" as defined in Section 3(11) of the Act.

In the circumstances, the Commission has no objection to the issuance by the U.S. Forest Service of a Special Use Permit to Utah Power & Light Company for the proposed relocated portion of the Big Cottonwood-Park City District System line.

The Commission finds:

(1) The license for transmission line Project No. 765, further amended as hereinafter provided, is in the public interest.

(2) The following described exhibits, revised to the extent indicated, conform to the Commission's rules and regulations and should be reapproved as part of the license:

(a) Exhibit "K", sheet 3 of 5 (FPC No. 765-3), revised by the staff to reflect the exclusion from the license of the remaining portion of the Snake Creek-Mary Ellen Mine 11 KV line, and of a portion of the Big Cottonwood-Park City District System;

(b) Exhibit "K", sheet 2 of 5 (FPC No. 765-7), revised by the staff to reflect the exclusion from the license of a part of the Columbia Green River-Sego 44 KV line; and

(c) Exhibit M, revised by the staff to reflect the exclusion from the license of the remaining portion of the Snake Creek-Mary Ellen Mine 11 KV line, and of a portion of the Big Cottonwood-Park City District System and of the Columbia-Green River-Sego 44 KV line.

The Commission orders:

(A) The license for transmission line Project No. 765 is hereby further amended, effective as of September 1, 1963, as follows:

PARAGRAPH I. The paragraph commencing "Now, therefore . . ." on page 2 of the license as amended, listing the project works, is hereby further amended to exclude the following described portions of transmission lines:

"Columbia-Green River-Sego 44 KV Line" extending from a point on the above-mentioned transmission line in the NW¼NW¼, Sec. 21, T. 21 S., R. 20 E., S.L.M., near Thompson, Utah, to the Chesterfield Coal Company Substation near Sego, Utah, in the SW¼NW¼, Sec. 27, T. 20 S., R. 20 E., S.L.M. "Snake Creek-Mary Ellen Line 11 KV Line" extending from Snake Creek Power Plant in Sec. 21 T. 3 S., R. 4 E., S.L.M., to the Live Yankee Tunnel in Sec. 20, T. 3 S., R. 3 E., S.L.M.

"Big Cottonwood-Park City District System 12.5 KV Line" from Station 88+81.9 in the NW¼NE¼, Sec. 21, T. 2 S., R. 2 E., S.L.M. to Station 259+62.8 in SW¼NE¼, Sec. 13, T. 2 S., R. 2 E., S.L.M.

PARAGRAPH II. Article 12 as amended February 10, 1959 is hereby further amended by changing subparagraph (b) to read:

(b) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its land, $748.79.

(B) The exhibits described in finding (2) above, revised in the manner therein indicated, are hereby reapproved as part of the license for Project No. 765.

(C) The aforementioned application filed on February 5, 1963 is hereby dismissed to the extent that it seeks to include in the license the portion of the Big Cottonwood-Park City District System line proposed to be relocated.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HUMBLE OIL & REFINING COMPANY, DOCKET NO. RI64–72

ORDER DENYING MOTION

(Issued January 7, 1964)

On September 19, 1963, the County of Wayne, Michigan (County of Wayne) filed a petition requesting leave to intervene and a motion for a prompt hearing in the above-entitled proceeding,[1] which relates to a proposed increased rate of 22.25¢ per Mcf, including tax reimbursement, at 15.025 psia tendered by Humble Oil & Refining Company (Humble) on July 22, 1963, for sales of natural gas to American Louisiana Pipe Line Company from Cheniere Perdue Field, Cameron Parish, Louisiana. By the Commission's order issued August 2, 1963, in said docket, the proposed increased rate, designated as Supplement No. 3 to Humble's FPC Gas Rate Schedule No. 140, was suspended until February 1, 1964, and thereafter until such further time as it is made effective in accordance with the provisions of the Natural Gas Act.

---

[1] The petition to intervene filed by County of Wayne will be acted upon in a separate order.

In support of its motion, the County of Wayne states, among other things, that Humble's proposed increased rate exceeds by 6.75¢ per Mcf the applicable area price level for increased rates and, while not here involved, also exceeds the level for initial service rates as set forth in the Commission's Statement of General Policy No. 61–1, as amended.[2] The County of Wayne also states that the refund provisions of Section 4(e) do not fully protect the ultimate consumer, and further, that under Section 4(e) of the Act the Commission is required to give to the hearing and decision of questions arising thereunder preference over other questions pending before it and decide the same as speedily as possible.

Humble's proposed rate will not have any triggering effect or price redetermination impact on other producer rates in the area. Nor will the proposed rate pierce the producer pricing plateau in the area. Further, the estimated annual increase in revenue to Humble, if the proposed rate is made effective subject to refund in accordance with Section 4(e) of the Act, is $7,516, which is a relatively small amount. Unlike the situation involved in those producer cases that we have set for individual hearing[3] subsequent to the *Phillips* decision,[4] there are no exceptional circumstances presented here which would warrant similar action in the instant case. We therefore conclude that determination of the just and reasonable rate for the sale by Humble involved here should be made in an area rate proceeding. In this connection we note that an area rate proceeding[5] has been initiated, and is well under way, for the area from which the subject sale is made.

The Commission finds:

For the reasons set forth above, the motion of the County of Wayne should be denied.

The Commission orders:

The motion filed by the County of Wayne for a prompt hearing in Docket No. RI64–72 is hereby denied.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; PERRY R. BASS, (OPERATOR), ET AL.,[1] DOCKET NOS. CI61–406, CI61–714, CI61–973, AND CI63–631; MIDWEST OIL CORPORATION (OPERATOR), ET AL.,[1] DOCKET NOS. CI61–621 AND CI62–1317

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 7, 1964)

On September 20, 1963, Perry R. Bass, (Operator), et al., (Bass) filed a motion for severance of the above-entitled Bass proceedings from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* (hereinafter referred to as Union Texas proceeding), for approval of the attached settlement proposal and for the prompt issuance of certificates of public convenience and necessity in accordance with the applications and the settlement proposal.

---

[1] The applications, related rate schedules and settlement proposals include the interests of the *"et al."* sellers listed in the applications.

The terms of the Bass proposal conform, generally, to the recent settlements in the Union Texas proceeding which have been approved by the Commission[2] and provide for maximum initial rates of 20.625¢ per Mcf[3] for sales from south Louisiana, effective April 1, 1963; a five-year moratorium on rate increase filings (subject to the usual exceptions); and extension of the take-or-pay make-up periods to four years in the rate schedules which provide for lesser make-up periods.[4]

No answers to Bass' motion and offer have been received.

On September 23, 1963, Midwest Oil Corporation (Operator), *et al.*, (Midwest) filed a similar motion and offer related to the Midwest dockets listed in the caption hereof.[5] Midwest's proposal differs from those proposals recently approved by the Commission in that the effective date of its rate reduction and commencement of moratorium period is October 1, 1963, rather than April 1, 1963. The Brooklyn Union Gas Company (Brooklyn Union), on October 7, 1963, and Public Service Electric and Gas Company on October 16, 1963, filed letters with the Secretary objecting to the October 1, 1963 effective date proposed in Midwest's offer. Both stated, however, that they would not object to an effective date of April 1, 1963. As we have stated in other settlement orders in this proceeding, it would be unfair to producers who settled earlier to allow such later effective date.[6] Accordingly, our approval of Midwest's proposal will be conditioned upon a change in the effective date of the rate reductions and commencement of the moratorium period to April 1, 1963.

With the exceptions discussed hereinafter, the rates during the moratorium period under the rate schedules related to the applications proposed to be settled by Bass and Midwest will be 20.625¢ per Mcf. The initial rate under Bass' Rate Schedule No. 11 (CI61–973), 19.5¢ per Mcf, will remain in effect during the moratorium period. The initial rate under Midwest's Rate Schedule No. 26 (CI62–1317) is 20.3¢ per Mcf. The presently effective rate, being collected subjected to refund in Docket No. RI63–116, under Midwest's Rate Schedule No. 26 is 20.7¢ per Mcf. Midwest proposes that such increased rate remain in effect during the moratorium period subject to further orders of the Commission in the rate proceeding in Docket No. RI63–116.

Except in Docket No. CI61–793, none of the temporary authorizations heretofore issued to Bass and Midwest in these dockets contain express refund conditions and neither applicant proposes to refund any amounts collected for deliveries made prior to the proposed effective dates of the rate reductions.[7]

---

[2] See orders issued August 7, 1963, 30 FPC 456 (Humble Oil & Refining Company) and October 9, 1963, 30 FPC 979 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*

[3] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[4] See appendix for further details.

[5] In addition to the Dockets listed in the caption to this order, Midwest's Docket No. CI60–745 is also consolidated with the Union Texas proceeding. However, Midwest has filed an amendment to its application in Docket No. CI60–745 seeking authorization to abandon the service proposed in that docket.

[6] See order issued October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 979.

[7] In Docket No. CI61–973 the settlement rate is the initial rate proposed, 19.5¢ per Mcf.

We find these proposals, generally, to be in the public interest and shall approve them subject to the following reservations and conditions.

Since deliveries have been made at rates higher than the settlement rates since April 1, 1963, we shall require that Bass and Midwest refund to the pipeline purchasers the dollar amounts of such excess with interest at 7 percent per annum, such interest to accrue through the last day of the month in which the settlements were filed, September 30, 1963.

In the context of the proposals, we interpret the term "delivered" as used in paragraph 1 of the proposals to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretations. Thus, prepayments, if any, shall be made during the moratorium periods at rates no higher than the rates in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposals also provide that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlements will be so conditioned.

Transcontinental Gas Pipe Line Corporation and Hope Natural Gas Company, the purchasers in Docket Nos. CI61–714 and CI61–621 respectively, will flow through the refunds received and reduce their rates in accordance with their latest rate settlements.

Southern Natural Gas Company (Southern), the purchaser in Docket Nos. CI61–406 and CI63–631, has filed reports of plans of disposition of refunds in connection with several of our orders conditionally approving settlement agreements arising out of the Union Texas Proceeding.[8] Southern contends in those reports that it should be permitted to retain refunds received from a producer in a situation similar to that here presented. In order to avoid a situation in which a pipeline obtains and fails to pass on to the ultimate consumers refunds and reduction in gas purchase costs, even though, in the absence of such refunds and rate reductions, it may be earning a reasonable return on invested capital, we shall require that Southern, within 30 days from the date of issuance of this order, report to the Commission its proposed disposition of the refunds which it would receive as a result of Bass' settlement, and its proposed rate adjustments to reflect the prospective reductions in purchased gas costs which result from Bass' settlement. In addition, and until further order of the Commission, we shall require that Bass hold the amounts proposed to be refunded to Southern attributable to payments for gas delivered between March 31, 1963, and the date upon which the rates are actually reduced, in a special account. Interest shall accrue only through September 30, 1963. No additional interest shall accrue as a result of this provision.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221,

---

[8] Order issued August 7, 1963, 30 FPC 448, *re The California Company, a Division of California Oil Company*, report filed December 2, 1963: Order issued October 9, 1963, 30 FPC 979, *re Socony Mobil Oil Company*, report filed December 20, 1963: Order issued October 28, 1963, 30 FPC 1096, *re Sinclair Oil & Gas Company*, report filed December 19, 1963.

et al., omit the intermediate decision in regard to these dockets,[9] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Each of the applicants is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Southern be required to submit the reports as ordered below.

(7) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in Docket Nos. CI61–406, CI61–714, CI61–973, CI63–631, CI61–621 and CI62–1317 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued to the applicants in Docket Nos. CI61–406, CI61–714, CI61–973, CI63–631, CI61–621 and CI62–1317 upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates granted by paragraph (C) above, are granted upon the express condition that applicants comply fully with the terms of this order and the settlement proposals, as modified, which settlements are expressly approved under the conditions of this order.

(E) Within 90 days from the date of issuance of this order, applicants shall refund to the respective pipeline purchasers the difference between the amounts collected for gas delivered subsequent to March 31, 1963, and the amounts that would have been collected under the settlement rates for gas delivered since that time, except under Midwest's Rate Schedule No. 26 and Bass' Rate Schedule Nos. 9 and 13, together with interest computed at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposals were filed, September 30, 1963.

---

[9] The hearings in the *Union Texas Petroleum, et al.*, consolidated proceeding concluded July 25, 1963.

(F) The certificates issued to Midwest by paragraph (C) above are granted upon the express condition that the effective date of the rate reduction be April 1, 1963, and that the moratorium period commence on April 1, 1963, and end on March 31, 1968.

(G) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, each applicant shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, and the amounts that would have been refunded but for Paragraph (M) hereof, showing separately the amount of principal and interest and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(H) Upon full compliance of applicants with all the terms of this order and of the settlement proposals, applicants shall be relieved of any further refund obligations in these certificate proceedings, except as might be required by further orders of the Commission provided for in Paragraph (M) hereof, and said proceedings shall terminate.

(I) The certificates herein issued are not transferable and shall be effective only so long as applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(K) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against applicants, particularly any proceeding under Section 4 or 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(L) Within 30 days from the date of issuance of this order, Southern shall submit to the Commission, a report, a copy of which shall be served upon each of its jurisdictional customers and the various state utility commissions of states wherein it does business, setting forth the proposed disposition of any refunds it might receive from Bass as a result of Bass' settlement and its proposed rate adjustments to reflect the reduction in purchased gas costs which result from Bass' settlement proposal insofar as it applies to Docket Nos. CI61-406 and CI63-631.

(M) Until further order of the Commission, Bass shall retain in a special account sums equal to the difference between the amount paid under Rate Schedules Nos. 9 and 13 for deliveries made between March 31, 1963 and the date upon which the rates are actually reduced and that which would have been paid at the proposed settlement rates. Interest on amounts in this special account shall accrue at a rate of 7 percent per annum through September 30, 1963.

APPENDIX

Producer	Rate schedule No.	Docket No.	Purchaser	Present rate [1] (cents per Mcf)	Settlement rate [1] (cents per Mcf)

[1] All rates at 15.025 p.s.i.a. pressure base 15.025 p.s.i.a.
[2] This rate is now in effect subject to refund in docket No. RI63-116, and according to Midwest's settlement proposal, this rate will continue in effect subject to refund.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; HUGH GOODRICH, DOCKET NO. CI62-1410

ORDER SEVERING PROCEEDING, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 7, 1964)

On December 2, 1963, Hugh Goodrich (Goodrich) filed a motion for severance of Docket No. CI62-1410 from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* (hereinafter referred to as the Union Texas proceeding), for approval of the attached settlement proposal and for the issuance of a certificate of public convenience and necessity in accordance with the application and settlement proposal.

The terms of the Goodrich proposal conform, generally, to recent settlements in the Union Texas proceeding which have been approved by the Commission[1] and provide for the issuance of a certificate of public convenience and necessity at a rate of 20.625¢ per Mcf[2] for the sale of natural gas produced from the Kaplan and Casinade Fields, south Louisiana; a five-year moratorium on rate increase filings, effective April 1, 1963 (subject to the usual exceptions); refunds of all amounts above the settlement rate collected for deliveries made subsequent to March 31, 1963, with interest at a rate of 7 percent per annum to accrue through September 30, 1963.

The contract has a ten-year take-or-pay make-up period and provides for an initial price of 22.75¢ per Mcf. The temporary authorization heretofore issued to Goodrich provided for an initial price of 21.25¢ per Mcf.

No answers to Goodrich's motion have been received.

We find this proposal, generally, to be in the public interest and shall approve it subject to the following reservations and conditions.

---

[1] See orders issued August 7, 1963, 30 FPC 456 (Humble Oil & Refining Company) and October 9, 1963, 30 FPC 979 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

We shall require that interest on the amounts to be refunded accrue through the last day of the month in which the motion and offer were filed, December 31, 1963. This has been a requirement in all of our orders approving settlements arising out of the Union Texas proceeding.

In the context of the proposals, we interpret the term "delivered" as used in paragraph 1 of the proposals to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation. Thus, prepayments, if any, shall be made during the moratorium period at a rate no higher than the rate in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The pipeline purchaser in Docket No. CI61–1410 is Transcontinental Gas Pipe Line Corporation (Transco). In order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Transco to report to the Commission the amount of refund and interest which it receives as a result of Goodrich's settlement, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of this settlement in a special account subject to further orders of the Commission.

In accordance with the above we shall sever this individual docket from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket Nos. G–13221, *et al.*, omit the intermediate decision in regard to this docket[3] and issue a certificate of public convenience and necessity in accordance with the application, settlement proposal and conditions of this order.

The Commission finds:

(1) Hugh Goodrich is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Goodrich is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

---

[3] The hearings in the *Union Texas Petroleum, et al.*, consolidated proceeding concluded July 25, 1963.

(4) The proposed sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, is required by the public convenience and necessity and is in the public interest upon the conditions set forth below, and a certificate should be issued as ordered below.

(5) The conditions attached to the certificate herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco be required to submit the reports and accounts for the refunds, interest and purchased gas cost reductions as ordered below.

(7) No party has opposed the waiver of the intermediate decision in this proceeding.

The Commission orders:

(A) The motion for waiver of the intermediate decision is granted.

(B) The matters in Docket No. CI62-1410 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*

(C) A certificate of public convenience and necessity is hereby issued to Hugh Goodrich in Docket No. CI62-1410, upon the conditions set forth herein authorizing the sale of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the application and settlement proposal herein.

(D) The certificate granted by paragraph (C) above, is granted upon the express condition that Goodrich comply fully with the terms of this order and the settlement proposal, as modified, which settlement is expressly approved, under the conditions of this order.

(E) Within 90 days from the date of issuance of this order, Goodrich shall refund to the pipeline purchaser the difference between the amounts collected for gas delivered subsequent to March 31, 1963, and the amounts that would have been collected under the settlement rate for gas delivered since that time together with interest computed at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposal was filed, December 31, 1963.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Goodrich shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with a release from the purchaser showing receipt of the refunds in conformity with the settlement as approved.

(G) Upon full compliance of Goodrich with all the terms of this order and of the settlement proposal, Goodrich shall be relieved of any further refund obligations in this certificate proceeding and said proceeding shall terminate.

(H) The certificate herein issued is not transferrable and shall be effective only so long as Goodrich continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificate herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(J) The grant of certificate herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Goodrich, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Goodrich, the Commission staff, or any affected party herein in any other proceeding.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Transco shall submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions wherein it does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to Goodrich's rate reduction, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs. Pending Commission action and further orders respecting such proposed disposition and adjustments, Transco shall hold such refunds, interest and amounts equal to the reductions in purchased gas costs which accrue as a result of this settlement in a special account.

(L) Upon full compliance of Goodrich with all the terms of this order and the settlement proposal, Supplement No. 2 to Goodrich's Rate Schedule No. 1 shall be accepted for filing, effective as of the date of initial delivery.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ALABAMA POWER COMPANY, PROJECT NO. 2146

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued January 9, 1964)

Application was filed on March 7, 1963 by Alabama Power Company, licensee for major Project No. 2146, for further amendment of its license for the project situated on the Coosa River, navigable waters of the United States, and affecting lands of the United States.

The application requests authorization to install the third generating unit in the Lock 3 Development during initial construction. The licensee states that the proposed installation of the third generating unit will be economically feasible by 1966 and the installation should be commenced in 1964 and completed in 1966.

The license for the project describes the Lock 3 Development as consisting of an initial installation of two 33,500-horsepower turbines each connected to a 24,300-kilowatt generator with provision for an additional third unit of similar size. The proposed installation will consist of having one 33,500-horsepower turbine connected to one 24,300-kilowatt generator, together with associated facilities.

Recent load forecast and power supply studies, obtained by taking detail load forecasts for 1964, 1965 and 1966 from each of the four operating companies forming the Southern Company integrated system which includes the licensee, and developing therefrom a diversified system total, indicate that the power output from the Lock 3 development, constructed initially to its ultimate capacity of 72,900 kw (3 units of 24,300 kw each) will be required to meet the estimated

1966 system load, and its dependable capacity thereon is estimated at 63,200 kw, as compared with 46,800 kw for a 2-unit installation. The average annual energy to be obtained from the ultimate installation is estimated at 202.3 million kwh, as compared with 190.6 kwh for a two-unit installation. The incremental increase in capital cost for installing the third generating unit initially is estimated at $2,275,000, and the corresponding increase in annual cost is estimated at $294,700. The incremental increase in power output, derived from the third generating unit, is about 16,400 kw of dependable capacity, and about 11.7 million kwh of average annual energy. Based on power values of $27.53 per kw-yr for dependable capacity, and 2.5 mills per kwh for average annual energy, the estimated incremental annual value of the power output is about $480,900. The incremental annual net benefits ($480,900–$294,700) therefrom amount to about $186,200. Thus, construction should be completed by July 30, 1966, as contemplated in the construction schedule set forth in Article 33 of the license.

The granting of the application increasing the authorized installed horsepower capacity will increase the amount of administrative annual charges payable under the license.

The Chief of Engineers and the Secretary of the Army have reported that, based on the understanding that the existing license provisions in the interest of navigation and flood control will remain applicable, the proposal in the application for amendment of the license is satisfactory.

The Commission finds:

(1) The license, further amended as hereinafter provided, is in the public interest.

(2) Public notice of the application has been given. No protests have been received.

(3) The authorized installed horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charge is 756,000 horsepower, and the increased annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based on such capacity, as hereinafter provided, is reasonable.

(4) Exhibit M (Revision No. 2), filed as part of the application, conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit M, filed on January 19, 1962 now part of the license and which has been superseded, should be eliminated from the license.

The Commission orders:

(A) Exhibit M (Revision No. 2) mentioned in finding (4) above is hereby approved as part of the license for Project No. 2146, and Exhibit M mentioned in the same finding as being superseded is hereby eliminated from the license for the project.

(B) The license for Project No. 2146 is hereby further amended, effective as of December 1, 1963, as follows:

Article 28 of the license is further revised to show the authorized installed capacity as being increased to 756,000 horsepower.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP64–111

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 9, 1964)

On November 13, 1963, Columbia Gulf Transmission Company (Applicant) filed in Docket No. CP64–111 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to construct during the calendar year 1964, gas supply facilities necessary to take into its certificated main line system natural gas purchased by United Fuel Gas Company (United Fuel) from producers in the general area of Applicant's existing transmission system, at a total cost not to exceed $500,000, with no single project to exceed $125,000, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to United Fuel for transportation by Applicant, all as fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in making relatively minor alterations and additions to its existing gas supply facilities in order to attach and utilize additional supplies of natural gas from new or existing sources.

Applicant proposes to finance the cost of the subject facilities from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 31, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 5, 1958, in Docket No. G–15524, *et al.* (20 FPC 681).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Columbia Gulf Transmission Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the appplication in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to United Fuel Gas Company.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COMMISSION LETTER ORDER OF OCTOBER 30, 1963, DIRECTING RESPONSES TO TWO QUESTIONNAIRES:

(I) SUMMARY LISTS OF RESPONDENT'S (1) GAS AND OIL PRODUCTION AND (2) FIELD AND CYCLING PLANTS BY PRICING AREAS—YEAR 1962 AND

(II) COSTS AND STATISTICS PERTAINING TO OIL AND GAS PRODUCTION, EXPLORATION, GAS SYSTEMS, AND FIELD GASOLINE AND CYCLING PLANT OPERATIONS—YEAR 1962

ORDER MODIFYING LETTER ORDER REQUIRING FURNISHING OF DATA AND DENYING MOTIONS FOR RECONSIDERATION

(Issued January 9, 1964)

On October 30, 1963, 30 FPC 1155, the Commission issued a letter order pursuant to Section 10(a) of the Natural Gas Act directing 114 natural gas producers to complete and file the two questionnaires having the titles stated in the caption of this order. Recipients of the letter and the questionnaires were either producers making sales of more than 10,000,000 Mcf annually in interstate commerce or regulated natural gas pipeline companies with annual production of 10,000,000

Mcf and their oil and gas production affiliates. The letter order stated that the data being solicited was necessary "for programming additional area rate proceedings."[1]

The data collected will be made available for use by interested parties and the Commission staff in future area proceedings instituted as a part of our continuing efforts to establish just and reasonable prices for natural gas produced by independent producers, and by natural gas pipeline companies and their affiliated companies and sold in interstate commerce. On November 27, 1963, the Commission issued an order initiating two additional area rate proceedings in the Hugoton-Anadarko and the Texas Gulf Coast areas pursuant to Sections 4, 5, 10, 14, 15, and 16 of the Natural Gas Act. This order stated, with respect to the questionnaire, that:

As a next step in fixing just and reasonable area rates, we believe that additional area rate proceedings should now be instituted. To this end, we have promulgated a cost and operating data questionnaire to more than one-hundred principal natural gas producing companies making sales of natural gas for resale. Data received from the respondents to this questionnaire will be a prime source of information to be utilized by the parties to the proceedings including the Commission's staff. See *Area Rate Proceeding* (Hugoton-Anadarko Area), Docket No. AR64-1, *et al.*, 30 FPC 1354.

Between November 29, 1963 and December 31, 1963, motions for reconsideration of the letter order were filed by twenty-five of the respondents and by the Independent Petroleum Association of America (IPAA).[2] The motions, except those of Humble, British-American, Skelly, Shell, Forest, Superior and IPAA were designated as applications for rehearing under Section 19(a) of the Natural Gas Act and Section 1.34 of our Rules of Practice and Procedure. However, neither the Act nor our Rules provide for applications for rehearing of orders calling for the submission of information for use in Commission proceedings or investigations. Our letter order of October 30, 1963, is much like our order of August 2, 1961, prescribing the filing of data in Area Rate Proceeding (Permian Basin Area), Docket No. AR61-1, *et al.*, 26 FPC 247. An appeal taken from this order by the Sun Oil Company was dismissed upon the motion of the Commission on the ground that it was interlocutory and therefore review was not permissible. *Sun Oil Company* v. *Federal Power Commission*, 297 F. 2d 77. The applications for rehearing, therefore, will be treated as motions for reconsideration.

---

[1] See our Statement of General Policy No. 61-1, Federal Power Commission Rules of Practice and Procedure, Section 2.56, 18 C.F.R. 2.56.

[2] The respondents filing such motions were Texaco Inc.; Humble Oil & Refining Company; a joint motion by Austral Oil Company Incorporated, Perry R. Bass (Operator), *et al.,* and Belco Petroleum Corporation; a joint petition by Hunt Oil Company, Hassie Hunt Trust and Placid Oil Company; J. M. Huber Corporation, and Sun Oil Company. Amerada Petroleum Corporation filed a telegram joining Texaco's motion. If we were to follow Section 1.34 of our Rules, the following applications for rehearing would be regarded as untimely filed: the motion of Kerr-McGee filed on December 2, 1963; the telegram filed by American Petrofina Company of Texas adopting Hunt's motion on December 2, 1963; Cabot Corporation adopted Texaco's motion on December 3, 1963, by telegram, and The Pure Oil Corporation also adopted Texaco's motion on December 9, 1963, by telegram. On December 9, 1963, The Atlantic Refining Company adopted Humble's motion and The British-American Oil Producing Company filed a motion for reconsideration. Also, on December 9, 1963, Aztec Oil & Gas Company protested the applicability of the letter order to it since it sold less than 10,000,000 Mcf for resale in 1962, a claim which has been confirmed by a reexamination of Commission records. On December 12, 1963, Skelly Oil Company filed a "Petition for Order Assigning Docket Number, Setting Matter For Hearing And For Declaration Of Rights Of Petitioner." This petition will also be treated as a motion for reconsideration since it raises essentially the same points as the other movants. This statement is also applicable to "Protest" filed by Shamrock Oil and Gas Corporation and to Union Pacific Railroad Company's adoption of Humble's motion, both filed on December 16, 1963; to the application of Southwest Gas Producing Company, Inc. for rehearing and reconsideration filed on December 18, 1963; and to the motions for reconsideration filed by Shell Oil Company, Forest Oil Corporation and The Superior Oil Company on December 19, 24 and 26, 1963, respectively. On December 31, 1963, Pan American Petroleum Corporation advised us by telegram that it joined in Shell's motion. IPAA sent a lengthy letter to the Commission under date of December 17, 1963, raising essentially the same contentions as those of the movants. It will, therefore, be treated as another motion for reconsideration and answered herein.

The movants individually or collectively urge the Commission to rescind its October 30th letter order, or in the alternative, to revise the cost and operations questionnaire. No objections are raised to answering the summary questionnaire. The reasons advanced for rescission are multiple. It is contended that the questionnaire is not "necessary or appropriate to assist the Commission in the proper administration" of the Natural Gas Act because (1) the burden of completing the questionnaire outweighs the usefulness of the data to be filed; (2) data are solicited concerning extracted liquifiable hydrocarbons and not just natural gas; (3) the questionnaire covers all field gasoline cycling plants including those engaged solely in intrastate commerce; (4) the questionnaire is not representative because the Commission has not directed natural gas producers selling less than 10,000,000 Mcf in interstate commerce to file it; (5) the respondents are being required to submit certain data (unspecified) previously submitted in other Area Rate Proceedings and the questionnaire is incompletely drawn; (6) the questionnaire is prematurely issued because the area rate approach and the various allocation methods have not been finally sanctioned by the Courts; (7) the pricing area boundaries used by the Commission in fixing natural gas prices should be determined in the rulemaking proceedings in Docket No. R-218 before cost and operating data is requested for all production areas; (8) the Commission should require cost and operating data only with respect to those areas where area rate proceedings are to be initiated; and (9) more time will be needed for compliance with the questionnaire. Certain movants urge that Commission-Gas Industry conferences, or hearings, be scheduled to shorten, clarify, and revise the questionnaire so as to reduce the reporting burden.

The burden complained of by the movants relates to the estimated cost and the amount of time needed to complete the questionnaire. There are a variety of cost estimates: Texaco $250,000, Humble $100,000, Skelly $125,000, various companies $85,000, Perry R. Bass $50,000, Austral $40,000 (by Arthur Andersen & Co.) and Belco $20,000.[3] In the main, these cost estimates were brought to the attention of the Bureau of the Budget when it reviewed and approved the cost questionnaire pursuant to the Federal Reports Act of 1942, thereby independently determining that "the collection of * * * [the] information is necessary for the proper performance of the [Commission's] functions." *Federal Reports Act*, 5 U.S.C. Sec. 139(d). The questionnaire was approved for issuance only after several months of consultation between the Bureau, the Commission and the Committee on Petroleum and Natural Gas, a member committee of the Advisory Council on Federal Reports. The consulting membership of the Committee included executives from 14 individual oil and gas company-respondents, 3 industry trade associations and a leading accounting firm.

While we recognize that the task we have set for the respondents to our Order is undoubtably substantial, the cost of providing information necessary to assist the Commission in the proper administration of the Natural Gas Act, is not a sufficient reason for rescission of our Order. In the *East Ohio Gas Company* case, 6 FPC 176, a natural-gas company objected to complying with general accounting orders of the Commission prescribing a Uniform System of Accounts because of a claimed cost of $1,500,000. (6 FPC at 183.) The Commission's rejection of this contention received the approval of the Supreme Court. *Federal Power Commission* v. *East Ohio Gas Co.*, 338 U.S. 464, 475. The Commission's orders, the Court concluded, met the test prescribed in *American Telephone & Telegraph Co.* v. *U.S.*, 299 U.S. 232, 247, that, "The evidence does not show that the expense * * * will lay so heavy a burden upon the companies as to overpass the bounds of reason."

---

[3] In terms of interstate volumes sold by these companies in 1962, the alleged average cost of completing the questionnaire is approximately 0.065¢ per Mcf. (*Source:* The above cost estimates divided by the reported 1962 interstate sales by the companies named above.) This cost is to be contrasted to the average wellhead price received for natural gas in 1962—15.4¢ per Mcf. (U.S. Bureau of Mines).

Obviously, much of the cost incurred in answering the present questionnaire is attributable to the absence of any regulations requiring natural gas producers to maintain a Uniform System of Accounts or to file annual reports with respect to their regulated business. As a result, the responses to the questionnaire become the only source of information available to the Commission. These responses must be developed from the respondents' diverse accounting systems. However, when such costs are measured against the task at hand, that of obtaining general information to aid in the establishment of gas rates in all pricing areas, they do not appear to be disproportionate. The uses to be made of the data amply justify its collection. As mentioned above, two new area proceedings involving seven of the twenty-six pricing areas have been recently instituted.[4] Further, it is of the utmost importance to begin preparations now for the completion of the first round of fixing just and reasonable rates in all of the pricing areas as soon as possible. To achieve this, data must be readily available and composited at the earliest time to facilitate the commencement of hearings in other areas.

However, the costs to a particular company complying with the questionnaire are directly proportional to the number of pricing areas in which it has interstate gas sales. Costs for the larger companies, therefore, will be greater because they do business in most or all of the pricing areas. If a respondent has production in a single major pricing area, such as the Permian Basin or Southern Louisiana, its cost of completing the questionnaire should not be appreciably greater than it was in the first two area rate proceedings. However, a large part of the questionnaire requires the filing of production trend data for a seven-year period in all pricing areas. We think, in view of the comments in the motions concerning the burden of complying with the questionnaire, that the filing of all trend data for pricing areas other than the Permian Basin, Southern Louisiana, Hugoton-Anadarko, the Texas Gulf areas and the continental United States should be deferred at this time. This will give substantial relief to the respondents and should enable them to provide the Commission the remaining data needed for the review of information already lodged with the Commission and that necessary for the development of further area rate proceedings, the most immediate being the Hugoton-Anadarko and the Texas Gulf Coast areas. At such time as the Commission considers the initiation of more area proceedings, it will require submission of the deferred trend data.

The contention is made that the questionnaire improperly requires the filing of data concerning "liquifiable hydrocarbons and plants operated for the extraction thereof." Also, that data related to all "producer owned or operated field gasoline and cycling plants," is required irrespective of the intrastate character of some plants. These arguments not only miss the point but also

---

[4] While the November 27th order instituted two new proceedings affecting seven pricing areas, the Commission preserved to the parties an opportunity to seek an enlargement of the areas encompassed in these proceedings.

fail to particularize the liquids and plant data considered objectionable. Of course, in area rate proceedings, the Commissions' sole objective is to establish just and reasonable rates only for jurisdictional sales of natural gas. In so doing, the Commission is not precluded from considering appropriate evidence relating to intrastate or other non-jurisdictional matters affecting the rates of natural gas being transported or sold in interstate commerce for resale. On the contrary there are costs, revenues, and other considerations incident to extraction operations which though non-jurisdictional are related to interstate sales of natural gas, and therefore, must be taken into account in fixing rates for such sales. *Phillips Petroleum Company*, 24 FPC 537, 563, affirmed, *Wisconsin* v. *F.P.C.*, 373, U.S. 294; also see *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 305 F. 2d 763; *City of Detroit* v. *F.P.C.*, 230 F. 2d 810, certiorari denied, 352 U.S. 829. Likewise, the operations of the so-called intrastate gasoline plants are usually integrated with total company operations. They normally are one of many similar operations undertaken by an oil and gas producing company. An understanding of a company's integrated gasoline plant operation is therefore essential to determine what portion of the costs properly should be borne by the interstate segment. We note, moreover, that all respondents retain their right to object to the introduction in an area rate proceeding of any evidence extracted from the information supplied in response to these portions of the questionnaire should they at that time still believe it is unrelated to the problem at hand.

Many respondents assert that cost and operations data obtained only from the large producer respondents to the questionnaire will not be representative of natural gas producing experience in the various pricing areas. It is their position that producers with less than 10,000,000 Mcf annually should also be made respondents thereby adding to the information contained in the composites of the filed data for use in area proceedings. This, they say, will increase the representativeness of the composites.

When a similar question arose recently in connection with other area rate proceedings we determined that the issue of representativeness of the data contained in the basic data exhibits and the related studies based on them should properly be decided upon the close of the area proceedings by the presiding examiner and then by the Commission. See Area Rate Proceeding, *et al.*, Docket No. AR61–2, *et al.*, Order Denying Motion to Direct Certain Respondents to Submit and Staff to Compile Cost Data, issued November 22, 1963, 30 FPC 1350. At the present time, we have not promulgated but we do not foreclose the use of a questionnaire for smaller producers who are respondents to the new proceedings. They are, of course, free to submit the information required of the respondents should they choose to do so. In any event, however, it is clear that we will need the information in the questionnaire from the producer respondents to the present inquiry who alone make an estimated 77%[5] of the sales of natural gas subject to our jurisdiction.

Some of the movants point out that the questionnaire provides for the reporting of data already submitted by them in connection with previous area rate proceedings. The questionnaire, of course, had to be designed for all prospective respondents regardless of the possibility that certain of them might have previously answered some schedules in connection with earlier proceedings. Where data are requested which have been previously filed with the Commission by a given respondent, the respondent should either file duplicate data or meet with representatives of the Bureau of Natural Gas and establish a means of utilizing the relevant information of the earlier filing.

---

[5] On the basis of available information, seventy-four independent producer respondents sold 6,010,879,967 Mcf (Form 301) of the total 7,798,180,890 Mcf (Form 2) of natural gas purchased domestically by natural-gas company pipelines in the year 1962. In addition, the questionnaire will obtain data on almost 95% of the natural gas produced by natural-gas pipeline companies and their affiliates. (Form 2)

Also, some respondents claim that data, in addition to that presently required by the questionnaire, will doubtlessly be requested by various parties and that, therefore, the questionnaire is inadequate. It is quite possible that the questionnaire does not require the filing of all the data desired by all the parties to the various area proceedings and that they may seek to secure such additional information by informal or formal request. It does, however, include all the additional schedules requested by producer representatives during the Bureau of the Budget's recent review of the questionnaire pursuant to the Federal Reports Act of 1942. To defer the questionnaire until all interested parties could fully refine their needs for additional information would obviously be incompatible with our responsibilities under the Natural Gas Act.

We cannot accept the contentions by the movants that the collection of 1962 cost and operations data for all areas is premature. It is urged that further development of area rates should be discontinued until the method adopted by the Commission for fixing the area rates in the Permian Basin is judicially approved. Also, it is argued that all area boundaries should be fixed in Docket R-218 before collecting more data; and, in any event, the present collection of data should be limited to only those areas where new rate proceedings have been initiated.

In the order instituting two new proceedings in the Hugoton-Anadarko and Texas Gulf Coast areas we stated that our statutory responsibilities do not permit us to "await determination of one area proceeding before we initiate others * * *." There, our reference was to Commission determinations, but our statement is even more applicable to the long periods of time needed for Court review. A contrary view would involve a stretch-out in achieving fully effective producer regulation and result in a general breakdown of the Commission's program for fixing producers' rates by the area approach which received judicial encouragement at the highest level earlier last year in *Wisconsin* v. *F.P.C.*, 373 U.S. 294.

Our policy, therefore, is to initiate and complete as many area proceedings as expeditiously as our resources permit. For this reason, it is essential to begin the collection of data from all areas now, and to have it available for use as soon as future area proceedings can be scheduled.

None of the movants argue persuasively that area boundary proceedings in Docket R-218 should be concluded before collecting area data and instituting new proceedings. As pointed out in the Commission's recent order in that Docket,[6] the outcome of the rulemaking proceeding, involving relatively limited boundary changes, is largely dependent on the "production cost information" to be provided by responses to the questionnaire. We stated that the area boundary refinements contemplated in Docket R-218 could not be completed satisfactorily in the absence of this information. We expect, as stated in our deferral order, "that the additional area proceedings * * * will allow for consideration and disposition of area boundary issues arising within the pricing areas consolidated for hearing * * *."

Some movants request the Commission to grant extensions of time for the filing of their completed questionnaires. We do not believe that such requests should be entertained at this time, and they will be denied without prejudice.

---

[6] Order Deferring Further Consideration of Proposed Changes in Pricing Area Boundaries Fixed Under Statement of General Policy 61-1, Docket No. R-218, 30 FPC 1374, issued November 27, 1963.

We have no intention of permitting any substantial general delay in meeting the time schedule which was worked out with the Committee on Petroleum and Natural Gas in a manner calculated to gear the responses into our hearing schedule, while relieving producers of the obligation to perform all portions of the work at once. We recognize, however, that there may be some few special situations calling for accommodation. Such requests for more time should detail the efforts the petitioner has made to complete the questionnaire within the prescribed time, and be addressed separately to each of the four segments of data to be reported and the reporting dates set out therefor in the schedule accompanying the cost questionnaire.

We are unable to confirm Hassie Hunt Trust's statistically unsupported claim that it sold less than 10,000,000 Mcf of natural gas in interstate commerce during the year 1962. On the basis of gas sales information available from F.P.C. Forms 301-A and 301-B, filed by the Trust for the year 1962, it is evident that its sales exceeded 10,000,000 Mcf at both mixed pressure bases and at a pressure base of 14.65 psia which is the one prescribed for use in answering the questionnaire. See *Instructions and Explanatory Notes on Questionnaire*, page 6, first paragraph.[7]

The proposal contained in several motions for conferences looking toward simplifying and shortening the questionnaire, would normally be favorably received by us.[8] However, we believe that the respondents, either directly or indirectly, have been accorded ample opportunity during the extensive Bureau of the Budget review to present their views and, therefore, further general conferences on the basic content of the questionnaire at this time would only serve to delay forward progress in answering it, to the obvious detriment of our area rate program. Of course, to the extent clarifying instructions are required, the Commission's staff is always available to provide such assistance and guidance as needed.

The Commission orders:

(A) The motions for reconsideration filed by the movants listed on page 2, footnote 3, requesting the Commission to rescind its letter order of October 30, 1963, or in the alternative, to revise the questionnaire thereby promulgated, entitled "Costs and Statistics Pertaining to Oil and Gas Production, Exploration, Gas Systems, and Field Gasoline and Cycling Plant Operations—Year 1962," are denied.

(B) Requests for extensions of time within which to file responses to the questionnaire are denied without prejudice. Future requests should be in the form prescribed hereinabove.

(C) The request of Sun Oil Company for a stay of our letter order of October 30, 1963, is denied.

(D) The request of the Skelly Oil Company for an immediate hearing concerning the need and the form of the questionnaires is denied.

---

[7] According to our analysis of available Form 301 information, the Trust made the following total interstate sales in 1962:

	Mcf
Natural gas sales reported at a pressure base of 14.65	3, 950, 759
Natural gas sales reported at a pressure base of 15.025 psia converted to 14.65 psia (5,778,286 Mcf x 1.0256)	5, 926, 210
Natural gas sales reported under rate schedules filed by others (Form 301–A)	354, 097
	10, 231, 066

[8] We are not required, under Section 10(a) of the Natural Gas Act, to issue notice and hold hearings concerning the need or content of industry questionnaires. However, as noted above, gas producing industry views were received and considered.

(E) The Aztec Oil & Gas Company is relieved from complying with the letter order of October 30, 1963, and further, its name shall be removed from the list of respondents to the questionnaires.

(F) Trend data for the years 1955–1961 required by the Costs and Statistics Questionnaire Schedule D, Sheets 4, 6, 7, 8, 9, 10, 11, 12, 13, 14; Schedule F, Sheets 3 and 4; Schedule G, Sheet 2; Schedule H, Sheet 6; Schedule I, Sheets 2 and 4; and Schedule M, Sheet 10, should not be reported by the respondents for the following areas until further order of the Commission:

	Area code
Appalachian	01
Illinois Basin	02
Mississippi	03
Northern Louisiana	04
East Texas-Arkansas	06
Texas Railroad Commission District No. 1	10
Texas Railroad Commission District No. 5	11
Texas Railroad Commission District No. 7–B	12
Texas Railroad Commission District No. 9	13
Other Oklahoma-Arkansas	18
Aneth Field	20
San Juan Basin	21
Unitah-Green River Basin	22
Colorado-Julesburg Basin	23
Montana-Wyoming	24
Montana-Dakota	25
Other Area	88

Commissioner Ross *dissents* to the issuance of this questonnaire at this time for the reasons stated in his dissent to the order instituting area rate proceedings issued November 27, 1963, in Dockets Nos. AR64–1 and AR64–2, Hugoton-Anadarko Area and Texas Gulf Coast Area, 30 FPC 1354, 1358.

OPINION NO. 414

UNION PRODUCING COMPANY, ET AL., DOCKET NOS. G–13811, G–13820, G–14114, G–14352, G–14553, G–16725, G–17589, G–17606; UNION PRODUCING COMPANY (OPERATOR), ET AL., G–18354

OPINION AND ORDER MODIFYING AND ADOPTING INITIAL DECISION OF PRESIDING EXAMINER AND REMANDING PROCEEDINGS

(Issued January 9, 1964)*

Syllabus

1. Cost of service is proper basis for determining rates where, as here, producer is producing arm of pipeline. P. 43.
2. Producer having failed to make its own case, as it must to justify rate increase, cannot claim that staff failed to make company's case for it. P. 47.
3. Producer's depreciation and depletion reserve figures properly rejected; Staff's study while not wholly adequate demonstrates deficiency in Union's case is substantial. P. 47.

---

*Initial decision appears on p. 59. Clarified and rehearing denied by Opinion 414–A, issued March 6, 1964, 31 FPC 503. [Ed. Note: Union's Petition to Review filed in CA5 (#21339) was withdrawn on February 2, 1965, following settlement order—See 31 FPC 1506]

4. Union has not justified a return above 6.5 percent. P. 47.
5. Because of insufficient evidence upon which to determine producer's rates for future, Commission *remands* 5(a) proceeding to Examiner with appropriate instructions. P. 47.
6. In determining fair rate of return, Commission *finds* Union must be considered as producing arm of pipeline and not comparable to independent producer. P. 47.
7. Upon remand Union will be permitted to introduce evidence of type suggested in *El Paso* and *Southern* in support of claim for additional return. P. 48.
8. Commission *finds* allocation of joint products cost necessary here—allocates such costs under *Phillips* relative cost method. P. 48.
9. Minimum bank balances excluded as working capital allowance. P. 49.
10. Claimed Federal income taxes *disallowed* since producer had no tax liability for test year. P. 49.
11. Commission *disallows* increased rates in proceedings arising under Section 4(e) of the Natural Gas Act; *remands* Section 5(a) proceeding for further hearing and decision. P. 51.

Commissioner Black *concurring.*

Commissioner O'Connor *concurring* in part and *dissenting* in part.

Commissioner Woodward *dissenting.*

Winston W. Brown, Thomas Fletcher, J. D. Daniel, E. J. Freibeg, Vernon Woods, and *C. H. Lewis* for Union Producing Co.

Winston W. Brown and *John T. Guyton* for Union Producing Co. (Operator), *et al.*

James O'Malley, Jr. and *John A Lodge* for Consolidated Edison Company of New York.

Harry G. Hill, Jr. and *Edwin F. Russell* for Brooklyn Union Gas Company.

Garner W. Green, Thomas M. Knebel, Bryce Rea, Jr., and *Gordon Allison Phillips* for Willmut Gas & Oil Company.

George E. Morrow and *Reuben Goldberg* for Memphis Light, Gas & Water Division.

Reuben Goldberg for Mississippi Valley Gas Co.

Henry P. Sullivan and *Samuel G. Miller* for Philadelphia Electric Co.

Barbara M. Suchow, Kent H. Brown, and *Lawrence M. DeVore* for Public Service Commission of New York.

J. Harry Mulhern and *William R. Duff* for Public Service Electric & Gas Company.

Robert W. Perdue for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SWIDLER, *Chairman:*

This is a rate case arising upon filings made by Union Producing Company (Union) under Section 4 of the Natural Gas Act (Act) for increases in certain of its rates applicable to sales of natural gas from Texas, Louisiana, and Mississippi gas fields. Union is the production affiliate of United Gas Pipe Line Company, but this proceeding involves production property and field rates, rather than transmission property and city-gate rates as in the case of pipelines. Pursuant to motions, the increases were put into effect subject to refund. Subsequently we enlarged these proceedings by ordering an investigation and hearing concerning all of Union's jurisdictional gas rates pursuant to Section 5(a) of the

Act. The case is now before us on exceptions to the presiding examiner's initial decision. Oral argument on the exceptions was held on April 26, 1963.

To establish proper rates for Union, both Union and the Staff relied on a companywide approach and a test year of 1958. Union seeks to support its rates with cost of service and field price economic evidence, while Staff presented cost of service evidence only. Both Union and Staff supplemented their initial presentations while the hearing was in progress in the light of the issuance of our Opinion No. 338 in *Phillips Petroleum Company*, 24 FPC 537, subsequently affirmed by the courts.[1]

Applying the principles announced in our *Phillips* Opinion, the Examiner found that Union's rates were excessive. Relying on cost of service evidence exclusively and accepting the parties' companywide approach for a 1958 test year, the Examiner found a proper average companywide unit cost for Union's jurisdictional gas sales to be 8.652 cents per Mcf. In comparison, he found that Union's jurisdictional sales realized average revenues of 10.9467 cents per Mcf, or an excess of some 4.1 million dollars for the test year. Accordingly the Examiner ordered Union to file reduced companywide rates to conform insofar as possible to the area pricing standards of the Commission's Statement of Policy No. 61–1, 24 FPC 818, as amended, with refunds to be made as we might subsequently order.

Only Union filed exceptions to the Examiner's decision. Staff and the other principal parties to the proceeding—the Interveners, Memphis Light, Gas and Water Division (Memphis), Mississippi Valley Gas Company (Mississippi Valley), Philadelphia Electric Company and the United Gas Improvement Company (Philadelphia Interveners), and the Public Service Electric and Gas Company (Public Service)—basically agree with the Examiner's decision and request that we adopt it. Union excepts to the Examiner's reliance on cost of service evidence, and to his findings increasing the company's depreciation and depletion reserve above the book figure, allowing only a 6.5 percent rate of return on production property, allocating production costs, excluding bank balances from working capital, disallowing claimed Federal income taxes, using seven-eighths of Union's production in determining unit production costs, and allegedly making inadequate findings.

We conclude that the Examiner's decision was correct insofar as he found Union's rate increases unjustified under Section 4(e) of the Act. For the reasons set forth below we conclude that the 5(a) proceeding must be remanded for a more complete evidentiary presentation on certain issues and in so doing we feel it is appropriate to supplement and modify the Examiner's discussion respecting certain of these issues.

In excepting to the Examiner's reliance exclusively on cost of service evidence in considering its rates, and his refusal to consider certain field price and economic evidence, Union contends that our Opinion No. 338 and our Statement of General Policy No. 61–1 contemplate that field price and economic data also be considered in fixing producer rates. In this connection Union contends that the Examiner erred in treating it as the producing arm of a pipeline company rather than an independent producer.

We conclude that cost of service evidence was properly the basis for determining rates where, as here, the producer is the producing arm of a pipeline company. See *Panhandle Eastern Pipe Line Company*, 25 FPC 787, and *Northern Natural Gas Company*, 28 FPC 4. The status of Union Producing as the producing arm of a pipeline company is not in doubt. Union is the wholly owned producing subsidiary of United Gas Corporation, which also wholly owns the pipeline subsidiary, United Gas Pipe Line Company, to which Union sells over 80 percent of its gas production. In referring to Union in *Mississippi River Fuel Corporation* v. *F.P.C.*, 252 F. 2d 619 (CADC), cert. denied, 355 U.S. 904, the court said "A 100 percent affiliate stands in the same position as does the integrated producing arm of a pipeline company."

---

[1] *Wisconsin* v. *FPC*, 303 F. 2d 380, CADC 1961, affirmed *Wisconsin* v. *FPC*, 373 U.S. 294, 83 Sup. Ct. 1266 (1963).

We cannot accept the suggestion in the dissenting opinion that affiliation should not be controlling in this case. Whether the Commission should depart from the method by which it has consistently regulated affiliated producers is not a decision to be made on the basis of conjecture as to the dire consequences which may follow if Union is limited to rates based upon cost of service including a fair return. This is especially true because for the purposes of fixing all of Union's future rates we are remanding the proceedings to be certain of using current and accurate figures as well as allowing whatever higher return can be justified on the basis of Union's value to United's customers.

Turning now to a discussion of Union's cost of service, the first issue presented is the proper amount of its depreciation and depletion reserve. The balance in the depreciation and depletion reserve account consists of the total of the amounts properly accumulated annually by charges against earnings for depreciation and depletion, less the net cost of the properties retired and charged to the reserve. The average reserve is deducted from the company's average gross plant to arrive at the average net plant, which is the principal element in the rate base on which the company is permitted to earn a future return. The larger the depreciation and depletion reserve, the smaller the rate base and the less the return.

The Examiner rejected the 62.5 million dollars of depreciation and depletion reserve claimed by Union as shown on Union's books, and approximately 68 million dollars, as shown by Union under a reserve requirement study put in evidence through its witness Dunn. Instead the Examiner, following Staff's recommendation, increased Union's reserve to approximately 93.8 million dollars, thus arriving at an average net plant figure of 108 million dollars compared to the net plant figure of 138.6 million dollars contended for by Union. The Examiner rejected Union's depreciation and depletion reserve figures on the ground, basically, that Union's reserve requirement study adduced in evidence to support the book figure was "too closely allied with Union's book reserves, whose calculation through the years or relationship to plant did not conform to generally accepted practices of the industry and of the Commission."

Union initially contended that its book reserve had been properly accrued under a sound and conventional unit of production method[2] of accruing depreciation and depletion which the company has applied since 1941, and which was referred to as the "Hargrove formula," so-called after the name of the Union official who devised it.

Prior to Union's 1941 adoption of its Hargrove formula, questionable depreciation and depletion practices had been applied to its properties. Union came into existence in 1937 as the subsidiary of United Gas Corporation, and for many years previously the properties which it acquired had been subject to a retirement reserve method of depreciation and depletion rather than the unit of production method generally followed today and contemplated by our system of accounts. Cf., account 111.1 (Class A and B). The requirement reserve method tends to result in irregular and insufficient charges to operations in the early years when replacement expenditures are small, so that such a method may fail to build up a reserve commensurate with the expired service life of all the property in the early years. It is clear from the record that Union has never made any adjustment to its books to correct for the unsound past depreciation practices.[3]

---

[2] A unit of production method of computing depletion is a method of accounting under which an annual depletion charge reflecting the cost of each unit produced—Mcf of gas, barrel of oil, etc.—is determined and applied in order to charge the cost of the depletable property to annual expense and to provide the basis for an accrued depletion reserve. Depletion is computed for each lease separately, or sometimes on an aggregation of leases. The procedure is to divide the total cost of remaining reserves by the estimated number of recoverable units to get a unit depletion charge. The charge applicable to revenues for the year is found by multiplying the number of units sold by the unit charge. Revisions to date may be required in computing the annual depletion and the reserve for a number of reasons; including additions to property, retirements, changes in reserve estimates, etc. The unit of production method is to be distinguished from the retirement reserve method. See Wickson, Accountants Handbook, Fourth Edition, Sec. 15.14, 17.52.

Under the Hargrove formula, initiated in 1941, depreciation is booked on a straight line basis at a rate of 8 percent applied to estimated depreciable property other than well equipment at the beginning of each period. Depletion is booked on the basis of a unit rate of 25 cents per barrel placed on oil reserves and wells. The rate of depletion of gas computed at 1.35 cents per Mcf hinges on the rate for oil since it is computed by dividing the balance of plant remaining for gas reserves and wells by the estimated gas reserves. Depreciation and depletion are not booked on oil and gas separately or any particular unit of property but are determined for total oil and gas properties.

The record is wholly lacking in evidence to show that the 25-cent unit rate for oil has, or ever had, any relationship to the investment costs related to finding or acquiring the oil production properties. It is evident from the continued use of the 25 cents per barrel figure that Union has employed a fixed unit rate for determining the depletion provision for oil production and not a rate that properly follows the conventional unit of production method described above. Such a fixed unit rate method could not produce valid results if there were substantial change in the average investment costs per barrel of oil. Although we find no data in the record respecting average investment costs for oil, the record does show that the total United States average value for crude oil in 1942 was $1.13 per barrel, and the average price of Union's crude oil in 1958 was a little in excess of $3 a barrel. Thus it appears to be a reasonable inference that oil costs have risen materially since Union adopted its accounting method in 1941. Clearly there is no substantial basis for Union's use of the 25-cent oil figure applied under the Hargrove formula, and the depreciation rate for gas is correspondingly unsupported because it hinges on the oil figure.

A unit of production method, conventionally applied, also contemplates computations based on the units of oil or gas produced from the oil and gas leases or aggregations, not on an over-all basis. Because Union has accrued depletion on its books in total only, its method fails to take into consideration possibly wide differences in rates of depletion, investment per barrel or Mcf of recoverable reserves, and retirements among Union's numerous depletable reserves, necessarily producing inaccuracies in the resulting depletion reserves. Nor does the Hargrove formula automatically correct for the earlier erroneous depreciation and depletion practices discussed above. The application of a unit of production method for the entire remaining productive life of a property will not bring the book reserve for accrued depletion into balance with the actual accrued depletion until the moment of retirement.

Union's reserve requirement study adduced in evidence as an alternative to the Hargrove formula produces a reserve figure closely comparable to the book figure resulting from the application of the Hargrove formula. This study also fails to meet the standards of a proper unit of production method of depletion and therefore fails to support Union's claimed depreciation and depletion reserve.

---

[3] The SEC, at 16 SEC 546, has also noted that the appropriations to the reserve for depreciation and depletion in the early years of United Gas Corporation's history were low and were subject to serious question.

Again Union's computations in determining annual depletion involved applying to a total depletion base a percentage derived by adding together all production and all estimated recoverable reserve properties, and not on the basis of separate leases. Because of Union's failure to separate depletable units in its computations, we cannot know either what is the proper depletion base for each property or the applicable depletion factor. Union's erroneous application of an over-all depletion factor to property units with widely varying costs, reserves and production will, over the years, undoubtedly result in a significant error. Union's reserve as computed under this study also fails to reflect any recomputation for changes in annual depletion accruals resulting from the revisions of recovery estimates. Obviously, if original estimates of volumes of recoverable reserves are later revised, accruals for previous years should also be revised in order to provide an accurate estimate for the reserve requirement as of the date of the revised estimate and for succeeding years. Union's presentation fails to reflect any such changes in recovery estimates or any related recomputation of depletion accruals, even though many such changes affecting Union's properties were evidently made and recomputations would have been justified.

Staff tested Union's book figures by computing what it considered to be a proper reserve requirement for Union based upon information furnished by the company respecting hydrocarbon reserve data by fields and products. Staff used the information Union provided to compute percentages reflecting the ratio of total production at the end of 1958 to the total of recoverable reserve by fields. Where appropriate, such reserves were allocated between gas and oil (including liquids) and a relative cost basis consistent with *Phillips* (*supra*). Staff applied these percentages by fields to Union's gross plant balance, which totaled $166,443,674 on December 31, 1958. Staff thus arrived at a reserve requirement for producing properties of $90,890,159 as of December 31, 1958. The staff witness testified that on this basis Union's producing properties were 54.61 percent depleted. Applying this depletion percentage to Union's gross general plant of $8,010,796, Staff arrived at a general plant reserve requirement of $4,374,696, which, when added to the reserve requirement for producing properties in the amount of $90,890,159, produced a total reserve requirement of $95,264,855 on December 31, 1958. When averaged for the test year 1958, this produces a reserve requirement of approximately 93.8 million dollars.

Union, while not pointing out any particular error in the Staff's testimony or computations, contends that Staff's method does not follow the requirements of a proper unit of production method, but it is clear that the Staff method applied in computing the depreciation and depletion reserve for Union was not intended to be a complete reserve requirement study. It was an abbreviated study, undertaken because of the evident weaknesses in Union's initial presentation to enable the examiner and the Commission to determine whether the inadequacies of the Union presentation and its failure to meet its burden thereon were purely technical (in which case they might have been overlooked) or appeared to be of substantial import. In the circumstances it was a suitable, if not the only then available method for arriving at a reasonable estimate of a proper reserve for use in testing the Union figures.

In order to compute depletion properly by the method normally applied, complete plant records would have to be available from the inception of Union to date showing the data by years and by properties respecting gas reserves, additions to plant, production, retirements, and other pertinent facts. The staff witness did not have all this necessary information as he makes clear on the record. Union, however, having failed to make its own case, as it must do to justify rate increases, cannot validly complain that Staff did not make the company's case for it.

We conclude, therefore, that the Examiner properly rejected Union's depreciation and depletion reserve figures (both per its books and its reserve requirement study) and that the Staff study while not wholly adequate in itself demonstrates that this deficiency in Union's case is substantial to the point of being controlling. Union's proposed increases amounted to about $730,000 for the test year. Its excess revenues as found by the Examiner amounted to about $4,100,000. Using the net plant of $108,000,000 the increases could only be justified by using a rate of return of over 10%. Conversely, if Staff's depreciation and depletion figures were substantially modified there would still be no justification for the increased rates on this record unless other elements of Union's cost were also adjusted in Union's favor, and we do not find that any such adjustments are warranted. If the $30,000,000 of depreciation and depletion in dispute were all added to Union's rate base at a return of 6.5 percent it would add costs of less than $2,000,000. As discussed below, Union, on the evidence in this proceeding, has not justified a return above 6.5 percent. We note, however, that even if we were to allow as much as an additional 2 percent on the entire net plant claimed of almost $140,000,000, it would still add less than $3,000,000 to Union's costs and would leave a revenue excess after deducting the $730,000 in increases from the $4,100,000 of excess revenues.

While we find that Staff's presentation was sufficient to demonstrate that Union's rate increases were not justified by Union's presentation and clearly shows that Union's revenues in the test year exceeded its costs by an amount substantially in excess of the proposed rate increases, we do not believe that the Staff presentation provides a sufficiently accurate basis upon which to determine Union's rates for the future. We will therefore remand Docket No. G-18354 to the Examiner with instructions that he obtain from Union an accurate depreciation and depletion figure based upon complete data consistent with our Uniform System of Accounts. Since the 5(a) proceeding must be remanded for this purpose we will also direct that a more current test year be adduced and that further rate of return evidence may be presented as discussed below. With regard to the other issues concerning Union's costs we believe they have adequately been disposed of as set forth hereinafter. The principles which we note below should therefore be applied to a current test year containing a proper depreciation and depletion study and additional evidence on rate of return insofar as it may be relevant.

The next question presented in determining the proper cost of service for Union is the rate of return. The Examiner would allow Union an overall rate of return of 6.5 percent, denying the 12 percent or more requested. Following the Staff's position, the Examiner considered that since all of Union's capital has been supplied by its parent, United Gas Corporation, Union's rate of return requirements should be gauged primarily by the financing experience of United Gas Corporation, and of pipelines generally, rather than by the experience of producers.

In arguing that it is entitled to a 12 percent return, Union contends that its affiliation with United Gas Corporation is not controlling and that the affiliation does not reduce the risks of its operations below those of an independent producer. As stated earlier in this opinion, the Examiner was correct in finding that Union must be considered as the producing arm of a pipeline and is not comparable to an independent producer.

Determining a fair rate of return for the producing arm of a pipeline has been the subject of considerable discussion in recent decisions by the Commission in *El Paso* and *Southern Natural*.[4] It seems unnecessary to repeat what we so lately said in those cases. We add only that the proof in this proceeding with respect to an additional return did not meet the tests specified in the El Paso and Southern Natural opinions. If Union can demonstrate the public benefits referred to in those opinions it would be entitled to an additional return. Accordingly, in the remand Union should be permitted to introduce evidence of the type suggested in El Paso and Southern Natural in support of its claim for an additional return.

Another issue raised is that of the allocation of costs of producer joint products. Union, like most producers, produces gas from some wells, oil from others, and joint products (gas and oil, or gas and condensate) from other wells. The Examiner allocated these costs of Union by the relative cost method approved in our *Phillips* opinion, *supra*. This method simply takes the cost of producing gas in the virtual absence of liquids (the gas "leg"), and the cost of producing oil in the virtual absence of gas (the oil "leg"), and applies the ratio of these two known costs to the costs of producing gas and liquids jointly.

Union contends that its gas and oil costs (except exploration and development costs) were properly recorded directly to gas and oil on its books, and that the amount of joint products is minor (condensates only 2 percent and casinghead gas only 3 percent of total gas production), so that no allocation of joint products costs was necessary.

In addition, Union contends that the Examiner in applying the relative cost method erred in treating gas condensate production like gas production, and in combining the former with the latter for purposes of finding the gas leg. Union argues that gas condensate wells are gas wells and not oil wells, and that condensate is a part of the gas and not oil. Also, Union contends that the Examiner erroneously used non-representative low-cost gas wells and thus improperly shifted gas costs to oil.

In our judgment, the foregoing and other objections advanced in Union's exceptions are without merit. Union's gas and oil costs as recorded directly to its books do not provide a proper basis for developing a cost of service. To a material extent, the costs to gas and oil recorded by Union to its books reflect allocations previously made by Union personnel which were not supported on the record. Union derived approximately 17 percent of its revenues from condensates in the test year, compared to approximately 45 percent from gas and 38 percent from oil. Clearly, an allocation of joint products costs was necessary.

The Examiner, in applying the relative cost method, concluded that Staff's gas-only production, or gas leg, was too small to be properly representative, since it concluded only about 6 percent of Union's total gas production. He used instead the gas leg of the Philadelphia interveners, which embraced all of Union's gas fields having a gas-liquids ratio exceeding 100 Mcf of gas per barrel of liquids. This resulted in including 19 gas-condensate fields, and gave a gas leg which included 31 percent of Union's gas production for the test year. In our view, the Examiner's inclusion of some gas-condensate production in the gas leg in order to produce a more representative gas leg was fully justified in the circumstances.[5] Likewise, the Examiner was justified in using Staff's oil leg. Although Union complains the oil production covered is not representative, the oil leg embraces some 29 percent of Union's total liquids production, compared to some 30 percent in *Phillips*. Under the circumstances, we conclude that the oil leg is adequate and the Examiner's allocations are correct.

---

[4] *El Paso Natural Gas Company*, 28 FPC 688; *Southern Natural Gas Company*, 29 FPC 323.

[5] *Cf.* the provisions of the Texas Civil Statute, Title 102, Art. 6008, p. 8 (dec. 23), which define "gas well" as any well which, *inter alia*, produces more than 100 Mcf of natural gas to each barrel of crude petroleum oil from the same producing horizon.

Union has also excepted to the exclusion of bank balances from working capital. The Examiner, following staff's recommendation, excluded bank balances of some $3.3 million (monthly average) from Union's working capital in determining its rate base. Working capital is an allowance in the rate base, on which a return is permitted, for the amount a company must supply from its own funds to meet obligations arising in the current operation of the business. The Examiner allowed the items claimed and normally permitted in working capital, such as one-eighth of annual cash operating expenses (45 days), prepayments, and an allowance for material and supplies. The Examiner excluded the claimed bank balances, however, holding that the Commission has consistently done so in other cases, citing *El Paso Natural Gas Co.*, 22 FPC 260, 270, *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 606, 611, and the *Phillips* opinion, 24 FPC at 566. The Examiner also pointed out that from these bank balances, Union pays dividends and interest on common stock and fixed obligations owned by its parent, United Gas Corporation.

Union contends that producers generally need much larger amounts of cash working capital than do pipelines. And it argues that record evidence establishes that Union needs the $3.3 million a month bank balances over and above the cash working capital already allowed to meet cash requirements for exploration and development, lease acquisition costs, and well-drilling expenses requiring internally-generated cash. Union argues that the 45 days' annual cash operating expenses permitted in working capital covers the period before the cash from related revenues is collected and does not provide sufficient cash balance for the above needs. Under *Trunkline Gas Company* v. *F.P.C.*, 247 F. 2d 159, says Union, minimum bank balances should be allowed if factually justified. In addition, Union contends that in the *El Paso* case, 22 FPC at 270, the Commission recognized that the company needed an additional $2.3 million for minimum bank balances, but did not allow it since El Paso had available over $2 million accruals from taxes other than income. However, Union contends that it has no such other cash available, and it says working capital was not ruled on in *Phillips* at all, 24 FPC at 566. Finally, it contends that the Examiner's summary grounds for excluding bank balances are inadequate and arbitrary.

We conclude that minimum bank balances should be excluded as an addition to the working capital allowance on which a return is permitted, because it does not appear that such balances are required to enable Union to carry on its business. Our exclusion of bank balances from working capital does not deny their use to the company but merely denies the company a return on them until they are invested. We also point out that Union has available as cash working capital adequate amounts received as advances from its affiliate, United, and on which United is already receiving a full return. We note also as we did in *Hunt Oil Co.*, 28 FPC 623, 625, the use of a year end rate base assures that Union will receive a full return on any investments during the year, even though some properties may not be purchased until late in the test year.

The issue of disallowance of claimed Federal income taxes requires little discussion. Union claimed in its test year cost of service an amount of some $13.3 million, comprising Federal income taxes as computed without giving effect to the deductions for statutory depletion and intangible drilling and development costs permitted by Sections 613 and 263(c), respectively, of the Internal Revenue Code. The Examiner excluded this $13.3 million from the cost of service on the ground basically, that Union in fact had no Federal income tax liability for the test year.

Union excepts, contending that as a producer the tax benefits from statutory depletion and intangible drilling and development costs are essential to carry out vital exploratory and drilling activities and supplying needed gas. Union says that during 1954–58, such tax benefits provided almost one-fourth of its total expenditures for exploratory and development activities, that denying them to Union would adversely affect its search for and production of oil and gas, and that such would be contrary to the interest of the consumer. Certain other objections are also advanced.

The Examiner should be affirmed on this issue also, basically for the reasons he gave. As the Examiner found, Union in fact had no tax liability and filed no return for the test year, but experienced an income deficit for that year, as computed for tax purposes in accordance with the tax laws and regulations, of some $15 million. The Examiner's decision cites the numerous judicial and Commission decisions dealing with this issue and supporting the conclusion that financing needs for exploration and development, etc., should be met through a sufficient rate of return allowance.

Another exception of Union arises from the fact that in determining Union's unit production costs for natural gas, the Examiner used only the seven-eighths, or net interest volumes of Union's production, excluding royalty expenses from operating expense. Also the Examiner adjusted Union's revenues from gas sales during the test year to reflect revenues received by Union from the sales of wet gas to purchasers who later processed the wet gas and subsequently reimbursed Union for the liquids extracted.

Union excepts to the foregoing and other related determinations of the Examiner. Union contends, *inter alia*, that the Examiner should have followed its presentation which reflects the gross eight-eighths production in determining unit production costs for natural gas. Union also contends that the Examiner's procedure erroneously treated $1.5 million of royalty revenues from condensates and products as jurisdictional sales of natural gas, whereas it says that the sale of products from gas is a separate nonjurisdictional business of Union, as we have recognized.

We conclude that the procedures employed by the Examiner in the foregoing connection, which Staff and certain interveners recommend, were appropriate in the circumstances and produced a reasonable end result. Nor has Union shown that its procedures are more valid or are otherwise to be preferred. Determining the royalty interests by separating out ⅛ of the volume before determining the unit cost rather than using ⅞ of the volume and adding ⅛ to the unit cost avoids constant recomputation and gives essentially the same result. The revenue received from the products extracted from the gas stream was part of the total price paid for the gas by the purchaser and was properly credited against the cost of service. We perceive no justification, therefore, for disturbing the Examiner's judgment concerning these matters.

Union also contends that the Examiner's findings respecting the depreciation and depletion reserve issue, rate of return issue, working capital issue and certain other issues are inadequate. Reviewing the Examiner's decision as supplemented by this opinion, we think that the path the Examiner followed is clearly discernible, the parties' material arguments are dealt with, and all the findings required by law are made.

We turn now to the question of rates and refunds. As indicated at the outset, the Examiner, to effectuate his decision, directed Union to file within 30 days rates which will produce no more than the jurisdictional cost of service found to be proper, with supporting data from which it can be determined that such rates are satisfactory. He also directed that such rates conform, insofar as possible, to the area pricing standards as set forth in our Statement of General Policy No. 61-1, 24 FPC 818, as amended. The Examiner also required Union to refund to its jurisdictional customers, with interest at 6 percent per annum, all amounts collected under its Section 4(e) rate increase filings made effective subject to refund in all the dockets in this proceeding except Docket No. G-18354. Refunds cannot be required, of course, with respect to the rates which are the subject of the Section 5(a) proceeding in Docket No. G-18354.

Staff evidently sees no objection to effectuating the 5(a) determination in the above manner. Union also evidently considers that levels of particular rates should be based upon the area pricing standards. Public Service at the oral argument proposed certain modifications to the Examiner's procedures, including permitting more recent cost evidence to be adduced.

We conclude that the Examiner's procedures, summarized above, are reasonable and should be followed in substance in fixing Union's rates at the conclusion of the remanded proceeding. We have already noted that more recent cost evidence should be adduced. Full refunds of all increased rates collected in the 4(e) proceedings should be made to the purchasers immediately.

The Commission orders:

(A) The decision of the Presiding Examiner issued in these proceedings on June 26, 1962, is modified as herein set forth and as so modified is adopted by the Commission as its decision in this case.

(B) Union's increased rates and charges contained in its filings in Docket Nos. G-13811, G-13820, G-14114, G-14352, G-14553, G-16725, G-17589, and G-17606, are hereby disallowed and denied.

(C) Within 30 days from the date of issuance of this order Union shall make refunds in the dockets referred to in paragraph (B) above, of all amounts collected subject to refund together with interest and shall within 15 days of making such refunds report to the Commission the amount of such refunds, to whom they were made and the method of computation.

(D) Union shall within 30 days of the date of issuance of this order file reduced rates where appropriate consistent with ordering paragraph (B) and subject to Commission approval.

(E) The proceedings in Docket No. G-18354, are hereby remanded to the Examiner for further hearing and decision consistent with the principles set forth above.

(F) All exceptions to the Examiner's decision not granted herein are hereby denied.

Commissioner Black *concurring.*

Commissioner O'Connor *concurring* in part and *dissenting* in part.

Commissioner Woodward *dissenting.*

BLACK, Commissioner, *concurring:*

I agree with the result reached in this case but I am disturbed by the Commission's comments concerning Union's rate of return on account of its production activities. The Commission appears to be holding out the promise of some additional, extra, or premium rate of return (the quantum of which and the manner by which it would be measured I do not know) if the company can show that "public benefits" will result. Our opinion also contains language that a "higher return can be justified on the basis of Union's value to United's customers." While the majority opinion pays lip-service to the *El Paso* and *Southern Natural* decisions, it appears that we have considerably softened the requirements set forth in these cases. As I read them, these two cases require much more than a showing of "benefits" or "value" from pipeline production as a basis for an "extra" rate of return.

The majority has correctly stated that "Union must be considered as the producing arm of a pipeline and is not comparable to an independent producer." It is fundamental to pipeline rate regulation by this Commission that utilities subject to our jurisdiction are entitled to recover their costs of service including a reasonable return on their investment devoted to serving their jurisdictional customers. We should not abandon or substantially modify this orthodox cost of service philosophy for some woolly and uncertain concept of value, or benefit, or incentive, or what have you, with resulting higher price gas to the consumer except upon a most compelling showing.

In *Southern Natural* the Commission observed that the company had not demonstrated that pipeline production activities involve the same degree of risk as that encountered by an independent producer. Perhaps it can be shown in the Union-United situation that measurable "overall financial risk" (to use the words of the *Southern Natural* decision) is present and that the ultimate cost of providing service reflects this risk. If this can be demonstrated on the record, then of course this Commission must allow the company rates which will recover these costs. This might mean a higher rate of return—reflecting higher cost of capital—than would be permissible without the extra risk factor.

But to provide an "additional" rate of return, as the majority indicates we will do, simply upon a showing of "benefits," presumably as an incentive to continued pipeline production activities, is farther than I am prepared to go. If there are not real additional economic risks in pipeline production, and if such method of operation is cheaper than purchase of gas from independent producers, then I cannot believe that enlightened management will abandon its own production, or that it will not seek to expand production activities. We observed, both in *El Paso* and in *Southern Natural* that if the company's "production activities result in lower overall costs and thus lower rates to its consumers, it has every reason to continue such operations in the normal course of the prudent, business-like operation of its system." I suggest that we should not depart from this premise, and until it can be shown that actual consumer benefits will be lost without a premium rate of return, we have no business promising it.

O'CONNOR, Commissioner *concurring in part* and *dissenting in part:*

In October of 1962 this Commission issued its decision in *El Paso Natural Gas Company*[1] the first of three recent opinions involving a contested rate of return for pipeline production of natural gas. Prior to deciding that rates of return of 6 percent and 6⅛ percent were "just, fair and reasonable" for the entirety of El Paso's integrated system, this Commission was ordered by the Federal Court of Appeals for the 5th Circuit to assign ". . . the incentive necessary to attract capital to the exploration and development activities of the company."[2] This the Commission refused to do but vaguely suggested the conditions precedent to our assignment of this incentive factor which four months later, in *Southern Natural Gas Company*[3] we more clearly enumerated. These conditions as enunciated are first, that the pipelines must be engaging in production for the benefit of its pipeline customers, and secondly, that the production must be a demonstrable economic benefit to the pipeline customers.

[2] *El Paso Natural Gas Co.* v. *Federal Power Comm'n.*, 281 F. 2d 567, 574 (5th Cir., 1960).

[3] 29 FPC 323 (1963).

A considerable portion of the natural gas industry, the pipeline producers, whose ratio of gas produced to gas purchased has decreased sharply in recent years, paid close attention to these words. They were eager to see if, and to what extent this Commission would give effect to its previous words in the July 1960 interim order in *Southern Natural* when we said: "The Commission has heretofore expressed its opinion as to the desirability of encouraging pipeline companies in the development of their own natural gas production . . ."[4] If such development was desirable then, ". . . it follows that this must result from regulatory policies designed to encourage rather than penalize such activities."[5] If ever this Commission has had before it an affiliated producer which would justify the initiation of such a policy, it is Union Producing; and, although I concur in the decision to remand the Section 5(a) proceeding, I am compelled to dissent to the rejection of those Section 4(e) increases to levels below our area guidelines for increased rates. My reasoning is as follows: had the majority treated Union Producing as an independent producer these increases would have been allowed. I contend that Union Producing is sufficiently comparable to an independent producer of similar size to be regulated as one, and consequently I contend that the increases were justified.

The first step that should be taken in deciding whether an affiliated producer is to be regulated on a cost of service basis, or, because of extraordinary circumstances, on an independent producer basis, is to focus an inquiry on the extent of the unity resulting from the affiliation. The United Gas Pipe Line-Union Producing affiliation is the "cleanest" in the entire industry. First, Union Producing has been operating for 33 years; it was not brought into being, as several producing affiliates have been, in order to avoid a disadvantageous application of the cost of service method of regulation. Thus, there is no taint attached to its inception. Secondly, unlike El Paso and Southern Natural, Union Producing is not a division or a department of one corporate structure; it is an entirely separate corporation run on an entirely separate basis. The clear distinction between transmission operations and producing operations goes deeper than separation of personnel. What crucially differentiates the Union-United affiliation from both of those previously reviewed and what causes my severe disapproval of the majority's opinion is the fact that not one cent of any exploration and development expense incurred by Union Producing is included, prior to delivery of gas, in a United Gas Pipe Line cost of service, nor, aside from prepayments of gas common to non-affiliated producers has there ever been one advance to Union from United. In short, Union recovers its exploration and development expenses in the same manner as every other independent and in a manner decidedly different from the ordinary affiliate. A thorough appreciation of this fact must be kept in mind if we are to make any meaningful inquiry into the risk factor inherent in Union's operations. As was well stated by Mr. Justice Jackson in *Federal Power Commission* v. *Hope Natural Gas Company*,[6] it is this element of risk which totally differentiates the production industry from the transmission industry. Thus, if an affiliated producer is to be regulated as an independent, he should be able to show that risks are comparable.

In the *Southern Natural Gas Company* case this showing could not be made. The majority of this Commission disposed of Southern Natural's risk argument with three observations: First, all of its dry hole expenses were included in its cost of service; second, Southern Natural had a ready market for its production; and third, Southern Natural could blend high cost gas with low cost gas to produce a return on the former.[7] As to the first observation, it is meaningless when considered in the context of the Union-United affiliation, because the latter includes the exploration and development expenses of the former only *after* merchantable gas has been received. Thus, by the time the United customer pays for his bill, there is no risk that he will be paying for nothing. He has already received what he paid for, and, unlike previously considered affiliations, he is not sponsoring *future* dry holes. This means that the entire risk is undertaken by Union; they explore and attempt to develop without any assurance that production will ever be sufficiently established to repay their investment. If not established, these expenses will be written off against Union's current production and will not be recovered through ratepayer contributions or United Gas Pipe Line advances. If production is established, the price at which Union can sell to United is then established by the Commission in a cost of service procedure which, in turn, involves a risk not faced by independent producers. These procedures involve numerous decisions on complex issues of cost allocations between jurisdictional and non-jurisdictional activities, and the risk is substantial that costs will be improperly allocated to non-jurisdictional activities and never recovered. A still further risk involves marketing the gas, and the existence of United Gas Pipe Line does not obliterate this risk. In a very real sense it increases it because Union's sales policy is such that it is completely dependent upon United Gas Pipe Line, and their successes are mutually interdependent. Thus instead of minimizing its own marketing risks, Union, unlike suppliers who sell to numerous purchasers, has inherited all the marketing risks of one purchaser, and as recent proceedings have revealed these risks are not illusory. Inheriting the marketing risks of United thus potentially negates any assurance on Union's part that the per Mcf price set in its cost of service study will finally be realized. This is because United, if unable to continually find new sales will find increasing costs causing a disproportionate rise in the per Mcf price it must obtain to recover a fair return on its investment. In order to combat this United will have to either increase the price of its gas, which makes a still less attractive offer and is liable to further decrease its sales, or reduce the cost of its purchased gas. In the event it takes the latter alternative, Union will be forced to accept less for its gas than a fair rate of return would dictate. In short, any statement that Union has no marketing problem is an unwarranted oversimplification.

---

[4] 24 FPC 26, 31 (1960).

[5] *Panhandle Eastern Pipe Line Co., et al.* v. *Federal Power Comm'n.*, 13 FPC 53, 352 U.S. 891 (1956).

[6] 320 U.S. 591 (1944). "The service one renders to society in the gas business is measured by what he gets out of the ground, not by what he puts into it, and there is little more relation between the investment and the results than in a game of poker." *Id.* at p. 649.

The second observation made in Southern Natural, as to the existence of a ready market, is misleading for in each of the three states where Union operates United Gas Pipe Line has always purchased ratably from non-affiliated producers in order to aid them in protecting their leases. Thus they, as Union Producing, have always had a ready market for their gas because United has always deemed it in the best interests of the industry to keep these non-affiliated producers in business. Any intimation of the non-affiliated producer eager to sell his gas but withering on the vine because of United's preference to its affiliate, cannot be seriously entertained. It might also be noted that large independents, in general, have a ready market for their gas for a number of reasons: large producers can offer more stability than small independents by assuring large volumes over long periods; large producers generally have lower unit costs than small independents producing the same volume, which results in lower unit prices; large producers can operate in wide areas and therefore have a greater chance of establishing production near prospective purchaser. Thus, Union Producing does not derive its ready market solely from its affiliation; as an independent of equal size it would have ready potential buyers, as well as a more diversified and thus less risky sales policy.

---

[7] *Southern Natural Gas Company*, 29 FPC 323, 336 (1963).

The third observation made in *Southern Natural*, that unlike an independent producer it could mix high cost gas with low cost gas to guarantee a return on the former is inapplicable to Union Producing because it begs one very serious question; namely, what return is Union Producing guaranteed if *no* gas is produced? To say that a return is guaranteed regardless of whether gas turns out to be high cost or low cost is very little compensation to Union Producing which is engaged in a highly speculative industry. Union Producing, unlike El Paso and Southern Natural which recover their expenditures regardless of whether production is established, cannot possibly be expected to venture into increasingly high cost production when the chances and the extent of remuneration are so very small.

Reaching the conclusions that United Gas Pipe Line and Union Producing are separate operations and that Union Producing has risks comparable to an independent producer states only a part of Union's case. Further inquiries should then be made as to the extent to which United Gas Pipe Line-Union Producing affiliation acts to the detriment or to the benefit of the public interest. It must be understood at the outset of this inquiry that uncontroverted testimony reveals that United Gas Pipe Line has, during the entirety of its 34-year history, taken ratably from all producers in the fields in which it operates, even prior to the advent of ratable-take statutes. United has at no time entered into a policy of production manipulation to the detriment of the general public or the industry, but, on the contrary, its policy of self-imposed ratable takes has at all times been compatible with the public interest.

Even more relevant in any overall "public interest" examination of Union's operations is the undeniably low prices charged by Union to United, the benefit of which is then passed to United's customers in the form of lower rates. Exhibit 13, an FPC release dated November 12, 1958, shows that in 1957, Union sold 232 MMcf of natural gas at an average price of 9.8 cents. Of this 90 percent went to United Gas Pipe Line at 9.4 cents, while the remaining 10 percent went to unaffiliated purchasers at 13.4 cents. These figures approximate 1958 results. This same report reveals that out of the 247 producers listed therein, only 38 have an average sale price less than that shown for Union Producing. Thus, 84.6 percent of the listed producers received greater than 9.8 cents per Mcf. As the majority is aware, the current United Gas Pipe Line proceeding[8] reveals that the price paid by United to other independent producers is roughly twice the price paid to Union Producing. Taking an overall view at Union's pricing policy, Exhibit 12 reveals that the weighted average purchase price paid for gas by 13 major transmission companies for up to a 10-year period is as much as 10.5 cents per Mcf higher than the weighted average of Union's sales prices to major transmission companies. Of even broader importance than the price paid to or received by Union is the fact that RP63-1 has clearly indicated that United Gas Pipe Line pays less for gas in fields where Union Producing operates than it pays in fields where Union Producing does not operate. When a pipeline without any compulsion from a regulatory body, uses the leverage created by its affiliation with an independent producer to force other independent producers to hew to a lower price line, substantial consumer benefit is derived. This benefit is not to be lightly disregarded.

---

[8] Docket No. RP63-1.

As a minor point to this decision, but one not without its public interest implications, is the fact that Union Producing has extremely few contracts in which take-or-pay provisions are found. As to the contracts which include these provisions, Union Producing has always made extensions in time in order to assure that no gas was paid for which was not actually taken. There was no distinction on Union's part between United and nonaffiliated purchasers vis-a-vis these extensions. As we are currently considering the merits of the take-or-pay obligation in R–199, the point is worthy of note.

* * * * * * *

It is incontrovertible that this country will continue to require large quantities of natural gas. Studies estimate that the market requirements for the years 1960 to 1965 will increase from 10,757 MMMcf to 14,414 MMMcf. Reserve addition requirements for the same years will increase from 25,880 MMMcf to 32,470 MMMcf even though estimated reserve additions will be only 21,344 MMMcf. Studies reveal that by 1965, there will be a 52.12 percent deficiency of gross additions when compared to the reserve addition requirements. Thus, the Statement of the 5th Circuit that ". . . there is a public interest in the creation of an incentive to cause additional exploration and development in the oil and natural gas industries"[9] has never been more accurate than today. In light of this ever growing need, it is crucial for the majority to fully comprehend the plight of Union Producing. Their exhibits reveal the following facts: From 1950 to 1960 the cost per unit of gas produced doubled, and the cost per unit of gas sold more than doubled. Geological and geophysical expenditures per unit of reserve additions nearly doubled from 1950 to 1958. Bonus costs per acre trebled from the 1948–1953 period to the 1954–1959 period, and the total costs per unit of unproven acreage rose 72 percent for the same period. Royalty payments per unit of gas sold doubled from 1950 to 1960. These costs are nearly three times what normal inflation indices reveal. The average depth of producing gas wells increased from the 1946–1950 period by 2,824 feet. The necessity for deeper depth in itself resulted in the tons of casing and tubing per well, the drilling time per well, and the construction time per well showing astounding cost increases. As might be expected, Union's exploration and development expenses per billion Btus of reserves added more than doubled from 1950 to 1958, but what is significant is that from 1950 to December 31, 1959, their total reserves fell from 3,844 MMMcf to 3,385 MMMcf. This decrease of some 12 percent is reflected in a comparison of Union's production as a percent of the total U.S. production for the years 1955 through 1959: 1955 (2.52%), 1956 (2.49%), 1957 (2.25%), 1958 (2.19%), 1959 (1.88%).

The sum and substance of all this is that at a time when gas production is far behind gas demand, a producer faced with spiralling costs has appeared before us for authorization to increase its prices from a near confiscatory level to one where a minimal return on its investment will be realized. This the majority of the Commission has refused to do, but with full knowledge of all facts has disallowed contractually authorized price increases. It has, however, deferred for future consideration the most crucial question: establishing a "just and reasonable" rate of return for an affiliated producer which is operationally comparable to an independent of equal size. I emphasize now that if the Commission later ignores this comparability and establishes a rate of return at or approximately near the same level as established in the *El Paso* and *Southern Natural* proceedings, the repercussions will be serious, farreaching and harmful not only to Union Producing but to the entirety of the gas-consuming public.

---

[9] *El Paso Natural Gas Company* v. *Federal Power Comm'n.*, 281 F. 2d 567, 571 (5th Cir. 1960).

The immediate repercussion of an option which continued the El Paso-Southern Natural low rate of return policy for pipeline production would, of course, be felt by Union Producing, United Gas Pipe Line and United Gas Corp. The latter would then in all probability follow one of three alternatives, all equally undesirable. The first would be to completely integrate Union Producing with United Gas Pipe Line. This, of course, would cause the customers of the latter to underwrite the exploration and development expenses of the former prior to the establishment of production. The second alternative would be to transfer Union Producing to an unaffiliated party thereby giving the successor the right to collect area guideline rates far in excess of those Union is now collecting. The third alternative would be to liquidate Union Producing with the result of forcing United Gas Pipe Line to purchase its gas from independent producers at approximately 5 cents more per Mcf than they now pay to Union Producing. The prospect of a general gas price increase resulting solely from a corporate disposition or liquidation makes prophetic words written fifteen years ago:

> Continued rigid adherence to the cost standard may, therefore, induce the divorcement of producing properties from the interstate operations of pipeline companies, with the resultant loss of whatever advantages there may be in such integrated operations from the standpoint of both the companies and their customers.[10]

The secondary repercussions will be felt by interests far broader than those represented by Union Producing, United Gas Pipe Line and United Gas Corporation and certainly as significant. These are the interests of the royalty owners in the States of Mississippi, Louisiana, and Texas. Although the instant rejection of the increased rates has resulted in a temporary reduction of royalty payments, a final decision by this Commission that Union must forever pay royalties based on gas priced far below what independents can pay would place Union in an impossible leasing dilemma: either pay higher bonuses, or royalty payments, or both, or else watch desirable leases be negotiated with producers whose gas is either not subject to our jurisdiction, or if subject, not shackled to a low rate of return. The third repercussion of such a decision would be felt by the State Governments of Mississippi and Texas—the latter State being the largest producer of natural gas in the United States—by severely limiting the amount they will be able to realize from state severance and ad valorem taxes.[11] The amount these States collect annually by the vehicle of these taxes is considerable. They furnish to a substantial extent the funds necessary for schools, old age assistance, and child welfare. Any decision of this Commission which would unjustifiably limit affiliate sales prices would not only be unwarranted in itself, but it would also impair the rights of these States to the income which they for years enjoyed, and utilized to the benefit of their citizens.[12]

---

[10] Smith & Wimberly, *Natural Gas Investigation*, at p. 215 (1948).

[11] Louisiana, which taxes its gas production on a per Mcf basis, will be unaffected by a reduction in prices assuming that that production is not thereby reduced.

[12] Those who erroneously consider this tax contribution as insignificant would do well to study the latest fiscal reports of the State of Texas. It reveals that for the year ending August 31, 1963, Texas collected $64,050,842.00 through a 7 percent natural gas wellhead tax. This tax alone paid for over 12 percent of the State Government's cost of public education, and over 25 percent of the cost of teacher retirement, old age assistance, and aid to the disabled, the blind, and to dependent children.

These conclusions are neither new nor unsubstantiated. They were amply developed in Smith and Wimberly's 1948 report to Congress on the Natural Gas Investigation, where in reference to the effect of insufficient gas price levels, the following statement was made:

> It is pointed out also, that the adverse effects of this tendency are widespread, being seriously detrimental to conservation efforts, to the interests of gas producers and royalty owners as a whole, and to the entire economies of the producing States whose tax income from gas values and production are reduced thereby. Insofar as there may be such undesirable results, it is not in the broad public interest to ignore them in applying ratemaking policies.[13]

The majority of this Commission must face the facts that pipelines are engaging in the production of natural gas, and that as long as there is a Federal Power Commission in existence, there will be this production to regulate. The admittedly complex problem is: How? I contend that those affiliations where production and transmission are distinct, so that the risks of the former are not subsidized by the customers of the latter, are sufficiently comparable to an independent producer to warrant their regulations as such. Consequently, I would now, while presented with this record of operational divorcement likely to be unequalled in the near future, initiate the policy of giving pipeline producers the option of being regulated on an individual cost of service basis or on an area guideline basis. In those operations where the exploring and development expenses have never been underwritten by the consumer, no regulatory problems would arise upon the exercise of the option to be regulated on an area guideline basis. In those operations, however, where the consumer has underwritten some or all of these expenditures a situation involving different considerations is presented. As to these operations, I would suggest the following approach: Allow the creation of a producing affiliate conditioned upon the exploration and development funds being generated independently of consumer subsidies or extraordinary parental advances. Then, as to all production established after the creation of this affiliate, allow area guidelines to set the maximum rates. As to all production established prior to this date, this Commission should set applicable rates, giving due consideration to the consumer's previous payments of all or part of the exploration and development expenses. I stress, however, that this option would be exercisable only once: affiliates would not have the option of weighing the benefits of cost regulation against area regulation at the outset of each rate case. If in subsequent years the alternative followed resulted in a lesser return than the alternative rejected, the affiliate would nevertheless be bound to his previous decision. Thus the option does not forever guarantee the higher of two returns.

Consistent with well established Commission policy, the price established for gas sales to affiliated pipelines would not be controlling as a cost of purchased gas figure in any pipeline rate case.[14] One plausible method by which this figure might be determined, however, is as follows. First, calculate the actual gas price paid to the affiliated producer. Second, calculate the price that would have been paid had the producer been regulated on a cost basis. The difference between the two would then be discounted by the average interest of the producer in the wells involved. The amount discounted would then be subtracted from the price actually paid to reach the cost of purchased gas. Thus, if the affiliated producer had a 25 percent interest in the wells involved, sold gas at 16 cents, but, had he been regulated on a cost basis, would have sold it at 12 cents, the pipeline's cost of purchased gas would be 15 cents. (25% of 4¢ (16–12) = 1¢. 16¢ minus 1¢ = 15¢.)[15] The advantages of this approach would be to prevent penalizing both individual[16] and State interests which, solely because of co-ownership with an affiliated producer, are being given discriminatory regulatory treatment.[17]

---

[13] Smith & Wimberly, *Natural Gas Investigation*, p. 212 (1948).

[14] E.g., *An-Son Corporation, et al.*, Docket No. G–6693, *et al.* issued October 31, 1963. "The authorization granted in Docket Nos. CI61–212, CI62–1053 and CI63–1561 determines only the payments which may legally be made by the buyer to the seller and does not estop the Commission from considering the appropriate cost to be attributed to the subject sale, should buyer's purchased gas costs be in issue in a future rate proceeding under Sections 4(e) or 5(a) of the Act." *Id.* p. 8.

This approach is not without its shortcomings, but it is far preferable to continuing a low rate of return cost concept policy under conditions which strongly justify other approaches. The substantial evidence adduced in this proceeding as to the degree to which Union and United have always operated commensurate with the public interest serves to reinforce my opinion.

INITIAL DECISION

UPON PROCEEDINGS PURSUANT TO SECTIONS 4 AND 5 OF THE NATURAL GAS ACT

(Issued June 26, 1962)

FRAZEE, *Presiding Examiner:* From time to time since October 31, 1957, the Union Producing Company (Union), the applicant herein, has, pursuant to the provisions of Section 4 of the Natural Gas Act, tendered for filing proposed changes in certain of its currently effective rate schedules (which are more specifically referred to below) for sales of natural gas subject to the jurisdiction of the Commission. Pursuant also to the provisions of Section 4 of the Act the Commission from time to time suspended the effective date of such proposed changes and directed that a hearing be held in each instance to determine the lawfulness of such increased rate, charge, classification, or service. On April 29, 1959, the Commission pursuant to the provisions of the Natural Gas Act, particularly Sections 5, 14, 15 and 16 thereof, issued at Docket No. G–18354, 21 FPC 607, an order instituting an investigation into and concerning all of Union's rates, charges, or classifications, demanded, observed, charged or collected in connection with any transportation or sale of natural gas subject to the jurisdiction of the Commission, or any rules, regulations, practices or contracts affecting such rates, charges or classifications.

---

[15] The one-cent discount would thus be absorbed by the pipeline.

[16] Particularly inequitable is the plight of the involuntarily affiliated royalty owner. To draw an oversimplified hypothetical: A, property owner, enters into a gas lease with B, independent operator, who later assigns his interest to Union Producing. Union then commences sales to its affiliate, United. A thus receives less royalties than he would have received had B sold gas to United, due to an assignment over which he generally has no control.

[17] *Mississippi River Fuel Corp.* v. *Federal Power Comm'n.*, 252 F. 2d 619 (D.C. Cir. 1957) cert. denied 355 U.S. 904 (1957) does not pose any legal prohibition against regulating an affiliated producer on an area guideline basis. Further, the full discount of the affiliated producer's interest negates any potential price manipulation and thus prevents the results anticipated in the court's forbiddance of using contract prices negotiated between affiliates as purchased gas costs.

By its order issued on April 29, 1959, the Commission consolidated the Section 4 proceedings then pending[1] with the Section 5 proceeding in Docket No. G-18354 for hearing and found that Union was an independent producer of natural gas and a natural gas company[2] within the meaning of the Act and engaged in the

• The Louisiana Gas Gathering Tax of 1¢ per Mcf imposed pursuant to Act No. 8 of 1958, approved June 16, 1958, was in effect from August 1,1958 through November 30, 1958. The Louisiana Supreme Court held the aforesaid Act No. 8 of 1958 to be unconstitutional. *Bel Oil Corporation, et al.* v. *Rufus W. Fontenot*, 238 La. 1002, 1175.2d 571; *Southern Natural Gas Company* v. *Robert Q. Roland, Collector of Revenue*, 1235.2d 891. The State of Louisiana made refunds of the taxes collected, which had been paid under protest. The Federal Power Commission on February 21, 1961, as amended on May 29, 1961, in *Texaco Inc., et al.*, Docket No. G-15546, *et al.*, disallowed Union's increased rate filings in G-15549, G-15550, G-15661, G-15745 and G-16336, ordered refunds within 90 days of the amounts refunded and terminated the proceedings in these dockets. Union has reported to the Commission that refunds have been made. Accordingly, these dockets are not herein considered.

[2] Union had heretofore been found to be a natural-gas company on October 3, 1957, ***Union Producing Company*** and ***United Gas Pipe Line Company***, 18 FPC 387, and by a further order of the Commission issued on June 1, 1959 in G-10060.

sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption.

By various orders the Commission permitted the following interventions:

Brooklyn Union Gas Company
Consolidated Edison Company of New York, Inc.
Memphis Light, Gas & Water Division, City of Memphis
Mississippi River Fuel Corporation
Mississippi Valley Gas Company
Philadelphia Electric Company
Public Service Commission of New York
Public Service Electric and Gas Company
United Gas Improvement Company
Willmut Gas and Oil Company

Hearings were held pursuant to the Commission's order at which an opportunity was afforded all parties desiring to do so to offer evidence, and a substantial volume was received directly and by reference to other records. Further, those desiring to do so were permitted to file briefs, and briefs were filed by Union, several of the intervenors and by the staff of the Commission.

The proceedings herein pursuant to Section 4 of the Act concern the lawfulness of the rates, charges, classifications or services in connection with the changes proposed by Union in the several notices of increases filed herein as more specifically shown in footnote 1, *supra*, and the proceeding pursuant to Section 5 of the Act is for the purpose of determining whether any rate, charge, or classification demanded, observed, charged or collected by Union in connection with any transportation or sale of natural gas subject to the jurisdiction of the Commission is unjust, unreasonable, unduly discriminatory, or preferential.

Union Producing Company (Union) is a corporation organized in September, 1937 under the laws of the State of Delaware. Union's principal place of business is located at 1525 Fairfield Avenue, Shreveport, Louisiana. Union is a wholly-owned subsidiary of the United Gas Corporation, owning all of Union's securities. The United Gas Corporation also owns the United Gas Pipe Line Company.

Union is engaged, almost exclusively, in the exploration, development, production and sale of natural gas, condensate and crude oil principally in the States of Louisiana, Mississippi and Texas. Union sells its natural gas production at the wellhead or at the tailgate, or downstream side, of a separator set adjacent to the well. Union neither gathers nor transports natural gas. Union does not purchase natural gas for resale. Except for minor interests in one gasoline plant and four recycling plants[3] where natural gas is processed and from which Union receives revenue for liquids extracted and sold, and revenues from plant residue gas sold, Union does not own or operate any gasoline or processing plants through which its gas production is processed or from which its gas is sold.

The test year used in these proceedings is 1958. On December 31, 1958, Union owned an interest in gas and/or oil producing properties in 161 fields located in

---

[3] See the following table:

Plant name	*Percent Union ownership*
Pledger Gasoline Plant	4.0045
Benton Recycling Plant	1.3545
Cotton Valley Recycling Plant	3.5 approximately
Elk City Recycling Plant	0.3212
Katy Recycling Plant	0.49

five states as follows, 55 in Louisiana, 19 in Mississippi, 1 in Oklahoma, 1 in Arkansas and 85 in Texas. On this date Union's producing wells, operating and shut in, numbered 2207 gross wells or 1463.65 net company interest wells. Union classified 856 of its gross wells, or 612.47 net wells, as crude oil producers; 1023 of its gross wells, or 814.05 net wells, as gas wells; and 328 of its gross wells, or 37.13 net wells, as recycling wells. Union held acreage proven for production, or acreage held for future exploration, in fee or under lease in 11 states.[4]

In the test year of 1958, Union sold oil and/or gas from approximately 127 fields in five states. Crude oil, condensate and plant liquids, totaling 9,675,993 barrels were sold from 112 of these fields, 32 per cent of such sales being made in Texas, 28.38 per cent in Louisiana and 39.44 per cent in Arkansas. Also natural gas totaling 202,821,626 Mcf at 14.9 psia was sold from 110 of these fields, of such sales 51.72 per cent were made in Texas, 45.03 per cent in Louisiana and 3.25 per cent in Mississippi. Royalty income only was received by Union from 13 fields, seven of which were in Texas, five in Louisiana and one in Mississippi.

Also during the test year of 1958, Union held an ownership in 18 fields which produced no revenue. Three of these fields were abandoned during 1958, four were fields in which Union had a farm-out or royalty interest only and four of the fields had previously been producing fields but were entirely depleted at the beginning of 1958. The remaining seven fields were shut-in and which, at December 31, 1958, contained intact all of the recoverable reserves, five of these shut-in fields were in Texas, one in Louisiana and one in Mississippi.

During the test year of 1958, Union was active in exploration and development operations. In the test year Union owned a gross interest in 16 completed oil wells, for a net interest of 10.26 oil wells, a gross interest in 30 completed gas wells, for a net interest of 19.79 gas wells, also in 1958, Union completed 14 gross wells or 8.89 net wells as dry holes. Thus, on a net well basis, 26.36 per cent of Union's total 1958 well completions were oil wells, 50.82 per cent were gas wells and 22.82 per cent were dry holes.

The record herein shows for the five-year period, 1954 through 1958, Union had a total of 391.43 net well completions of which 41.10 per cent were oil wells, 34.60 per cent were gas wells and 24.20 per cent were dry holes.

The rate schedules under consideration herein are:

Union Producing Company's F.P.C. Gas Rate Schedule No. 72

On January 11, 1955, Union contracted with Frank S. Kelly, Jr., H. L. Hawkins and H. L. Hawkins, Jr., to sell for 10 years natural gas produced in the Epps Field in East Carroll and West Carroll Parishes, Louisiana. The initially filed rate was 15¢ per Mcf at 15.025 psia, with Union paying certain of the then imposed taxes and the buyers to pay others. The contract was accepted for filing by the Commission on October 31, 1957.

On October 31, 1957, a notice was filed increasing the rate 5¢ from 15¢ per Mcf plus 1¢ per Mcf Louisiana gathering tax, to 15.5¢ per Mcf plus the 1¢ per Mcf Louisiana gathering tax, at 15.025 psia, effective January 1, 1957. This filing, designated Supplement No. 3 to Union's F.P.C. Gas Rate Schedule No. 72, was suspended by Commission order dated November 29, 1957 in Docket No. G–13820, but was permitted to become effective on December 2, 1957, subject to refund.

Union Producing Company's F.P.C. Gas Rate Schedule No. 78

On July 12, 1951, Union entered into a contract[5] with the United Gas Pipe Line Company, a Delaware corporation, to sell for 10 years natural gas produced in the Greta and Tom O'Connor Fields in Refugio County, Texas. The initial filed rate was 6¢ per Mcf at 14.65 psia for the first five years and 8¢ per Mcf thereafter. Union to pay all taxes imposed prior to January 1, 1950, and prior to delivery; United Gas to pay all taxes imposed upon the gas after delivery. Any new taxes imposed prior to delivery to United Gas, after January 1, 1950, and paid by Union, was to be split 50–50 between Union and United Gas. The contract was accepted for filing by the Commission on October 31, 1957.

On October 31, 1957, an amendment dated February 28, 1956, to the contract between Union and United Gas dated July 12, 1951, was filed involving certain tax reimbursement changes[6] and an increased change in rates from the 6¢ per Mcf to 13.5¢ per Mcf from the effective date of the agreement to February 1, 1957, with an increase of 5¢ per Mcf per year for the following 10 years when the price would reach 19¢ per Mcf. Also the term of the contract was extended from 10 to 20 years. This filing of the amendment to the contract was designated as Supplement No. 5 to Union's F.P.C. Gas Rate Schedule No. 78 and was suspended[7] by Commission order dated November 29, 1957, in Docket No. G–13811, but was permitted to become effective on May 1, 1958, subject to refund.

On October 31, 1957, Union filed a notice of an increase in price to 14¢ per Mcf for gas being sold to United Gas from the Mary F. Lambert wells A–4 and A–6 and from the W. J. Fox *et al.* wells 24, 29, 30 and 33 in the Greta—Tom O'Connor Fields. This increase in price filing was designated as Supplement No. 6 to Union's F.P.C. Gas Rate Schedule No. 78 and was suspended[8] by Commission order dated November 29, 1957, in Docket No. G–13811, but was permitted to become effective on May 1, 1958, subject to refund.

On January 2, 1958, Union filed a notice of an increase in price from 14¢ per Mcf to 14.5¢ per Mcf at 14.65 psia, for the gas being sold to United Gas from the six (6) wells as described in Supplement No. 6, to Union's F.P.C. Gas Rate Schedule No. 78, *supra*. This increase in price filing was designated as Supplement No. 7 to Union's F.P.C. Gas Rate Schedule No. 78 and was suspended[9] by a Commission order dated January 31, 1958, in Docket No. G–14352 but was permitted to become effective on July 2, 1958, subject to refund.

---

[5] The effective date being February 12, 1951. Art. XXII of the filed contract.

[6] United Gas, the purchaser, agreed to reimburse Union, the seller, for three-fourths of all taxes imposed which would be in excess of seven percent of the value of the gas at the well.

[7] See footnote 2 *supra*.

[8] Except insofar as they provide for tax changes due Sept. 1, 1954, and Sept. 1, 1955, and for a periodic increase due Feb. 15, 1956, together with the tax component applicable thereto.

On December 30, 1958, Union filed a notice of an increase in price from 14.5¢ per Mcf to 15¢ per Mcf, at 14.65 psia, for gas being sold to United Gas from the six (6) wells as described in Supplements No. 6 and 7 to Union's F.P.C. Gas Rate Schedule No. 78, *supra*. This increase in price filing was designated as Supplement No. 8 to Union's F.P.C. Gas Rate Schedule No. 78 and was suspended[10] by Commission order dated January 29, 1959, in Docket No. G–17606 but was permitted to become effective on July 1, 1959, subject to refund.

Union Producing Company's F.P.C. Gas Rate Schedule No. 92

On June 23, 1954 Union contracted with United Gas to sell for 20 years natural gas produced in Forrest, Lamar and Pearl River Counties, Mississippi. The initial filed rate was 15¢ per Mcf at 15.025 psia from the date of initial delivery to January 1, 1955, and 20¢ per Mcf for the following four years, with further price escalation provisions for the remainder of the 20 years. Union to pay all taxes imposed on the gas prior to delivery. United Gas to pay any taxes imposed on the gas after delivery. United Gas to pay Union for three-fourths of the amount of any new taxes that may be imposed upon the gas and paid by Union. The contract was accepted for filing by the Commission on October 31, 1957.

On October 31, 1957, an amendment dated December 1, 1954, to the Gas Purchase Contract entered into between Union and United Gas on June 23, 1954, was filed involving increased rates from those set out in the original contract. The increased rates were as follows: 20¢ per Mcf from November 24, 1954, to November 24, 1959, with a 1¢ per Mcf escalation each five-year period thereafter, the term of the contract was extended to 20 years from the date of the amendment. The filing of the amendment was designated as Supplement No. 1 to Union's F.P.C. Gas Rate Schedule No. 92 and was suspended[11] by Commission order dated November 29, 1957, in Docket No. G–13811 but was permitted to become effective on May 1, 1958, subject to refund.

On October 31, 1957, Union filed a notice of an increase in price from 15¢ per Mcf to 20¢ per Mcf at 15.025 psia effective December 1, 1954, and for .1324¢ per Mcf at 15.025 psia, additional severance tax effective April 1, 1955, for the gas being sold to United Gas under Union's F.P.C. Gas Rate Schedule No. 92, *supra*. This increase in price filing was designated as Supplement No. 2 to Union's F.P.C. Gas Rate Schedule No. 92, and was suspended[12] by Commission order dated November 29, 1957, in Docket No. G–13811 but was permitted to become effective on May 1, 1958, subject to refund.

Union Producing Company's F.P.C. Rate Schedule No. 95

On April 27, 1944, Union contracted with the Houston Gulf Gas Company to sell to December 31, 1962, natural gas produced in the McFaddin Field in Victoria County, Texas. The initial filed rate was 3¢ per Mcf at 15.025 psia. The contract was accepted for filing on October 31, 1957.

On October 31, 1957, an amendment dated November 26, 1949, to the Gas Purchase Contract entered into between Union and Houston on April 27, 1944, was filed with the Commission. The filed amendment is between Union and United Gas and recites that United Gas has succeeded to the "rights and obligations" of the Houston Gulf Gas Company under the April 27, 1944 contract with Union. The filed amendment provided for a price increase from 3¢ per Mcf to 6.5¢ per Mcf at 14.65 psia from the effective date of the amendment for a period of five years and for 7.5¢ per Mcf for the following five years, the term of the contract to be 10 years. Union to pay taxes imposed on the gas prior to delivery, United Gas to pay taxes imposed after delivery. Any additional taxes imposed on Union to be split 50-50 between seller, Union, and buyer, United Gas.

---

[9] See footnote 4 *supra*.

[10] See footnote 4 *supra*.

[11] Except insofar as they provide for a tax change due April 1, 1955.

[12] See footnote 7 *supra*.

On January 27, 1958, Union filed a further amendment to the aforesaid Gas Purchase Contract and dated January 14, 1958. The filed amendment provides that buyer, United Gas, will reimburse seller, Union, for all production, severance or gathering taxes paid by Union, the amendment also provides for increased rates from the effective date of the amendment from 7.5¢ per Mcf to 13.75¢ per Mcf at 14.65 psia to June 7, 1962, with 1¢ per Mcf price escalations each 5-year period thereafter for a 20-year term. The filing of the amendment was designated as Supplement No. 5 to Union's F.P.C. Gas Rate Schedule No. 95 and was suspended by Commission order dated February 26, 1958, in Docket No. G–14553 but was permitted to become effective on July 27, 1958, subject to refund.

On January 27, 1958, Union filed a notice of an increase in price from 8.7659¢ per Mcf at 16.7 psia to 13.75¢ per Mcf at 14.65 psia with tax reimbursement to remain the same, *i.e.* seven percent of the value of the gas delivered. The increased price filing was designated as Supplement No. 6 to Union's F.P.C. Gas Rate Schedule No. 95 and was suspended by Commission order dated February 26, 1958, in Docket No. G–14553 but was permitted to become effective on July 27, 1958, subject to refund.

Union Producing Company's F.P.C. Rate Schedule No. 96

On November 3, 1947, Union contracted with United Gas to sell natural gas produced in the North McFaddin Field in Victoria County, Texas to United Gas for 3¢ per Mcf. This contract was accepted for filing on October 31, 1957. Notice of a change increasing the rate from 3¢ per Mcf to 6.5¢ per Mcf was filed on October 31, 1957, and, on that same date, a further notice of change was filed to increase the rate to 8.7659¢ per Mcf effective in November, 1954.

On January 27, 1958, Union filed an amendment to Gas Purchase Contract dated November 3, 1947, providing for a further increase in rates from 8.7659¢ per Mcf to 13.75¢ per Mcf at 14.65 psia effective from that date to June 7, 1962. The amendment was for a 20-year term.

On January 27, 1958, a notice was filed of an increase from 8.7659¢ per Mcf (including tax reimbursement) to 13.75¢ per Mcf. This filing was designated as Supplement No. 6 to Union's Rate Schedule No. 96 and was suspended by order of the Commission on February 26, 1958, in Docket No. G–14553 but was permitted to become effective on July 27, 1958, subject to refund.

Union Producing Company's F.P.C. Rate Schedule No. 215

On September 12, 1957, Union contracted with United Gas to sell for 20 years natural gas produced in the Lirrette Field, Terrebonne Parish, Louisiana. The initially filed rate was 17¢ per Mcf at 15.025 psia, to become effective on September 1, 1957. The rate previous to this date had been 10¢ per Mcf plus 1¢ tax reimbursement. United Gas agreed to pay Union for three-fourths of the amount of any new taxes imposed on Union. The contract was accepted for filing on October 31, 1957. On that date Union filed a notice increasing the rate from 10¢ per Mcf to 17¢ per Mcf at 15.025 psia effective September 1, 1957, plus 1¢ per Mcf tax reimbursement. This filing was designated as Supplement No. 1 to the aforesaid Rate Schedule No. 215 and was suspended by Commission order dated November 29, 1957, in Docket No. G–13811 but was permitted to become effective on May 1, 1958, subject to refund.

Union Producing Company's F.P.C. Rate Schedule No. 218

On November 29, 1957, Union contracted with United Gas to sell for 20 years natural gas produced in the Lafourche and Terrebonne Parishes, Louisiana at an initial price of 18.5¢ per Mcf plus three-fourths of any new taxes imposed on seller. Deliveries had previously commenced at 9¢ per Mcf at 15.025 psia plus 1¢ per Mcf tax reimbursement under Union's Rate Schedule No. 62, which is superseded by Rate Schedule 218.

On December 2, 1957, a notice was filed of an increase from 9¢ per Mcf to 18.5¢ per Mcf at 15.025 plus 1¢ tax reimbursement effective December 1, 1957. This filing was designated as Supplement No. 1 to Union's Rate Schedule No. 218 and was suspended by order of the Commission on December 27, 1957, in Docket No. G–14114 but was permitted to become effective on June 2, 1958, subject to refund.

Union Producing Company's F.P.C. Rate Schedule No. 220

On October 1, 1957, Union contracted with the United Gas Company, Inc., to sell for 20 years natural gas produced in the Palo Blanco Field in Brooks and Duval Counties, Texas at an initial price of 9.70¢ per Mcf at 14.65 psia from the date of initial delivery to November 1, 1957, with price escalations each year thereafter, but without tax reimbursement.

On September 29, 1958, a notice was filed of an increase from 9.153¢ per Mcf to 9.337¢ per Mcf at 14.65 psia, without tax reimbursement, to be effective November 1, 1958. This filing was designated as Supplement No. 2 to Union's Rate Schedule No. 220 and was suspended by order of the Commission on October 29, 1958, in G–16725 but was permitted to become effective on April 1, 1959, subject to refund.

Union Producing Company's F.P.C. Rate Schedule No. 228

On December 12, 1958, Union contracted with United Gas to sell for 20 years natural gas produced in the DeLarge Field in Terrebonne Parish, Louisiana at an initial price of 20¢ per Mcf at 15.025 psia, plus reimbursement of three-fourths of any new taxes, for the first 5-year period with 1¢ per Mcf price escalation each five years thereafter.

On December 24, 1958, two notices were filed increasing rates. The first notice pertained to the Louisiana gathering tax referred to in footnote 1–a *supra*, and was designated as Supplement No. 1. The second notice pertained to an increase in rates from 10¢ per Mcf—deliveries had previously been made under Union's Rate Schedule No. 69, at 10¢ per Mcf, which is superseded by Rate Schedule No. 229—to 20¢ per Mcf at 15.025 psia effective November 1, 1958, plus tax reimbursement of 2.05¢ per Mcf at 15.025 psia. This second filing was designated as Supplement No. 2 to Union's Rate Schedule No. 229 and was suspended on January 22, 1959, in Docket No. G–17589 but became effective on June 24, 1959, subject to refund.

Union's gross revenues for the test year 1958 were derived 50.118 per cent from the sale of oil and oil products and 49.882 per cent from the sale of natural gas.[13] Of the natural gas sales, 74.8 per cent were jurisdictional and 25.2 per cent nonjurisdictional. Of the jurisdictional sales, 62.9 per cent were made to United Gas Pipe Line Company, a wholly-owned subsidiary of United Gas Corporation. One of the several problems here is to allocate to (a) oil and liquids, (b) nonjurisdictional natural gas sales and (c) jurisdictional natural gas sales, each a proportionate share of Union's costs.

The Commission directed Union to proceed first in the presentation of its evidence in both the Section 4 and the Section 5 cases. The hearing was convened on July 23, 1959, and concluded on June 3, 1961. In the meantime the Commission issued its Opinion No. 338 on September 28, 1960, in *Phillips Petroleum Company*, 24 FPC 537 and on that same date the Commission issued its Statement of General Policy No. 61-1, 24 FPC 818, as later amended, in which the Commission stated it did not consider the cost-of-service method workable for determining rates for the future for producers, since they cannot be considered or classified as public utilities, and further, that producer rates should, and would be in the future, determined on an area basis by determining a fair price for the gas itself and not a separate price for each individual producer. However, the Commission on numerous occasions [14] has stated it did not intend to abandon the traditional cost-of-service method for determining rates for the future and especially in those cases which were in the hearing, or briefing, stage at the time the *Phillips* opinion was issued.

---

[13] Appendix 6, col. 7.

In support of its Section 4 filings for increased rates, Union presented companywide cost-of-service evidence in six separate studies with differing allocation methods, all utilizing a 12 per cent rate of return, together with evidence of prevailing prices in Union's area of operations. Each of the six cost-of-service studies reduced the various products to one of two common denominators, one, utilizing heat or energy content, converting all products to Mcf equivalents while the second conversion was to the weight of the various products. In its rebuttal evidence Union presented evidence of a vapor volume unit of measurement (Ex. 43-A). These methods of allocation resulted in unit costs for jurisdictional gas ranging from 23.599 to 24.694¢ per Mcf.[15] The Staff's area by area cost-of-service study, based on the sales realization allocation method, resulted in unit costs for jurisdictional gas ranging from 7.91¢ to 11.73¢ per Mcf.[16] The Philadelphia Electric Company and the United Gas Improvement Company, intervenors herein, introduced a joint cost-of-service study based upon the relative cost allocation method for production costs and the reserves-added-realization (RAR) allocation method for exploration costs, resulting in unit costs for jurisdictional gas ranging from 7.13¢ to 8.95¢ per Mcf,[17] while the Memphis Light, Gas and Water Division and the Mississippi Valley Gas Company, also intervenors herein, introduced a joint cost-of-service study based upon the relative cost allocation method for production costs and the net revenues allocation method for exploration costs, resulting in unit costs for jurisdictional gas of 5.8¢ per Mcf.[18]

By applying the *Phillips* (24 FPC 537) principles to its 1958 test year operations, as reflected in this record, Union, using an 11 per cent rate of return, arrived at a unit cost of service of 11.966¢ per Mcf,[19] while the staff, using a 6.5 per cent rate of return, arrived at a unit cost of service of 8.408¢ per Mcf [20] and the intervenors, using an 11 per cent rate of return, arrived at a unit cost of service of 9.216¢ per Mcf.[21]

In the disposition of this case on the cost-of-service basis, the principles and methods utilized by the Commission in the *Phillips* opinion will be applied to the facts of record herein, insofar as is possible, and as illustrated in detail in

Appendices 1 through 8 attached hereto and incorporated herein as a part of this decision.

The principal issues herein concern:

(1) The depreciation and depletion reserve of Union.

(2) Working capital.

(3) The method of allocating production costs and exploration and development costs to liquids and to gas.

(4) Federal income taxes.

(5) The rate of return.

Depreciation and Depletion

The principal differences between the derivation of the rate base by Union and the staff was the staff's recomputation of the depreciation and depletion reserve and the elimination of certain items of working capital. When Union was organized and started in the oil and gas business in 1937 it acquired certain producing and other properties from the United Gas Corporation at their appraised value as of June 30, 1932. To this appraised value of the property Union thereafter added book additions to the plant account. A Union witness testified that no original cost study had ever been made for Union, the appraised valuation being accepted as the original cost. These properties had been subject to the United Gas Corporation's method of computing the book reserves for depreciation and depletion up to the date of their transfer to Union in 1937. Union continued this method until 1941 when a formula ascribed to one of the company officials was adopted under which an estimated dollar amount of plant was depreciated at the annual rate of 8 percent, gas depreciated at the rate of 1.35¢ per Mcf, and oil production depreciated at 25¢ per barrel.

In its Exhibit 8, Schedule 3, Union shows $216,748,385 as its gross plant for January 1, 1958 and $226,189,675 as its gross plant on December 31, 1958. Each of these totals include an amount of $19,628,921 identified (Ex. 8, Sch. 2, ln. 14) as "undistributed plant." This "undistributed plant" amount was explained by a Union witness as being an amount which could not be associated with any physical property of Union's. The staff and intervenors properly eliminated this item from the gross plant totals above referred to, as not being an amount which Union would be entitled to recover through depreciation charges from its rate payers, and therefore not a legitimate part of the rate base on which to compute allowable return to be included in cost of service. Apparently, it was not associated with any items of the physical property and, as a staff witness testified, it appeared to be an "appraisal write-up" over and above the cost of the property. The Commission has eliminated a comparable item in *United Gas Pipe Line Company*, 25 FPC 26, 50. Union, seeking to remove the controversy over this item, presented its Exhibits 38 and 42-A, excluding the amount of $19,628,921 of "undistributed plant" (p. 10, Union's initial brief) from its gross plant totals. The item has also been eliminated by the Examiner for the reasons indicated above and as set out by the Commission in the *United Gas Pipe Line* case, *supra*. See Appendix 2-A.

The staff requested, and Union furnished, by field and products its original recoverable hydrocarbon reserves data and its reserves remaining on December 31, 1958. The staff then computed percentages reflecting the ratio of total production up to the end of 1958 to the total of recoverable reserves by fields, and then applied these percentages to Union's gross plant balance by fields on December 31, 1958, totaling $166,443,674 (Ex. 14, Sch. 7, Sh. 6 of 6, Col. 3, ln. 42) to arrive at a reserve requirement for producing properties of $90,890,159 at December 31, 1958. A staff witness testified that on this basis Union's producing properties were 54.61 percent depleted. Also applying this depletion percentage to Union's gross general plant of $8,010,796 (Ex. 14, Sch. 7-A, Col. 8, ln. 17) the staff arrived at a general plant reserve requirement of $4,374,696 which, when added to the reserve requirement for producing properties in the amount of $90,890,159, produced a total reserve requirement of $95,264,855 at December 31, 1958 (Ex. 14, Sch. 6, Sh. 6, Col. 5, ln. 40).

As illustrated in Appendix 2-A, the Examiner has adopted the staff's average gross plant amount of $201,840,109, represented by $164,302,237 for producing properties and recycling units (Ex. 14, Sch. 7, Sh. 6, Col. 4, ln. 42), and $7,865,758 for general and intangible plant (Ex. 14, Sch. 7-A), together with $29,672,114 of exploration and development plant (Ex. 14, Sch. 5, Col. 3, ln. 10). Also adopted was the staff's year end reserve requirement, determined as shown above, in the amount of $95,264,855 which was averaged with the reserve of $92,417,524 at the beginning of the test period on January 1, 1958, to arrive at the average reserve requirement for the test year in the amount of $93,841,189. This computation of the average reserve requirement carries out a consistent practice of the Commission of using the average, rather than year end plant figures, unless there are compelling reasons for other treatment. See, *Phillips*, p. 565.

Summarizing, the $93,841,189, the average reserve requirement was deducted from the average gross plant of $201,840,109 to arrive at the average net plant for 1958 test year in the amount of $107,998,920. See Appendix 2-A, Col. 6.

Union, in its Exhibit 44-A, Schedule 4, shows a net plant of $138,640,258 as taken from Exhibit 38, Schedule 1. This reflects a Union witness' reserve requirement study and testimony by which a reserve requirement for the test year 1958 was found to be $67,920,496. Deducting this reserve requirement from Union's year end gross plant of $206,560,754, the witness arrived at a net plant figure of $138,640,258. The Examiner has rejected Union's reserve requirement study as being too closely allied with Union's book reserves whose calculation through the years or relationship to plant did not conform to generally accepted practices of the industry and of the Commission.

Working Capital

The question of a proper and adequate amount of working capital for Union is an issue to be considered. In its Exhibit 1, Schedule 2, Union claims an allowance of $3,336,143 for bank balances. A Union witness testified this amount was the average of the twelve end-of-the-month bank balances for the test period. From this bank balance Union pays its common stock dividends and interest on its fixed obligations, all of which are owned by the United Gas Corporation. Union included this average bank balance in its working capital in addition to the traditional 45-day allowance for cash expenses. The staff, and the intervenors, properly eliminated the bank balance item from their computations.[32] The Commission has consistently and traditionally excluded minimum bank balances from working capital allowances. See: *El Paso Natural Gas Co.*, 22 FPC 260, 270; *Panhandle Eastern Pipe Line Co.* v. *F.P.C.* 236 F. 2d 606, 610-11. In *Phillips Petroleum Company*, 24 FPC 537, 566, the Commission applied the rule to an independent producer.

Working capital, as shown on Appendix 3 herein, has been computed from the average balances of the several accounts set out in the staff's Exhibit 14, Schedule 7-B, with the exception of the staff's elimination of 80 per cent, an item of $6,031,562, of the materials and supplies on the premise this amount related to construction work in progress. So adjusted the staff's Exhibit 14, Schedule 7-B, would allow only $1,507,890 for materials and supplies. The staff's elimination of the $6,031,562 item from the materials and supplies account as related to construction work in progress is disallowed. By its Exhibit 1, Schedule 1, line 5, Union's evidence reflects "Construction Work in Progress" for December 31, 1957, in the amount of $1,678,222 and for December 31, 1958, in the amount of $5,271,758. Also by Exhibit 1, Schedule 2, lines 10-24, Union shows an average monthly balance for materials and supplies in the amount of $7,967,511. In computing the average of 12 monthly balances of materials and supplies, the staff witness arrived at $7,823,856 (Ex. 14, Sch. 7-B, ln. 3), which amount is comparable to the $7,967,511 average monthly balance shown by Union in its Exhibit 1, Schedule 2.

---

[32] Exs. 18, 25, 27, 32, 33 and 5.

The size—the number of dollars invested—of the materials and supplies (inventory) account is a decision to be made by management based upon its experience in conducting its particular business operations. The size of the inventory required will depend upon the present operation and the prospective drilling program.

Items purchased by the company (except large items delivered direct to construction jobs) would normally be charged to the materials and supplies inventory) account for subsequent issuance as may be required in the company's operations. Here Union's management utilized the account to include the maintenance of items which, in large part, were to find their way into company construction. The evidence of record is not clear, or does not show, the nature of the numerous and varied items included in Union's materials and supplies account. However, it is assumed the account of this company is composed of those items normally to be found in the inventory of an *independent producer*.

There appears to be little difference in the final result between the handling of the $6,031,562 by the staff in Exhibit 14, Schedule 7-B and its handling by the Examiner. If the $6,031,562 is not allowed in the materials and supplies account as part of the rate base, but instead is classified directly as part of the construction work in progress, Union would be permitted to capitalize interest thereon during the construction period, and would be in a position to earn on such capitalization later on as a part of a future rate base. See *El Paso Natural Gas Co.*, 13 FPC 421, 428; *F.P.C. Uniform System of Accounts for Natural Gas Companies*, p. 439, Acct. 432. As will be hereinafter considered, Union is allowed a 6½ per cent rate of return upon its rate base. Therefore it appears the overall effect of the different handling of this account by the staff and by the Examiner would amount to only one-half of one per cent of interest.

The distribution of working capital, as shown on Appendix 3, to producing properties and general plant follows the staff treatment in its Exhibit 14, Schedule 7-B. The distribution to exploration and development follows the method and treatment of this account as developed by the staff in Exhibit 14, Schedule 5, line 15.

Union in its Exhibit 2, Schedule 1, Column 4, line 12, Joint Costs, Administrative and General, account lists an adjusted item of $6,142,785 which includes $1,619,547 for geological, geophysical and land and lease expense. Union later, in its Phillips-type presentation in Exhibit 44-A, Schedule 1, Column 2, line 6, removed this item of cost from administrative and general expenses and included it in its exploration and development costs as geological, geophysical and land and lease expense, as shown on line 10 of the exhibit "in order that we would have all of the exploration and development costs in one place" according to Union's witness. The Union adjustment of this $1,619,547 is approved and the treatment accorded same will be found in Appendix 1 and in Appendix 3. The effect of this adjustment is to increase the working capital figure for exploration and development costs for the test year (Ex. 14, Sch. 5, ln. 14) of

$6,598,096 by the amount of the adjustment as shown in Appendix 3, to which was applied the 45 days, or one-eighth, working capital allowance as shown in this appendix. The working capital allowance for general plant and producing properties in the amount of $8,915,412, and for exploration and development of $1,027,205 was transferred to Appendix 2. The $8,915,412 was distributed to production net investment on the basis of the dollar amounts shown in net investment applicable to Union's production operations.

The transfer of the $1,619,547 item, as above considered and approved, reduced the administrative and general production expense of $4,098,776 as shown by the staff (Ex. 14, Sch. 2, Sh. 6, Col. 5, ln. 42 and Ex. 51, Sch. 1, Col. 2, ln 9 or 13) to $2,479,229. (Appendix 3) but, when transferred to the exploration and development expense, it increased the five year average amount of $8,922,988, as used by the staff (Ex. 14, Sch. 5, Col. 3, ln. 33 and Ex. 51, Sch. 1, ln. 14 or 21), to $10,542,535 (Ex. 44–A, Sch. 1, Col. 3, ln. 13 and Appendix 1, Col. 3).

Allocation of Joint Product Costs

To allocate production costs, Union and the staff initially utilized the gross sales of natural gas, and the revenues derived thereform (Ex. 16, Sch. 1), during the test year as representing all of Union's marketed natural gas production, including the royalty interest. No adjustments were made by the staff to Union's sales as shown on Union's books. The staff made two adjustments to Union's revenues from gas sales during the test period. The first was to exclude gross revenues collected by Union which were subject to refund in rate proceedings pending before the Commission and, second, to reflect revenue received by Union from the sales of wet gas to associated[23] and non-associated[24] purchasers who later processed the wet gas and subsequently reimbursed Union for the liquids extracted. This method of handling the revenues received from liquids extracted follows the decision of the Court in *City of Detroit* v. *F.P.C.*, 230 F. 2d. 810, 819; *Panhandle Eastern Pipe Line Company*, 25 FPC 787, 797. The staff witness testified he was unable to ascertain from Union's books how it determined or classified its production costs or how Union allocated such costs to oil and gas on its books. He therefore found it necessary, in his judgment, to classify Union's producing fields by the product actually produced therefrom during the test year (Ex. 17) to derive allocation ratios based on revenues which were subsequently used (Ex. 18) to allocate Union's joint costs for producing oil and/or liquids and natural gas in the test year. Thus, in its Exhibit 18, the staff used the sales realization method for the allocation of costs. This method of allocating production costs was rejected by the Examiner and the Commission in *Phillips*, page 553. Later in this hearing the staff as well as Union and certain intervenors introduced evidence which apply the *Phillips* principles of allocation to the cost of service of Union for the test year of 1958.

Union produces only natural gas from some of its producing wells, from others it produces only liquids, while from others a combination of gas and oil is produced. This same situation was encountered in *Phillips*. Here, as in *Phillips*, the problem is to determine the cost of producing gas when it is produced jointly with liquids. In this record the joint production costs, including return and tax allowance, amounts to $15,656,655 (Appendix 5, Col. 6). In the allocation of these joint production costs between liquids and natural gas, the relative cost method will be employed. To allocate these joint production costs to gas and to liquids, it is first necessary to establish a representative cost of producing the single product of gas and of liquids. To make this determination a representative number of wells producing only gas and only liquids is required to establish the so-called "gas leg" and "oil leg." The staff by its Exhibit 51, Revised, arrived at a gas leg, or gas only production, consisting of six gas only producing wells (Ex. 52), of 12,040,208 Mcf, which compared to Union's total gas production of 199,962,477 Mcf[25] (Appendix 6, Col. 2, ln. 4) amounts to about six per cent of the total (Tr. 3890, lns. 2–7). This was acknowledged by the staff witness to be a small percentage of the total. The percentage in *Phillips* ran to about 60 per cent of the total. Also, in Exhibit 51, Revised, the staff arrived at an oil leg, or liquids only production, consisting of 16 liquids only producing wells (Ex. 53), of 2,772,685 barrels, which compared to Union's total liquids production of 9,470,538 barrels, amounts to 29.28 per cent of the total. In *Phillips* the liquids only group comprised 30.14 per cent of the total. One of the gas only producing units in the staff's gas leg, the Monroe #426, produces 10,864,725 Mcf of the total gas leg of 12,040,208 Mcf (Ex. 52, Col. 5, lns. 6–7) and one of the liquids only producing units in the staff's oil leg, the Tinsley #590, produces 2,076,854 barrels of the total oil only leg of 2,772,685 barrels (Ex. 53, Col. 5, lns. 14 and 17). As stated by the staff witness, before the relative cost method can be meaningful, the average cost for producing one Mcf of gas or barrel of oil, respectively, derived for the single product production of gas or liquids, respectively, must be reasonably representative of the probable cost of producing the same product in the fields and wells that produce gas and liquids jointly. In cases where the gas leg does not afford a representative sample then the Commission has used other methods as it did in *Alfred C. Glassell, et al.*, 25 FPC 1071.

---

[23] The only associated buyer was stated by staff witness Blair to be the United Gas Pipe Line Company which, with Union, are both subsidiaries of the United Gas Corporation (Tr. 821, ln. 18 to Tr. 822, ln. 5).

[24] The term "non-associated buyers" means buyers who are not affiliated with Union (Tr. 822, ln. 19–20) and who are specifically named in Ex. 16, Sch. 3, Col. 1.

The Philadelphia Intervenors found a more representative gas leg to represent Union's single product gas production by using all of Union's gas fields having a gas-liquids ratio exceeding 100 Mcf per barrel of oil.[26] The 25 fields which they used accounted for the 12,040,208 Mcf[27] production from the six gas only fields used by the staff as well as 49,890,321 Mcf produced from 19 gas condensate fields with gas liquids ratios exceeding 100 Mcf per barrel of oil (Ex. 32, Sch. 8, ln. 2) for a total of 61,930,529 Mcf or approximately 31 per cent of Union's total gas production during the test year. The Philadelphia Intervenors' oil only leg is the same as the staff's. This inclusion of the 19 gas condensate wells with gas-liquids ratios exceeding 100 Mcf per barrel of oil may, or may not, be a deviation from the method used to determine the gas only leg in *Phillips*, since Phillips has a Natural Gas Department which includes only those leases from which no liquids are extracted from the gas produced on the lease, however, the dry gas production of Phillips represented about 60 per cent of its total gas production, yet the bulk of this Phillips alleged dry gas, or about 58 per cent, was processed. *Cf.* Appendix 9 to *Phillips*, 24 FPC 537, 588. As has been stated, Union extracts liquids from its gas condensate wells at two points, one, in a separator at the wellhead and, two, in a processing plant. Phillips sent

---

[25] Exclusive of royalty interests amounting to 2,859,149 Mcf.

[26] Texas Oil and Gas Conservation Laws, Title 102 Revised, Civil Statutes of Texas, Railroad Commission of Texas, January 1957, page 8:

> The term "gas well" is any well (a) which produces natural gas not associated or blended with crude petroleum oil at the time of production, or (b) which produces more than one hundred thousand (100,000) cubic feet of natural gas to each barrel of crude petroleum oil from the same producing horizon, or (c) which produces natural gas from a formation or producing horizon production of gas only encountered in a well bore through which crude petroleum oil also is produced through the inside of another string of casing.

[27] Staff's gas leg, Ex. 51, Revised.

58 per cent of its dry gas through its extraction plants. Therefore the inclusion of these 19 gas condensate wells, as above considered in arriving at a representative gas leg is found to be proper under the circumstances in this case.

To determine the costs of producing the single products, the methods used by the Philadephia Intervenors have been used in this decision to arrive at, what appears to be, a broader base for the gas only leg. By use of the method of the Philadelphia Intervenors, direct expenses in the amount of $1,348,790 were assigned to the natural gas leg (Ex. 32, Sch. 8, ln. 6) and $2,248,127 to the oil only leg (Ex. 32, Sch. 7, ln. 1). In assembling costs for the indirect expenses the Examiner, as above discussed, transferred $1,619,547 from administrative and general expenses to exploration expenses for a balance of indirect expenses in the amount of $5,090,882, *Cf.* Appendix 1, Col. 2. This sum was then distributed to the various product columns in Appendix 1 on the basis of the amounts in the direct expense columns. This allocation of indirect expense on the basis of the allocation of the direct expense is somewhat different from its handling in ***Phillips***. There a portion of the indirect expense was assigned to products on the basis of "Net Capital Employed" (***Phillips***, p. 554). Since the "net capital employed" formula employed in ***Phillips*** was not spelled out in the opinion, it is necessary here to allocate the indirect expenses on another basis—the difference in the two methods of distribution probably being rather small as to the net result.

Federal Income Taxes

Union in its testimony and Exhibit 2, Schedule 2, Column 3, line 5, claims an allowance of $13,272,492 for Federal income taxes for the test year, related to a 12 per cent rate of return, reflecting tax deductions applicable to the production of natural gas and the retention by Union of the tax benefits from gas percentage depletion and intangible drilling costs of producing gas wells. Union alleges the retention of such tax benefits are justified upon the showing that they are, and have been in the past, used as a part of the funds required for lease acquisition and drilling costs.

The cost of service exhibits and testimony of the intervenors and the staff reflect no allowance for Federal income tax. The staff witness testified that from his examination of Union's records for the test year, using the Federal income tax return items as shown in Exhibit 14, Schedule 8, there would be an income deficit in excess of $15 million ($29,189,853—$13,976,187=$15,213,666 deficit). Union filed no Federal income tax return for the test year. A consolidated return was filed by Union's parent, the United Gas Corporation, in which Union's taxable income deficit was used to off-set taxable income gains. In such cases it has been the consistent practice of the Commission to disallow any claim for taxes not actually paid, on the premise that the gas consumer should be charged for only the actual liability for Federal income taxes. If, by filing a consolidated return, a reduction of the tax is effected, such reduction should be reflected in the costs charged to the consumer. ***Mississippi River Fuel Corp.***, 4 FPC 340; ***Colorado Interstate Gas Co.***, 11 FPC 324, 380; ***Transcontinental Gas Pipe Line Corp.***, 11 FPC 94; ***United Fuel Gas Co.***, 12 FPC 251, 265. The Court of Appeals for the Fifth Circuit recently held only such Federal income taxes as had actually been paid for the test year were to be treated, for gas rate purposes, as part of the cost of service, regardless of whether such taxes were less than would have been paid but for depletion allowance and deductions for intangible drilling expense. *Cf. El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d. 567; see also the decision of the Fourth Circuit stating they "are in accord with the decision" in the foregoing *El Paso* case, *Cities of Lexington, Kentucky, et al.* v. *F.P.C.*, 295 F. 2d. 109, 117. It therefore follows that the $13,273,492 claimed Federal income taxes paid by Union (Ex. 2, Sch. 2, Col. 3, ln. 5) are disallowed as a part of the cost of service as more fully reflected in the staff's Exhibit 14, Schedule 8 herein.

Rate of Return

Union seeks a rate of return, after taxes, of not less than 12 per cent claiming, under the *Bluefield Water Works and Improvement Company* v. *Public Service Commission*, 262 U.S. 679 and the *Federal Power Commission* v. *Hope Natural Gas Company*, 320 U.S. 591, as a producer of natural gas and oil it is entitled to a return comparable to that earned by other producers having similar risks. Union further seeks to show it operates as a separate corporate entity and that as an independent producer none of its operating costs are borne by any company with which it is affiliated. Union further contends its rate of return should not be interrelated with the cost of capital to the United Gas Corporation, its parent.

The Philadelphia Intervenors used illustrative rates of return of 6.5 and 11 per cent in their Exhibit 32 and 11 per cent in their Exhibit 33, in deference to the rate used by the Commission in *Phillips*.

The Memphis Intervenors used a 6.5 per cent rate of return in their evidence contending that Union, as the evidence shows, is the production department of the integrated production, transmission and distribution operations of the United Gas Corporation system and, therefore, the fair rate of return for Union should be determined upon the consideration of the cost of capital to the United Gas Corporation, the parent organization.

On the issue of a fair rate of return for Union the staff witness testified that Union was a wholly-owned subsidiary of United Gas Corporation, and that all of Union's capital to the extent of $160 million had been supplied by that company, therefore, in his opinion the financial affairs and capital raising experience of the United Gas Corporation must be given primary consideration in determining a fair rate of return for Union. In *Mississippi River Fuel Corporation* v. *F.P.C.*, 252 F. 2d 619, 622, cert. den., 355 U.S. 904, the Court said, "A 100 per cent affiliate stands in the same position as does the integrated producing 'arm' of a pipeline company." The staff's evidence properly related to money rates and security prices of pipeline companies, a description of several of the principal pipeline companies with trends of their revenues, earnings and dividends together with the market prices of their common stocks as well as their earnings-price ratios. In addition to this general information on the principal pipeline companies, the staff offered testimony and exhibits showing the record of earnings and other financial details of the United Gas Corporation.

The Commission considered the rate of return for the integrated producing arm of a major pipeline company in *Panhandle Eastern Pipe Line Company*, 25 FPC 787, 802, and there allowed the pipeline company a 5.75 per cent rate of return on its pipeline investment and a six per cent rate of return on its "well mouth properties." Being the producing arm of United Gas Corporation assures Union of a guaranteed market for its gas. Union says it spent practically all of its cash from net income, depletion and abandoned leases during the 10-year period immediately preceding the test year in drilling for, and adding to its reserves of oil, gas and condensate. The record shows that during this 10-year period Union paid substantial sums of money in interest and dividends from its gross earnings to the United Gas Corporation, the owner and holder of all of Union's outstanding securities. The Commission determined a fair rate of return for the United Gas Pipe Line Company, 25 FPC 26, 32, to be 6.25 per cent which would provide a 10 per cent return on equity. The allowance here of a 6.5 per cent rate of return, as urged by the staff, would provide a 10.23 per cent return to Union's common equity. Upon the evidence in this case it is here determined that 6.5 per cent is a fair, reasonable and adequate rate of return for Union. Applying this rate of return to the total rate base, found by the Examiner to be $117,941,537, produces a return of $7,666,200. (Appendix 2)

Returning now to further discussion of the oil only and gas only legs in developing the amount of return on the production rate base applicable to natural gas fields and 100 per cent oil fields, these amounts being $604,878 for the natural gas fields (Appendix 2, Col. 3) and $748,959 for the 100 per cent oil fields (Appendix 2, Col. 5), it was first necessary to ascribe the net investment shown on Appendix 2 to these respective fields. Such net investment was identified by natural gas fields and oil fields in accordance with the method used by the Philadelphia Intervenors, as hereinabove discussed and approved. The individual gas and oil only fields were identified individually in the staff's Exhibit 14, Schedule 7. Amounts relating to average net investment were accumulated and totaled to show the net investment in gas only fields to be $2,553,577 (Appendix 1, Col. 3) and in the oil only fields to be $3,997,036 (Appendix 1, Col. 5). The dollar amounts from Appendix 1 applicable to direct expenses, indirect expenses, and return were carried to Appendix 5 for the purpose of allocating the joint products costs. Such costs being the joint products field costs shown in Appendix 1, Col. 6, for the amount of $15,656,655. Appendix 5 follows the pattern of the Commission's opinion in *Phillips* which causes the joint product costs to be allocated to liquids in the amount of $9,772,886 (Appendix 5, Col. 7) and to gas in the amount of $5,883,769 (Appendix 5, Col. 8).

In allocating the exploration and development expense, the Examiner has followed the Phillips modified BTU method as exemplified in Appendix 6, and, as indicated thereon, the data contained in the first seven columns were taken from the staff's Exhibit 51, Schedule 4. As developed and shown on Appendix 1, Col. 7, the exploration and development expense totaled $10,542,535, the return of 6.5 per cent thereon amounts to $1,995,456 for a total of $12,537,991 (Appendix 1, Col. 7). The percentages developed in Column 7 of Appendix 6—49.882 per cent for gas and 50.118 per cent for liquids—were applied to the exploration and development expenses in Column 8 and the same percentages then were applied to the return on exploration and development investment in Column 9. Column 10 represents the totals of Columns 8 and 9 and reflects the distribution of these total exploration and development costs between gas and liquids.

The development of the unit or Mcf costs, both direct and allocated for the production of natural gas by Union during the test year of 1958 is illustrated in detail on Appendix 4. The direct costs were taken from Appendix 1, the allocated costs were taken from Appendix 5, and the exploration and development costs were taken from Appendix 6, which when totaled amount to total production costs of $17,124,604 for natural gas.

Union's testimony and exhibits reflect the gross eight-eighths production of 242,111,495 Mcf (Ex. 3, Sch. 3) with royalty expense in the amount of $6,136,111 (Ex. 3, Sch. 2) included as a part of Union's operating expenses. These royalty expenses were excluded from operating expenses by the staff (Ex. 51) and the Philadelphia Intervenors (Ex. 33) in their use of the seven-eighths volumes. It will be observed the Examiner in this decision has used only the seven-eighths, or net interest volumes of production in determining unit production cost for natural gas by Union. Thus by dividing this total cost of producing gas, $17,124,604 by the seven-eighths volumes of 199,962,477 Mcf, a unit, or Mcf, cost of 8.564¢ is determined as the production cost for natural gas. Appendix 4 also shows the per barrel costs of $2.28 for the production of liquids for the test year.

Since the 199,962,477 Mcf represent the net interest production volume for Union's entire system, the remaining step is to determine the amount and the per unit or Mcf costs for jurisdictional gas. It has hereinbefore been found that 74.8 per cent of Union's natural gas sales were made in interstate commerce for resale and thereby subject to the jurisdiction of this Commission. Therefore by multiplying 199,962,477 Mcf by 74.8 per cent a figure of 149,571,933 Mcf is found to be the jurisdictional volumes of natural gas. This jurisdictional volume multiplied by 8.564¢ produces the total costs in the amount of $12,809,340 for producing the jurisdictional volumes of natural gas.

Union advised and the staff accepted (Ex. 14, Sch. 1, note 2) that rate case (regulatory) expense incurred to that date and budgeted by Union for 1960 amounted to $350,000. One-third of this amount, $116,667, plus a return of $15,167 on the unamortized balance of $233,333 by applying thereto the 6.5 per cent rate of return, or a combined total of $131,834 should be added to the cost of jurisdictional gas which is found to be reasonable.

As will be noted on Appendix 4, Col. 4, this regulatory expense has been added to the costs for producing jurisdictional gas to arrive at a total cost for producing 149,571,933 Mcf of gas in the amount of $12,941,174 or a unit or Mcf production cost of 8.652¢ which is found to be the just and reasonable per Mcf cost of Union's jurisdictional gas production.

Union's average test year jurisdictional sales realization was 10.9467¢ per Mcf.[28] Accordingly Union's revenues for the sales of jurisdictional gas during the test year were excessive by $4,111,679.[29]

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinabove stated, that:

(1) The Union Producing Company (Union), a Delaware Corporation whose principal place of business is located at Shreveport, Louisiana, is a natural-gas company within the meaning of the Natural Gas Act.

(2) The rates and charges of the Union Producing Company (Union) for the sales of natural gas which are on file with the Federal Power Commission are subject to the jurisdiction of the Commission under Section 4 and Section 5 of the Natural Gas Act.

(3) The total system-wide jurisdictional cost of service herein determined for the Union Producing Company for the test year of 1958 is $12,941,174 or an average of 8.652¢ per Mcf, which is more fully set forth in Appendix 4 attached hereto.

(4) Such jurisdictional cost of service developed by the methods and principles used by the Commission in its *Phillips* opinion is less than the jurisdictional revenues collected by the Union Producing Company during the test period—the 12 months of 1958.

(5) The Union Producing Company in Docket Nos. G-13811, G-13820, G-14114, G-14352, G-14553, G-16725, G-17589 and G-17606, all as set out in detail in

---

[28] Staff, in its Ex. 24, Sch. 1, sh. 3 of 3, Col. 7, ln. 33, show Union's gross (eight-eighths) working interest volumes to be 179,179,934 Mcf for total actual revenues of $19,614,326.75. Dividing the revenue by the volume produces the average Mcf sales realization price of 10.9467¢.

[29] Derived by deducting from $19,614,327 (the eight-eighths actual revenue, see Ex. 24, Sch. 1, Sh. 3 of 3, Col. 9, ln. 33), the amount of $15,502,648, this latter amount was determined by multiplying 8.652¢ (the unit or Mcf cost for producing jurisdictional gas in the test year of 1958, see Appendix 4) by 179,179,934 Mcf, the eight-eighths jurisdictional sales volumes for the test year of 1958, See Ex. 24, Sch. 1.

footnote 1 hereto, has failed to sustain the burden of proof imposed upon it by Section 4 of the Natural Gas Act.

(6) No justification is found in this record for departing from the jurisdictional cost-of-service formula, or method, as developed by the Commission in *Phillips*, as the primary guide in fixing jurisdictional rates for the future for the Union Producing Company.

(7) The evidence adduced by the Staff, as supported generally by each of the intervenors, in this proceeding requires the Presiding Examiner to set just and reasonable rates for the Union Producing Company under Sections 4 and 5 of the Natural Gas Act.

(8) The Union Producing Company is directed to file, within 30 days from the effective date of this order, rates which will produce no more than the jurisdictional cost of service, as set forth in Finding (3) above, with supporting data from which the Commission can determine whether or not the filings fulfill this purpose.

(9) The new rates to be filed as provided in Finding (8) above shall conform, insofar as is possible, to the area pricing standards as set out in the Commission's Statement of General Policy, No. 61-1, 24 FPC 818, as amended.

(10) The Union Producing Company should be required to make refunds, with interest at 6 per cent thereon from the date of payment, to its customers in accordance with the undertakings hereto filed by Union and the Commission orders issued in each of the dockets enumerated in Finding (5) above, of all amounts collected by it from its jurisdictional customers and subject to refund under Union's proposed rate increases.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) The Union Producing Company is hereby directed to file, within 30 days from the effective date of this order, rates for all of its jurisdictional natural gas sales which conform to Findings (3), (8) and (9) above.

(B) The Commission reserves the right to reject all or any part of the schedules of rates and charges referred to in ordering paragraph (A) above and in lieu thereof prescribe by further order herein the appropriate rates, charges, classifications, rules, regulations, practices, or contracts.

(C) Upon approval by the Commission of the rates filed pursuant to ordering paragraph (A) above, the approved rates shall immediately become the legally effective rates to be observed and in force unless and until changed by a subsequent order of the Commission.

(D) The increased rates and charges, as amended and substituted, tendered for filing by the Union Producing Company in Docket Nos. G-13811, G-13820, G-14114, G-14352, G-14553, G-16725, G-17589 and G-17606 are thereby disallowed and denied.

(E) The increased rates and charges which have been collected, subject to a refund undertaking, by the Union Producing Company in those dockets enumerated in ordering paragraph (D) above and consolidated with this proceeding, will be refunded by the Union Producing Company in accordance with the terms and conditions of subsequent orders of the Commission.

HARRY W. FRAZEE,
Presiding Examiner.

APPENDIX 1

UNION PRODUCING COMPANY

COST OF SERVICE YEAR 1958

Description	Total	Adjustment[1]	Adjusted total	Natural gas fields	Oil and gas production			Exploration and development
					Total	100 percent oil fields	Joint product fields	
(1)	(2)		(3)	(4)	(5)	(6)	(7)	(8)
Direct expenses:								
Operating expenses	$4, 672, 330	----------	$4, 672, 330	$258, 027	$4, 414, 303	$1, 441, 444	$2, 972, 859	----------
Ad valorem and other taxes	1, 252, 053	----------	1, 252, 053	222, 070	1, 029, 983	66, 363	963, 620	----------

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-118

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 9, 1964)

On November 22, 1963, as supplemented on December 13, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-118 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of the following natural gas facilities:

(a) A 2" tap valve at approximate Milepost 58.8 on Applicant's 10" Bogalusa line, located in Section 52, Township 1 South, Range 14 East, Washington Parish, Louisiana;

(b) A 2" tap valve at approximate Milepost 63.9 on Applicant's 10" Bogalusa line, located in Section 47, Township 2 South, Range 14 East, Washington Parish, Louisiana; and

(c) A 2" tap valve at approximate Milepost 66.3 on Applicant's 10" Bogalusa line, located in Section 24, Township 2 South, Range 13 East, Washington Parish, Louisiana;

together with the leasing of certain meters from the purchaser, all as more fully set forth in the application.

Applicant states that the facilities will be used for the sale and delivery of natural gas to Gas Utility District No. 1 of the Parish of Washington, State of Louisiana, for resale and distribution through the proposed distribution system of said Utility District located in Washington Parish, Louisiana, as described in the application herein. This proposal will make natural gas available to residents in the area for the first time.

The facilities for which a certificate is sought will cost $1,700, which will be financed for current working funds.

During the first year of operation Applicant will sell and deliver to Gas Utility District No. 1 of the Parish of Washington, State of Louisiana, approximately 23,050 Mcf.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The above finding with respect to jurisdiction is subject to the Commission's final determination on the petition for rehearing now pending in United Gas Pipe Line Company Docket No. CP62-161.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate facilities as hereinbefore described, all as more fully described in the application in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operations, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within twelve months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G-10029; PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G-10038; EL PASO NATURAL GAS COMPANY, DOCKET NO. G-10088

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 10, 1964)

On October 15, 1963 and on November 5, 1963, El Paso Natural Gas Company (El Paso) and Colorado Interstate Gas Company (Colorado Interstate), respectively, filed petitions to amend the order, as amended, issued on September 5, 1956, in the above designated consolidated Docket Nos. G-10029, G-10038 and G-10088. Said order authorized the sale of natural gas on an exchange basis between El Paso and Colorado Interstate and the transportation of such gas between these parties by Pacific Northwest Pipeline Corporation (Pacific) (now El Paso Natural Gas Company), all for a term ending December 31, 1963.

Petitioners state that intervening circumstances have precluded the return by El Paso to Colorado Interstate of 30,622,395 Mcf of such gas and therefore a period extending from September 1, 1964, to December 31, 1968, is requested to allow for the payback.

El Paso Natural Gas Company has filed revised tariff sheets as follows: Rate Schedule X-4 to El Paso's FPC Gas Tariff, Third Revised Volume No. 2: Third Revised Sheet No. 3, Second Revised Sheet No. 4, First Revised Sheet Nos. 5 through 9, and Original Sheet No. 9-A. Rate Schedule X-5 to CIG's FPC Gas Tariff, Second Revised Volume No. 2: First Revised Sheet Nos. 4 through 11 and Original Sheet No. 11-A. These said revised tariff sheets establish appropriate charges under which natural gas will be returned by El Paso Natural Gas Company to Colorado Interstate Gas Company.

Due notice of the filing of the petitions to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 11, 1963 (28 F.R. 13417). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the said revised tariff sheets filed by petitioners herein be accepted and that the Commission's order issued September 5, 1956, in Docket Nos. G-10029, G-10038 and G-10088 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued September 5, 1956, in Docket Nos. G-10029, G-10038 and G-10088 be and the same is hereby amended by authorizing El Paso Natural Gas Company and Colorado Interstate Gas Company to exchange natural gas during the period from September 1, 1964, to and including December 31, 1968.

(B) The revised tariff sheets hereinbefore described are hereby accepted and shall become effective as of the date on which this order is issued.

(C) In all other respects said order of September 5, 1956, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HUNT OIL COMPANY, DOCKET NO. G-14082

ORDER TERMINATING PROCEEDING

(Issued January 10, 1964)

On August 27, 1963, Hunt Oil Company (Hunt) filed a motion requesting that the above-designated rate suspension proceeding be terminated. This proceeding involves the jurisdictional sale of natural gas by Hunt, under its FPC Gas Rate Schedule No. 33, to El Paso Natural Gas Company (El Paso) from the Amacker-Tippett field, Upton County, Texas (Texas Railroad Commission District No. 8).

On November 29, 1957, Hunt tendered for filing a notice of change in its FPC Gas Rate Schedule No. 33. The proposed periodic rate increase, from 9.5¢ per Mcf to 10.5¢ per Mcf at 14.65 psia, plus tax reimbursement, designated as Supplement No. 3 to Hunt's FPC Gas Rate Schedule No. 33, was suspended and later became effective subject to refund on June 1, 1938.

On April 25, 1958, the proceeding in Docket No. G-14082 was consolidated with the *Hunt* proceedings in Docket No. G-9065, *et al.* A hearing was held and an examiner's decision issued on October 2, 1961. In Opinion No. 365[1] the Commission remanded the proceeding in Docket No. G–14082 to the examiner for further hearing. On July 16, 1963, the Commission issued an order approving a settlement of the proceedings involved in Opinion No. 365, but excluding the proceeding in Docket No. G–14082, *inter alia*, because the sale involved there is made in the Permian Basin area. However, the proceeding was not consolidated in Docket No. AR61–1.

---

[1] Opinion No. 365, *Hunt Oil Company, et al.,* Docket No. G-9065, *et al.,* issued October 17, 1962, 28 FPC 623.

In support of its motion, Hunt states that the increased rate involved in this proceeding is below the area price level of 11.0¢ per Mcf at 14.65 psia, for increased rates, announced in the Commission's Statement of General Policy No. 61–1.[2] No protests have been filed with respect to the instant motion.

Since Hunt's increased rate does not exceed the area price level announced in the Statement of General Policy, the rate suspension proceeding in Docket No. G–14082 should be terminated.

The Commission finds:

For the reason set forth above, it is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the proceeding in Docket No. G–14082 be terminated and that Hunt's refund obligation with respect thereto be discharged.

The Commission orders:

The proceeding in Docket No. G–14082 is hereby terminated effective as of the date of issuance of this order, and Hunt's refund obligation with respect thereto is hereby discharged.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MC ALESTER FUEL COMPANY, DOCKET NO. RI62–300

ORDER DENYING MOTION TO TERMINATE PROCEEDING

(Issued January 10, 1964)

McAlester Fuel Company (McAlester) on December 2, 1963, filed a motion requesting that the increased rate of 14.475¢ per Mcf, suspended and thereafter made effective subject to refund on August 6, 1962, in the above-entitled proceeding, be accepted and that its refund obligation in Docket No. RI62–300 be discharged. The increased rate, designated as Supplement No. 6 to McAlester's FPC Gas Rate Schedule No. 3, relates to the jurisdictional sale of natural gas to Texas Eastern Transmission Corporation in Fort Lynn Field, Miller County, Arkansas.

In support of its motion, McAlester states (1) the increase in rate relates solely to tax reimbursement; (2) the total collection from August 6, 1962 to November 1, 1963, as a result of the rate increase amounts to only $166.79; (3) the subject contract contains no indefinite pricing provisions; and (4) the Commission accepted by letter order issued October 19, 1961, the underlying increased rate of 14.3¢ per Mcf for the same sale.

In determining whether to accept or suspend a proposed increased rate the fact that the increased revenues would be small or that the rate increase relates solely to tax reimbursement is not controlling. Nor does the previous acceptance of the underlying increased rate in any way limit the exercise of our discretion under Section 4(e) of the Act to suspend a proposed higher increased rate. Moreover, when a contract does not contain indefinite escalation provisions, a proposed increased rate relating thereto would not come within the increased rate ceilings set forth in the Second and Seventh Amendments to the Statement of General Policy No. 61-1 for cases in which indefinite pricing provisions are eliminated from the contract.[1] In view of the foregoing, we conclude that McAlester's motion to terminate the suspension proceeding should be denied.

---

[2] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

The Commission finds:

McAlester's motion to terminate the above-entitled proceeding filed on December 2, 1963, should be denied.

The Commission orders:

McAlester's motion to terminate the above-entitled proceeding filed on December 2, 1963, is hereby denied.

---

[1] *Sunray Mid-Continent Oil Company,* Docket No. RI62-196, order issued January 19, 1962, 27 FPC 94.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SUNRAY DX OIL COMPANY, ET AL., DOCKET NO. G-4281, ET AL.

ORDER REMANDING MOTION TO PRESIDING EXAMINER FOR APPROPRIATE ACTION

(Issued January 10, 1964)

On November 4, 1963, The People of the State of California and the Public Utilities Commission of the State of California (California) field a motion requesting that the Commission issue an order requiring that the producers and pipeline companies named as parties to these proceedings[1] make available certain information relating to extraction plant operations in which hydrocarbons are removed from the natural gas subject to these proceedings.

In Appendix A to its order of May 28, 1963, initiating these proceedings, the Commission specified that certain information be made available by those pipeline companies designated as parties to these proceedings. The information required by the Commission was designed to indicate the extent to which the BTU level of the gas stream is affected as a result of the removal of hydrocarbons from the natural gas subject to these proceedings. Appendix A also required that those pipeline companies supply information that was intended to portray the extent to which compensation was afforded to producers in order to reimburse them for furnishing their pipeline purchasers with a higher BTU content natural gas.

The additional information requested by California can be placed into two categories: (1) That information which is similar in nature to that required by Appendix A because it also reflects the nature and Btu level of the gas stream and the extent to which it is affected by extraction operations; and (2) that which is directed toward the obtaining of cost data with respect to the operation of extraction plants.

We clearly did not intend to limit the evidentiary scope of these proceedings by either Appendix A to our order of May 28, 1963, or the fact that certain section 7 certificate proceedings have been consolidated with these proceedings.

---

[1] See those parties listed in the caption of the Commission's Order dated May 28, 1963, initiating these proceedings relating to the propriety and necessity of BTU provisions in producer contracts.

These proceedings initiated an investigation under section 14 of the Natural Gas Act and are not to be limited by the fact that certificate applications under section 7 are consolidated therein. On the contrary, our order initiating these proceedings provided that the parties might be required to provide additional information on subsequent occasions.

While we agree with California that some or all of the data requested reflecting the effects of extraction on the nature of the gas stream[3] may be relevant, we do not believe this is true with respect to the producer extraction plant costs. It may well be that the producers can profit more from extracting liquid hydrocarbons, not required to meet minimum pipeline standards, than if we were to allow them extra compensation for high BTU gas geared to its value to the pipeline and its customers. Even if this is the case it would not justify allowing the producers a higher price for the extra BTUs than they are worth to the pipeline in order to induce its retention in the gas stream. We shall therefore remand this matter to the Presiding Examiner in order that he may take appropriate action on all requests other than those for producer extraction plant costs.

The Commission orders:

The above-mentioned motion filed by the People of the State of California and the Public Utilities Commission of the State of California be and hereby is remanded to the Presiding Examiner in order that he may take appropriate action thereon consistent with this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WISCONSIN MICHIGAN POWER COMPANY

ORDER APPROVING HEADWATER BENEFITS AGREEMENT

(Issued January 10, 1964)

The Wisconsin Michigan Power Company (Company), subsidiary of the Wisconsin Electric Power Company, requested on August 15, 1963 that the Commission approve under section 13.1 of the Regulations under the Federal Power Act in lieu of a determination under section 10(f) of the Federal Power Act four agreements to compensate the Company for headwater benefits received at the downstream hydroelectric projects of the Kimberly-Clark Corporation, Wisconsin Public Service Corporation, Menominee Company (which is a wholly-owned subsidiary of the Marinette Paper Company), and City of Norway, Michigan, from the Company's *Way Dam* project, Project No. 1759, on the Michigamme River, Michigan, a tributary of the Menominee River.

The contracts provide that the Company's annual "fixed charges" and "operating expenses" upon the Way Dam project be borne by the above-named owners of downstream projects in proportion of each owner's operating head to total operating head, including that of the Company's various projects. The "fixed charges" under the contracts consist of taxes actually paid plus 7.5 percent of the Company's investment to cover sinking-fund depreciation and interest. "Operating expenses" are the costs of maintenance, operation, and repair.

---

[3] Information of this nature requested by California would certainly serve to augment and supplement the information that the Commission required in Appendix A.

Total payments through 1962 made by the owners of downstream projects and their predecessors are as follows:

Kimberly-Clark Corporation (Since 1941)	$167,009
Wisconsin Public Service Corporation (Since 1941)	69,140
Marinette Paper Company (Since 1941)	62,383
City of Norway (Since 1947)	43,160
Total	341,692

The Commission finds:

The agreements dated May 23, 1940 between the Wisconsin Michigan Power Company and (a) Kimberly-Clark Corporation, (b) Menominee and Marinette Light and Traction Company, predecessor of Wisconsin Public Service Corporation, and (c) Union Falls Power Company, assignor of its rights thereunder to Menominee Company, wholly-owned subsidiary of Marinette Paper Company, and the agreement dated April 3, 1947 and amended March 31, 1952 between the Wisconsin Michigan Power Company and (d) City of Norway, Michigan, establish an effective and reasonable method of compensating the Wisconsin Michigan Power Company for headwater benefits from its Way Dam project on the Michigamme River, Michigan.

The Commission orders:

The aforesaid agreements are approved under section 13.1 of the Regulations under the Federal Power Act and payments made thereunder shall be accepted in lieu of payments by the parties thereto made pursuant to a headwater benefits determination under section 10(f) of the Federal Power Act until further order of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PLACER COUNTY WATER AGENCY, PROJECT NO. 2079

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued January 13, 1964)

On July 12, 1963, Placer County Water Agency, of Auburn, California, licensee for proposed Project No. 2079, filed application for Commission approval of certain Exhibits J, K, and L. The project affects lands of the United States within the Tahoe and Eldorado National Forests.

The licensee has made additional studies since the issuance of the license and has made modifications in the design of the project. The changes which are reflected in the exhibits would:

(1) Relocate Ralston Afterbay dam about 1,200 feet downstream on the Middle Fork of the American River and change the dam from a composite and earth-fill dam about 88 feet high with a crest length of 525 feet at elevation 1198 feet to a concrete gravity dam about 85 feet high with a crest 560 feet long at elevation 1189 feet; revise the length and diameter of the Oxbow tunnel from a 16-foot horseshoe tunnel 1320 feet long connecting to an 11-foot in diameter steel penstock extending about 100 feet to the Oxbow Powerhouse, to a 13¼-foot tunnel 403 feet long terminating at the penstock of 60-feet length; and make minor revisions in the Oxbow Powerhouse turbine setting and capacity; and

(2) Make other changes in the project boundaries primarily due to minor relocations of diversion dams on the North and South Forks of Long Canyon and realignment and minor relocations of tunnels and access roads.

The licensee has advised that further geologic studies and explorations revealed subsurface conditions that make desirable the proposed relocations, and that the proposed minor changes in the Oxbow Powerhouse turbine setting reflect the additional information furnished the licensee by turbine manufacturers.

The Department of Agriculture, in commenting on the application, advised that no special conditions for the adequate protection and utilization of National Forest land are deemed necessary, other than those already included in the license for the project.

The proposed changes result generally in improvements in the design of the project. No changes in the installed horsepower capacity of the project are herein involved. The Commission has reserved the right in the license to determine at a later date the amount of annual charges to recompense the United States for the use, occupancy, and enjoyment of its lands.

The Commission finds:

(1) Exhibit J, Sheets 1, 2, and 3 (FPC Nos. 2079-171, -172 and -173,), Exhibit K, Sheets, 1 17, 21, 24, 27, 28, 39, 40 and 41 (FPC Nos. 2079-174 through -182), and Exhibit L, Sheet 31A (FPC No. 2079-183)—all revised June 14, 1963—conform to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) Exhibit J, Sheets 1, 2, and 3 (FPC Nos. 2079-111, -112, and -113), Exhibit K, Sheets 1, 17, 21, 24, 27, 28, 39, 40 and 41 (FPC Nos. 2079-114, -124, -128 through -134), and Exhibit L, Sheet 31A (FPC No. 2079-156), which are now part of the license and which have been superseded, should be eliminated from the license for the project.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2079.

(B) The superseded exhibits described in finding (2) above are hereby eliminated from the license for the project.

OPINION NO. 415

POWER AUTHORITY OF THE STATE OF NEW YORK, PROJECT NO. 2000

OPINION AND ORDER GRANTING IN PART AND DENYING IN PART EXEMPTIONS FROM PAYMENT OF ANNUAL CHARGES

(Issued January 13, 1964)*

Syllabus

1. Claim for total exemption from payment of annual charges on grounds that development is part of navigation project *rejected* as outside both spirit and letter of Section 10(e) exemption. P. 96.
2. Citing *Central Nebraska* Commission *denies* claim to total exemption based on contention that power was sold to public without profit. Pp. 96-97.

---

*Initial decision appears on p. 100. Application for rehearing rejected and denied on February 27, 1964, 31 FPC 467. Affirmed, *Power Authority of the State of New York* v. *F.P.C.*, 339 F. 2d 269 (CA2-1964); cert. denied, 381 U.S. 933 (1964).

3. Under authority of Section 10(e) of the Federal Power Act, Commission *grants* in part and *denies* in part exemption from payment of annual charges. P. 99.

Commissioner Ross *concurring* generally.

***Thomas F. Moore, Jr.* and *Lewis R. Bennett* for Power Authority of the State of New York.**

***Donald A. Sander* for Staff of the Federal Power Commission.**

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WOODWARD, *Commissioner:*

On July 15, 1953, Power Authority of the State of New York (the Authority) was issued a license by this Commission to construct certain hydroelectric works in the International Rapids section of the St. Lawrence River. Article 27 of that license provided for payment of annual charges in accordance with Section 10(e) of the Federal Power Act. In the proceeding the Authority seeks exemption from these annual charges for the period from July 17, 1958, through December 31, 1961. The presiding examiner allowed partial exemptions totaling $9,621.70, but decided that the balance of $114,232.50 was due and payable. The Authority has duly excepted to the examiner's decision and contends that it is entitled to exemption from all annual charges for the period.

The Claim for Exemption as Part of a Navigation Project

The Authority is an independent agency of the State of New York empowered by statute of that State to develop certain hydroelectric resources, including those of the St. Lawrence River. It is a "municipality" within the meaning of the Federal Power Act.[1] Section 10(e) of the Act exempts from annual charges "projects constructed or to be constructed by States or municipalities primarily designed to provide or improve navigation." Although the Authority has been required by the terms of its license to make provision for navigation, the primary purpose of the project works constructed by the Authority was to provide hydroelectric power. This is clear from the original application for license, and the Authority does not dispute it. The Authority contends, however, that the "project" is not merely the works constructed by it under the license. It urges that the "project" is the complete development of the International Rapids section of the St. Lawrence River, of which development the Authority's works are but a part, and argues that this greater "project" was primarily designed to provide or improve navigation.

The original concept, when the license was issued in 1953, was that the power and navigation aspects of the seaway would be constructed by four agencies. The Authority was to construct the power works on the American side of the river. Its Canadian counterpart, The Hydro-Electric Power Commission of Ontario, was to construct the power works on the Canadian side. Agencies of the United States Government and the Canadian Government were to construct additional facilities solely concerned with navigation.

At the time of the application for the original license, it appears that all parties concerned regarded the Authority's works as a project in themselves or as part of a hydroelectric project constructed partly by the Authority and

---

[1] **Section 3(7) of the Act defines a "municipality" as "a city, county, irrigation district, drainage district, or other political subdivision or agency of a State competent under the laws thereof to carry on the business of developing, transmitting, utilizing, or distributing power;"**

partly by The Hydro-Electric Power Commission of Ontario. The Authority's application for license stated:

> 6. The *project* covered by this application is conceived to develop the International Rapids Section of the St. Lawrence River for the purpose of producing and transmitting hydroelectric energy to meet present and future requirements of the region within economic transmission distance of the project. [Emphasis supplied.]

On August 15, 1953, Congress enacted an amendment to the Federal Power Act which made special reference to "any license issued for a hydroelectric development in the International Rapids Section of the St. Lawrence River." (67 Stat. 587, this portion repealed July 31, 1959, 73 Stat. 271.) Congress clearly had in mind the license to the Authority. (*Lake Ontario Land Development & Beach Protective Ass'n* v. *F.P.C.*, 212 F. 2d 227, 232 (CADC, 1954).)

The record on the original application for license makes it clear that the Authority fully intended to have the hydroelectric works in operation, to provide needed power, long before the navigation facilities of the St. Lawrence Seaway were completed. The hydroelectric works were intended to be a complete and operating unit in themselves. These works thus qualify as a "project" within the meaning of the Federal Power Act.[3]

Examination of the legislative history of the exemption for navigation projects is enlightening. As originally presented to Congress, the Federal Power Act contained no such language. The exemption was inserted to deal with a specific situation. The State of Illinois proposed to spend $20 million to deepen the Illinois River for 65 miles from Lockport to La Salle. This would open to navigation a part of a navigable waterway which had not been previously navigable as a practical matter, and thus provide the first practicable navigation from the Great Lakes to the Gulf. The City of Chicago, through its sanitary district, had already constructed a canal 200 feet wide and 20 feet deep connecting Lake Michigan with the Illinois River at Lockport. Both these projects were designed to provide navigation, and the power potential created by them was stated to be merely incidental. Representative Dennison summed up the exemption (58 Cong. Rec. 2132):

> The exception is this, that where there is no navigable stream and where the State at its own expense makes one for the benefit of the public, and incidental to providing a navigable stream, develops the power, the State ought to have the right free to use that power to finance the project.

Examination of the record leaves no doubt that this was an accurate summation of the legislative purpose (58 Cong. Rec. 1933–4, 1937–8, 2131–3).

In the case before us, Power Authority of the State of New York was concerned first and foremost with hydroelectric power. Any benefit to navigation was incidental to the development of power, or arose from requirements imposed upon the Authority by this Commission and the International Joint Commission as conditions of it being allowed to proceed to its primary goal—development of hydroelectric power. The circumstances of the case for which the statutory exemption was designed were entirely different. There, it was the purpose of the State of Illinois and the purpose of the municipality of Chicago to provide navigation, and the project works constructed or to be constructed by each were primarily designed to that end.

---

[3] Section 3(11) of the Act provides: "'project' means complete unit of improvement or development, consisting of a power house, all water conduits, all dams and appurtenant works and structures (including navigation structures) which are a part of said unit, and all storage, diverting, or forebay reservoirs directly connected therewith, the primary line or lines transmitting power therefrom to the point of junction with the distribution system or with the interconnected primary transmission system, all miscellaneous structures used and useful in connection with said unit or any part thereof, and all water-rights, rights-of-way, ditches, dams, reservoirs, lands, or interest in lands the use and occupancy of which are necessary or appropriate in the maintenance and operation of such unit;"

Also, in that case all the facilities necessary to navigation were constructed or to be constructed by the State of Illinois and the municipality of Chicago. The exemption drawn with this in mind was granted only to projects "constructed by States or municipalities." In the case before us, the various parts of the seaway were constructed by an agency of the United States Government, an agency of the Canadian Government, an agency of a Canadian province, and the Authority. The Authority is the only one which qualifies as a State or municipality.[3] If we accept (which we do not) the Authority's contention that the entire seaway is the "project," the exemption would still not apply, since the greater part of the seaway was not constructed by States or municipalities.

In view of the foregoing, we think it clear that the Authority is outside both the spirit and the letter of this exemption.

The Claim for Exemption for Power Sold to the Public Without Profit

The Authority claims total exemption from charges on an additional ground. Section 10(e) of the Act provides that States or municipalities shall be exempt to the extent that power "is sold to the public without profit." It has long been established that whether power was or was not sold at a profit is determined by whether revenues exceed costs, and the determination is made on the basis of the figures for each individual year. (*Matter of The Central Nebraska Public Power and Irrigation Dist.*, 5 FPC 165 (1946), aff'd *Central Nebraska Pub. P. & I. Dist.* v. *F.P.C.*, 160 F. 2d 782 (CA8, 1947).[4] Regulations under the Federal Power Act, Section 11.24(d)(2). Reserves for contingencies, reserves for new construction, accumulation of funds for working capital and amortization of principal indebtedness are not "costs" for the purpose of determining whether revenues exceed costs.

The Authority concedes that it operates at a profit if "profit" be defined as an excess of revenues over costs. The record indicates that the Authority operates at a very substantial profit indeed. Its annual report for 1960 showed net income in the amount of $13,184,174, consisting of $1,719,763 in the Construction Fund, $10,490,616 in the General Fund, and $973,795 in the Operating Fund. In 1961 each of these three funds showed increases. The Authority's general revenue bond resolution required a coverage ratio of 1.4 to 1. The engineer who designed its rates testified that these rates were intended to produce revenues 20 percent greater than costs, the excess being a margin for contingencies. Reserves have been provided for new construction, together with an accumulation of funds for working capital. The amount allotted to amortization of principal indebtedness has been far in excess of any proper annual allowance for depreciation.

---

[3] "Municipality" is defined in Section 3(7) of the Federal Power Act as a subdivision or agency of a State; a State is defined in Section 3(6) of the Act as "a State admitted to the Union, the District of Columbia, and any organized Territory of the United States." The Federal Government, Canadian Government, and the Province of Ontario are not States within this definition.

[4] At page 785, the court said: "The practice of the Commission has always been to allow exemptions from annual charges only to those State and municipal licensees whose annual accountings disclose no net balance of receipts over costs for the period. It has made no distinction in accounting requirements between the municipal licensees like the District whose gains from operation inure ultimately to the public benefit, and others, and its position has been and is, that it is the intent of the Act to require annual charges from all licensees whose sales of electrical power result in an excess of receipts over costs during the annual period as shown by the accountings. It denies any controlling effect in considering exemption to municipal licensees to their ultimate application of the profits from sales of power to the public benefit."

In the absence of a showing of the necessary facts, the Authority falls back upon a purely legal argument and urges that by its very nature it is a nonprofit organization and as such is entitled to exemption.[8] It recognizes that this contention is contrary to the prior decision of the Commission in *Matter of Central Nebraska Public Power and Irrigation Dist., supra,* to the Court of Appeals' decision affirming that case, and to Section 11.24(d)(2) of the Regulations under the Federal Power Act. The Authority asks that we repudiate our prior decision and the action of the court in affirming it, and that we declare Section 11.24(d)(2) of the Regulations to be invalid.

Matter of Central Nebraska Public Power and Irrigation Dist., supra, was not an isolated case. Previously, there was "a line of Commission decisions in which we have consistently held that the earning by a State or municipality licensee of annual revenue in excess of operating expenses and fixed charges, was enough to subject such licensee to the same license charges as would be assessed against a private corporation operated for profit." *Matter of Central Nebraska Public Power and Irrigation Dist., supra,* dissenting opinion of Chairman Olds at p. 172.) The present Section 11.24(d)(2) of the Regulations was derived from a prior section (11.24(a)(2)) dating back to 1938. The Commission's interpretation of the statutory exemption, publicly proclaimed in decisions and regulations, has been allowed to stand by Congress for over 25 years. It has been upheld in litigation, and has not been seriously challenged since 1947. We are not prepared to repudiate precedents so well established. The Authority's claim to total exemption upon this ground must be denied.

Further, it is not enough for the licensee to show that the licensee itself made no profit. Section 11.24(e) of this Commission's Regulations under the Federal Power Act provides that, even though a municipality itself make no profit,

> . . . it shall be subject to the payment of annual charges to the extent that electric power generated, transmitted, or distributed by the project is sold to another State, municipality, person, or corporation for resale, unless the licensee shall show that the power was sold to the ultimate consumer without profit. The matter of whether or not a profit was made is a question of fact to be established by the licensee.

In *The Central Nebraska Public Power and Irrigation District, supra,* this Commission said, at page 171:

> . . . Even if District had shown that it has not earned a net income or profit each year, we would not be authorized to allow the present claims for exemption on its sales for resale without a showing that the power was resold to the consuming public without profit . . . .

This principle is not contested in the case before us. The burden of proof is upon the Authority to introduce evidence which would show that sales to the ultimate consumer were made without profit. This burden, except to the extent exemption was allowed by the examiner, the Authority has failed to discharge.

The Exclusion of Evidence

Exception was taken by the Authority to the exclusion of certain statements purportedly relating to New York State Electric and Gas Corporation. This exception was apparently abandoned, as the Authority's brief did not mention it. The examiner said (p. 121):

---

[8] In support of this the Authority cites *Merritt-Chapman & Scott Corp.* v. *Public Utility District No. 2,* 319 F. 2d 94 (CA2, 1963.) We do not find the citation in point. The holding in that case was that a levy under an attachment in a quasi-in-rem proceeding against an out-of-state government agency will be permitted to stand unless it will substantially interfere with the performance of the agency's public duties. The case had nothing to do with the Federal Power Act, and the dicta as to the absence of business-type profit have no relevance.

> . . . no one was presented on behalf of the Authority nor of Electric and Gas who had participated in the preparation of such statements or who could assume responsibility in connection with the preparation thereof. They were, therefore, considered as having no probative value and were excluded.

We agree with this statement of the examiner.

Payment of Charges

The Authority has paid under protest the charges specified in Paragraphs (A) through (E) of the presiding examiner's proposed order. Consequently, Paragraph (G) of that order, providing for payment, should be deleted.

The Commission further finds:

(1) Power Authority of the State of New York (Authority or Licensee) is a "municipality" as defined in Section 3(7) of the Federal Power Act and within the meaning of Section 10(e) thereof.

(2) The Licensee is the holder of a license issued by this Commission on July 15, 1953, for project works designated as Project No. 2000, since erected on the United States' side of the United States-Canadian Border in the International Rapids section of the St. Lawrence River.

(3) As a Licensee pursuant to the Federal Power Act, the provisions of the license above described and the Commission's regulations thereunder, the Authority is subject to, unless otherwise exempt from, the payment of annual charges for the purpose of reimbursing the United States for the costs of administration of the Act.

(4) Licensee has failed to show that Project No. 2000 was primarily designed to provide or improve navigation.

(5) Project No. 2000 was primarily designed for the development of power on the United States' side of the St. Lawrence River.

(6) Licensee has failed to show that Project No. 2000 was a part of any project constructed or to be constructed by States or municipalities primarily designed to provide or improve navigation.

(7) Project No. 2000 went into commercial operation on August 1, 1959.

(8) For the period July 17, 1958, through December 31, 1958, 0.0665 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(9) For the period July 17, 1958, through December 31, 1958, 21.4633 percent of the power available from Project No. 2000 was sold to general consumers and construction contractors without profit.

(10) For the period July 17, 1958, through December 31, 1958, the Licensee sold for resale 78.4702 percent of the power available from Project No. 2000, but the Licensee has wholly failed to show that this power was resold by its wholesale customers without profit.

(11) For the period January 1, 1959, through July 31, 1959, 0.0834 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(12) For the period January 1, 1959, through July 31, 1959, 29.1263 percent of the power available from Project No. 2000 was sold to general customers and construction contractors without profit.

(13) For the period January 1, 1959, through July 31, 1959, the Licensee sold for resale 70.7903 percent of the power available from Project No. 2000, but the

Licensee has not shown that this power was resold by its wholesale customers without profit.

(14) For the period August 1, 1959, through December 31, 1959, 0.1176 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(15) For the period August 1, 1959, through December 31, 1959, the Licensee sold 99.8824 percent of the power available from Project No. 2000, but the Licensee has failed to show that this power was sold by it without profit, or that the power sold for resale was resold by its wholesale customers without profit.

(16) For the year 1960, 0.0935 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(17) For the year 1960, the Licensee sold 99.9065 percent of the power available from Project No. 2000, but the Licensee has not shown that this power was sold by it without profit, or that the power sold for resale was resold by its wholesale customers without profit.

(18) For the year 1961, 0.0891 per cent of the power available from Project No. 2000 was used for State or municipal purposes.

(19) For the year 1961, the Licensee sold 99.9109 percent of the power available from Project No. 2000, but the Licensee has not shown that this power was sold by it without profit, or that the power sold for resale was resold by its wholesale customers without profit.

The Commission orders:

(A) The Licensee is exempted from the payment of annual charges for which it was billed for the period from July 17, 1958, through December 31, 1958, to the extent of 21.5298 percent, or $2,623.66, leaving a balance now due of $9,562.54 for that period.

(B) The Licensee is exempted from the payment of annual charges for which it was billed for the period from January 1, 1959, through July 31, 1959, to the extent of 29.2097 percent, or $6,913.16, leaving a balance now owing of $16,754.17 for the period.

(C) The Licensee is exempted from the payment of annual charges for which it was billed for the period from August 1, 1959, through December 31, 1959, to the extent of 0.1176 percent, or $20.09, leaving a balance of $17,060.58 for the period.

(D) The Licensee is exempted from the payment of annual charges for which it was billed for the year 1960 to the extent of 0.0935 percent, or $34.00, leaving a balance of $36,330.00 for the period.

(E) The Licensee is exempted from the payment of annual charges for which it was billed for the year 1961 to the extent of 0.0891 percent, or $30.79, leaving a balance of $34,525.21 for the period.

(F) Except to the extent exempted, as set out in paragraphs (A) through (E), Licensee's applications for exemption from the payment of annual charges for the several periods from July 17, 1959, through December 31, 1961, are denied.

(G) The exceptions to the initial decision of the presiding examiner are hereby denied.

Commissioner Ross *concurs* generally with the opinion except that portion which finds that the development of the International Rapids section of the St. Lawrence River can be separated into two projects, one navigation, and the other power. However, since the greater part of the Seaway was not constructed by the Authority, Commissioner Ross believes that an exemption to the Authority would be inconsistent with the legislative purpose of Section 10(e) of the Federal Power Act.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR EXEMPTION FROM ANNUAL CHARGES

(Issued July 18, 1963)

MARSH, *Presiding Examiner:* This proceeding is upon the several applications filed at various times by the Power Authority of the State of New York (Authority or Licensee) for exemption from the payment of annual charges levied by the Commission on Project No. 2000 pursuant to the provisions of Article 27 of the license for that project, Section 10(e) of the Federal Power Act and the Regulations of the Commission thereunder. The pertinent provisions of the Act are set out in the margin hereof.*

As will more particularly hereinafter appear, the Commission on July 15, 1953 (Opinion No. 255, 12 FPC 172) issued to the Authority a license for Project No. 2000 which contained, among other things, the provision, Article 27, for the payment of annual charges.

By an order issued on August 3, 1959, the Commission, acting upon the first of such applications, filed on April 30, 1959, found the Applicant *exempt* from the payment of annual charges for the period July 17, 1958, through December 31, 1958, to the extent of 21.5298 percent of such charges, or $8,191.83. That determination, however, left a *balance payable* of $29,856.98. On September 2, 1959, the Authority filed an application for rehearing on the Commission's order of August 3, 1959, claiming, among other things, that the development is primarily designed to provide or improve navigation and that all of the power which it produced was sold without profit. The Commission granted this request for a rehearing on September 24, 1959. Thereafter, on March 3, 1961, April 28, 1961, and June 21, 1962, the Authority filed applications predicated upon the same grounds for total exemption from annual payment for the years 1959, 1960 and 1961 respectively.

In its order of August 3, 1959, the Commission considered and disposed of each of the bases upon which the Authority in the application of April 30, 1959, had sought exemption. The application for rehearing filed on September 2, 1959, alleged that in the issuance of its order of August 3, 1959, the Commission failed to afford the Applicant an opportunity to produce evidence in support of its request for exemption from payment of annual charges. The Commission's order of September 24, 1959, granting rehearing was intended to afford the Authority an opportunity to present any such evidence.

Pursuant to the Commission's order, a public hearing was convened on November 14, 1962. Although the Commission's order setting the matter for hearing had included only the years 1958, 1959 and 1960, at the hearing it was agreed between the Applicant and the Staff of the Commission that the claim filed by the Applicant subsequent to the order setting the matter for hearing and related to the 1961 operations should be adjudicated in this proceeding also.

**Statutory provisions:*

Sec. 10. [as amended August 26, 1935] All licenses issued under this Part shall be on the following conditions:

(e) That the licensee shall pay to the United States reasonable annual charges in an amount to be fixed by the Commission for the purpose of reimbursing the United States for the costs of the administration of this Part; * * * *Provided further,* That licenses for the development, transmission, or distribution of power by States or municipalities shall be issued and enjoyed without charge to the extent such power is sold to the public without profit or is used by such State or municipality for State or municipal purposes, except that as to projects constructed or to be constructed by States or municipalities primarily designed to provide or improve navigation licenses therefor shall be issued without charge; * * *.

At the hearing also the Authority was permitted to present such evidence in support of its applications as it saw fit. Thereafter, the Authority and the Staff of the Commission were afforded an opportunity to file briefs and briefs were submitted by each of them, the last of which was filed on May 7, 1963.

On May 17, 1963, the Authority filed with the Presiding Examiner a letter in which an opinion of the United States Court of Appeals for the Second Circuit, issued April 2, 1963 (*infra*, p. 116) was cited and discussed. Staff counsel was permitted an opportunity to reply to Authority's argument and such reply was filed on July 1, 1963. The matter is now ready for decision.

The Issues

In support of its several applications for exemption from the payment of annual charges, the Authority contends that,

(1) The "project" was primarily designed to provide or improve navigation,

(2) Project power was sold to the public without profit,

(3) During 1958, 1959 and part of 1960 the project was under construction,

(4) The Applicant is entitled to partial exemption from annual charges for the years 1958 to 1961 to the extent power was used for State or municipal purposes.

The Staff, on the other hand, contends that the project works were not primarily designed to provide or improve navigation, that power produced by the project works referred to as Project No. 2000 was sold to the public at profit, that power sold by the Authority for resale has not been shown to have been sold to the ultimate public without profit, and that the construction period under the license had ended by August 1, 1959, and no exemption under Section 11.24(g) was available to the Authority after that date.

The Applicant and Project No. 2000

The Power Authority of the State of New York is a corporate municipal instrumentality, a political subdivision, and public agency of the State of New York. It was created pursuant to the terms of the Power Authority Act of the State of New York, more particularly referred to hereinafter.

In its application for a license in Project No. 2000 filed with this Commission on July 16, 1948, the Authority recited that:

> The applicant is an independent agency of the State *created by law to develop the hydro-electric power resources of the St. Lawrence River*. No control or ownership is exercised by the applicant in any other organization or over applicant by any other organization. [Emphasis supplied.]

In that application the Authority proposed jointly with The Hydro-Electric Power Commission of Ontario (Ontario Hydro) to construct certain works in accordance with and conforming generally with the recommendations contained in an earlier joint report of committees named by the United States and of Canada. The Authority proposed to construct, and sought a license for, only such of the works described therein as would lie in the United States.

A supplement to the application was filed on September 23, 1948.

After a hearing before a Commission Hearing Examiner and the issuance by him of an initial decision in which he found that the application should not be approved but that the matter should be referred to Congress under the provision of Section 7(b) of the Federal Power Act, the Commission issued its Opinion No. 203. By that opinion the Commission referred the matter to Congress with the recommendation that the water resources of the St. Lawrence be developed not by the Authority but by the United States.

The Congress having in the meanwhile taken no action on the Commission's recommendation, the Authority on September 22, 1952, filed an amendment to its original application. Thereafter, hearings were held on the application as amended and on July 15, 1953, the Commission issued its Opinion No. 255 authorizing the construction, maintenance and operation of the project works authorization for which was sought. The license as then issued contained, among other provisions, the following:

> *Article 27.* The Licensee shall pay to the United States the following annual charges:
>
> For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed generator capacity (computed at 1,250,000 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated by the project during the calendar year for which the charge is made.

The license was accepted by the Power Authority on November 3, 1953.

Approval of certain exhibits having had the effect of reducing the computed generating capacity of Project No. 2000 from 1,250,000 horsepower to 1,216,000 horsepower the Commission by order issued January 14, 1957, amended the license to reflect that change.

On January 27, 1960, the Authority filed application for deletion from the license of Articles 14 and 15 relating to accounting and for the amendment of Article 27 as of July 1, 1958, in accordance with the Commission's Order No. 205 issued June 6, 1958. By order issued September 9, 1960, the Commission amended the Authority's license by eliminating therefrom Articles 14 and 15 and amending Article 27 to read as follows:

> *Article 27.* The Licensee shall pay to the United States the annual charges:
>
> For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's Regulations. * * * The authorized installed capacity for such purpose is 1,216,000 horsepower.

In the meantime the Authority had filed the applications for exemptions described above.

Discussion of the Authority's Contentions

Was the "Project" Primarily Designed to Provide or Improve Navigation?

Implementing the provisions of Section 10(e) of the Power Act, the Commission's Regulations under that Act provide that:

> Section 11.24. Exemption of State and municipal licensees.
>
> (a) *Bases for exemption.* A State or municipal licensee may claim total or partial exemption upon one or more of the following grounds:
>
> (1) The project was primarily designed to provide or improve navigation;
>
> * * * * * * *
>
> (b) *Projects primarily for navigation.* No State or municipal licensee shall be entitled to exemption from the payment of annual charges on the ground that the project was primarily designed to provide or improve navigation unless the licensee establishes that fact from the actual conditions under which the project was constructed and was operated during the calendar year for which the charge is made.

That the Authority is a municipal licensee within the meaning of these provisions is not questioned. We proceed then to Authority's contention that the project was primarily designed to provide or improve navigation.

But before doing so it may be desirable to arrive at an understanding of the term "primarily designed."

As defined in Webster's International Dictionary (Second Edition) "primarily" means: "In the first place; originally; preeminently; fundamentally; as, an action primarily based on policy."

"Fundamental" means, in turn, "of or pertaining to the foundation or basis; serving for the foundation."

Used intransitively, the verb "design" means "to plan; to intend; to proceed or start (for)."

Our purpose then is to determine the underlying or basic objective of the project.

At the outset of its argument on this issue the Authority asserts that "In order to determine whether the *St. Lawrence project* was designed primarily to improve or provide navigation or primarily to provide power the Commission must consider the entire *project* on both sides of the international boundary. This is true because the navigation and power phases on both sides of the boundary are physically interrelated to such an extent that one could not have been designed without regard to the others." (Emphasis supplied)

The argument continues: "Three entities in addition to the Authority were involved in construction of *the project:* the St. Lawrence Seaway Development Corporation, the St. Lawrence Seaway Authority (Canada) and The Hydro-Electric Power Commission (herein 'Ontario Hydro')." (Emphasis supplied)

The language here employed is both confused and confusing and raises a question as to what in the view of Authority is the "project" with which we are here concerned. It might, from this language, be construed to mean the entire Seaway Development, or at least the entire hydroelectric portion thereof. The words "St. Lawrence project" in the first sentence quoted above are defined in the Authority's General Bond Resolution (*infra* p. 113) as those portions located in the United States of America of "* * * structures and facilities to be constructed by the Authority either alone or jointly with the Hydro-Electric Power Commission of Ontario * * * pursuant to the Order of Approval, dated October 29, 1952, of the International Joint Commission, as from time to time amended: * * *" consisting of "(i) a concrete gravity dam (designated as Long Sault), * * * extending from the United States shore of the Saint Lawrence River in the vicinity of Massena, New York, to the upstream end of Barnhart Island, (ii) a concrete dam (designated as Iroquois), * * * located on the Saint Lawrence River at Point Rockway, * * * New York, (iii) a dam and powerhouse (designated Barnhart Island Powerhouse) with installation in the United States * * * of about 940,000 kilowatts in 16 units of equal size spanning the North channel of the Saint Lawrence River at the lower end of Barnhart Island, and * * * (iv) dikes, reservoirs, and appurtenant works and facilities, and all structures, fixtures, equipment, and facilities used or useful in the construction, maintenance or operation of the structures and facilities described in this definition and located on the project; including portable property as may be used or useful in connection with such structures or facilities or any portion thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the Saint Lawrence Project is approved or acquiesed in by the Federal Power Commission; * * *" together with all other improvements, buildings, structures, machinery, equipment, appurtenances of the Authority on or along the International Rapids Section of the Saint Lawrence River.

These are the project works for which the license for Project No. 2000 was issued and thus it seems clear that "the project" to which the Authority is directing this argument is indeed Project No. 2000. It becomes necessary then to determine what is meant by and the extent to which the St. Lawrence Seaway Development Corporation, the St. Lawrence Seaway Authority (Canada) and The Hydro-Electric Power Commission were "involved" in the construction of Project No. 2000. It thus becomes desirable to inquire into the basic purpose and objective of the Authority which in turn requires an understanding of the history of, and the events leading up to the construction and operation of, the project. There are in this record a large number of documents relevant to this question but it is thought necessary to refer to and quote from only a few.

An act of the legislature of the State of New York, approved March 29, 1930, declared the policy of the state in respect to its water power resources, provided for the appointment of a commission to devise and report a plan or plans for the development of hydroelectric power on the St. Lawrence River, and to effectuate such plan or plans when so reported and approved by the legislature. The commissioners were directed to study and consider the reports made by the International Joint Commission of the United States and Canada and the Federal Power Commission and any other available surveys or reports and confer with representatives of others then generating or distributing water or electric power within the state and those familiar with or interested in power sites and the development of power therefrom. The commissioners were required to report the results of such studies and investigations to the governor and legislature on or before January 15, 1931.

On the latter date the designated commissioners filed their findings and recommendations. They found it "entirely practicable to construct a dam in the St. Lawrence River in the International Rapids Section, and to *generate power in a manner which will permit meeting fully all requirements of navigation present and future.*" They found, too, that the development recommended by the advisory board promised to produce power at a cost which would make the project a sound one from an economic point of view.

The engineers employed by the commission estimated "the cost (to be shared equally between New York and Canada) will be $171,547,000 to construct all works necessary for power (a very large portion of which is likewise useful for improved navigation), to maintain navigation facilities without interruption, and so to arrange the work as to harmonize with and facilitate the execution of all contemplated plans for future navigational improvements in the International Rapids Section."

Under the plan one-half of the power produced would be available to Canada and one-half to New York. The report of the commission recited, among other things, that "Because of the regularity of the river's flow from season to season, the project can generate power to the plant's maximum firm capacity during practically the entire year. * * *"

As a result of the recommendations made in the foregoing report there was enacted by the legislature of the State of New York (approved April 27, 1931) the "Power Authority Act" which created the corporate municipal instrumentality of the state which is herein designated the "Authority." By that Act the Authority was authorized and directed to cooperate with the appropriate agencies and officials of the United States government to the end that any project undertaken under the authority of the Act should be consistent with and in aid of the plans of the United States for the improvement of commerce and navigation along the Niagara and St. Lawrence rivers and so planned and constructed as to be adaptable to the plans of the United States therefor, "so that the necessary channels, locks, canals, and other navigational facilities could be constructed and installed *by the United States in, through, and as a part of such project.*" [Emphasis supplied.]

The Authority was further authorized and directed, upon the completion of contracts for the sale, transmission and distribution of power produced at the project to proceed with the physical construction of the project including the erection of the necessary dams, powerhouses and other facilities, including transmission lines.

It seems quite apparent from a study of the foregoing documents that it was the policy and the basic purpose of the State of New York in the creation of the Authority and the construction and operation of the proposed project to develop the power resources of the St. Lawrence River situated and available on the New York side of the stream for the use and benefit of the people of that state. It is equally apparent that the committee and the legislature were aware that the state could not procure the authority necessary for that purpose without making provision for, and some contribution, perhaps, to the improvement and expansion of the navigational resources inherent in the stream.

There followed the passage of the Power Authority Act numerous surveys and reports on the methods and means by which the development of the International Rapids Section of the river could be accomplished. In 1940 engineers from the United States and Canada began consideration of the "controlled single stage project, 238-242" which, as we shall see, was the plan ultimately adopted and pursued. On July 16, 1948, as shown above, the Authority filed with this Commission an application for a license to authorize the construction, operation and maintenance of the project works described therein, all of which were to be situated in the State of New York. To that application there was attached the Power Authority Act above described (but with minor amendments) and a copy of an application, dated July 1, 1948, of the Authority to the International Joint Commission for an Order of Approval of joint construction of certain works to be located in the State of New York and the Province of Ontario by the Power Authority of the State of New York and The Hydro-Electric Power Commission of Ontario under the New York-Ontario Power Priority plan for development of the International Rapids Section of the St. Lawrence River. Among other things, the Authority stated in that application that:

> 5. The applicant, jointly with The Hydro-Electric Power Commission of Ontario, (a body corporate under and by virtue of The Power Commission Act, a Statute of the Province of Ontario) proposes to construct certain works in accordance with the project hereinafter described as the New York-Ontario Power Priority Plan for the development of the International Rapids Section of the St. Lawrence River. Under the plan the applicant will undertake to construct, pursuant to authority granted by the Federal Power Commission, those works provided for in the aforesaid plan which lie within the State of New York, on the United States side of the international boundary line, and The Hydro-Electric Power Commission of Ontario will undertake to construct those works which lie within the Province of Ontario, on the Canadian side of the international boundary. The power produced at the proposed project by the natural flow of the river will be divided equally between the applicant and The Hydro-Electric Power Commission of Ontario.
>
> 6. The project covered by this application is conceived to develop the International Rapids Section of the St. Lawrence River for the purpose of producing and transmitting hydro-electric energy to meet present and future requirements of the region within economic transmission distance of the project.

On September 28, 1951, the President of the United States and the Prime Minister of Canada discussed the St. Lawrence Development Project. They agreed on the vital importance to the security and the economies of both countries of proceeding as rapidly as possible with both the seaway and power phases of the project. The Prime Minister informed the President of the needs of Ontario for power and of the arrangement that the Canadian government could make with the government of that province for its participation with the appropriate federal or state authority in the United States for the power development. Thereafter, diplomatic notes were exchanged between the Canadian Ambassador and the Secretary of State of the United States. In a note from the Ambassador to the Secretary dated January 11, 1952, appears the following statement:

> The Canadian Parliament has recently passed legislation providing on the one hand for a power development on the St. Lawrence River to be undertaken by The Hydro-Electric Power Commission of Ontario and an appropriate agency of the United States, and on the other hand, for the establishment of the St. Lawrence Seaway Authority to construct the seaway either in cooperation with the United States, as provided for in the 1941 agreement, or as a solely Canadian undertaking.

On June 30, 1952, the governments of Canada and the United States filed complimentary but separate applications with the International Joint Commission for an order of approval of the construction, maintenance and operation of the power facilities referred to in the report dated January 3, 1941, of the Canadian Temporary Great Lakes-St. Lawrence Basin Committee and the United States St. Lawrence Advisory Committee.

In each of the applications last referred to approval was sought for the construction of works jointly by the Authority and Ontario-Hydro consisting of channel enlargements, control facilities, powerhouses, dikes, canals, revision of locks and the Long Sault dam. It was proposed as an essential part of the project that all main features including the Long Sault dam and Barnhart Island Powerhouse be so planned and built as to be *adaptable* to the *future* improvement of this reach of the river for *navigational* purposes as recommended in the joint report of January 3, 1941, of the United States-Canadian committees including the construction of the necessary works to permit continuance during and after completion of the project of 14-foot navigation on the Canadian side from the pool which would result from the Long Sault dam to the Cornwall canal.

The order issued by the International Joint Commission on November 19, 1952, authorizing the construction of the power works for which authorization had been sought stated that:

> Whereas the Government of Canada and the Government of the United States of America under date of June 30, 1952, have submitted applications to the International Joint Commission (hereinafter referred to as the "Commission") for its approval of the construction jointly by entities to be designated by the respective governments, *of certain works for the development of power* in the International Rapids section of the St. Lawrence River. . . . [Emphasis supplied.]
>
> * * * * * * *
>
> *Ordered*, That the construction, maintenance, and operation jointly by the Hydroelectric Power Commission of Ontario and an entity to be designated by the Government of the United States of America of certain works (hereinafter called "the works") in accordance with the "controlled single stage project (238–242)," which was part of the joint report dated January 3, 1941, of the Canadian Temporary Great Lakes-St. Lawrence Basin Committee and the United States St. Lawrence Advisory Committee, containing

> the features described in appendix A to this order and shown in appendix B to this order, be and the same are hereby approved subject to the conditions enumerated below, namely—
>
> (b) The works shall be so planned, located, constructed, maintained, and operated as not *to conflict with or restrain uses of the waters of the St. Lawrence River for purposes given preference over uses of water for power purposes* by the treaty, namely, uses for domestic and sanitary purposes and uses for navigation, including the service of canals for the purposes of navigation, and shall be so planned, located, constructed, maintained and operated as to give effect to the provisions of this order. [Emphasis supplied.]
>
> * * * * * * *
>
> (e) The hydroelectric plants approved by this order shall not be subjected to operating rules and procedures more rigorous than are necessary to comply with the provisions of the foregoing paragraphs (b), (c), and (d).

All of the studies conducted by and the negotiations between the United States and Canada respecting the use and improvement of the St. Lawrence River from the date of execution of the Boundary Waters Treaty of 1909, which created the International Joint Commission, culminated, so far as the United States was concerned, in the passage of what is commonly called the Wiley-Dondero Act of May 13, 1954. This act created the Saint Lawrence Development Corporation (Corporation). The "St. Lawrence Seaway Manual—A Compilation of Documents on the Great Lakes Seaway Project and Correlated Power Development" reflects the legislative history of the Act. It also contains numerous documents relating to the subject including those last above referred to.

The Corporation created thereby was authorized and directed by the Act to "construct, in United States territory, deep-water navigation works substantially in accordance with the 'Controlled single stage project, 238–242' * * * designated as 'works solely for navigation' in the joint report dated January 3, 1941, of the Canadian-Temporary Great Lakes-Saint Lawrence Basin Committee and the United States St. Lawrence Advisory Committee * * *."

The Corporation was directed to make necessary arrangements "to assure the coordination of its activities with those of the Saint Lawrence Seaway Authority of Canada and the entity designated by the State of New York, or other licensee of the Federal Power Commission authorized to construct and operate the dams and power works authorized by the International Joint Commission in its order of October 29, 1952. . . ."

This legislation contemplated and presupposed the construction of particular but specific phases of the Seaway Development by the four entities, two of the United States and two Canadian, all of which works were to be constructed, operated and maintained in accordance with the "controlled single stage project, 238–242." In fact, the Act specifically provided that the Corporation should not proceed with the construction which it was directed to perform unless and until the Canadian Authority provided assurance that it would complete the navigation facilities which it proposed to construct and until the Corporation had received assurances that the State of New York or other licensee of the Federal Power Commission, in conjunction with an appropriate agency of Canada, construct and complete the dams and power works approved by the International Joint Commission in its order of October 29, 1952. The *power project* was to include the facilities designated in the earlier studies and reports as "primarily for power" and "common to navigation and power." As distinguished from the navigation phase the *power development* was to be accomplished at the State-Provincial level, and not at the Federal level, but jointly by the Authority and Ontario-Hydro; and the Act provided for the construction by the United States of those works south of the international boundary which had been previously classified as "solely for navigation."

Concurrently with the passage of the Wiley-Dondero Act the Authority filed the amendment to its application heretofore mentioned the purpose of which was to bring that application into conformance with the Act and the "controlled single stage project, 238–242." In the latter document the Applicant asserted that:

> The Power Authority of the State of New York submits this amendment to its previously filed application for License to construct, operate and maintain a hydro-electric power project * * * all in accordance with the plan for development of power described in Section 8 of the applications of the Governments of the United States and Canada dated June 30, 1952 to the International Joint Commission for an Order of Approval of certain works in connection with the St. Lawrence Seaway and Power Project.
>
> The power development works applied for by the applicant as revised and supplemented by this amendment are similar to those proposed in the March 19, 1941 Agreement between the United States and Canada with the exception of the navigation features which are excluded. However, as stated in Section 2 of the applications of the Governments of the United States and Canada to the International Joint Commission, it is the intention of Canada to undertake construction, on the Canadian side of the International Boundary, of certain navigation works to provide a 27-foot waterway in the section of the St. Lawrence River in which the power works applied for herein by this Applicant are to be constructed * * * . By an exchange of notes between the two national governments dated June 30, 1952, Canada has agreed that when all arrangements have been made to ensure the completion of the power phase applied for herein, the Canadian government will construct locks and canals on the Canadian side of the International Boundary to provide deep-water navigation to the standards specified in the aforesaid agreement between the United States and Canada dated March 19, 1941, and in accordance with the specifications of the joint Board of Engineers dated November 16, 1926, and that such deep-water navigation shall be provided as nearly as possible concurrently with the completion of the power phase of the St. Lawrence development.

The amendment further recited that it was submitted to bring its license application "into conformance with the plans for the development of the International Rapids Section of the St. Lawrence River as proposed by the Government of the United States" in the exchange of diplomatic notes referred to above.

As Exhibit H to the amendment there appeared the statement that:

> Applicant's proposed power development will be designed, constructed, operated and maintained according to the conditions specified in Section 10 of the application of the Governments of the United States for an Order of Approval filed with the International Joint Commission, June 30, 1952.

We come now to the document, Opinion No. 255, issued July 15, 1953, which constitutes the Authority's authorization to construct and maintain the project works described in its application as supplemented and amended, and which stated the conditions under which they were to be constructed and maintained.

There is set out in Opinion No. 255 the relevant history of the St. Lawrence Seaway Development, the relationship between the navigation and power phases thereof, the relationship between the features of the power phase to be constructed by the Canadian entity and that to be constructed by the United States. It recited that the maintenance and operation of the power facilities on each side of the International Boundary under the authorizations theretofore procured by the respective entities would be merely one of the several activities providing for the furtherance of the mutual interests recognized by the consummation and ratification of the Boundary Waters Treaty of 1909.

More specifically the Commission, among other things, found therein that:

> The Government of Canada has advised the Government of the United States that "it has concluded that it would no longer be practicable to revert to the terms of the 1941 Agreement or to place that Agreement before Parliament for approval." The demand for power in the area to be served by the International Rapids power development is so urgent in Canada that the Canadian Government does not wish to engage in any deliberations which may delay the progress of the plan now under way for the construction of a power project in this section of the river.

It recited also that:

> The Canadian Government has given assurance to the Government of the United States that when all arrangements have been made to insure the completion of the power phase of the St. Lawrence project, the Canadian Government will construct locks and canals on the Canadian side of the international boundary, and will make all necessary improvements in the wholly Canadian section of the river to provide for deepwater navigation to the standard specified in the proposed agreement between Canada and the United States for the development of navigation and power in the Great Lakes-St. Lawrence Basin, signed March 19, 1941, and in accordance with the specifications of the Joint Board of Engineers, dated November 16, 1926, and that such deepwater navigation shall be provided as nearly as possible concurrently with the completion of the power phase of the St. Lawrence project.

Article 19 of the license issued concurrently therewith provided that:

> In the design, construction, maintenance and operation of the project covered by this license, the licensee shall comply with all applicable provisions and requirements of the order of approval (International Joint Commission, docket 68) issued October 29, 1952, by the International Joint Commission to the Governments of the United States and Canada for the construction of certain works for the development of power in the International Rapids section of the Saint Lawrence River.

The license was issued on July 15, 1953, and it was accepted by the Authority on November 3, 1953. On the day following the President issued an Executive Order declaring the Power Authority as the designee of the Government of the United States for the construction of the works for which the license was issued. That order recited that:

> Whereas the Federal Power Commission on July 15, 1953, issued a license (hereinafter referred to as the license) to the Power Authority of the State of New York for the construction, maintenance, and operation of Project No. 2000 which project represents that portion of the works for the development of power in the International Rapids section of the Saint Lawrence River located within the United States; ....

There are many other documents in this record relating to the evolution of the plan for the development of the International Rapids Section of the St. Lawrence all of which are entirely consistent with each other and with those referred to above. It is perfectly clear therefrom that the four entities named by the Authority in its brief as "involved" in the construction of the "project" each had particular functions to perform under the plan devised and prescribed by the Joint Commission. Obviously, there were two major phases of the plan, (1) the improvements to navigation and (2) the development, as an economic factor, of the power potential. And those two phases were in turn, because of international considerations, segregated between those to be performed by the Canadian entities on the one hand and those to be performed by the United States entities on the other. Thus, although it is clear that each phase of the overall Seaway development was closely related to each other phase thereof, and that the power phase as contributed to by the Authority on the American side and Ontario Hydro on the Canadian were complementary and mutually dependent there is no occasion here to cause to be "involved" any portions thereof except the Authority's. To do so merely results in confusion.

Clearly, the "project" with which we are here concerned is made up of, and confined to, the project works constituting that portion of the *power phase* of the Seaway Development which lies within the United States, and although the project works, authorization for which was sought by the Authority and granted by the Commission, were to constitute only the United States' portion of that power phase (and thus alone incapable of accomplishing the production of power) they were found to constitute a complete unit of development within the definition of "project" as it is defined in the Act. The operation of the project works in substantially confined to the production of electric power. Such of the navigation facilities as were included in the authorization are purely incidental and they were so included in order that the power phase of the project might be coordinated and compatible with the subsequent development of the Seaway. That the project facilities so licensed constitute a separate and distinct phase of the Seaway Development and even of the power phase of the development and yet are a complete unit of development was confirmed by the United States Court of Appeals, District of Columbia Circuit in *Lake Ontario Land Development & Beach Protection Association, Inc.* v. *Federal Power Commission*, 212 F. 2d 227 in which case the Commission's order of July 15, 1953, issuing the license for Project No. 2000 was reviewed.

It should be clear beyond cavil that the requirement contained in Section 10(e) of the Power Act with respect to the payment of annual charges relates such charges to costs of administration of Part I of the Act in its application to the project works for which the license was issued and not to all projects or parts of projects which may presently or in the future fit into a plan for the development of a much more extensive reach of a stream. Article 27 of the Authority's license must be construed against the background of that interpretation of the Statute.

Based upon the record in this proceeding it is concluded that the project works for which the license was issued is a complete and separate unit of development and, therefore, that the issue here presented, namely, whether that unit of development was designed primarily to improve or provide navigation can be decided without regard to the facilities, functions and objectives of the other three entities.

It is of no consequence then that all of the phases of the St. Lawrence Seaway Development were constructed in accordance, or at any rate consistently, with the 1909 Boundary Waters Treaty between the United States and Great Britain and the international agreements entered into between the two countries in accordance therewith. Nor is there occasion to question the Authority's statement that the Authority and Ontario-Hydro cooperated closely in construction of their respective parts of the power projects constructed and operated by them or that all costs incurred by both of them except the cost of electrical equipment were shared equally. It is probably also true, as the Authority asserts, that: "The United States and Canadian parts of the Seaway are interrelated in that locks and canals on each side of the boundary are in different stretches of the river so that there is no duplication."

There is no occasion either to here question the assertion of the Authority that the power entities, in compliance with the requirements of the authorization needed and sought for the construction and operation of the power projects, performed millions of dollars worth of dredging which was needed to provide a channel acceptable to the International Joint Commission as reflected in its order of approval of power works dated November 19, 1952.

The order of the Joint Commission clearly reveals that the several plans for the St. Lawrence Seaway Development contemplated the construction of power dams as well as canals and locks in connection therewith. Thus, to this extent, it may properly be said, as the Authority does, that the Seaway could not operate without the power phases and that, therefore, the construction of the power dams is essential to the Seaway. This is not to say, of course, that such dams, canals and locks could not have been constructed to the exclusion of power production.

Nor is it of consequence, even if we assume it to be the case, that the navigation and power phases of the St. Lawrence are physically and legally related; that no part of the St. Lawrence project was authorized without consideration of the fact that each part was to be coordinated with and supplemented by the other; that navigation was to have priority in the use of the water and that whenever there is a conflict, if there is, between the use of the water for navigation and the use of water for power the latter must yield to the former.

Nor does "The dependence of the Seaway on work done by the power entities" which might be inferred from the requirement in the Wiley-Dondero Act "that the State of New York, or an entity designated by it, or other licensee of the Federal Power Commission—will construct and complete the dams and power works approved by the International Joint Commission" deserve weight in the determination of the question whether Project No. 2000 was primarily designed to provide or improve navigation.

Neither is the fact that Article VIII of the 1909 treaty provided an order of preference to be preserved as to the uses of water helpful in determining this issue. Obviously, if "priority of useage" were adopted as the determinant it would follow that the Seaway would have been primarily designed to provide and improve the river for domestic and sanitary purposes rather than for navigation or power. Obviously, such a conclusion would be unwelcome to the Authority.

It is beyond controversy that the St. Lawrence Seaway Development was primarily designed to provide or improve navigation and that either directly as navigation facilities solely or indirectly through separate entities seeking authority to construct power facilities, the facilities needed for the Corporation's planned deep-water navigation would have had to be constructed. But, it simply does not follow because the power facilities were needed to and did contribute to the deep-water navigation phase of the Seaway Development by the construction of facilities and the performance of dredging not necessarily used and useful in the production of power that the power entities' facilities were primarily designed to provide or improve navigation.[1] On the contrary, the Authority has failed to adduce a single item of evidence which establishes the fact, historically or from actual conditions, that Project No. 2000 was primarily designed, was constructed or was operated at any time prior to the hearing to provide or improve navigation.

---

[1] Nor does the fact that the St. Lawrence Seaway Development Corporation, an entity separate and distinct, had a deficit from operations for the period April 25 to December 21, 1959, and for the calendar years 1960 and 1961 has any relevance here.

Perhaps, however, before leaving this subject one other aspect should be commented upon.

Section 10(e) provides, as we have seen "* * * that as to projects constructed by states or municipalities primarily designed to provide or improve navigation, licenses therefor shall be issued without charge; * * *." The purpose for which such a project was primarily designed should have been known to the Applicant at the time of the designing thereof. It would seem that an applicant for a license for a project primarily designed to provide or improve navigation, aware of the foregoing provision of the statute as the Authority undoubtedly was, would have made that fact known immediately and would have demanded the exemption from annual charges contemplated thereby. There is no evidence here that any such purpose was asserted or claimed. No such statement was made in the application, initially or as supplemented and amended, and there is no evidence that a claim of this nature was made during the course of the proceedings which resulted in the orders of July 15, 1953, January 14, 1957, and September 9, 1960. And, of course, as we have seen Article 27 was in the license as issued and as accepted by the Authority on November 3, 1953. As far as the evidence here discloses, this "reason" for exemption from payment of annual charges was advanced for the first time in the application for total exemption from payment of annual charges filed on April 4, 1959, more than nine years after the project was designed.

Since the "greater part" of Project No. 2000 has never been concerned with navigation and since from the beginning the primary purpose of Project No. 2000 was, and has been, the production of power and not navigation *South Carolina Public Service Authority* v. *Federal Power Commission*, 200 F. 2d 78 (4th Circuit 1952) has no analogy here.

The licensee has failed to adduce any evidence which would support the contention that Project No. 2000 was primarily designed to provide or improve navigation. Thus, it has failed to make the showing required by the Commission's Regulations.

To What Extent, if any, was Project Power sold to Public Without Profit

Section 11.24(a) of the Commission's Regulations under the Federal Power Act provides further that "A state or municipal licensee may claim total or partial exemption [from payment of annual charges] upon one or more of the following grounds:

* * * * * * *

> (a)(2) To the extent that power generated, transmitted, or distributed by the project was sold directly or indirectly to the public (ultimate consumer) without profit;
>
> * * * * * *
>
> (d) Sales to public. No State or municipal licensee shall be entitled to exemption from the payment of annual charges on the ground that power generated, transmitted, or distributed by the project is sold to the public without profit, unless such licensee shall show:
>
> (1) That it maintains an accounting system which segregates the operations of the licensed project and reflects with reasonable accuracy the revenues and expenses of the project:
>
> (2) That an income statement, prepared in accordance with the Commission's Uniform System of Accounts, shows that the revenues from the

sale of project power do not exceed the total amount of operating expenses, maintenance, depreciation, amortization, taxes, and interest on indebtedness, applicable to the project property. Periodic accruals or payments for redemption of the principal of bonds or other indebtedness may not be deducted in determining the net profit of the project.

There is in this record an absence of proof that the Authority maintains "an accounting system which segregates the operations of the licensed project and reflects with reasonable accuracy the revenues and expenses of the project." Nor was there presented by the Authority an income statement prepared in accordance with the Commission's Uniform System of Accounts, showing that the revenues from the sale of project power do not exceed the total amount of operating expenses, maintenance, depreciation, amortization, taxes and interest on indebtedness, applicable to the project property. However, Staff counsel agreed that the statements of receipts and expenditures in the Authority's annual reports were clear and understandable and, therefore, he did not insist on separate and other such statements. It is understood then that compliance with Sections 11.24(d)(1) and (d)(2) in this respect is not in issue.

On the issue whether project power was sold to the public without profit the Authority argues that:

(1) The Power Authority Act prescribes the method by which project power shall be sold and provides for regulation of resale rates by the licensee through contractual provisions,

(2) Section 1005(6) of the Power Authority Act requires that the Authority's power contracts shall provide for:

(a) Payment of all operating and maintenance expenses of the project,

(b) Interest on and amortization and reserve charges sufficient within fifty years of the date of issuance to retire the bonds of the Power Authority issued for the project,

(3) The Authority is required by Section 1005(5) to sell power to municipalities and political subdivisions "at prices representing cost of generating plus capital and operating charges and the cost of transmission and to sell power to industrial customers in such a manner to secure a sufficiently high load factor and revenue returns to permit domestic and rural use at the lowest possible rates,

(4) Provisions of the Power Authority General Bond Resolution, which was adopted by the Authority on December 21, 1954, [and thus subsequent to the issuance of the license and the acceptance thereof by the Authority] require that the revenues received during the construction period be paid into the construction fund to meet the cost of construction and revenues received after date of completion of the project in excess of operating expenses, working capital and necessary reserves be first applied to the payment of interest and principal on outstanding bonds.

It is clear from the foregoing that the Authority relies in respect to this issue not upon the provisions of the Power Act or the Commission's regulations thereunder but rather upon a statute of the State of New York and a contract between the Authority and its bond purchasers entered into voluntarily and with full knowledge of the conditions attached to the license.

Consistently with those contentions, aside from such financial data as appeared in its annual reports for the periods beginning June 1954 and extending through the calendar year 1961, the Authority offered no evidence which might be construed as evidence of the "cost of service" and thus the basis for the determination of whether there resulted in the several periods a profit within the contemplation of the Power Act and the regulations thereunder.

The Authority sells power to the Aluminum Company of America, the Public Service Commission of the State of Vermont, the City of Plattsburgh, New York, the United States Air Force (for the Plattsburgh Air Force Base), Reynolds Metals Company, Niagara Mohawk Power Corporation, New York State Electric and Gas Corporation and General Motors Corporation. The evidence which Authority did adduce shows that it charges the same rates under all of its power contracts. They were devised by a consulting engineer who formerly was Chief Engineer of the U.S. Bureau of Reclamation. Those rates, this witness testified, "were intended to produce revenues sufficient to meet the bond service requirements together with the cost of operation and maintenance of the project plus the Authority's administrative costs." The basic data employed in formulating the rate schedule were the engineer's estimates of the cost of construction and of the annual costs involved. It does not appear that any change has subsequently been made in the rate schedule then devised.

When the bonds were sold, the bond circular contained a rate covenant which obligated the Authority to procure net revenues sufficient to meet a 1.4 to 1 ratio between net revenues and the "bond service requirements." Thus, the rates were expected to produce revenues at least that much in excess of those requirements. Actually, the witness testified, they were expected to provide annual revenues sufficient to meet not only the estimated annual charges for bond service but an additional small margin for contingencies.

It should be noted, however, that this analysis was made and the rates thus determined, in the witness' words, "before the bonds had been sold and the bond service requirement had not been determined at that time." Actually, the basic data used in the formulation of the rate schedules consisted of neither known bond service requirements nor operating and maintenance costs actually experienced. They were based instead on estimated costs of construction and an engineering report estimating annual costs. To the amounts thus taken as "costs" the trustees added 20 percent for contingencies to provide against possible increases in cost. The revenues derived therefrom were, as we have seen, expected to afford a small margin above costs.

Section 11.24(d)(2) of the Commission's Regulations under the Power Act (*supra*, p. 112) allows as costs to be offset against revenues in the determination of whether the power sold is sold without profit both "depreciation" and "amortization" but it provides that periodic accruals or payments for redemption of the principal of bonds or other indebtedness *may not be deducted in determining the net profit of the project.*

The Authority contends that "amortization" is the periodic accruals of payments for the redemption of the principal of bonds or other debt and that Section 11.24(d)(2) is, therefore, self-contradictory and, therefore, unreasonable and invalid. Authority contends further that "amortization" must be construed to include amounts accrued or paid in the redemption of the principal of outstanding bonds and that if Paragraph 11.24(d)(2) were construed otherwise the provisions would be arbitrary, unreasonable, self-contradictory and invalid, would be contrary to the plain language of Section 10(e) and to the clear intent of the Congress demonstrated when Section 10(e) was enacted, and would unreasonably and contrary to the express prohibition of Section 10(e) increase the cost of power to consumers through the imposition of improper charges.

It should be pointed out in this connection that consistently with the Authority's contention that the bond service requirement including an allowance for the retirement of its bonds should be considered a cost in determining the net profit of the project, the Authority did not include any amount in its "cost" of service for depreciation expense.

The Authority's position here seems to be that the amounts which it sets aside during each accounting period to be applied to the retirement of its bond, thus constituting a return of capital rather than a cost of operation, should be considered part of Authority's cost of producing power in the determination of whether such power is sold without profit. A similar contention was made in *The Central Nebraska Public Power and Irrigation District*, 5 FPC 165. There the Commission said:

> While the Federal Power Act authorizes exemption to the extent that power generated by a municipal licensee is sold to the public without profit, the Act does not define what is meant by the sale of power "without profit." According to universal understanding of the meaning of the words, there is a profit if, for a given period, the revenues exceed the properly allocated costs. *Rubber Company* v. *Goodyear*, 76 U.S. 788, 804 (1869). Nothing in the legislative history of the exemption clause of section 10(e) shows that Congress intended a concept of municipal profit differing in any respect from that generally accepted.[8] The fact that Congress allowed the exemption on sales to the public only "to the extent" that power is sold without profit shows that on sales "with profit" the exemption cannot be granted. [Footnote omitted.]

Here, as there, the licensee would have us consider the repayment of its power investment as an expense in producing the power which it sells. In that connection the Commission there said:

> * * * It is true that a municipality is put to expense in building a power plant and that ordinarily it must raise the construction money by issuing revenue or tax bonds. But the construction of any power plant calls for an expenditure of capital, whether the owner be a public agency, an individual, or a private corporation. Neither this Commission nor any other regulatory agency would allow, as part of the expense in producing the power sold, a double return to investors of the cost of a private power plant through both a depreciation allowance and through amortization of principal. Having permitted this public agency to deduct a depreciation charge as an expense, there is no reason why we should also allow it to treat the repayment of its capital investment as a further and duplicate expense. As a matter of fundamental principal, such a repayment of capital investment can only be made from profit.
>
> The reduction of the indebtedness against the property by payment of the principal of the bonds outstanding out of earnings can only be regarded as profit. *City of Newport News* v. *Warwick*, 166 S.E. 570, 578 (Va. 1932).
>
> See decisions of other courts to like effect: *Village of Boonville* v. *Maltbie*, 4 N.E. 2d 209, 212 (N.Y. 1936); *Carta v. City of Norwalk*, 145 A. 158, 160 (Conn. 1929); *Zangerle* v. *City of Cleveland*, 145 Ohio State, 347 (1945).

A Commission explanation of the purposes and the application of Section 11.24 of the Regulations appears in a footnote on page 169 of Volume 5 of the Commission's Reports as follows:

> Under paragraph A of section 11.24 of our regulations pertaining to exemption of municipalities from the payment of annual charges, such a licensee may show that the revenues from the sale of power do not exceed the project operating expenses plus payment of interest on indebtedness. Among the items listed as *expense deductions* appears "amortization." That is, there may be included among the expense deductions the amortization of those amounts which for one reason or another have been deferred to be carried forward to a future period. For example, operating expenses would include amortization of debt discount and expense, amortization of premium on debt,

amortization of prepaid rent, amortization of improvements to leased premises where such improvements are to remain upon the expiration of the lease, or amortization of limited term interests in lands. However, under no circumstances should this be interpreted to include the amortization of principal, especially as an added expense on top of the allowance already made for depreciation.

It is apparent, therefore, that the Commission is and has been for a number of years aware that public projects are financed by revenue bonds. They have, however, disregarded, and it is believed that they will continue to disregard, the distinction proposed by the Authority in connection with the determination of whether the Authority's power is sold without profit.

Subsequent to the filing of its reply brief, namely on May 17, 1963, the Authority lodged with the Presiding Examiner what, although in letter form, was in effect a supplemental reply brief. In consequence, the Staff was permitted to reply thereto and such reply was filed on June 28, 1963.

In this supplemental brief Authority cited the decision of the United States Court of Appeals for the Second Circuit in *Merritt-Chapman & Scott Corporation* v. *Public Utility District No. 2 of Grant County, Washington*[2] (No. 164—October Term 1962, decided April 22, 1963). This decision, the Authority contends, shows clearly the distinction between "earnings" or "revenue" from a bookkeeping standpoint and "profit" as contemplated by the language of Section 10(e) of the Federal Power Act which grants exemption from annual charges when power is sold without profit.

The language of the court on which Authority appears to rely is as follows:

> While the District may have "earnings" or "revenue" from the operation of the Priest Rapids Production System, this is solely in the accounting sense that income exceeds expenses, and all such revenues must be applied either to retire indebtedness, to establish working capital and reserves for expansion and contingencies, or to reduce or stabilize rates.[3]

But the relevance of the statement to its context is far from clear. Treating "earnings" and "revenue" as synonymous is confusing and what the alternative "sense" may be is not discernable. It should be noted, however, that this was an action brought in the State of New York to enforce a New York contract between a Delaware contractor and a municipal corporation formed under the laws of the State of Washington.

The court below had held that the central point on the motion to vacate the attachment and levy and set aside the service of summons was whether the activities of Public Utility District No. 2 constituted local governmental duties or whether such a venture is private and proprietary in nature. On that theory he had found that the District was not engaged in a private and proprietary venture and that, therefore, the monies attached were not subject to attachment. It is not understood to be the Authority's contention here that because it is engaged in a governmental rather than a proprietary activity it is exempt from payment of annual charges.

The Court of Appeals, however, found the issue of the validity of the warrant of attachment and of the levy in the case a constitutionally procedural matter for New York conflict of law purposes and that, therefore, the question for consideration was the existence and nature of the limitation the New York courts would read into the attachment provisions of the New York Civil Practice Act, Sections 902, 903 and 912 based upon the District's claim of governmental immunity.

---

[2] A licensee of this Commission under license issued November 4, 1955, for Project No. 2114, 14 FPC 1067.

[3] Two other passages are quoted but both of them pertain to the question whether the District was performing a private or public function, a question not in any way in issue here.

The Court of Appeals, concluding that "* * * due to the way in which the critical issue has been submerged and disregarded by all concerned, we have no way of coming to a rational conclusion with respect to the practical consequences that may or will follow a decision that the attachment levy is valid", remanded the case for further consideration by that court. Obviously, neither of the questions there involved are in issue here and, therefore, that case has not the slightest analogy to the one at bar. Consequently, it can hardly be argued that the opinion has any precedential value in this proceeding.

It is concluded that for the purpose of determining whether the power produced at the project is with or without profit, amounts which are accrued against or which are used for the retirement of the principal of outstanding bonds cannot be included in the Authority's costs of production of power.

However, the Commission has consistently allowed as part of a proper cost of service the loss in service value not restored by current maintenance incurred in connection with the consumption or prospective retirement of electric plant from causes which are known to be in current operation and against which the utility is not protected by insurance. This is, of course, depreciation. The Staff, therefore, presented evidence on the reasonable service life of the depreciable project works and found as reasonable an annual depreciation rate of 1.25 percent. That rate the Staff applied to the Authority's depreciable plant to arrive at depreciation expense for the periods involved. The substitution of "depreciation" as so determined for "amortization" of bond payments as proposed by Authority results in greater excess of costs over revenue than would otherwise ensue.

As showing that despite the provisions of the Power Authority Act, licensee's sales were not without profit the Staff points to the fact that the Authority's annual report for the year 1960 reflects what the Authority characterized as "net income" in the total amount of $13,184,174. This amount is made up, according to the report, of $1,719,763 in the "Construction Fund," $10,490,616 in the "General Fund" and $973,795 in the "Operating Fund." The Authority contends that "net income" as used in the report "refers to 'adjusted' income for accounting purposes only before deducting for bond service and principal payments on bonds, working capital and other necessary reserves," and as has been pointed out the Authority had not included depreciation expense in its operating statement.

The Staff points also to other evidence that the rates charged by the Authority result in an excess of revenues over the costs of production, excluding the amortization of bonded indebtedness but including reasonable depreciation expense. More specifically, there is evidence that during 1961 each of the three funds which the bond resolution required to be set up showed increases, thus indicating that revenues exceeded costs. As we have seen, the General Revenue Bond Resolution required a coverage ratio of 1.4 to 1. We have seen too that the rates devised were fixed so as to bring in at least 20 percent more revenues than costs including debt service.

The Authority, in answer to the arguments advanced in his brief by Staff counsel, contends that this evidence does not prove that the power produced at the project was sold at a profit. While the writer does not agree with that contention, it must be remembered that to be entitled to the exemption from the payment of annual charges on the ground that the power generated is sold to the public without profit, the matter of whether or not a profit was made *is a* *question of fact to be established by the* Licensee, and the Licensee has wholly failed to make the showing this requires. Actually, in fact, the Authority made no effort to show what its "costs," within the contemplation of the Federal Power Act and the Commission's Regulations pursuant thereto, were or are.

Thus, the basic question appears to be whether in the discharge of the responsibility placed upon it by the Congress of the United States for the licensing and regulation of hydroelectric projects on navigable streams of the United States this Commission's authority is to be subordinated to the laws of a state inconsistent and incompatible therewith. It would seem unnecessary at this late date to say that the answer is No.

There is even less justification for the contention, if that is intended, that a licensee by entering into a bond indenture the provisions of which are inconsistent with the provisions of the license and the Commission's Regulations under the Act may render ineffective the latter provisions.

The matter of whether or not a profit was made on power sold for resale is a question of fact to be established by the licensee. The Authority has failed to make the required showing.

The Construction Period

Section 11.24(g) of the Regulations under the Federal Power Act provides:

> *Construction period.* During the period when the licensed project is under construction and is not generating power, it will be considered as operating without profit within the meaning of this section, and licensee will be entitled to total exemption from the payment of annual charges * * *."

As has been noted, the Licensee contends that during 1958, 1959 and 1960, the project was still "under construction." In this connection, too, the Licensee relies upon the General Bond Resolution. Under its provisions the Authority is required to pay into what is called the "proceeds account," a separate account within the construction fund, among other things, all revenues from the St. Lawrence project received prior to the date of completion thereof, that date to be determined by the Authority's engineer and evidenced by his certificate to that effect. The Authority's engineer certified completion on May 24, 1960. Until that date all proceeds of the Authority went into the construction fund. The Authority contends that until that date it put nothing in its revenue account and in that context asserts that, "It is impossible to have a profit without revenues."

The Authority thus contends that within the meaning of Section 11.24(g) of the Regulations the project was under construction and, therefore, entitled to total exemption from payment of annual charges. But the Authority gives effect to only a portion of the language of Section 11.24(g). That which the Authority ignores is of controlling significance.

The Authority's own evidence shows that Generator Nos. 1 and 2 "went into commercial operation" on July 23, 1958. Generator Nos. 4, 5 and 6 were in operation during the month of August 1958 and Generator Nos. 7 to 16 inclusive went into operation at intervals of about one month therafter, Generator No. 16 going on the line on July 29, 1959. No reason has been advanced, and none appears, why the criteria for the determination of the construction period heretofore established by the Commission should not be applicable here. There is a line of Commission opinions beginning as far back as September 22, 1939, *In the Matter of Kanawha Valley Power Company*, License Project No. 1175, 2 FPC 11, where the Commission held that the construction period to be considered in making an allowance for interest and taxes during construction, "is that which with the exercise of the due diligence and prudence is reasonably necessary for the completion of all processes required for the achievement of the project in commercial operation. Commercial operation as thus used necessarily contemplates the end of the period required to complete the project whether or not power was then actually generated and revenue derived therefrom. But, the beginning of the period of operation does not necessarily mean the completion of all construction activities but a degree of operation capable of making the facilities available for the services for which the were intended."

In *Puget Sound Power and Light Company*, License Project No. 943, 3 FPC 231, the Commission then pointed out that the construction period does not extend beyond the date when the Licensee by due diligence and prudence could have completed the project. The Licensee does not contend in this proceeding that the project had not been completed to the point that it was available for the purpose for which it was intended.

It is concluded that Project No. 2000 was under construction until, but not after, August 1, 1959. Thus, that date fixes the end of the period for the purpose of the allowance for interest during construction and the beginning of the period for which annual charges are to be computed. It is not proper, therefore, in determining whether the Authority has sold and is selling power without profit to treat revenues received prior to the latter date as credits to the construction fund and thereby delay the beginning of payment of annual charges.

But here again the basic question appears to be whether the bond indenture entered into by the Authority should take precedence over the regulations of this Commission. The answer, of course, must again be No.

State or Municipal Use Determination of Exemptions

Section 11.24 of the Regulations also provides that a state or municipal licensee may claim total or partial exemption from the payment of annual charges to the extent that the power is used by the licensee itself for state or municipal purposes. With respect, however, to sales for resale it provides that:

> Notwithstanding compliance by a State or municipal licensee with the requirements of paragraph (d) of this section, it shall be subject to the payment of annual charges to the extent that electric power generated, transmitted or distributed by the project is sold to another State, municipality, person, or corporation for resale, unless the licensee shall show that the power was sold to the ultimate consumer without profit. The matter of whether or not a profit was made is a question of fact to be established by the licensee.

At the outset of the hearing the Authority conceded that it sold some power to villages and other municipalities but that it had no data to show that such power was resold without profit. Beyond that related to the design of the project, the Authority claimed no exemption therefor.

Sales of Power for Resale

The Authority sells power for resale regularly to the Vermont Public Service Commission and has on occasion sold power for that purpose to Reynolds Metals Co. An Authority witness testified that even the most casual inspection of Reynolds resale rate "will show they are taking a loss on it." Sales of power to the Public Service Commission of the State of Vermont are made under a contract which provides that resales by the purchasers will be on a non-profit basis. The only evidence adduced by the Authority in support for its claim for exemption in connection with this sale was an excerpt from the Biennial Report of the Vermont Commission for the period July 1, 1958, to June 30, 1960, and an excerpt from the Public Service Commission's Accounting Manual for St. Lawrence power which extract accompanied that report. This excerpt states that:

> The sale of power and the operations shall be on a non-profit basis to electric distribution companies, cooperatives, municipalities and privately-owned utilities, as provided in agreement of the Power Transmission contract between the State of Vermont and the Vermont Electric Power Company, Inc. (Section 0.3) and the agreement of the Sale, Transmission and Distribution of Power between the Power Authority of the State of New York and State of Vermont (Article IX).[4]

The excerpts above described were offered for the record by an electrical engineer in the Power Utilization Department of the Authority. This witness did not know the occasion for the issuance of the instructions; he did not know exactly what the Vermont people were talking about. He certainly was not capable of testifying as to the meaning of the words "non-profit basis" as used therein. Since there is, obviously, more than one way in which "profit" and "non-profit" may be determined, the mere existence of the instructions is no evidence that the sale to Vermont is "without profit" within the meaning of Paragraphs 11.24 (d) and (e). The Authority thus has failed to make the showing required by those provisions.

In the contract between the Authority and Niagara Mohawk Power Corporation (Niagara Mohawk) for the sale by the former to the latter of power generated by Project No. 2000 the purchaser agreed to pass on to domestic and rural consumers within the buyer's St. Lawrence Market area "savings" derived from the purchase of such power. Those savings were to be computed by determining the difference per kilowatt-hour between the purchaser's average system cost of 60-cycle power and energy from whatever source derived (except from Authority) and the average delivered cost to purchaser of such power and energy purchased from Authority.

In support of its contention that the power produced by the project was sold without profit, Authority put in evidence a copy of the contract and copies of a series of statements issued from time to time for filing on behalf of Niagara Mohawk with the New York State Public Service Commission and for inclusion in copies of purchaser's rates and tariffs available for public inspection.

The System Rates Manager for Niagara Mohawk explained the statements. They were prepared each month by Niagara Mohawk "for the purpose of making a determination of the rate of St. Lawrence credit per kilowatt-hour to be used by our accounting and billing department in connection with the preparation of bills rendered by Niagara Mohawk to customers who take service on our service classification No. 1 of Schedule PSC No. 204."

They reflected three factors, (1) the estimated kilowatt-hours to be billed on the latter rate schedule for the month, (2) the "savings" related to reduction in power costs applicable to the current monthly billing cycle, and (3) the credit adjustment per kilowatt-hour which is the second factor divided by the first. The billing currently is upon "regular" rates and to them for the succeeding billing period the "credit" is applied.

---

[4] Article IX reads as follows:

> Contractor agrees that in reselling power purchased from Authority it will do so pursuant to the appropriate laws of the State of Vermont, that it will do so on a nonprofit basis and that it will require transmitting or distributing companies or public agencies to whom it sells the power for resale also to sell such power without profit other than reasonable compensation for use of facilities and for services furnished in the transmission and/or distribution of such power, and that it will follow the principles enunciated in the Power Authority Act particularly that which requires that power be made available at the lowest possible cost to rural and domestic consumers.

Niagara Mohawk's assistant comptroller explained the second factor. In arriving at this saving the following steps were taken:

> First we obtain the net investment in 60-cycle utility plant which is taken from our record at the end of each year. This net investment is used to obtain a six percent return on an average monthly basis and for a 12 months' ending period.
>
> The second step is to obtain the cost of operation and maintenance of all the 60-cycle production plant units from our monthly records, and also accumulated for a 12-months' ending period.

In the cost figures so determined there is included the New York State water charge for one of Niagara Mohawk's plants depreciation, insurance and taxes. This evidence bears a resemblance to that which would seem to be required for the determination of cost and ultimate profit, but it is inadequate for the purposes of a reasonably accurate determination. In addition, it is relevant only to production costs after receipt by Niagara Mohawk, does not reflect the costs of transmission and, of course, does not reveal the cost of producing the power by the Authority.

The contract under which project power is sold to New York State Electric & Gas Corporation (Electric & Gas) contains similar provisions respecting the treatment of "savings" and the application thereof. In this connection also the Authority offered in evidence the contract and a series of statements similar to those prepared by Niagara Mohawk. Here, however, no one was presented on behalf of the Authority nor of Electric & Gas who had participated in the preparation of such statements or who could assume responsibility in connection with the preparation thereof. They were, therefore, considered as having no probative value and were excluded.

Conclusions

There is no controversy here with respect to the costs of the administration of the Act for which the United States is to be reimbursed, a portion of which, in the absence of exemption, would be payable by the Authority.

A statement showing the generation (in kilowatt-hours) of energy at Project No. 2000 and its disposition during each of the years 1958 through 1961 appears opposite Page 28 of the Staff's brief. No exception thereto having been taken by the Authority it is adopted for the purposes of this decision and is set out in Appendix A hereto.

If consideration were here confined to the evidence presented by the Licensee it might reasonably be found that the Authority has failed to adduce evidence to sustain any of the exemptions from the payment of annual charges permitted under Section 10(e) of the Power Act and the Commission's Regulations thereunder and that the amounts billed are payable in full. Staff counsel, however, offered in evidence by reference certain documents which are in the files of the Commission. Those the Staff employed in the computation of exemptions to which the Licensee is reasonably entitled. They reveal that, exclusive of power used for station purposes, lost in transmission, etc.:

(a) For the period July 17 through December 31, 1958, power was sold without profit to general consumers and construction contractors in the percentages of 20.9394 and 0.5239 respectively, or a total of 21.4633 percent. Power used for State purposes amounted to 0.0665 percent. The remainder, 78.4702 percent, was sold for resale. Applying these percentages to the total charges billed results in an exemption of charges in the amount of $2,623.66 and charges not exempt in the amount of $9,562.54.

(b) For the period January 1 through July 31, 1959, 29.0616 percent of the power was sold to general consumers and .0647 percent to construction contractors, all without profit. Also, .0834 percent was used for state purposes. The remainder, 70.7903 percent, was sold for resale. The application of those percentages to the total charges billed of $23,667.33 results in an exemption of $6,913.16 and an unexempt balance of $16,754.17.

(c) During the period August 1 through December 31, 1959, the project was in commercial operation. Of the total sales 38.2247 percent were to general consumers, 0.0147 percent to construction contractors and 61.6430 were sales for resale. As explained above, the Licensee has failed to show that any part of these sales were without profit. Only 0.1176 percent represented power used for state purposes. Again, applying the above percentages to the total amount billed, there results an exemption of $20.09 and unexempt charges of $17,060.58.

(d) The project was in commercial operation throughout the calendar year 1960. In that period 53.1780 percent of the sales of available power were to general consumers and 46.7285 percent were for resale. Only 0.0935 was used for state purposes. In the absence of the required showing that any or all of the sales were without profit, the Licensee is entitled to exemption only with respect to the latter. The application of the percentages establishes an exemption in annual charges of $34.00 and a balance due of $36,330.00.

(e) Similarly, during the year 1961 the project was in commercial operation. General consumers purchased 50.5855 percent of the available power and 49.3254 percent was sold for resale. The required showing not having been made, the Licensee is not entitled to exemption for the 99.9109 percent so determined. Use for State purposes represented 0.0891 percent of the total available. The Licensee under the showing made here is entitled to exemptions of only $30.79 and the balance remaining is $34,525.21.

The Licensee in its reply brief raises no question as to the accuracy of these calculations, relying instead upon the contentions relating to total or partial exemption as shown above. In the absence of objection the Staff's calculations are adopted for the purpose of the determinations appropriate here.

FINDINGS AND CONCLUSIONS

Based upon all of the evidence of record and the briefs filed herein, the Presiding Examiner finds and concludes, in addition to the findings and conclusions above set out, that:

(1) The Power Authority of the State of New York (Authority or Licensee) is a "municipality" as defined in Section 3(7) of the Federal Power Act and within the meaning of Section 10(e) thereof.

(2) The Licensee is the holder of a license issued by this Commission on July 15, 1953, for a water-power development, Project No. 2000, since erected on the United States' side of the United States-Canadian Border in the International Rapids Section of the St. Lawrence River.

(3) As a Licensee pursuant to the Federal Power Act the provisions of the license above described and the Commission's Regulations thereunder, the Authority is subject to, unless otherwise exempt from, the payment of annual charges for the purpose of reimbursing the United States for the costs of administration of the Act.

(4) Licensee has failed to show that Project No. 2000 was primarily designed to provide or improve navigation.

(5) The evidence shows that Project No. 2000 was, in fact, primarily designed for the development of power on the United States' side of the St. Lawrence River.

(6) Project No. 2000 went into commercial operation on August 1, 1959.

(7) The evidence shows that for the period July 17, 1958, through December 31, 1958, 0.0665 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(8) The evidence shows that 21.4633 percent of the power available from Project No. 2000 was sold to general consumers and construction contractors without profit for the period July 17, 1958, through December 31, 1958.

(9) The evidence shows that for the period July 17, 1958, through December 31, 1958, the Licensee sold for resale 78.4702 percent of the power available from Project No. 2000 but the Licensee has wholly failed to show that this power was resold by its wholesale customers without profit.

(10) The evidence shows that for the period January 1, 1959, through July 31, 1959, 0.0834 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(11) The evidence shows that for the period January 1, 1959, through July 31, 1959, 29.1263 percent of the power available from Project No. 2000 was sold to general consumers and construction contractors without profit.

(12) The evidence shows that for the period January 1, 1959, through July 31, 1959, the Licensee sold for resale 70.7903 percent of the power available from Project No. 2000 but the Licensee has not shown that this power was resold by its wholesale customers without profit.

(13) The evidence shows that for the period August 1, 1959, through December 31, 1959, 0.1176 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(14) The evidence shows that for the period August 1, 1959, through December 31, 1959, the Licensee sold 99.8824 percent of the power available from Project No. 2000 but the Licensee has failed to show that this power was sold by it without profit, or that the power sold for resale was resold by its wholesale customers without profit.

(15) The evidence shows that for the year 1960 0.0935 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(16) The evidence shows that for the year 1960 the Licensee sold 99.9065 percent of the power available from Project No. 2000 but Licensee has not shown that this power was sold by it without profit, or that the power sold for resale was resold by its wholesale customers without profit.

(17) The evidence shows that for the year 1961 0.891 percent of the power available from Project No. 2000 was used for State or municipal purposes.

(18) The evidence shows that for the year 1961 the Licensee sold 99.9100 percent of the power available from Project No. 2000 but the Licensee has not shown that this power was sold by it without profit, or that the power sold for resale was resold by its wholesale customers without profit.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal or on its own motion, as provided by its Rules of Practice and Procedure, that:

(A) The Licensee is exempted from the payment of annual charges for which it was billed for the period from July 17, 1958, through December 31, 1958, to the extent of 21.5298 percent, or $2,623.66 leaving a balance now due of $9,562.54 for that period.

(B) The Licensee is exempted from the payment of annual charges for which it was billed for the period from January 1, 1959, through July 31, 1959, to the extent of 29.2097 percent, or $6,913.16, leaving a balance now owing of $16,754.17 for the period.

(C) The Licensee is exempted from the payments of annual charges for which it was billed for the period from August 1, 1959, through December 31, 1959, to the extent of 0.1176 percent, or $20.09, leaving a balance of $17,060.58 for the period.

(D) The Licensee is exempted from the payment of annual charges for which it was billed for the year 1960 to the extent of 0.0935 percent, or $34.00, leaving a balance of $36,330.00 for the period.

(E) The Licensee is exempted from the payment of annual charges for which it was billed for the year 1961 to the extent of 0.0891 percent, or $30.79, leaving a balance of $34,525.21 for the period.

(F) Except to the extent exempted as set out in paragraphs A through E Licensee's applications for exemption from the payment of annual charges for the several periods from July 17, 1959, through December 31, 1961, are denied.

(G) Payment of the unexempted portions of annual charges as set out in paragraphs A through E inclusive, shall be made within 60 days from the issuance of this order.

EDWARD B. MARSH,
Presiding Examiner.

APPENDIX A

GENERATION AT PROJECT NO. 2000 IN KWH AND ITS DISPOSITION [1]

	1958	1959	1960	1961
1. Sales to general consumers	269,244,809	[3] 1,826,448,219	3,297,223,000	3,090,408,000
2. Other sales	6,737,000			
Sold for resale	1,008,994,365	3,720,894,698	2,897,328,000	3,013,426,000
3. Subtotal of KWH sold [2]	1,284,976,174	[3] 5,547,342,917	6,194,551,000	6,103,834,000
4. St. Lawrence Seaway	840,875	3,224,400	4,282,800	4,746,000
5. New York Department of Parks and Public Lighting	(4)	137,786	213,200	211,000
6. Project use	[5] 13,828	2,076,946	1,306,000	489,000
7. Station use and transmission line loss	12,353,123	[5] 84,360,951	108,679,000	107,387,000
8. Total disposed of in KWH	1,298,184,000	5,637,143,000	6,309,026,000	6,216,667,000
9. Power purchased	109,000		95,000	485,000
10. Power generated at project	1,298,075,000	5,637,143,000	6,308,931,000	6,216,182,000

[1] This table is derived from items by reference E, H, J, M, and Q and exhibits 19, 20, 21, 22, 25 and 27.

[2] Total sales in KWH for same periods reported in other sources are as follows:

Exhibit 25	(1,284,970,000)	(5,547,343,000)	(6,194,551,000)	(6,103,834,000)
Exhibit 19	(1,284,976,174)			
Exhibit 20		(5,647,342,917)		
Exhibit 21			(6,194,551,517)	
Exhibit 22				(6,103,834,000)

[3] The figures as supplied in items by reference H and J were charged to those shown by an affidavit of Witness Helwith supplying information for the record in accordance with a request made at Tr. 100–104.

[4] According to exhibit 27 no amount was separated from the amount used for Long Sault and construction.

[5] Estimated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DUKE POWER COMPANY, PROJECT NO. 2232

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued January 15, 1964)

On August 7, 1963, Duke Power Company, licensee for Project No. 2232, filed for Commission approval revised project exhibits.

Revised Exhibit L, sheet 8A (FPC No. 2232–88) shows the Hicks Crossroads dike, constructed as part of the Cowans Ford development. The Exhibit J and Exhibit L drawings show the "as constructed" project structures of all developments of Project No. 2232, except the Cowans Ford development and show certain minor changes, particularly with respect to the referral of elevations to United States Geological Survey datum.

The Chief of Engineers, Department of the Army, has advised that the project plans affecting navigation have been approved in accordance with the provisions of Section 4 (e) of the Federal Power Act.

The Commission finds:

The following described revised project exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project and the exhibits described in this finding as being superseded and which are now part of the license, should be eliminated from the license:

Exhibit J, sheet 1 (FPC No. 2232–80) (revised) entitled "General Map & Profile," superseding Exhibit J, sheet 1 (FPC No. 2232–62) and sheet 2 (FPC No. 2232–81) entitled "Transmission System Map," superseding Exhibit J, sheet 2 (FPC No. 2232–63).

Exhibit L: Plans of Structures (revised).

Title: Catawba-Wateree project	FPC No.	Superseded exhibits-FPC No.
Bridgewater development:		
Plan and profiles	2232–82	2232–19
Sections and details	2232–83	2232–20

Sections and details	2232–77	2232–39

The Commission orders:

The revised exhibits described in the above finding are hereby approved as part of the license for Project No. 2232 and the exhibits described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G-13202

ORDER APPROVING RATE SETTLEMENT AND TERMINATING PROCEEDING

(Issued January 15, 1964)

The above docket relates to a rate proceeding arising from a proposed increase in rates and charges tendered for filing on August 6, 1957 by El Paso Natural Gas Company[1] pursuant to Section 4 of the Natural Gas Act. The increased rates and charges became effective and were collected by El Paso, subject to refund commencing on February 5, 1958.

From time to time conferences were held between El Paso and the Commission staff and between El Paso and its customers seeking to arrive at settlement of this matter. As a result of such conferences, a Stipulation and Agreement was filed by El Paso on December 27, 1963, requesting that the Commission enter an order disposing of the rate case in the manner contemplated by the Stipulation and Agreement.

El Paso's transmittal letter states that the Stipulation and Agreement was mailed to all jurisdictional customers in the Northwest Division, the regulatory commissions of those states served from the Division, and all other interveners by letter dated December 18, 1963. The letter of December 18, 1963 advised that the Stipulation and Agreement would be presented to the Commission on December 27, 1963 and that any comments should be submitted to the Commission before that date.

El Paso further attached to its filing a list of its jurisdictional customers in the Northwest Division who have executed the Stipulation and Agreement and the state commissions who have either indicated their approval of the proposed action or indicated that they have no objection.[2] El Paso also states that it has not received any objections to the disposition of the rate case in the manner provided by the Stipulation and Agreement and is not aware of any adverse comments addressed to the Federal Power Commission.

Briefly stated, the Stipulation and Agreement (attached hereto as an exhibit) provides as follows:

(1) The suspension proceeding shall be terminated and the tariff sheets presently on file applicable to sales being made by El Paso to customers in the Northwest Division shall be the unconditional lawful rates and El Paso's undertaking relating to refunds shall be ordered terminated by the Commission.

(2) El Paso agrees that no application for rate increases will be filed by it for its Northwest Division applicable to Rate Schedules PL-2, PL-3, PL-4, DL-1, DI-1, DI-2, DI-3, DI-4, DI-5, DS-1, DS-4, I-1, I-2, I-2, I-4, I-5, C-1, S-1 and MDS-1, under circumstances where such increases will become effective, after full suspension by the Federal Power Commission, prior to November 1, 1965,

---

[1] The original filing was made under the name of Pacific Northwest Pipeline Corporation, which was merged into El Paso effective December 31, 1959.

[2] The Commission has received comments from the state regulatory commissions of Colorado, Idaho, Oregon, Washington and Wyoming. Colorado, Oregon and Washington have indicated that they have no objection to the Stipulation and Agreement; Idaho supports the Stipulation and Agreement and Wyoming has approved the Stipulation and Agreement.

provided, however, El Paso may offset its natural gas supplier rate increases, by filing to become effective after full suspension by the Commission, no sooner than January 1, 1965.

(3) El Paso further agrees that if it should receive from its gas suppliers, refunds covering gas purchased for El Paso's jurisdictional customers on the Northwest Division which exceeds $1 million as to any calendar year from the inception of service through the year 1963, El Paso shall refund the amount of such excess. The Commission and each of the parties reserves all authority, rights and obligations as to gas supply refunds received by El Paso subsequent to December 31, 1963.

The Stipulation and Agreement also contains reservations that no party to the proceeding shall be bound or prejudiced by any part of the Stipulation and Agreement unless it is approved without modification; that none of the parties nor any affected person shall be deemed to have approved, accepted, agreed or consented to any ratemaking principle or any method of cost-of-service determination, or any allocation method underlying or supposed to underlie any of the rates which by the Stipulation and Agreement are to continue in effect, and that the provisions of the Stipulation and Agreement shall apply to all customers of El Paso's Northwest Division except those who expressly object to the disposition of the aforesaid rate case as herein contemplated.

The Commission finds:

(1) The proposed settlement of this proceeding upon the basis of the Stipulation and Agreement is reasonable, proper and in the public interest in carrying out the provisions of the Natural Gas Act, and should be approved and made effective as hereinafter provided and ordered.

(2) The rate proceeding herein should be terminated and the rates presently effective in El Paso's Northwest Division should be allowed to remain in effect without refund obligation, subject to the conditions in the Stipulation and Agreement.

The Commission orders:

(A) The settlement of these proceedings upon the basis set forth in the Stipulation and Agreement (hereto attached and made a part hereof), is approved and made effective as proposed therein.

(B) El Paso shall comply with each of the provisions of the Stipulation and Agreement.

(C) The rates presently effective in El Paso's Northwest Division are hereby allowed to remain in effect without refund obligation, and this proceeding is hereby terminated, subject to the terms of the Stipulation and Agreement.

(D) This order is without prejudice to any findings or orders which may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, El Paso, the Commission staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against El Paso Natural Gas Company or any other person or parties affected by this order.

Commissioner O'Connor *not participating.*

GEORGIA POWER COMPANY, PROJECT NO. 2177

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL COST, ACCRUED DEPRECIATION, NET INVESTMENT, AND CHANGES THEREIN, AND PRESCRIBING ACCOUNTING THEREFOR

(Issued January 15, 1964)

Georgia Power Company, Licensee for Project No. 2177,[1] filed statements of claimed cost pursuant to Sections 4.1 and 4.20 of the Commission's Regulations under the Federal Power Act on December 22, 1960, showing a claimed cost of $3,288,728.88, accrued depreciation of $1,240,572.11, and net investment of $2,048,156.77 in the project[2] as of January 1, 1955, the effective date of the license. This report also showed net cost changes in project plant accounts of $15,386,402.32 for the period from January 1, 1955 through December 31, 1959, consisting of gross additions of $15,450,608.87, which included the Oliver development and two additional units at Goat Rock development, and gross retirements of $64,206.55, resulting in a total claimed actual legitimate original cost of the project of $18,675,131.20, as of December 31, 1959.

Licensees claimed net changes in project accrued depreciation amount to an increase of $513,889.46 for the period from January 1, 1955 through December 31, 1959, and result in a total claimed project accrued depreciation of $1,754,461.57, as of December 31, 1959.

Commission's staff conducted a field examination of the licensee's books and records for the purpose of determining the accuracy of licensee's claims. As a result of that examination staff has proposed, subject to Commission approval, certain adjustments, agreed to by the licensee as follows: (1) a reduction of $13,741.87 in the claimed actual legitimate original project cost as of January 1, 1955 including a reclassification within project plant accounts of $719.86; (2) a reduction of $41,661.02 in the claimed initial accrued depreciation as of January 1, 1955, resulting from the disposition of plant account adjustments and a direct adjustment to the claimed accrued depreciation; and (3) a reduction of $31,698.75 in the claimed cost changes in project plant accounts for the period from January 1, 1955 through December 31, 1959, including a reclassification within project plant accounts of $258.16.

The reclassifications, eliminations, and other adjustments are enumerated below:

---

[1] The project consists of three developments, the existing Goat Rock and North Highlands developments and the newly constructed Oliver development, located on the Chattahoochee River between the States of Alabama and Georgia. The Goat Rock development is located approximately 8.5 miles north of Columbus, Georgia, and was placed in operation in 1913 by the Columbus Power Company, a predecessor of the Licensee. The North Highlands development is located at Columbus, Georgia, and was placed in operation in 1901 also by Columbus Power Company. The Oliver development is located in the northern section of the City of Columbus, Georgia, and was placed in operation in 1959 by Georgia Power Company, Licensee. The license was issued pursuant to Sec. 4 (e) of the Federal Power Act for a 50-year period, effective as of January 1, 1955.

[2] Articles 21 and 22 of the license provide for Commission determination of the actual legitimate original cost, accrued depreciation and resulting net investment of Licensee in the parts of the project completed prior to the effective date of the license; the actual legitimate original cost of parts of the project completed after the effective date of the license and of any additions thereto or betterments thereof, and applicable accrued depreciation.

Adjustment No.	Description	Amount
	TO PLANT ACCOUNTS	
1	Reclassifications $719.86	0
2	Training station operators	($5,553.90)
3	Repairs to transformers	(2,627.17)
4	Repairs to railroad	(5,440.38)
5	Interest during construction	120.42)
6	Clearing debris at tailrace after date of commercial operation	(3,338.90)
7	Interest during construction re adjustment No. 6	(82.80)
8	Reclassification within project accounts $258.16	0
9	Correction of duplicated transfer	2,213,98
10	Elimination of profits-to-affiliates	(26,253,05)
11	Elimination of out of period interest and engineering costs	(4,137.98)
12	Legal expense applicable to hydro land option not exercises	(100.00)
	Total plant adjustments	(45,440.62)
	TO ACCRUED DEPRECIATION	
13	Correct recording of net retirement	($31,010.91)
14	Transfer in functional, classifications $246.86	0

( ) Denotes reduction.

The foregoing adjustments are to be accomplished by the following composite journal entry:

Account No.	Particulars	Debit	Credit
101	Electric Plant in service-project No. 2177		$45,440.62
107	Construction work in progress		2,213.98
108	Accumulated provision for depreciation of electric plant in service-project 2177	$41,661.02	
108	Accumulated provision for depreciation electric plant in service-non-project		31,010.91
121	Nonutility property		12,690.47
216	Unappropriated earned surplus	49,694.96	
	Total	91,355.98	91,355.98

By letter dated April 19, 1962, Licensee confirmed its agreement with the proposed staff adjustments and resulting project costs and depreciation as set forth above.

The Georgia Public Service Commission was advised by letter of this Commission as to the proposed staff adjustments and resulting project costs and accrued depreciation. By letter dated December 27, 1962, the Georgia Commission indicated no objection thereto.

The Commission finds:

(1) Licensee, by its acceptance of the proposed adjustments including the accounting dispositions and resulting project costs and project accrued depreciation, and the Georgia Public Service Commission by its lack of objection thereto, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4, 4.5, 4.22, and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments including the accounting dispositions are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) As of the effective date of the license, January 1, 1955 the actual legitimate original cost of Project No. 2177 is $3,274,987.01, classified by developments as shown in attached Schedule I; the project accrued depreciation of the constructed plants is $1,198,911.09, as shown in attached Schedule II; and the net investment of Licensee in the constructed plants of Project No. 2177 is $2,076,075.92.

(4) The net increase or change in the actual legitimate original cost of the project for the period from January 1, 1955 through December 31, 1959, is $15,354,703.57, consisting of the initial cost of the newly constructed Oliver development in the amount of $14,293,269.85, net additions to the constructed plant (Goat Rock) in the amount of $1,061,433.72 and the resulting actual legitimate original cost of Project No. 2177 as of December 31, 1959 is $18,629,690.58, classified by developments and by primary plant accounts as shown in attached Schedule I.

(5) The net increase or change in project accrued depreciation for the period from January 1, 1955 to December 31, 1959 is $513,889.46 and the resulting project accumulated provision for depreciation as of December 31, 1959 is $1,712,800.55, as classified by plants or developments and by functional groups as shown in attached Schedule II.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments including accounting dispositions, proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts, showing the debit balance of $3,274,987.01 as the actual legitimate original cost of Project No. 2177 as of January 1, 1955, the debit amount of $15,354,703.57 as the net increase or change in the actual legitimate original cost of the project for the period from January 1, 1955 through December 31, 1959, and the debit balance of $18,629,690.58 as the actual legitimate original cost of the project as of December 31, 1959, all as more specifically shown in the attached Schedule I, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed For Public Utilities and Licensees.

(D) Licensee, to the extent that it has not already done so, shall establish and maintain a reserve account for accrued depreciation applicable to in-service project properties of Project No. 2177 showing the credit balance of $1,198,911.09 as of January 1, 1955, the credit amount of $513,889.46 as the net increase or change in project accrued depreciation for the period from January 1, 1955 through December 31, 1959 and the credit balance of $1,712,800.55, all as more specifically shown in the attached Schedule II, classified by plants or developments and functional groups and in accordance with the Commission's Uniform System of Accounts Prescribed For Public Utilities and Licensees.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission FPC Form No. 7 and certified copies of its adjusting journal entries showing compliance therewith, in triplicate.

SCHEDULE I

Georgia Power Co., Licensee, Project No. 2177 (Middle Chattahoochee Development)

SUMMARY OF COST, BY DEVELOPMENTS, AS OF JAN. 1, 1955, RECORDED CHANGES FOR THE PERIOD JAN. 1, 1955 THROUGH DEC. 31, 1959, WITH ADJUSTMENTS THERETO AND ALLOWED BALANCES AS OF DEC. 31, 1959

PUBLIC UTILITY DISTRICT NO. 2 OF GRANT COUNTY, WASHINGTON, PROJECT NO. 2114

ORDER ACCEPTING AGREEMENT MADE PURSUANT TO LICENSE CONDITION

(Issued January 15, 1964)

On August 2, 1963, Public Utility District No. 2 of Grant County, Washington, licensee for Project No. 2114, filed an agreement dated July 29, 1963, between the licensee and the State of Washington, Department of Game, concerning the conveyance to the State of Washington, Department of Game, of land owned by the licensee along the Columbia River and tributaries outside the project boundary, for development by the Department of Game for the preservation of wildlife and waterfowl as substitute areas for areas lost by inundation of the Wanapum and Priest Rapids Reservoirs of Project No. 2114.

The agreement was made pursuant to the provisions of Article 40 of the license which reads as follows:

Article 40. The Licensee shall negotiate with the Department of Game of the State of Washington, with respect to the acquisition by the Licensee for the State of island and marsh areas along the Columbia River and tributaries for development as substitutes for waterfowl nesting areas to be lost by reservoir inundation. Should the Licensee and the State Department of Game fail to agree on the acquisition of such lands, the Commission reserves the right to make a final determination in this matter after notice and opportunity for hearing.

The aforementioned agreement was made subject to its approval by U.S. Fish and Wildlife Service which has approved the agreement in accordance with Section XI thereof.

The Commission finds:

The aforementioned agreement is in compliance with Article 40 of the license for Project No. 2114.

The Commission orders:

The aforementioned July 29, 1963 agreement between the licensee for Project No. 2114 and the State of Washington Department of Game is hereby accepted for filing pursuant to the provisions of Article 40 of the license.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 621

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued January 15, 1964)

The Washington Water Power Company, Licensee for Project No. 621,[1] from time to time filed statements, pursuant to Section 4.1 of the Commission's

---

[1] The project is located on the Clearwater River in the vicinity of the City of Lewiston in Nez Perce County, Idaho, and may be described as the Lewiston Project. The Licensee, issued pursuant to Section 4(d) of The Federal Water Power Act to Inland Power & Light Company, authorizing the construction, operation, and maintenance of the project, is by its terms effective for a period of 50 years, commencing June 8, 1926. The Commission approved the transfer of the license (1) from Inland Power & Light Company to Chelan Electric Company on June 20, 1930 (Eleventh Annual Report of FPC (1931), pp. 53–54); and (2) from Chelan Electric Company to The Washington Water Power Company on July 20, 1937 (1 FPC 693).

Regulations under the Federal Power Act, claiming a net increase in the original cost of the project of $454,591.86 for the period from January 1, 1937, through December 31, 1960.[2]

The claimed net increase, of $454,591.86, consisting of claimed and recorded project gross additions of $560,265.94, gross retirements of $307,175.56, and debit adjustments of $201,501.48, results in a total claimed project cost as of December 31, 1960 of $3,828,576.49.

The Commission staff conducted a field examination of Licensee's books and records and other data for the purpose of ascertaining the correctness of the above claimed and recorded project cost changes for the period from January 1, 1937, through December 31, 1960.

Following that examination, the staff proposed certain adjustments for the period from January 1, 1937 through December 31, 1960 consisting of: (1) reclassification within project plant accounts of $43,585.34 affecting the previously approved classified project cost as of December 31, 1936; (2) reclassification within project plant accounts of $55,482.82 during the period from January 1, 1937 through December 31, 1960; and (3) other adjustments effecting a net elimination of $247,523.57 in the claimed and recorded project cost changes for that period; and (4) the accounting disposition of the foregoing amounts, all as agreed to by representatives of Licensee, subject to Commission approval. The net effect of staff adjustments is a reduction in the claimed and recorded cost of additions in the period from $454,591.86 to $207,068.29.

The proposed net elimination of $247,523.57 in claimed and recorded changes in project cost is comprised of the following items:

	Amount—Debit or () credit
Nonproject facilities	($56, 578. 51)
Erroneous adjustment of overhead costs	639. 26
Maintenance costs erroneously capitalized	(3, 716. 64)
Duplicate retirement	778. 15
Unrecorded retirements	(14, 996. 41)
Contributions in aid of construction	(173, 649, 42)
	(247, 523. 57)

The proposed accounting disposition of the amounts involved in the proposed adjustments is shown in the following composite journal entry:

Account No.		Title	Debit	Credit
New	Old[1]			
101	100. 1	Electric plant in service—nonproject	$55, 939. 25	
		Project No. 621		$73, 874. 15
271	265. 2	Contributions in aid of construction—Federal		173, 649. 42
108	250. 1	Accumulated provision for depreciation of electric plant in service—project No. 621	14, 218. 26	
271	265	Contributions in aid of construction—General	173, 649. 42	
216	271	Unappropriated earned surplus	3, 716. 64	
			247, 523. 57	247, 523. 57

[1] Account numbers prescribed in the Commission's Uniform System of Accounts for Public Utilities and Licensees, effective prior to Jan. 1, 1961.

---

[2] The Commission, by its order issued December 28, 1949 (8 FPC 1407), determined the total actual legitimate original cost of the project as of December 31, 1936, to be $3,373,984.63. No determination was made in the Commission's order of the project accrued depreciation.

Based upon the proposed adjustments, the staff recommends and Licensee concurs, that the Commission determine: (1) the net increase or change in project cost for the period from January 1, 1937 through December 31, 1960 to be $207,068.29, comprised of gross additions of $502,534.68, gross retirements of $287,798.14, debit adjustments of $165,981.17 to the project plant accounts, and contributions in aid of construction in the credit amount of $173,649.42; and (2) the actual legitimate original cost of the project as of December 31, 1960 to be $3,581,052.92, classified by primary plant accounts as shown in the attached schedule.

Staff analysis of Licensee's provisions for project depreciation has not been completed, and the staff proposes that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to in-service project properties as of December 31, 1960.

By letter dated January 17, 1962, Licensee confirmed its agreement with respect to the proposed adjustments, accounting dispositions, and resulting project costs.

The Washington Utilities and Transportation Commission and the Idaho Public Utilities Commission were advised by this Commission of the proposed adjustments, accounting dispositions, and resulting project costs, all as recommended by this Commission's staff and agreed to by Licensee as set forth above. Each of those Commissions indicated no objection to the foregoing.

The Commission finds:

(1) The acceptance of the staff recommendations by the Licensee, and the lack of objection thereto by the Washington Utilities and Transportation Commission and the Idaho Public Utilities Commission, obviate the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by Licensee, are reasonable and appropriate for the purposes of the Federal Power Act, and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 621 for the period from January 1, 1937, through December 31, 1960, is $207,068.29, consisting of gross additions of $502,534.68, gross retirements of $287,798.14, debit adjustments of $165,981.17 to the project plant accounts, and contributions in aid of construction in the credit amount of $173,649.42, and the resulting actual legitimate original cost of the project as of December 31, 1960, is $3,581,052.92, classified by primary plant accounts as shown in the attached schedule.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to in-service project properties of Propect No. 621 as of December 31, 1960, be reserved for future Commission consideration.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, as proposed by the staff and agreed to by Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts, for Project No. 621 showing the debit amount of $207,068.29 as the net increase or change in the actual legitimate original cost of the project for the period from January 1, 1937, through December 31, 1960, and the total debit balance of $3,581,052.92 as the actual legitimate original cost of the project as of December 31, 1960, classified by primary plant accounts as shown in the attached schedule.

(D) The matter of Commission determination of the accrued depreciation applicable to in-service project properties of Project No. 621 as of December 31, 1960, is hereby expressly reserved for future Commission consideration and decision.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission certified copies of Licensee's adjusting journal entries showing compliance therewith; three copies of those journal entries to be submitted to the Secretary, Federal Power Commission, Washington, D.C., 20426, and two copies thereof to be submitted to the Regional Accountant, Federal Power Commission, San Francisco, California, 94111.

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 2058

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued January 15, 1964)

The Washington Water Power Company, Licensee for Project No. 2058,[1] filed with the Commission its Form No. 8 statement, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from August 1, 1954 through December 31, 1960, a net increase in the original cost of the project in the amount of $371,704.86 [2] consisting of claimed and recorded gross additions of $642,369.36, gross retirements of $343,244.82 and debit adjustments of $72,580.32, resulting in a claimed total actual legitimate original cost of the project as of December 31, 1960, of $46,954,613.92.

The Commission's staff conducted a field examination of licensee's books and records and other data for the purpose of ascertaining the correctness of above claimed and recorded project cost changes for the period from August 1, 1954, through December 31, 1960. Following that examination the staff proposed, subject to Commission approval, the reclassification of $13,813.79 within the project plant accounts and a net reduction of $250,811.01 in the claimed and recorded project cost changes as shown in the attached Schedule. Those adjustments, agreed to by representatives of Licensee, and subject to Commission approval, are summarized as follows:

	Amounts
Nonproject facilities	($224, 342. 34)
Transfer to project No. 2075	(21, 040. 69)
Operating and miscellaneous costs capitalized in error	(4, 565. 37)
Unrecorded retirements	(862. 61)
Total proposed net reduction	(250, 811. 01)

The accounting disposition of the proposed adjustments is shown in the following composite journal entry:

Account		Title	Debit	Credit
New	Old[1]			
101	100.1	Electric plant in service:		
		Nonproject	$224, 342. 34	
		Project No. 2058		$250, 811. 01
		Project No. 2075	21, 040. 69	
108	250.1	Accumulated provision for depreciation of electric plant in service-project No. 2058	862. 61	
216	271	Unappropriated earned surplus	4, 565. 37	
		Total	250, 811. 01	250, 811. 01

[1] Account references are to account numbers prescribed in the Commission's Uniform System of Accounts for Public Utilities and Licensees, prior to Jan. 1, 1961.

---

[1] The project is located on the Clark Fork River about 9 miles upstream from Pend Oreille Lake in Bonner County, Idaho, and Sanders County, Montana, and affects public land and lands of the United States within the Cabinet National Forest. Its transmission lines are located in Bonner and Kootenai Counties, Idaho, and Spokane County, Washington. It may be described, generally as the Cabinet Gorge project. The license authorizing the construction, operation, and maintenance of the project, was issued pursuant to Section 4(e) of the Federal Power Act for a period of 50 years, commencing March 1, 1951. The project began commercial operation on March 1, 1953.

[2] The Commission, by order issued February 7, 1961 (25 FPC 263) determined the initial actual legitimate cost of the project as of July 31, 1954, to be $46,582,909.06.

Licensee by letter of March 26, 1962, confirmed its acceptance of the staff's proposed adjustments as set forth above. The Washington Utilities and Transportation Commission, the Idaho Public Utilities Commission and the Board of Railroad Commissioners of the State of Montana were advised of the proposed adjustments, accounting dispositions, and resulting project costs, and each of those Commissions indicated no objections thereto.

Staff analysis of Licensee's provisions for project depreciation has not been completed, and the staff proposes that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to in-service project properties.

The Commission finds:

(1) Licensee, by its acceptance of the proposed adjustments including the accounting dispositions and resulting project cost and the Washington Utilities and Transportation Commission, the Idaho Public Utilities Commission, and the Board of Railroad Commissioners of the State of Montana by their lack of objection thereto have obviated the necessity for notice and opportunity to protest provided by Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The proposed adjustments including the accounting dispositions are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of the project for the period from August 1, 1954, through December 31, 1960 is $120,893.85, consisting of gross additions of $403,913.80, gross retirements of $333,907.43 and debit adjustments of $50,887.48 and the resulting actual legitimate original cost of the project as of December 31, 1960, is $46,703,802.91.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the project depreciation reserve applicable to in-service project properties of Project No. 2058 be deferred for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including accounting dispositions, proposed by the staff and agreed to by the Licensee are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts, showing the debit amount of $120,893.85 as the net increase or change in the actual legitimate original cost of Project No. 2058 for the period from August 1, 1954 through December 31, 1960, and the amount of $46,703,802.91, as the actual legitimate original project cost as of December 31, 1960, all as more specifically shown in the attached schedule, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed For Public Utilities and Licensees.

(D) The matter of Commission determination of the project accrued depreciation for Project No. 2058 is hereby expressly reserved for future Commission consideration and decision.

(E) Licensee shall within 90 days from the issuance of this order file with the Commission three certified copies of its adjusting entries showing compliance therewith and shall submit two further copies thereof to the Regional Accountant, Federal Power Commission, in San Francisco.

FOREST OIL CORPORATION

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 16, 1964)

On December 20, 1963, Forest Oil Corporation (Forest) filed an application for rehearing of the Commission's letter-order issued November 21, 1963, rejecting the Notice of Producer Rate Change filed by Forest on October 30, 1963, for a proposed rate increase under its FPC Gas Rate Schedule No. 17 from 19.5¢ per Mcf to 21.4¢ per Mcf for gas presently being sold by Forest, pursuant to conditioned temporary authorization issued in Docket No. CI62-898 to Transcontinental Gas Pipe Line Corporation.

The basis for the rejection was that the proposed increase was not in conformity with the express condition in the temporary authorization that the 19.5¢ rate shall remain in effect until changed by further Commission order in the certificate proceedings in Docket No. CI62–898.

Forest relies principally upon the fact that a similar condition has been held to be invalid by the Fifth Circuit Court of Appeals, *Hunt* v. *F.P.C.*, 306 F. 2d 334.* However, the Supreme Court has granted certiorari on appeal by the Commission from this decision (No. 273, October Term 1963) and, pending such review, the decision of the circuit court is not controlling as a precedent, even with respect to new applications. *A fortiori* we cannot give effect to it here where (unlike *Hunt* which in accepting the temporary expressly reserved the right to seek review and did so after denial of a petition for rehearing) Forest accepted the temporary authorization as tendered and allowed the Commission's letter-order granting the temporary to become final.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application of Forest present no new facts or principles of law which were not considered by the Commission when it issued its letter-order of November 21, 1963, or which having now been considered warrant any change or modification of said order.

The Commission orders:

The application for rehearing filed by Forest on December 20, 1963, is hereby denied.

---

OPINION NO. 416

KENTUCKY WEST VIRGINIA GAS COMPANY, DOCKET NO. RP63-12

OPINION AND ORDER APPROVING INCREASED RATES

(Issued January 16, 1964)*

Syllabus

1. Proposed increased rates under single schedule embodying same charges for Respondent's jurisdictional customers *found* just, reasonable and nonpreferential. P. 142.
2. Commission *approves* increased rates in proceeding arising under Section 4(e) of the Natural Gas Act. P. 144.

Donald I. Moritz for Kentucky West Virginia Gas Company

H. E. Robinson, Jr. and *J. T. Brown* for Equitable Gas Company

Herbert W. Ryan, *Giles D. H. Snyder* and *W. C. Hart* for Kentucky Gas Transmission Corporation

Frederick D. Cornellius, *Herbert E. Squires* and *Alan R. Squires* for Pennsylvania Public Utility Commission

Cyril S. Wofsy for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WOODWARD, *Commissioner:*

This case involves a proposed increase in the jurisdictional rates of Kentucky West Virginia Gas Company (KWV) for gas sold to its two jurisdictional customers, Equitable Gas Company (Equitable) and Kentucky Gas Transmission Corporation (KGT). By order issued May 28, 1963, the Commission suspended the proposed increase for one day, and ordered a hearing on the lawfulness of the increase under the Natural Gas Act. Upon motion duly filed by KWV together with an undertaking to make refund if required, the increased rates became effective subject to refund as of June 2, 1963. Interveners in this proceeding are Equitable, KGT, and the Pennsylvania Public Utilities Commission (PUC).

---

*Initial decision appears on p. 144.

At the hearing, no issue was raised with respect to the over-all amount of the increase proposed. The parties stipulated that KWV's jurisdictional cost of service in this proceeding is $6,589,816, which is the cost reflected in the $479,028 annual increase filed by KWV. The only issue in controversy was the allocation of KWV's cost for the purpose of designing its rates for Equitable and KGT. KWV proposed rates which are the same for both customers, following the company's consistent practice of changing a single rate to all of its jurisdictional customers. PUC, however, contended that the rates to Equitable should be reduced and the rates to KGT should be increased so as to reflect differing costs of service to the two customers.

On October 15, 1963, the presiding examiner issued an initial decision finding that KWV renders identical service to both Equitable and KGT, and that a single rate for both, as in the past, is appropriate in the present circumstances. He concluded that the single demand and commodity rate as proposed is just, reasonable, non-discriminatory and non-preferential under the Natural Gas Act.

Exceptions to the examiner's decision were filed by PUC and by the Commission's staff. PUC objects to the examiner's approval of the single rate to both customers. PUC also objects to a finding by the examiner that KWV is essentially a producer of natural gas. Staff also takes exception to the examiner's finding that KWV is a producer. The case is now before us on these exceptions to the examiner's decision.

In our judgment the proposed rates under a single schedule for Equitable and KGT are neither discriminatory nor preferential, but are just and reasonable as found by the examiner. There is no necessity, however, to determine KWV's status as a pipeline company or a producer in order to reach this result. The company's status was not an issue in this case, and we do not find any justification for making a finding on this question at this time.

KWV sells purchased and produced gas to its two jurisdictional customers under an exchange arrangement whereby the gas is delivered to United Fuel Gas Company (United Fuel) for their account at United Fuel's Beaver Creek compressor station and at a connection with United Fuel's system near KWV's Dwale compressor station. Equitable and KGT in turn, under separate agreements with United Fuel, receive exchange gas from the latter at points downstream on United Fuel's system convenient to their service areas. KVW also delivers a small part of KGT's requirements directly to KGT at KWV's Tomahawk compressor station. Under its service agreements with Equitable and KGT, KWV allocates the gas delivered into United Fuel's system at Beaver Creek and at Dwale between that delivered for the account of Equitable and that dealivered for the account of KGT. Normally, KWV allocates deliveries at Dwale to KGT to the extent necessary to meet the latter's daily requirement of 15,000 Mcf.[1] The balance of the deliveries at Dwale and all of the deliveries at Beaver Creek are then, normally, allocated to Equitable. KWV makes this allocation for the purpose of its billings to Equitable and KGT. The assignment of deliveries at Dwale and Beaver Creek does not represent a physical delivery of gas to either Equitable or KGT, and the gas received by these customers under their exchange agreements with United Fuel is physically unaffected by the gas delivered to United Fuel by KWV. Moreover, neither KWV's costs nor United Fuel's costs are affected by the allocation made by KWV.[2]

---

[1] KWV first delivers 2,000 to 3,000 Mcf per day directly into KGT's line at Tomahawk. The amounts allocated to KGT at Dwale on any day represent the difference between KGT's daily demand of 15,000 Mcf and the deliveries at Tomahawk.

PUC claims that KWV renders both production and transmission services, and that its sales to KGT, unlike the sales to Equitable, are all made through its transmission system facilities and should reflect the higher costs associated therewith. The transmission facilities referred to are the compressor stations at Tomahawk and Dwale and about two miles of pipeline connecting these stations to the points of delivery. The deliveries at United Fuel's Beaver Creek Station, on the other hand, are made through KWV's production and gathering system, and the gas is compressed to pipeline pressure by United Fuel and not by KWV. In support of its argument that KWV's rates to Equitable and KGT should reflect the varying costs of the facilities used to effect deliveries at each of the three delivery points PUC would rely on the provisions in the exchange agreements between these customers and United Fuel. For example, PUC contends that Equitable's exchange agreement with United Fuel reserves the capacity of the Beaver Creek compressor station for Equitable, for which Equitable pays United Fuel a demand charge. KGT, under its contract with United Fuel, pays no demand charge for the exchange service, only a flat one-cent commodity charge; and the contract recites the prior right of Equitable to make deliveries to United Fuel at the Beaver Creek station.

The contracts which Equitable and KGT have entered into with United Fuel for redelivery of the gas delivered by KWV to United Fuel for their account are not relevant to the question to be decided here. The sales to Equitable and KGT are made under the service agreements between KWV and these customers, and these contracts are controlling for the purpose of this case. Under these contracts, and the realities of KWV's operations, it is clear that the allocation made by KWV is for the latter's convenience in billing its customers. It makes no difference of any substance insofar as KWV's or United Fuel's operations are concerned; and it makes no difference insofar as the physical deliveries of gas to Equitable and KGT by United Fuel are concerned. The cost allocation in this case should not be based on KWV's bookkeeping procedures, but on the actual facts of its operations.

KWV, Equitable, KGT and staff have all taken the position that KWV's so-called transmission facilities serve both a transmission and a production function which is beneficial to Equitable and KGT alike; that these facilities are in reality a part of an over-all operation which insures the maximum delivery of gas for assignment to Equitable and KGT; and that all of KWV's jurisdictional costs should be rolled together for the purpose of its rate design. The record supports this position and a finding that KWV is rendering the same service to both Equitable and KGT. Accordingly, we conclude that the single rate proposed by KWV for the sale of gas to these two customers is just, reasonable, non-discriminatory, and non-preferential, and is a lawful rate within the meaning of the Natural Gas Act.

The Commission finds:

The proposed rates filed by Kentucky West Virginia Gas Company in this proceeding under a single rate schedule embodying the same charges for both of its jurisdictional customers are just, reasonable, non-discriminatory, and non-preferential under the Natural Gas Act.

---

[2] KWV is a wholly owned subsidiary of Equitable. KGT is affiliated with United Fuel, both being subsidiaries of the Columbia Gas System.

The Commission orders:

Kentucky West Virginia Gas Company is hereby relieved of its undertaking to make refunds in this proceeding; and the rates herein proposed by Kentucky West Virginia Gas Company and heretofore made effective subject to refund are hereby continued in effect without obligation for refund from the time said rates first became effective.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON PROCEEDINGS PURSUANT TO SECTION 4(e) OF THE NATURAL GAS ACT

(Issued October 15, 1963)

WILLIAMS, *Presiding Examiner:* On April 30, 1963, Kentucky West Virginia Gas Company, the Applicant in this proceeding and hereinafter referred to as KWV, tendered for filing with the Commission its Tenth Revised Sheet No. 4 of its F.P.C. Gas Tariff, Original Volume No. 1 to become effective June 1, 1963, and which provides for a monthly demand charge of $1.90 per Mcf of billing demand and a commodity charge of 21.28¢ per Mcf of gas delivered, and proposes an annual increase in its rates and charges of $479,028 or 7.8% over the rates in effect for the calendar year 1962, as adjusted.

By order issued May 28, 1963, the Commission suspended, for one day, the proposed increase and ordered that a hearing be held with respect to the lawfulness thereof. A prehearing conference was set in the same order for the purpose of defining the issues, reaching an agreement and stipulation thereon and on any other facts relevant to this matter, and, if necessary to prescribe procedure for the hearing, observing the Commission's over-all desire that the matter be expedited.

A subsequent Commission order on May 31, 1963, permitted the interventions of Kentucky Gas Transmission Corporation (KGT) and Equitable Gas Company (Equitable). A notice of intervention had been previously filed by the Pennsylvania Public Utility Commission (Pennsylvania Commission) on May 16, 1963.

A prehearing conference was held on June 18, 1963, wherein the parties stipulated that the total jurisdictional cost of service in this proceeding is $6,589,816, the amount requested by the Applicant (KWV) in the rate increase filing.

It was developed in the course of the ensuing hearing that KWV is a wholly owned subsidiary of Equitable, and is primarily engaged in the production of natural gas in Eastern Kentucky for sale to two jurisdictional customers (Equitable and KGT) at identical rates under Rate Schedule S-1 to KWV's F.P.C. Gas Tariff, Original Volume No. 1. Pursuant to separate service agreements with each customer, KWV is obligated to deliver up to 65,000 Mcf per day to Equitable when such amount of gas is available; the obligation to KGT is a maximum of 15,000 Mcf per day.

With the exception of deliveries made to KGT at Tomahawk Compressor Station (Tomahawk) a producing segment independent and unconnected with the balance of KWV's system, gas is delivered to the United Fuel Gas Company (United Fuel) for the accounts of both Equitable and KGT at the inlet side of United Fuel's Beaver Creek Compressor Station (Beaver Creek) and a short distance from the outlet side of KWV's Dwale Compressor Station (Dwale). The gas delivered at Beaver Creek, limited to 54,000 Mcf per day at a minimum pressure of 60 pounds, is obtained from KWV's fields south of Beaver Creek and by purchase from adjoining areas.

The gas produced by KWV,[1] and infrequently the purchased gas, is processed by Kentucky Hydrocarbon Company, a wholly owned subsidiary of KWV, and the Btu content is reduced to 1005. Because the processed gas is, however, usually mixed with unprocessed purchased gas before movement to Beaver Creek, the Btu content is raised to an average of 1063 per cubic foot. The gas delivered from Dwale is produced by KWV and is untreated except for the removal of gasoline. The Btu content averages 1173 per cubic foot and the pressure of the gas entering the United Fuel pipeline is 325 pounds. The gas sold to KGT at Tomahawk is delivered untreated with a Btu content averaging 1140 per cubic foot and at a pressure of 280 pounds.

The gas received for exchange by United Fuel from KWV at Beaver Creek and Dwale becomes a part of the commingled and fungible supply moving through the United Fuel system and it cannot be segregated for delivery to Equitable or KGT, both of whom have individual exchange agreements with United Fuel which reserve capacity, specify Btu content, delivery pressure, etc. Equitable takes its exchange gas from United Fuel at Cedarville, West Virginia and KGT receives its exchange consignments at three points, namely: Leach, Means and Richmond, Kentucky.

In billing its jurisdictional customers, KWV subtracts the amount of gas delivered to KGT at Tomahawk from the obligated 15,000 Mcf daily and makes up the difference with deliveries at Dwale or Beaver Creek to United Fuel for the account of KGT.[2] The deliveries at Beaver Creek are normally all assigned to Equitable together with the daily balance at Dwale.

Prior to November 1, 1962, KWV's two jurisdictional customers were Equitable and Louisville Gas & Electric Company (Louisville Gas), a former affiliate of KWV. The rates charged each customer were the same and KWV was obligated to supply Louisville Gas with a maximum of 22,000 Mcf daily. Deliveries were made into Louisville's system at Tomahawk and Sitka. The operations at Tomahawk were identical with the present arrangement except that KGT has replaced Louisville. The Sitka deliveries were made at the terminal of a ten-inch line which runs northward from Dwale for approximately twenty-five miles. Since sales to Louisville were abandoned,[3] this line has been operated at a reduced pressure and only to serve non-jurisdictional customers, including the Municipalities of Paintsville and Prestonburg.

Louisville's replacement by KGT has made an additional 7,000 Mcf per day available to Equitable since the KGT's contract demand was reduced to 15,000 Mcf. The agreement with the later terminates on November 30, 1967 and Equitable will become the sole jurisdictional customer as of that date.

The single demand and commodity rate proposed by the Applicant follows its historical design and contemplates an increase in revenue of 7.8% from both jurisdictional customers based upon the test year ending December 31, 1962, as adjusted and restated. The increase in dollars with respect to Equitable amounts to $369,513 and for KGT $109,515.

The parties are apparently satisfied that the proposed increase in rates is warranted since they stipulated to an over-all jurisdictional cost of service which would produce the revenue sought by KWV's proposed increase.

The Pennsylvania Commission while a party to the stipulation, disagrees with the Applicant as to the manner in which the cost of service should be recovered and alleges that the proposed rate structure discriminates against Equitable, a Pennsylvania distributor. It is the position of the Pennsylvania Commission that the stipulated cost of service should be met by separate rates for each jurisdictional customer, based upon the type of service (transmission or production) furnished by KWV. Equitable, it feels, receives services that are derived essentially from the Applicant's production activities while KGT is the recipient of more costly transmission services.[4]

---

[1] Except gas produced in the Tomahawk segment.

[2] KGT is the only outlet for gas from the Tomahawk segment and receives the entire daily production. There is only one meter at Dwale and Beaver Creek; therefore the billings shown as deliveries to Equitable or KGT are book rather than operating transactions.

[3] Approved by Commission on October 10, 1962, Docket No. CP62–239.

The testimony establishes that prior to 1948, the Applicant was the production arm of a self-contained production and distribution system composed of its parent corporation, Equitable, and an affiliate, Louisville Gas, and while KGT has been substituted in the triumvirate for Louisville Gas, KWV is still primarily engaged in the production of natural gas in Eastern Kentucky for resale to its two jurisdictional customers.[5] A single jurisdictional rate schedule has been maintained by the Applicant for at least twenty-five years and the propriety of the practice has not been challenged until this proceeding.

The Applicant lends verisimilitude to the position of the Pennsylvania Commission through what appears to be an arbitrary breakdown of jurisdictional costs as between deliveries of gas from its "production" and "transmission" systems.

The Applicant's compressor stations at Tomahawk and Dwale while denominated transmission installations, not only serve to inject gas into the 20" and 12" pipelines, respectively, of United Fuel and KGT, but to facilitate the movement of gas through the multitude of production and gathering lines.

The so-called transmission costs associated with the twenty-five mile Dwale-Sitka line which formerly served Louisville Gas and now supplies only a few non-jurisdictional customers, are charged against Equitable and KGT although neither jurisdictional customer receives any transmission services therefrom. Exhibit 1, a map of the Applicant's system, indicates that this line in addition to supplying non-jurisdictional customers also performs the dual function of a gathering line for some production below Paintsville and east of Prestonburg.

The short segments of actual transmission line owned and operated by the Applicant—less than one-half mile connecting Tomahawk with the KGT pipeline and approximately one and one-eighth miles linking Dwale with United Fuel—are, in fact, nothing more than service connections between a producer and its distributors. Also, the allocations made by the Applicant for its deliveries of gas at Dwale and Beaver Creek are a billing convenience and do not represent an actual physical delivery or transmission of gas to the jurisdictional customers at such points.

Considerable testimony and argument has been devoted to the purported inequities of the varying pressures and Btu content of gas delivered at Tomahawk to KGT, at Dwale and Beaver Creek to United Fuel and, in turn, by United Fuel at Cedarville, West Virginia, and Leach, Means and Richmond, Kentucky, to Equitable and KGT, respectively. The deliveries and exchanges of gas are, however, being made pursuant to arm's-length contracts and service agreements between the respective parties, and in the opinion of the examiner, the agreements between United Fuel, Equitable and KGT concerning the deliveries by United Fuel are not relevant to the issue involved in this proceeding.[6]

---

[4] The Pennsylvania Commission has placed the Dwale and Tomahawk Compressor Stations and the facilities downstream from such installations in the latter category.

[5] Some gas is purchased from other producers in the KWV operating area.

[6] Contractual agreements notwithstanding, it would seem that any disparity in the Btu content between the gas received by KGT at Tomahawk and that delivered to Equitable by United Fuel, is compensated for by the previous stripping of the gas delivered to United Fuel by Kentucky Hydrocarbon Company, a wholly owned subsidiary of the Applicant.

Despite obviously inaccurate cost classifications and allocations by the Applicant, it is abundantly clear that KWV is essentially a producer rendering identical services to both Equitable and KGT. A single rate for both jurisdictional customers, as in the past, is appropriate in the present circumstances.

If the Pennsylvania Commission's design was adopted, the charges to KGT would be increased $483,135 or more than 35%, and Equitable would benefit by a reduction of $4,161. Since KWV's increased rates are required to support a long range gas supply (eventually for Equitable's sole benefit) and to maintain a rate of return that was adversely affected by Equitable's cut backs in the test year,[7] the Pennsylvania Commission's proposal would bestow unwarranted advantages upon affiliates and, in the opinion of the examiner, impose undue hardship upon the non-affiliate customer.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record, the testimony and the briefs of counsel, the examiner finds and concludes, in addition to findings and conclusions previously stated, that:

(1) Kentucky West Virginia is essentially a producer of natural gas and that any transmission services performed by it are incidental to its function as a producer.

(2) Kentucky West Virginia is performing identical services for its two jurisdictional customers and a single demand and commodity rate for both is just, reasonable, non-discriminatory and non-preferential under the Natural Gas Act.

AMES W. WILLIAMS
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE PRESTON OIL COMPANY

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 16, 1964)

On December 20, 1963, The Preston Oil Company (Preston) filed an application for rehearing of the Commission's letter-order issued November 21, 1963, rejecting the Notice of Producer Rate Change filed by Preston on October 22, 1963, for a proposed rate increase under its FPC Gas Rate Schedule No. 29 from 20.7¢ per Mcf to 21.1¢ per Mcf for gas presently being sold by Preston, pursuant to conditioned temporary authorization issued in Docket No. CI63–977, to United Fuel Gas Company from the Ellis Field, Acadia Parish, Louisiana.

The basis for the rejection was that the proposed increase was not in conformity with the express condition in the temporary authorization that the 20.7¢ rate shall remain in effect until changed by further Commission order in the certificate proceedings in Docket No. CI63–977.

Preston relies upon the fact that a similar condition has been held to be invalid by the Fifth Circuit Court of Appeals, *Hunt* v. *F.P.C.* 306 F. 2d 334.[8] However, the Supreme Court has granted certiorari on appeal by the Commission from this decision (*F.P.C.* v. *Hunt*, No. 273, October Term 1963) and, pending such review, the decision of the circuit court is not controlling as a precedent, even with respect to new applications. *A fortiori* we cannot give effect to it here where (unlike *Hunt* which in accepting the temporary expressly reserved the right to seek review and did so after denial of a petition for rehearing) Preston accepted the temporary authorization as tendered and allowed the Commission's letter-order granting the temporary to become final.

---

[7] Equitable is committed to alternative sources of supply and subject to take-or-pay provisions in its contracts with such sources.

[8] CA5 reversed, 376 U.S. 515.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application of Preston present no new facts or principles of law which were not considered by the Commission when it issued its letter-order of November 21, 1963, or which having now been considered warrant any change or modification of said order.

The Commission orders:

The application for rehearing filed by Preston on December 20, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. CP64-110

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 16, 1964)

On November 12, 1963, South Georgia Natural Gas Company (Applicant) filed in Docket No. CP64-110 pursuant to Section 7(b) of the Natural Gas Act an application for authority to abandon a segment of its high pressure pipeline system consisting of approximately 1,910 feet of 3½-inch O.D. transmission line designated as Applicant's Line No. 7, now utilized to serve the City of Dawson, Georgia.

Applicant states that the purpose of disposing of the said stretch of pipeline is to enable the City of Dawson, the purchaser thereof, to pave over the line in the new section of the city where the line lies, and to convert the said stretch so acquired into a part of the City's distribution system to benefit the residents of that area.

The purchase price for the pipeline facilities to be sold and transferred by Applicant is $3,656.62 which has been agreed to by the City of Dawson, Georgia.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 9, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, South Georgia Natural Gas Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission, and the facilities hereinabove described were authorized by the Commission on September 2, 1954, in Docket No. G-1915.

(2) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such adandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by South Georgia Natural Gas Company of the facilities hereinbefore described be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP64–109

ORDER DENYING APPLICATION FOR SUBPENAS AND PERMITTING INTERVENTION

(Issued January 17, 1964)

On January 7, 1964, Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) filed in this proceeding an application requesting that the Commission issue subpenas to Fuels Research Council, Inc., National Coal Association, and Mid-West Coal Producers Institute, Inc. (Coal Interveners)[1] who were permitted to intervene in this proceeding by the Commission's order issued herein on December 18, 1963. Michigan Wisconsin gives six classifications of information which it contends the Coal Interveners must present in order to show: (1) that they are appearing in truly representative capacities; (2) that they are the real parties in interest; (3) that Michigan Wisconsin's sale of natural gas to Wisconsin Public Service Corporation (Public Service) for use by the latter in its Weston generating plant will cause serious and permanent unemployment of personnel among their members, accompanied by loss of revenues and wages, despite the fact that coal is readily available for use as fuel at the Weston plant at reasonable cost; and (4) that the Fuels Research Council, Inc., is a "non-profit" organization.

Michigan Wisconsin correctly points out in its application for subpenas that the Coal Interveners were permitted to intervene in this proceeding "* * * in order that they may establish the facts and law from which the nature and validity of their alleged rights and interests may be determined * * *." However, Michigan Wisconsin contends that (application, p. 4):

> Despite the foregoing [finding by the Commission], there is no assurance that the Coal Petitioners will disclose the identity of the coal and railroad companies which are the real parties in interest or that they will present evidence with respect to their operations, profits, price policies, and other factors bearing upon the competition between natural gas and coal involved in this proceeding. * * *

In addition to its application for subpenas, Michigan Wisconsin filed an answer to the Coal Interveners' petition to intervene, objecting to the Coal Interveners' being allowed to participate in this proceeding because the Coal Interveners had not shown that they were the real parties in interest and had failed to demonstrate that they qualify as representatives of the real parties in interest. Michigan Wisconsin's objections to the granting of the Coal Interveners' petition to intervene and Michigan Wisconsin's application for subpenas have placed in issue the right of the Coal Interveners to participate in this proceeding.

---

[1] Although the Coal Interveners' joint petition to intervene was filed on behalf of the three organizations named above as well as the United Mine Workers of America, Michigan Wisconsin gave no reason for omitting United Mine Workers of America from its application requesting issuance of subpenas to the other three organizations which purport to represent competing fuel and transportation interests.

In *National Coal Association* v. *F.P.C.*, 191 F. 2d 462, 466 (CADC), the court referred to the legislative history pertaining to the Natural Gas Act and indicated that Congress appears to have wanted the Commission to consider the effect that authorization of gas service would have upon competing fuel and transportation interests, but the court added the condition that such competing interests should be heard "* * * upon a showing of injury to them." The court also made it clear that once a hearing has been concluded, in which organizations purporting to represent the competing coal and transportation interests have been allowed to participate, the Commission cannot raise the argument on review that the competing fuel interests were not actually "aggrieved" parties to the proceeding because of their failure to present evidence proving that the sale of gas would have an immediate adverse effect upon such competing interests. The court further observed that anyone who would be "aggrieved" by a Commission order would also be one who would have a right to intervene. Otherwise, the Commission could prevent judicial review of its orders simply by refusing to allow intervention in its proceedings because judicial review is limited solely to the parties to Commission proceedings who have been "aggrieved" by Commission orders issued in such proceedings.[2]

In *City of Pittsburgh* v. *F.P.C.*, 237 F. 2d 741 (CADC), the court referred to its decision in the *National Coal* case, *supra*, and explained that (237 F. 2d at 746):

> * * * We did not imply that the Federal Power Commission was authorized to deny a certificate of public convenience and necessity for a natural gas pipeline merely because of the adverse effect upon producers and carriers of a competing fuel and their employees. We held merely that parties so affected were authorized to seek review of the substantive issues involved in determining whether or not the public convenience and necessity would be served. * * *

The court also held in the *City of Pittsburgh* case that the Commission erred in sustaining the Presiding Examiner's exclusion of competing transportation interests' proffer of proof in that proceeding and specifically stated that "* * * Having precluded the barge operators from proving injury, the Commission cannot now be heard to complain that the record contains no proof." (237 F. 2d at 749.) Thus, the court decisions make it quite clear that competing fuel and transportation interests have a right to intervene in Commission proceedings provided they sustain their burden of establishing that they will be adversely affected if the gas service which they oppose is ultimately authorized by the Commission.

If we were to grant Michigan Wisconsin application for subpenas, we would be passing upon the exact classifications and extent of the evidence which the Coal Interveners will have to present in order to prove their allegations as to economic injury. We do not believe that we should specify the kinds or extent of the testimony and exhibits which would appear to be necessary to prove the allegations contained in the Coal Interveners' petition to intervene. The issuance of subpenas directing the Coal Interveners to submit specific details regarding six different types of information would seem to be a resort to measures as extreme in requiring proof in this proceeding as were the rulings used in the *City of Pittsburgh* case for precluding proof. The court held in its *Pittsburgh* decision that it was error for the Commission to deny proffers of proof simply because they were made in general rather than in specific terms. Therefore, we are denying Michigan Wisconsin's application for subpenas.

---

[2] Of course, the denial of intervention would not leave a competing fuel company without remedy because it was held in *Virginia Petroleum Jobbers Association* v. *F.P.C.*, 259 F. 2d 921 (CADC), that if the competing fuel association had a right to intervene, it also had a right to judicial review of the order denying intervention.

We note that the Commission's Rules of Practice and Procedure do not prohibit the filing by the Coal Interveners of an answer to Michigan Wisconsin's application for subpenas. Since we are denying Michigan Wisconsin's application for subpenas, it does not appear that the Coal Interveners will be prejudiced by our acting upon the application for subpenas prior to the receipt from the Coal Interveners of an answer thereto. We believe it is in the public interest that the parties have this procedural question answered prior to the commencement of the hearing so as to avoid further postponement of the date fixed for the commencement of the hearing. Early action on the procedural questions should also be helpful to Michigan Wisconsin and other parties who may be preparing evidence for presentation at the hearing. As we have indicated in prior orders, the Presiding Examiners have the power to issue subpenas. *El Paso Natural Gas Company*, 27 FPC 321–322 and order issued October 4, 1963, in *Indiana & Michigan Electric Company*, Docket No. E–7089, 30 FPC 967. Therefore, after counsel for the Coal Interveners have presented such evidence as they deem necessary to prove the essential allegations contained in their joint petition to intervene, Michigan Wisconsin is free to renew before the Examiner its request for subpenas accompanied by a showing of relevance and materiality.

Subsequent to the issuance on December 18, 1963, of our order granting, *inter alia*, the petitions to intervene which had theretofore been filed in this proceeding, the following petitions seeking leave to intervene were filed by a number of distributors:

Petitioners:	*Date petitions were filed*
Iowa Southern Utilities Company	January 6, 1964
Madison Gas and Electric Company	January 10, 1964
North Central Public Service Co	January 8, 1964
Wisconsin Fuel and Light Company	January 10, 1964
Wisconsin Natural Gas Company and Wisconsin Michigan Power Company (Joint Petition)	January 8, 1964
Wisconsin Power and Light Company	January 10, 1964

The Commission finds:

(1) Michigan Wisconsin's application for subpenas should be denied because it is unnecessary for the Commission to specify at this stage of the proceeding the types of evidence which the Coal Interveners should be required to present in support of the allegations contained in their joint petition to intervene, particularly since the Coal Interveners, whose interest has been challenged, have the burden of coming forward with evidence showing that they have authority to represent members of the coal-producing and transportation industries who would suffer the alleged economic injuries and other adverse effects, to which the Coal Interveners refer in their joint petition to intervene, in the event Michigan Wisconsin's application in Docket No. CP64–109 should be granted.

(2) Although the petitions for leave to intervene filed by Madison Gas and Electric Company, Wisconsin Fuel and Light Company, and Wisconsin Power and Light Company, respectively, were not filed within the time required by

Section 1.8 (d) of the Commission's Rules of Practice and Procedure, such date in this proceeding having been January 9, 1964, good cause exists to permit the late filings.

(3) It is desirable to allow the distributor petitioners to intervene in this proceeding, in which a hearing is scheduled to commence on January 21, 1964, in order that the petitioners may establish the facts and law from which the nature and validity of their alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) Michigan Wisconsin's application for subpenas filed January 7, 1964, in this proceeding is hereby denied for the reasons given in paragraph (1) of this order.

(B) The distributor petitioners be and they are hereby permitted to become interveners in the above-entitled proceeding subject to the rules and regulations of the Commission: *Provided, however*, that the participation of such interveners shall be limited to matters affecting asserted rights and interests as specifically set forth in said petitions for leave to intervene; and *provided, further*, that the admission of such interveners shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., DOCKET NOS. CI61-1570, CI61-1571 AND CI62-313

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 20, 1964)

On September 20, 1963, North Central Oil Corporation (Operator), *et al.* (North Central) filed a motion for severance of Docket No. CI62-313 from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* (hereinafter referred to as the Union Texas proceeding), for approval of settlement proposal and for the issuance of a certificate of public convenience and necessity. On September 23, North Central filed a similar motion relating to Docket Nos. CI61-1570 and CI61-1571.

Consolidated Edison Company of New York, Inc. (Con-Edison), on September 27, 1963, filed a response in opposition to the motion filed on September 23, on the grounds that North Central had failed to provide for refunds in accordance with the temporary authorizations heretofore issued in Docket Nos. CI61-1570 and CI61-1571.[1]

This failure to provide refunds was a departure from the other Union Texas settlements. North Central also proposed that it be allowed to file rate increases for ¾ of additional taxes, if reimbursable. Union Texas settlements have provided for rate increase filings for a maximum of ½ of such tax increases.[2]

---

[1] On October 4, 1963, Public Service Electric and Gas Company filed a letter with the Secretary agreeing with the response of Con-Edison.

North Central, on October 1, filed an amendment to its offer of settlement in Docket Nos. CI61–1570 (RS–9) and CI61–1571 (RS–8). By this amendment North Central offered to make refunds of excesses collected under the rate schedules related to these certificate applications since January 1, 1962, the date on which North Central became the operator of the properties. Pioneer Oil and Gas Company had been the operator of the properties prior to that time and had been making sales since June, 1961, under refund conditioned temporary authorizations. As operator during the period June 1961 to January 1, 1962, Pioneer's filings covered the interests of North Central; since January 1, 1962, North Central's filings have covered the interests of Pioneer. The rate under both rate schedules is 23.25¢ per Mcf[3] and the proposed settlement rate is 20.625¢ per Mcf.

Brooklyn Union Gas Company (Brooklyn Union), on October 11, 1963, filed a statement in opposition to the offer of settlement of North Central in Docket Nos. CI61–1570 and CI61–1571 noting the failure to provide for refunds as required by the temporary authorizations. Brooklyn Union stated that it would not oppose the settlement if the producer would accept modification to provide for full refunds.

In view of the objections of the intervenors and the departures from the Union Texas settlement pattern, we denied North Central's motions by order issued in these proceedings on December 9, 1963.

On December 23, 1963, North Central filed an amended offer of settlement and motion for severance.[4] This amendment removes the reasons for the Commission's rejection of the original offer. In substance, the offers now conform to the recent Union Texas settlements and provide for the issuance of certificates of public convenience and necessity at initial rates of 20.625¢ per Mcf for three sales from south Louisiana; a five year moratorium on rate increase filings, effective April 1, 1963 (subject to the usual exceptions); extension of take-or-pay make-up periods to 4 years in all rate schedules which provide less; refunds of all amounts collected above that which would have been collected at the settlement rate since the date of initial deliveries in Docket Nos. CI61–1570 and CI61–1571, and for all deliveries made subsequent to March 31, 1963, in Docket No. CI62–313; interest on all amounts to be refunded computed at a rate of 7 percent per annum.[5]

We find these proposals, generally, to be in the public interest and shall approve them subject to the following reservations and conditions.

We shall require that interest on the amounts to be refunded accrue through the last day of the month in which the amended motion and offer were filed, December 31, 1963. This has been a requirement in all of our orders approving settlements arising out of the Union Texas proceeding.[6]

In the context of the proposals, we interpret the term "delivered" as used in paragraph 1 of the proposals to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation. Thus, prepayments, if any, shall be made during the moratorium period at rates no higher than the rates in effect for gas physically delivered.

---

[2] See, *e.g.*, orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company) in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979 respectively.

[3] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[4] North Central's filing was entitled "Application for Rehearing" but since the order of December 9, 1963, was not a final order and since the "Application for Rehearing" substantially changed the original offer of settlement, the "Application for Rehearing" is considered an amended offer of settlement and motion for severance.

[5] See Appendix for further details.

[6] See order issued October 25, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, regarding the settlement of Texaco Inc., 30 FPC 1089.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61-2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61-2. The settlement proposals also provide that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61-2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The pipeline purchaser in Docket Nos. CI61-1570, CI61-1571, CI62-313 is Transcontinental Gas Pipe Line Corporation (Transco). In order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Transco to report to the Commission the amount of refund and interest which it receives as a result of North Central's settlement, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of this settlement in a special account subject to further orders of the Commission.

In accordance with the above we shall sever these North Central dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*, and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals, as amended, and conditions of this order.[7]

The Commission finds:

(1) North Central Oil Corporation is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) North Central is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

---

[7] The hearings in the *Union Texas Petroleum, et al.*, consolidated proceeding concluded July 25, 1963, and the Presiding Examiner's Decision was issued January 14, 1964.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco be required to submit the reports and account for the refunds, interest and purchased gas cost reductions as ordered below.

The Commission orders:

(A) The matters in Docket Nos. CI61-1570, CI61-1571, and CI62-313 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*

(B) Certificates of public convenience and necessity are hereby issued to North Central Oil Corporation upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals, as amended, and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals, as amended, herein.

(C) The certificates granted by paragraph (B) above, are granted upon the express condition that North Central comply fully with the terms of this order and the settlement proposals, as amended, which settlement is expressly approved, under the conditions of this order.

(D) The interest required to be paid under the terms of these proposals shall accrue through December 31, 1963, the last day of the month in which the amended settlement proposal was filed.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals as amended, North Central shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with a release from the purchaser showing receipt of the refunds in conformity with the settlement as approved.

(F) Upon full compliance of North Central with all the terms of this order and of the settlement proposals, as amended, North Central shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as North Central continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposals, as amended.

(I) The grant of certificates herein and approval of the settlement proposals are without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against North Central, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, North Central, the Commission staff, or any affected party herein in any other proceeding.

(J) Within 15 days from the date of receipt of refunds and interest required by this order, Transco shall submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions of states wherein it does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to North Central's rate reductions, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs. Pending Commission action and further orders respecting such proposed disposition and adjustments, Transco shall hold such refunds, interest and amounts equal to the reductions in purchased gas costs which accrue as a result of this settlement in a special account.

Commissioner Ross *not participating.*

APPENDIX

Docket No.	Rate schedule No.	Applicant	Purchaser	Current rate (cents per Mcf)	Proposed settlement rate
CI62-313	7	North Central Oil Corp. (operator), *et al.*	Transcontinental Gas P/L Corp.	[1] 21.25	20.625

[1] The proposed initial rate of 22.75 cents per Mcf was conditioned to 21.25 cents per Mcf by temporary authorization.

[2] The proposed initial rate of 23.55 cents per Mcf was conditioned to 23.25 cents per Mcf by temporary authorization.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

KENTUCKY WEST VIRGINIA GAS COMPANY, DOCKET NO. CP64–105

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 21, 1964)

On November 4, 1963, Kentucky West Virginia Gas Company (Applicant) filed in Docket No. CP64–105 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon and remove one 800 horsepower compressor unit from its Dwale Compressor Station in Floyd County, Kentucky.

Applicant states that gas deliveries through the Dwale Compressor Station have declined to a point where all volumes of gas required to be pumped by the station can be handled more than adequately by the remaining six compressor units. The abandonment of the compressor will not alter or affect Applicant's operations.

The estimated net salvage value of the unit to be removed is $37,700.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 16, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kentucky West Virginia Gas Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by

the Commission in its order of January 4, 1944, Docket No. G–272 (4 FPC 476).

(2) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Kentucky West Virginia Gas Company, of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP64–14; THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP64–15; UNITED FUEL GAS COMPANY AND KENTUCKY GAS TRANSMISSION CORPORATION, DOCKET NO. CP64–16

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 21, 1964)

On July 17, 1963, as supplemented on August 30, 1963, The Ohio Fuel Gas Company (Ohio Fuel) in Docket No. CP64–14, on July 17, 1963, as supplemented on August 29, 1963, The Manufacturers Light & Heat Company (Manufacturers) in Docket No. CP64–15 and on July 17, 1963, United Fuel Gas Company (United) and Kentucky Gas Transmission Corporation (Kentucky Gas), jointly, in Docket No. CP64–16, filed applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the construction and operation of certain facilities in order to receive increased deliveries of natural gas* and to meet the increased 1964–65 winter requirements of existing customers, all as more fully set forth in the respective applications.

Specifically, Applicants request the following authorizations:

Docket No. CP64–14—Ohio Fuel

To construct and operate approximately 15.4 miles of 24-inch pipeline in Lawrence County, Ohio, partially looping Ohio Fuel's existing "R" system north from United's delivery point at Burlington, Ohio, and a 1500 horsepower compressor unit at the existing Crawford Compressor Station, Fairfield County,

---

***These applications are related to the applications of Columbia Gulf Transmission Company (Columbia), Humble Oil & Refining Company (Humble) and Isaac Arnold, *et al.* (Arnold), filed in Docket Nos. CP64–1, CI64–5 and CI64–6, respectively, requesting authorization for the sale and delivery of natural gas in southern Louisiana by Humble and Arnold to United and transportation of such gas by Columbia to United at delivery points near the Kentucky-West Virginia border. By Commission order of November 15, 1963, Columbia Humble and Arnold were issued certificates in said dockets.**

Ohio. The proposed facilities will provide increased capacity for Ohio Fuel to receive and transport approximately 45,000 Mcf per day of increased firm deliveries from United. The estimated cost of the proposed facilities is $2,222,000.

Docket No. CP64-15—Manufacturers

To construct and operate approximately 13.85 miles of 16 and 24-inch pipeline looping Manufacturers' existing composite 16 and 20-inch line No. 1740 from a connection with the system of United in Glenville District to a point in Troy District, all in Gilmer County, West Virginia. The application indicates that the proposed facilities will increase the capacity of line No. 1740 by approximately 24,000 Mcf per day. The increased capacity will be needed during the 1964–65 winter season and the 1965 summer storage operations. The estimated cost of the proposed facilities is $1,400,000.

Docket No. CP64-16—Kentucky Gas and United

Kentucky Gas proposes to construct and operate approximately 16 miles of 30-inch pipeline, partially looping one 13 mile section of its system extending north from its Means Compressor Station, Montgomery County, Kentucky, and one 3 mile section extending south from the Means Station. Kentucky Gas states that the proposed facilities will increase the capacity of its system by 19,400 Mcf per day which increase will be utilized primarily to meet the increased 1964–65 winter requirements of The Cincinnati Gas & Electric Company and The Union Light, Heat and Power Company. The application shows that Columbia delivers the majority of Kentucky Gas' requirements directly to Kentucky Gas near the Means Station for the account of United. The estimated cost of the proposed facilities is $2,149,000.

United proposes to construct and operate (1) approximately 4.7 miles of 30-inch pipeline loop between its Ceredo Compressor Station, Wayne County, West Virginia, and a point of interconnection with Columbia near the Kentucky-West Virginia border; (2) an additional 2700 horsepower compressor unit each at its Ceredo Station and its Lanham Station, Kanawha County, West Virginia, and an additional 1100 horsepower unit at its Glenville Station, Gilmer County, West Virginia; (3) 23.3 miles of 24-inch loop extending in a southwesterly direction from its Glenville Station, and (4) 7.9 miles of 26-inch partial loop extending in an easterly direction from its Lanham Station.

The application indicates that United's proposed facilities are required primarily for summer storage operations. United states that the period of maximum usage of its eastern high pressure system is during the average summer day. This results because the average daily requirements of United's major wholesale customers are at a relatively high level and because of United's summer storage injection program. The estimated cost of United's proposed facilities is $6,882,300.

The estimated cost of the proposed facilities in each docket will be financed by the issuance of installment promissory notes and common stock to Applicants' parent corporation, The Columbia Gas System, Inc.

Several petitions to intervene have been filed in Docket No. CP64-16 by interested companies. In each case, the burden of such filings has been that the petitioners did not request formal hearing in these proceedings and did not object to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules, but that each petitioner desired to preserve its rights to appear and participate fully in the event that these matters should be set for formal hearing. Inasmuch as the shortened procedure is being used herein, no further action on the various intervention petitions appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 16, 1964, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications, supplements and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) Applicant, The Manufacturers Light & Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593, *et al.* (4 FPC 821).

(3) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued March 1, 1944, in Docket No. G–341 (4 FPC 543).

(4) Applicant, Kentucky Gas Transmission Corporation, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 6, 1958, in Docket No. G–15288 (20 FPC 463).

(5) The facilities hereinbefore described, as more fully described in the applications in these proceedings, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) The construction and operation of the proposed facilities by Applicants are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(8) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicants, The Ohio Fuel Gas Company, in Docket No. CP64–14, The Manufacturers Light & Heat Company, in Docket No. CP64–15, and joint Applicants, United Fuel Gas Company and Kentucky Gas Transmission Corporation, in Docket No. CP64–16, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the respective applications herein, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in paragraph (A) above shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within nine months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; J. C. TRAHAN DRILLING CONTRACTOR, INC. (OPERATOR), ET AL., DOCKET NOS. G–18287, CI60–481, CI60–698, CI61–452 AND CI62–771; SHORELINE EXPLORATION, INC., DOCKET NOS. CI60–356, CI61–1015, CI62–73, AND CI62–102

ORDER GRANTING ALTERNATIVE MOTION FOR SEVERANCE, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 21, 1964)

On September 16, 1963, J. C. Trahan Drilling Contractor, Inc. (Operator), *et al.* (Trahan) and Shoreline Exploration, Inc. (Shoreline) filed a joint offer of settlement relating to the above nine Trahan and Shoreline dockets.

But for one aspect, the settlement proposal is similar to settlements heretofore conditionally approved by the Commission in the Union Texas proceeding.[1] The applications in Docket Nos. CI61–452, CI62–73 and CI62–102 concern assignments of acreage previously covered by the assignors' certificates and rate schedules.[2] The rates in effect at the time of the assignments were 20.25¢ per Mcf[3] (Docket No. CI61–452) and 23.3¢ per Mcf (Docket Nos. CI62–73 and CI62–102). However, such rates were in effect subject to refund under Section 4(e) of the Natural Gas Act. In each case the initial rate of the predecessor as well as the last rate of the predecessor not subject to refund were substantially less than the rates in effect at the time of the assignments. Trahan proposes that a certificate be issued in Docket No. CI61–452 at a rate of 20.25¢ per Mcf[4] and Trahan proposes that certificates be issued in Docket Nos. CI62–73 and CI62–102 at a rate of 20.625¢ per Mcf.

The issuance of certificates at the rates proposed by Trahan and Shoreline would be a violation of the principles expressed in our recent Opinion No. 408, *Graridge Corporation (Operator), et al.*, Docket No. G–19246, *et al.*, issued

---

[1] See e.g., orders issued August 7, 1963, 30 FPC 456 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, 30 FPC 979.

[2] The predecessors rate schedules and certificate Docket Nos. are: Sun Oil Company Rate Schedule No. 63, Docket No. G–6834; Shell Oil Company, Rate Schedule No. 202, Docket No. G–5037 and Sunray Mid-Continent Oil Company, Rate Schedule No. 186, Docket No. G–6053.

[3] All rates expressed inclusive of tax reimbursement and all volumes expressed at 15.025 psia.

[4] Subsequent to the assignment this rate was again increased and is now in effect subject to refund in Docket No. RI61–550.

October 31, 1963, 30 FPC 1156. We there held that a certificate issued to a successor in interest should put the successor in the same position that the predecessor would be in, had the latter retained the property transferred. To grant the certificates in these three dockets as proposed by Trahan and Shoreline would be to put them in a more favorable position than their assignors.

Because of doubts as to the acceptability to us of the provisions relating to these three dockets, Trahan and Shoreline, on December 10, 1963, filed an alternative motion for severance urging that we accept the settlement proposal as originally submitted but in the alternative, if we were to find the proposal unacceptable because of the provisions relating to these three dockets, urging that we accept it as to the other six dockets.

For the reasons discussed above, we shall grant the alternative motion for severance and leave Docket Nos. CI61-452, CI62-73 and CI62-102 consolidated for decision in the Union Texas proceeding. The Presiding Examiner's decision in the Union Texas proceeding was issued on January 14, 1964. Our determination herein to leave these three dockets consolidated in the Union Texas proceeding is not to be construed as either approving or disapproving the Examiner's decision regarding these three dockets. That decision is not properly before us at this time.

Insofar as it relates to the remaining six dockets, the Trahan and Shoreline proposal provides for maximum initial rates of 20.625¢ per Mcf; a five-year moratorium on rate increase filings effective April 1, 1963 (subject to the usual exceptions); extensions of the make-up periods to four years in all rate schedules which provide lesser make-up periods.[5]

The rates in effect subject to refund in Docket Nos. RI61-315, RI62-103 and RI61-557 will remain in effect subject to ultimate disposition in those rate proceedings; the certificate issued to Trahan in Docket No. CI60-481 and to Shoreline in Docket Nos. CI60-356 and CI61-1015 will be at the proposed initial rates of 20.25¢ per Mcf. The initial rates proposed in the other three dockets are 20.625¢ per Mcf.

Trahan will refund to the pipeline purchasers the difference between the amounts collected under Rate Schedules Nos. 7, 14 and 21 for deliveries made subsequent to March 31, 1963, and the amounts that would have been collected at the settlement rates of 20.625¢ per Mcf. Interest on amounts to be refunded will accrue at a rate of 7 percent per annum through September 30, 1963, the last day of the month in which the settlement proposal was filed.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 to include gas required to be taken during the moratorium period but paid for and not taken. Our approval of this settlement is conditioned upon such interpretation. Thus, prepayments, if any, shall be made during the moratorium periods at rates no higher than the rates in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61-2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61-2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61-2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

---

[5] See appendix for further details.

In accordance with the above we shall sever Docket Nos. G–18287, CI60–481, CI60–698, CI62–771, CI60–356 and CI61–1015 from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, and issue certificates of public convenience and necessity in accordance with the applications, alternative settlement proposal and conditions of this order.

The Commission finds:

(1) Each of the applicants herein is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

The Commission orders:

(A) The matters in Docket Nos. G–18287, CI60–481, CI60–698, CI62–771, CI60–356 and CI61–1015 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(B) Certificates of public convenience and necessity are hereby issued in Docket Nos. G–18287, CI60–481, CI60–698, CI62–771, CI60–356 and CI61–1015 upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the alternative settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposal herein.

(C) The certificates issued by paragraph (B) above, are granted upon the express condition that the applicants comply fully with the terms of this order and the alternative settlement proposal which settlement proposal is expressly approved, as modified by this order.

(D) The refunds required by the alternative settlement proposal and this order shall be made within 90 days from the date of issuance of this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the alternative settlement proposal Trahan shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity with the alternative settlement proposal and the conditions of this order.

(F) Upon full compliance of the applicants with all the terms of this order and of the alternative settlement proposal the applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the alternative settlement proposal.

(I) The grant of certificates herein and approval of the alternative settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(J) The motion for severance, for approval of settlement proposal, and for the issuance of certificates of public convenience and necessity in Docket Nos. CI61–452, CI62–73 and CI62–102 is hereby denied.

Commissioner Ross *not participating.*

APPENDIX

Rate Schedule	Docket No.	Purchaser	Present Rate (¢/Mcf)	Certificate Settlement Rate (¢/Mcf)

ACCO OIL & GAS COMPANY (OPERATOR), ET AL., DOCKET NO. G–17270

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, REQUIRING REFUNDS, TERMINATING AND SEVERING PROCEEDING

(Issued January 22, 1964)

On December 23, 1963, Acco Oil & Gas Company (Acco) filed an Offer of Settlement in the above-designated rate suspension proceeding, pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure. This proceeding relates to the jurisdictional sale of natural gas by Acco under its FPC Gas Rate Schedule No. 2 to Tennessee Gas Transmission Company (Tennessee) from Harris and Montgomery Counties, Texas (Railroad Commission District No. 3).

The following table sets forth the data pertinent to the proceeding involved herein:

Docket No.	Rate schedule No.	Supplement No.	Effective rate	Date effective subjec to refund
G-17270	2	2	[1] 16.16047	June 1, 1959

[1] At 14.65 p.s.i.a.

In its Offer of Settlement, Acco proposes to eliminate the favored-nation, price redetermination, and periodic escalation clauses from the rate schedule involved, and to establish a settlement rate of 15.0¢ per Mcf, inclusive of present tax reimbursement,[2] for the remaining term of the contract. Acco also proposes to refund to Tennessee all amounts collected in excess of the settlement rate, plus interest at the rate of 6% per annum to the date of refund. The estimated amount of the refund is approximately $6,700, exclusive of interest, and the estimated decrease in annual revenues is approximately $1,370.

In support of its offer, Acco cites the deletion of the price redetermination, favored-nation and periodic escalation clauses from its gas purchase contract with Tennessee, and states that such provisions were important elements of consideration required by Acco under the contract for the long-term commitment of its gas reserves to the performance of the contract. Tennessee has stated that it has no objection to the proposed settlement.

Since the proposed settlement rate of 15.0¢ per Mcf at 14.65 psia is acceptable under the provisions of the Second Amendment[3] to the Commission's Statement of General Policy No. 61-1,[4] for jurisdictional sales of natural gas in Texas Railroad Commission District No. 3, it is believed that the public interest will best be served by accepting Acco's proposed settlement as hereinafter set forth.

Our approval of the settlement proposal should not be construed as constituting approval of any future rate increases filed in accordance with its reservation of the right to file increases to cover future tax increases.

The proceeding in Docket No. G-17270 was consolidated with the proceeding in Area Rate Proceeding, Docket No. AR64-2; consequently, it should be severed from such area rate proceeding, and terminated as hereinafter ordered.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Acco with the Commission on December 23, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Acco with the Commission on December 23, 1963 is hereby approved in accordance with the provisions of this order.

---

[2] Under its offer, Acco further proposes to amend its contract to provide for tax reimbursement of three-fourths of any tax increases levied subsequent to December 1, 1963, rather than January 1, 1954.

[3] Issued December 20, 1960, 24 FPC 1107; amended by Order No. 264, in Docket No. R-234, issued March 27, 1963, 29 FPC 589.

[4] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

(B) Acco shall file, within 30 days from the date of issuance of this order, a notice of change providing for the 15.0¢ per Mcf rate, including present tax reimbursement, specified in its Offer of Settlement, and a contractual amendment to its FPC Gas Rate Schedule No. 2, which Acco shall execute with Tennessee in conformity with Acco's Offer of Settlement in all respects. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Acco shall refund to Tennessee all amounts collected under its FPC Gas Rate Schedule No. 2, in excess of the settlement rate of 15.0¢ per Mcf, together with simple interest at the rate of 6% per annum, from the date of receipt of such excess amounts by Acco to the date of refund. Acco shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this order, Acco shall report to the Commission, in writing, the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from Tennessee with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that Acco has complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf, including present tax reimbursement specified in the Offer of Settlement, shall be effective as of the date of issuance of this order, the proceeding in Docket No. G-17270 shall be deemed terminated and severed from Area Rate Proceeding, Docket No. AR64-2, and Acco's refund obligation with respect to the proceeding in Docket No. G-17270 shall be deemed discharged.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against Acco.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DEPARTMENT OF WATER RESOURCES OF THE STATE OF CALIFORNIA, PROJECT NO. 2100

ORDER AMENDING LICENSE (MAJOR)

(Issued January 22, 1964)

Application was filed on April 17, 1962, under Section 6 of the Federal Power Act, by Department of Water Resources of the State of California, licensee for Project No. 2100, designated in the application as "Oroville Division, State Water Facilities," for amendment of its license for the project, currently under construction on the Feather River and its tributaries near Oroville, California, and affecting lands of the United States within the Plumas and Lassen National Forests and lands held in trust by the United States for Indians in the County of Butte, California.[1]

The April 17, 1962 application, which was filed as a result of further studies and investigations by the licensee to obtain a more economical design of the project structures and their installation would change: the type of dam for the Oroville development from concrete gravity to a zoned fill-type with normal pool elevation remaining at elevation 900 feet and the conventional type powerhouse to an underground powerhouse with an installation of 440,000 kilowatts to 612,000 kilowatts of which 261,000 kilowatts are pump-turbine; for the Thermalito development from two reregulating reservoirs with no power installation to a forebay and regulating afterbay with an installation of 92,000 kilowatts of which 60,200 kilowatts are pump-turbine; the period of construction from seven years to twelve years; the authorized horsepower installation from 587,000 horsepower to 939,000 horsepower; the formula for assessing administrative annual charges from one (1) cent per horsepower plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy, to a reasonable annual charge based upon the 939,000 horsepower in accordance with the provisions of Part 11 of the Commission's regulations which contemplate application of Commission's Order No. 205 (Docket R-129); and other minor modifications of the license.

---

[1] The April 17, 1962 application supersedes in its entirety an application for amendment filed by the licensee on December 18, 1959.

The Secretary of the Army and the Chief of Engineers have reported: that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned; that the plans of the structures are in general satisfactory insofar as the interests of flood control are concerned, subject to the pertinent provisions in the contract (No. DA-04-167-CIVENG-62-56), dated March 8, 1962, between the United States and the State of California; and that the operation of the project in the interest of flood control as provided for in Article 32 of the license shall be in accordance with rules and regulations to be prescribed by the Secretary of the Army pursuant to Section 204 of the Flood Control Act of 1958.

The Department of Agriculture has reported that the proposed amendment to the license will not interfere or be inconsistent with the purpose for which the Plumas and Lassen National Forests were created or acquired.

The Department of the Interior, in reporting on the application, recommended certain conditions for inclusion in the license in the interests of the fishery resources of the area involved.

The Commission finds:

(1) The license amended as hereinafter provided is in the public interest.

(2) The license amended as hereinafter provided will not interfere or be inconsistent with any reservation or with the purposes for which the Plumas and Lassen National Forests were created or acquired.

(3) The authorized installed horsepower capacity of the project under this amendment is 939,000 horsepower, and the increased annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based on such capacity, as hereinafter provided, is reasonable.

(4) The amount of annual charges to be paid under the license as amended for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line right-of-way, is reasonable as hereinafter fixed and specified.

(5) The exhibits described and designated in PARAGRAPH I under paragraph (C) below, except for Exhibits FPC Nos. 2100-69 and 2100-79 which we have already approved as part of the license, conform to the Commission's rules and regulations and should be approved as part of the license as amended.

The Commission orders:

(A) The exhibits described and designated in PARAGRAPH I under paragraph (C) below, with the exceptions noted, are hereby approved as part of the license as amended for the project.

(B) Exhibits J (FPC No. 2100-20); K (FPC Nos. 2100-21; -23); L (FPC Nos. 2100-25, -26, -28, -30, and -36 through -38); and Exhibit M amended October 31, 1955 "General Description and Specifications for Equipment" in 14 sheets, filed November 10, 1955, now part of the license and which have been superseded, are hereby eliminated from the license.

(C) The license for Project No. 2100 is hereby amended, effective as of December 1, 1963, as follows:

PARAGRAPH I. The description of the project works as set forth in finding (2) of the license is revised to read as follows:

(a) All lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for amendment of license and which are designated and described as follows:

Exhibit	FPC No.	Title
J-1-b	2100-63	Vicinity and Location Map.
K-1-b	2100-65	Ownership of Land.
K-2-b	2100-66	Ownership of Land.
K-3-b	2100-67	Ownership of Land.
K-4-b	2100-68	Ownership of Land.

(b) All project works consisting principally of:

Oroville Dam and Reservoir—An earth-fill dam across the Feather River about 5.5 miles upstream from Oroville, about 735 feet high above stream-bed with crest length of 6,800 feet including gated spillway and flood control outlet section on the right abutment; three auxiliary earthfill dams at low points in the periphery of the reservoir; and a reservoir with storage capacity of 3,484,200 acre-feet and water surface of 15,485 acres at normal surface elevation 900.

Oroville Power Plant—An underground powerhouse located in the left abutment with installation of three 117,000-KW conventional generating units and three combined pump-turbine, motor-generator units each rated 87,000 kw as generator; two 22-foot penstocks from intake structure to the powerhouse and two 35-foot tailrace tunnels from powerhouse to the Feather River at the toe of the dam; step-up transformers; and an access tunnel from the surface adequate for railroad rolling stock. (Future development comtemplates doubling the capacity at Oroville with six units in a separate powerhouse).

Thermalito Diversion Dam—A concrete gravity overflow type dam across Feather River about 0.85 mile above the Oroville-Chico highway bridge at Oroville, about 151 feet high above streambed, with crest length of 1,280 feet including 630 feet of radial crest gates, impounding a reservoir with storage capacity of 13,400 acre-feet at normal water surface elevation 225.

Thermalito Power Canal—An earth-cut canal extending approximately two miles between Thermalito Diversion Dam and Thermalito Forebay, originally to have capacity of 16,400 cfs and to be enlarged to 32,800 cfs capacity ultimately.

Thermalito Forebay Dam—An earth-fill dam located in Section 10, Township 19 North, Range 3 East, MDB & M, about 70 feet high with crest length of 1,220 feet and forming, with approximately 2½ miles of earth levee, a reservoir with 11,750 acre-feet of storage capacity at normal water surface elevation 225; and Thermalito Power Plant at the right end of the dam with initial installation of one 31,800-KW conventional generating unit and two combined pump-turbine, motor-generator units each rated 30,100 KW as generator with step-up transformers, and with provision for future enlargement.

Thermalito Afterbay Dam—An earth-fill dam with maximum height of 30 feet and total length of 41,400 feet located in Sections 18, 19, 30, 31, 32, 33 and 34 Township 19 North, Range 3 East, MDB & M, impounding a reservoir with gross storage capacity of 57,500 acre-feet, of which 45,000 acre-feet will be active storage, such reservoir to be supplied by an earth-cut channel from the tailrace of Thermalito Power Plant.

Two 230-KV Switchyards—One located on the left bank of Feather River immediately downstream from Oroville Dam; the other downstream and to the right of Thermalito Forebay Dam.

Thermalito-Oroville Transmission Line—A 230-KV line between 230-KV switchyards at Thermalito and Oroville Power Plants.

Palermo Outlet Works—A tunnel through left abutment of Oroville Dam, to supply Palermo Irrigation Canal.

Feather River Hatchery—A concrete gravity overflow type Fish Barrier Dam across Feather River about ¼ mile above the Oroville-Chico highway bridge at Oroville, about 30 feet high above streambed and 600 feet long; a fish ladder from the river just below the dam to the hatchery facilities on the right bank; a gathering and spawning building; hatchery building; an artificial spawning channel and holding tanks, nursery tanks, and rearing ponds; and other appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for amendment of license and which are designated and described as follows:

Exhibit	FPC No.	Title
L-1-b	2100-69	Oroville Dam.
L-2-b	2100-70	Oroville Dam—Core Block.
L-3-b	2100-71	Oroville Dam—Diversion Tunnels.
L-4-b	2100-72	Oroville Power Plant—Penstocks and Intake.
L-5-b	2100-73	Oroville Powerhouse—Typical Transverse Sections.
L-6-b	2100-74	Do.
L-7-b	2100-75	Oroville Powerhouse—Longitudinal Sections.
L-8-b	2100-76	Oroville Powerhouse—Plan and Sections.
L-9-b	2100-77	Oroville & Thermalito Power Plants—Electrical.
L-10-b	2100-78	Oroville Spillway.
L-11-b	2100-79	Thermalito Diversion Dam.
L-12-b	2100-80	Thermalito Power Canal, Forebay Dam, and Sections.
L-13-b	2100-81	Thermalito Powerhouse and Intake.
L-14-b	2100-82	Thermalito Afterbay, Tail Channel and Sections.
L-15-b	2100-83	Auxiliary Dams and Sections.

Exhibit M-b: Comprised of twenty-two (22) pages entitled "General Description and Specifications for Equipment."

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

Paragraph II. Article 28 of the license is amended to read as follows:

Article 28. The Licensee shall commence construction of the Oroville Division, State Water Facilities Project within two years from the effective date of this license; shall thereafter in good faith and with due diligence prosecute such construction; and shall complete the project and place it in operation within twelve years from the date of commencement of construction.

Paragraph III. Article 29 of the license is amended to read as follows:

Article 29. The Licensee shall operate the project works in such a manner as to maintain the main Feather River downstream from the proposed Thermalito Diversion Dam such flows as are determined by study and experimentation with the project in operation and as are mutually agreed upon by and as are acceptable to Licensee, the California Department of Fish and Game; and the Secretary of the Interior: *Provided*, That the flow in this reach shall not be less than 400 cfs pending such determination and excepting any mutually agreeable modification for purposes of study and experimentation. In the event the parties named herein fail to reach an agreement as contemplated herein, the Commission reserves the right, after notice and opportunity for hearing, to make the determinations required under this article.

Paragraph IV. Article 38 of the license is amended to read as follows:

Article 38. The Licensee shall, prior to impounding water, clear all lands in the bottoms and margins of the reservoirs of Thermalito Diversion Dam, Thermalito Forebay Dam, and Thermalito Afterbay Dam and also clear all land in the bottom and margin of the reservoir of Oroville Dam between high water elevation 900.0 (U.S.C. & G.S. datum, 1929 adjustment), and a plane at elevation 640.0 (U.S.C. & G.S. datum, 1929 adjustment), and shall cut all trees and brush within the elevation 640.0 contour area so that no part thereof will protrude above said elevation; shall clear and keep clear to an adequate width lands of the United States along open conduits; and shall dispose of all temporary structures; unused timber, slash, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the high-water line of the reservoirs which die during the operation of the project shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Paragraph V. Article 42 of the license is amended to read as follows:

Article 42. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part II of the Commission's regulations, in effect from time to time. The authorized installed capacity for such purposes is 939,000 horsepower;

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $18,525.72; and

(iii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands used for transmission line right-of-way, an amount as may be determined hereinafter by the Commission.

Paragraph VI. Articles 33 and 34 of the license are hereby eliminated from the license for the project.

Paragraph VII. The following articles are hereby added to the license as amended.

Article 43. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any

State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 44. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 45. The licensee shall release into the Feather River from the Thermalito Afterbay discharge channel such minimum flows for the downstream fish populations as are determined necessary by study and experimentation with the project in operation and as are mutually agreed upon and acceptable to Licensee, California Department of Fish and Game, and U.S. Fish and Wildlife Service. In the event the parties named herein fail to reach an agreement as contemplated herein, the Commission reserves the right, after notice and opportunity for hearing, to make the determinations required under this article.

Article 46. The Licensee shall prevent damage to fish and wildlife resulting from construction or operation of the project. Special precautions shall be taken to: (a) prevent discharge of silt, petroleum products, and other harmful substances or debris into the Feather River, (b) prevent loss, removal, disturbance, and compaction or shifting of gravel of the Feather River channel downstream from Thermalito diversion dam except as may be appropriate for protection or the improvement of fish habitat, and (c) prevent the project borrow areas from becoming sources of silt or other fines during floods or serving to dissipate stream maintenance flows or serving to trap anadromous fish.

Article 47. The Licensee shall permit the United States or its designated agency to manage such of the project lands, water areas, and waterways as may be necessary to prevent and alleviate waterfowl crop-depredation damages on lands adjoining the project. The use of the project lands, water areas, and waterways, for such purposes, shall be free of cost to the United States or its designated agency. In addition, the Licensee shall cooperate with the designated agency of the United States and the California Department of Fish and Game in making such reasonable modification of the project operations for effectual management of waterfowl to prevent or alleviate crop-depredation purposes as are consistent with the primary project purposes.

Article 48. The Licensee shall submit, in accordance with the Commission's rules and regulations, final design Exhibit L drawings for the finally adopted intake structure which is capable of drawing water from multiple levels for water temperature control for the Oroville Dam Powerhouse and shall not begin construction of the intake until the Commission has approved the Exhibit L drawings.

Article 49. The Licensee shall base the final designs of the main Oroville dam spillway and discharge channel and the Thermalito spillway and ogee apron on the results of hydraulic model tests.

Article 50. The operation of the project in the interest of flood control as provided in Article 32 of the license shall be in accordance with the rules and regulations to be prescribed by the Secretary of the Army pursuant to Section 204 of the Flood Control Act of 1958.

Article 51. Approval by the Commission of any plans for Project No. 2100 shall not relieve the Licensee of its responsibility for compliance with Contract No. DA-04-167-CIVENG-62-56, which covers the contribution of funds pursuant to the Flood Control Act of 1958 (P.L. 85-500).

(D) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(E) The aforementioned application for amendment filed on December 18, 1959 and which has been superseded is hereby dismissed.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WISCONSIN MICHIGAN POWER COMPANY AND WISCONSIN PUBLIC SERVICE CORPORATION, DOCKET NO. E-7142

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued January 22, 1964)

Wisconsin Michigan Power Company (Wisconsin-Michigan), a corporation organized under the laws of the State of Wisconsin and authorized to do business in the State of Michigan, with its principal business office located in Milwaukee, and Wisconsin Public Service Corporation (Public Service), a corporation organized under the laws of the State of Wisconsin and authorized to do business in the State of Michigan, with its principal place of business in Milwaukee filed an application on November 26, 1963 requesting authorization pursuant to Section 203 of the Federal Power Act, for the purchase and acquisition by Public Service of Wisconsin-Michigan's interests in certain substation facilities located at the Pulliam substation of Public Service at Green Bay, Wisconsin, and for Wisconsin-Michigan to dispose of its interests in said facilities.

Wisconsin-Michigan is engaged in, among other things, the business of generating, transmitting and distributing electric power. It serves customers in twelve counties in Northwestern Wisconsin and eleven counties in Northern Michigan. Wisconsin-Michigan's net plant was recorded at $56,264,000 as of June 30, 1963.

Public Service is engaged in, among other things, the business of generating, transmitting and distributing electric power. It serves customers in seventeen counties in Northern and Northwestern Wisconsin and one county in Northern Michigan. Public Service's net plant was recorded at $144,247,000 as of June 30, 1963. Wisconsin-Michigan and Public Service are not affiliated companies.

Wisconsin-Michigan and Public Service have for many years maintained a point of interconnection between the 138 kv system of Wisconsin-Michigan and the 69 kv system of Public Service at Green Bay, Wisconsin. Public Service is now engaged in establishing its own 138 kv system in the Green Bay area, and in the near future, the Green Bay interconnection between the two companies will be at 138 kv. Incident to this change, Public Service proposes to purchase Wisconsin-Michigan's share in certain facilities owned in common, to purchase other wholly owned facilities of Wisconsin-Michigan, and to purchase an undivided half interest in certain other electric facilities of Wisconsin-Michigan all located at the Pulliam substation of Public Service.

The application contains an inventory of Pulliam substation items of plant such as transformers, switches, lightning arresters, circuit breakers and protective equipment. As indicated in the inventory, Wisconsin-Michigan proposes to sell and Public Service proposes to acquire facilities which have recorded total amounts as follows:

	Original cost	Accumulated depreciation	Original cost less accumulated depreciation
(1) Facilities now owned in common (sale of such facilities by Wisconsin Michigan Power and purchase by Wisconsin Public Service will result in entire ownership of these facilities by Wisconsin Public Service)	$274, 927. 11	$102, 306. 61	$172, 620. 50
(2) Facilities now owned by Wisconsin Michigan Power (transfer of such facilities will result in entire ownership of these facilities by Wisconsin Public Service)	14, 293. 50	1, 263. 54	13, 029. 96
(3) Facilities now owned by Wisconsin Michigan Power (sale of undivided half interest by Wisconsin Michigan Power and purchase by Wisconsin Public Service will result in an undivided half interest being retained by Wisconsin Michigan Power and an undivided half interest being acquired by Wisconsin Public Service)	8, 090. 63	715. 20	7, 375. 43
Total	297, 311. 24	104, 285. 35	193, 025. 89

To acquire the facilities from Wisconsin Michigan, Public Service will make cash payment of $193,025.89, which amount is equal to the original cost of the facilities less accumulated provision for depreciation. The transfer of the facilities will not result in the creation of an acquisition adjustment on the books of Public Service.

Written notice of the application has been given to the Michigan Public Service Commission and the Wisconsin Public Service Commission and to the Governor of each of those states. Notice of the application has also been given by publication in the Federal Register on December 13, 1963 (28 F.R. 13523) stating that any person desiring to be heard or to make any protest with reference to the application should, on or before December 30, 1963, file with the Federal Power Commission, Washington, D.C., 20426, petitions or protest. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Both Wisconsin-Michigan and Public Service are public utilities within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued September 17, 1958, *In the Matter of Wisconsin-Michigan Power Company, Wisconsin Public Service Corporation*, Docket No. E-6814 (20 FPC 358).

(2) By the proposed acquisition of facilities as described above Public Service will acquire and merge or consolidate with its facilities subject to the jurisdic-

tion of the Commission, certain electric facilities of Wisconsin-Michigan, another person, within the meaning and subject to the requirements of Section 203 of the Act.

(3) By the proposed sale of facilities Wisconsin-Michigan would dispose of a part of its facilities subject to the jurisdiction of the Commission within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed acquisition and merger or consolidation of facilities and the proposed sale of facilities all as described above upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 in the Federal Power Act for the reasons set forth above.

The Commission orders:

(A) The proposed sale by Wisconsin-Michigan of a part of its transmission facilities and the acquisition and merger or consolidation thereof by Public Service, all as referred to above and described in the application are authorized and approved upon the terms and conditions and for the purposes set forth in the application, subject to the provisions of this order.

(B) Public Service and Wisconsin-Michigan shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved are consummated within 180 days from the date of issuance of this order.

(D) The foregoing authorization and approval is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever now pending or which may come before the Commission and nothing in this order shall be construed as an acquiesence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CAROLINE HUNT SANDS AND LOYD B. SANDS, DOCKET NO. RI64–356

ORDER PERMITTING INTERVENTION

(Issued January 22, 1964)

Petitions seeking leave to intervene in the above-designated proceeding have been timely filed by Philadelphia Gas Works Division of the United Gas Improvement Company (PGW) on December 16, 1963, and by Hope Natural Gas Company (Hope) on December 17, 1963.

In support of its request to intervene, PGW states, among other things, that it purchases approximately two-thirds of the natural gas which it distributes and sells to consumers from Texas Eastern Transmission Corporation (Texas Eastern) and the remainder from Transcontinental Gas Pipe Line Corporation (Transco); that Texas Eastern and Transco purchase substantial quantities of gas in South Louisiana both directly from producers and indirectly from other pipelines who purchase from producers in that area; and that the price of gas sold by a producer in South Louisiana, regardless of the ultimate destination of the gas or the identity of the pipeline purchaser, can have a direct bearing on the cost of gas to Texas Eastern and Transco through price-redetermination provisions, by raising the general level of the well-head price for gas, and through so-called third-party escalation clauses, and which, in turn, could directly affect the rates charged PGW.

An answer and objection to PGW's petition to intervene was filed on December 20, 1963, by Caroline Hunt Sands and Loyd B. Sands (Respondents). Respondents state, in opposition to the petition to intervene, that PGW acknowledged it did not purchase gas from Respondents or from pipeline distributors which purchased gas from Respondents, and allege (1) that PGW has only a remote and conjectural interest in the proceeding; (2) that third-party, favored-nation clauses are customarily not included in purchase contracts for gas in South Louisiana; (3) that the existence of higher rates than the 24.55 cents per Mcf rate proposed by Respondents would have already given rise to increases under price-redetermination provisions, citing Southeastern Public Service Company's currently effective rate of 25.25 cents per Mcf, and the Commission's 1961 publication "Sales by Producers of Natural Gas to Natural Gas Pipe Line Companies" which indicates 32 sales are at higher prices; (4) that Transco is currently purchasing gas in South Louisiana under contracts having presently effective price escalations at 25.55 cents per Mcf, although only Hassie Hunt Trust and Placid Oil Company have filed to make effective price escalations to 25.55 cents per Mcf and that the matters relating to those escalations are now pending before the Circuit Court of Appeals for the Fifth Circuit, as the other producers have elected not to file for the higher rates; and (5) that PGW's interest in this proceeding is neither direct nor one which is not adequately represented by existing parties, citing: *Atlantic Seaboard Corporation*, Docket No. CP62-43, 27 FPC 370, 372.

In setting this case for an expeditious hearing, we stated in our order issued November 26, 1963, that the Respondents' increased rate proposal:

> * * * may serve as a basis for a price redetermination at higher rates under other gas purchase contracts in the area to increase the cost of purchased gas to approximately $12,768,000 annually * * *.

This increased rate proposal, with one exception, is higher than any presently effective rate for a jurisdictional sale of natural gas in South Louisiana. The higher rate of 25.25 cents per Mcf, filed by Southeastern Public Service Company, is itself the subject of an expedited hearing. The other higher prices as shown in our 1961 publication, to which the Respondents advert, relate to non-jurisdictional sales of natural gas.

While it may be contended that certain producers have not exercised their rights to file for increased rates in the 25 cents per Mcf range in South Louisiana and thus there is no reason for concern over the possibility of higher price redeterminations, we observe that such rights have not been waived by such producers. Other producers in South Louisiana have filed increased rate proposals in this range.[1] If we were to find this present filing to be just and reasonable, there is no reason to assume that others would not exercise their contractual right to seek higher rates. Consequently, we believe that the matters relating to a determination of a just and reasonable rate in this proceeding could very well have a real impact upon PGW.

---

[1] Increased rate proposals in the 25-cent range have been filed by other producers in South Louisiana, including, among others, Texaco Inc. in Docket No. RI62-481, Humble Oil & Refining Company in Docket No. RI62-471, and Sun Oil Company in Docket No. RI62-483, which were subsequently withdrawn. Similar filings by other producers in South Louisiana, including other Hunt interest, have either been withdrawn as a part of a general company rate settlement, were disallowed after hearing, or are pending judicial review.

Notices of intervention herein have been filed by Public Service Commission of the State of New York (PSC) on December 12, 1963, and by Pennsylvania Public Utility Commission on December 16, 1963.

Answers and Objections were belatedly filed by Respondents to the petition to intervene of Hope and to the notice of intervention of PSC. Hope is the pipeline purchaser of the Respondents under the rate schedule involved in this proceeding and the PSC's filing of a notice to intervene is under our Rules itself sufficient justification for intervention. *PSC of the State of New York* v. *F.P.C.*, 295 F. 2d 140, cert. denied 82 S. Ct. 388.

The Commission finds:

The participation of Petitioners in this proceeding as interveners may be in the public interest.

The Commission orders:

Petitioners are hereby permitted to intervene in this proceeding subject to the Rules and Regulations of the Commission: *Provided, however*, that the participation of such Petitioners as interveners shall be limited to matters affecting asserted rights and interest as specifically set forth in their respective petitions to intervene; and *Provided further*, that said permission shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

INVESTMENT TAX CREDIT UNDER 1962 AMENDMENT TO INTERNAL REVENUE CODE; ACCOUNTING TREATMENT BY PUBLIC UTILITIES, LICENSEES, AND NATURAL GAS COMPANIES, DOCKET NO. R-232

INTERIM ORDER

(Issued January 23, 1964)

The Commission has under consideration in this docket[1] an order prescribing the accounting treatment to be accorded under the Commission's Uniform Systems of Accounts to the investment tax credit provided by the Revenue Act of 1962.[2]

The Commission has reached the conclusion that on the basis of existing law the accounting treatment to be prescribed should be to flow through the credit to income. We recognize, however, that legislation is pending in the Congress dealing with the investment credit and that it is not now possible to determine whether such legislation as might be adopted would require a different accounting treatment for the credit.

In order to enable affected companies to close their books of account for the year 1963, the Commission hereby notifies all public utilities, licensees, and natural gas companies that the interim accounting prescribed for the investment tax credit under Order No. 261, Docket No. R-231, issued January 9, 1963,[3] continues in effect for calendar year 1963 and in accounting for income taxes until further notice or order of the Commission.

---

[1] Notice issued January 15, 1963, published in 28 F.R. 528 of January 19, 1963.

[2] 76 Stat. 960, P.L. 87-834, section 2, adding new sections 38, 46-48, 181 to and amending certain existing sections of the Internal Revenue Code of 1954.

[3] 29 FPC 62, 28 F.R. 402.

Commissioners O'Connor and Woodward *dissent* as to the statement of the accounting treatment which is appropriate under existing law. Commissioner O'Connor believes decision should be deferred until Congress has acted on the pending legislation. Commissioner Woodward favors deferred tax accounting.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ORDER DENYING MOTION TO CONSOLIDATE RATE PROCEEDINGS FOR IMMEDIATE HEARING

(Issued January 23, 1964)

Pacific Lighting Gas Supply Company, Southern California Gas Company and Southern Counties Gas Company of California (Petitioners)[1] on November 1, 1963, filed a joint motion requesting that the above-entitled proceedings be set for immediate hearing to determine the justness and reasonableness of the rate increases filed herein. A number of answers to the joint motion were filed by producers involved here.

The proposed periodic increased rates in these proceedings range with one exception[2] from 17.0¢ to 21.8¢ per Mcf for sales to Transwestern Pipeline Company (Transwestern) from the Permian Basin Area and are presently under suspension until February 1, 1964, or later in some instances. If all of the proposed rates are placed in effect subject to refund at the termination of the respective suspension periods, Transwestern's cost of purchased gas will be increased approximately $700,000. Petitioners state in this connection that other producers having similar periodic provisions in their sales contracts with Transwestern could file for at least an additional $235,000 annually.

In support of the joint motion Petitioners state, *inter alia*, that (1) the producer increases may cause Transwestern to file for a rate increase which even under the new procedures in Section 154.63 of the Regulations would probably be in effect under bond for at least a year, and (2) the proposed rates, if allowed to become effective subject to refund, would only have to be reduced again after the final order in Docket No. AR61-1 because of the wealth of evidence in that record showing that rates of 17¢ or higher in the Permian Basin are not justified.

---

[1] Petitioners are purchasers of natural gas from Transwestern who supply gas to retail and wholesale customers in Southern California.

[2] Supplement No. 8 to Gulf Oil Corporation's FPC Gas Rate Schedule No. 192, suspended in Docket No. RI64-176, provides for a 13.0¢ per Mcf increased rate. Petitioners, however, citing Opinion No. 328, claim that the proposed rate is equivalent to 18¢ per Mcf for pipeline quality gas because the gas sold by Gulf contains about 30% carbon dioxide and other inert ingredients.

As announced in *Phillips* (Opinion No. 338, 24 FPC 537), we are proceeding on an area approach in producer cases. Exceptional circumstances are not presented here which would warrant action similar to that we have taken in the few producer cases[3] set for individual hearing following the *Phillips* decision. Although the proposed rates are in excess of the initial rate ceiling, such rates will have no triggering effect[4] or present price redetermination impact[5] on other producer rates in the area.

We also note that the hearing in the Permian Basin area proceeding in Docket No. AR61–1 has concluded. The issues there are now being briefed by the parties prior to the examiner's decision and Commission review thereof. It would be most inappropriate in this landmark case—the first area proceeding to come before us since the *Phillips* decision—to prejudge our determination in that case as to the uppermost level of the just and reasonable area rate as requested by Petitioners,[6] particularly in light of the complex issues and voluminous testimony presented there. Although the instant proceedings are not consolidated in the Permian proceeding, we are confident that whatever action may be necessary upon completion of the area proceeding to dispose of the proceedings herein will be taken prior to the time that these periodic increases could affect the price redetermination provisions in Transwestern's contracts.

In view of the foregoing, we conclude that the joint motion filed by Petitioners should be denied.

The Commission orders:

For the reasons set forth above, the joint motion filed by Petitioners on November 1, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXACO INC., DOCKET NO. CI64–502

ORDER RESCINDING IN PART TEMPORARY CERTIFICATE AND DENYING APPLICATION FOR REHEARING

(Issued January 23, 1964)

The Public Service Commission of the State of New York (PSC) on December 26, 1963, filed an application for rehearing and reconsideration of the Commission's letter-order issued November 26, 1963, granting a temporary certificate to Texaco Inc. authorizing the sale of natural gas from the Dog Lake and Jefferson Island fields in southern Louisiana to Texas Gas Transmission Corporation at an initial price of 21.25¢ per Mcf.

PSC in the application correctly points out that Texaco Inc. requested a temporary certificate to initiate service from Jefferson Island field only. It did not seek such certificate covering the sale of gas from the Dog Lake field because it did not contemplate commencing service from that field until July, 1965.

---

[3] See, for instance, *H. L. Hunt, et al.*, Docket No. RI62–467, *et al.*, order issued June 14, 1962, and *Southeastern Public Service Company*, Docket No. RI63–361, order issued March 7, 1963.

[4] Transwestern's gas purchase contracts in these areas do not contain favored-nation clauses. Nor are there any third-party favored-nation provisions in other gas purchase contracts in these areas.

[5] Although a number of Transwestern's gas purchase contracts contain price redetermination provisions, the next redetermination period will not arise until September 1967.

[6] Petitioners request disallowance of the rate increases, but do not seek a determination of the just and reasonable rate for these sales in moving for an immediate hearing.

Obviously it was error to grant a temporary certificate to Texaco Inc. covering the sale of natural gas from the Dog Lake field in view of the fact that the sale from that field would not be commenced until approximately two years after the date of filing of the application. Section 157.28 of the Commission's Regulations under the Natural Gas Act contemplates the issuance of temporary certificates to independent producers only in emergency situations which include "drainage, threatened loss of lease, flaring, economic hardship resulting from payment of shutin royalties, or similar situations." Clearly, there exists no emergency within the contemplation of Section 157.28 of the Regulations with respect to Texaco's sale from the Dog Lake field. Accordingly we will correct an inadvertent error and will rescind the temporary certificate issued November 26, 1963, insofar as it authorizes Texaco Inc. to sell natural gas from the Dog Lake field.

PSC in its application for rehearing, relying principally upon the reasons set forth in its brief filed in *P.S.C. of New York* v. *F.P.C.*, D.C. Cir. No. 17673, wherein its contentions are substantially the same as its contentions in the instant case, alleges that the temporary certificate issued to Texaco herein for the Jefferson Island field is invalid in that:

1. No emergency within the meaning of Section 7(c) of the Natural Gas Act exists in law or in fact, nor is such emergency alleged to exist.
2. The certificate is not limited to the period of the emergency.
3. The price permitted to be collected is out of line.

P.S.C's contentions were rejected by the Court in *P.S.C. of New York* v. *F.P.C.*, D.C. Cir. No. 17673, decided January 2, 1964, and the Court's opinion is decisive of the questions presented in P.S.C's application for rehearing filed herein. There is no need to further labor or consider the substantially similar contentions. The application will be denied.

The Commission orders:

(A) The temporary certificate issued to Texaco Inc. by letter-order dated November 26, 1963, authorizing sales of natural gas to Texas Gas Transmission Corporation from Jefferson Island and Dog Lake fields located in southern Louisiana be modified so as to rescind that part of the authorization relating to the sale of natural gas from the Dog Lake field.

(B) The application for rehearing and reconsideration filed by the Public Service Commission of New York on December 26, 1963, be and hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; GENERAL CRUDE OIL COMPANY (OPERATOR), ET AL., DOCKET NO. CI61-1280

ORDER REJECTING OFFER OF SETTLEMENT AND DENYING PETITION FOR ISSUANCE OF CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 23, 1964)

On October 28, 1963, General Crude Oil Company (Operator), *et al.*, (General Crude) filed an offer of settlement and petition for issuance of certificate of public convenience and necessity in the above-captioned proceedings. The matter in Docket No. CI61-1280 concerns an application for a certificate of public convenience and necessity authorizing a sale of natural gas for resale from South Louisiana under General Crude's Rate Schedule No. 9. The application is a part of the Union Texas proceeding.[1]

General Crude requests that the Commission issue a certificate at an initial rate of 20.4¢ per Mcf[2] and that the increased rate in effect subject to refund in Docket No. RI63–389 (21.6¢ per Mcf)[3] remain in effect subject to the ultimate determination in that rate proceeding. General Crude also proposes a moratorium on rate increase filings. Rate Schedule No. 9 does not have a limitation on the take-or-pay make-up period.

The acreage dedicated under General Crude's Rate Schedule No. 9 was formerly dedicated under Pan American Petroleum Corporation's (Pan American) Rate Schedule No. 173. A certificate was issued to Pan American authorizing sales from this acreage (and other acreage) at an initial rate of 17.5¢ per Mcf in Docket No. G–3216 on November 2, 1954. Pan American's effective rate at the time of assignment (subject to refund under Section 4(e) of the Natural Gas Act) was 20.4¢ per Mcf. The last rate of Pan American not subject to refund was 18.0¢ per Mcf.

The issuance of a certificate at the rate proposed by General Crude would be a violation of the principles expressed in our recent Opinion No. 408, *Graridge Corporation* (*Operator*), *et al.*, Docket No. G–13221, *et al.*, issued October 31, 1963, 30 FPC 1156. We there held that a certificate issued to a successor in interest should put the successor in the same position that the predecessor would be in had the latter retained the property transferred. To grant a certificate to General Crude on the terms proposed would be to put General Crude in a more favorable position than Pan American, its assignor. Accordingly, General Crude's offer will be rejected and its petition will be denied.

Our determination herein to reject General Crude's offer is not to be construed as either approving or disapproving the Examiner's Decision regarding this docket. That decision is not properly before us at this time.

The Commission orders:

The offer of settlement filed by General Crude Oil Company (Operator), *et al.*, on October 28, 1963, is hereby rejected and the petition for issuance of certificate of public convenience and necessity filed therewith is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

CROWN CENTRAL PETROLEUM CORPORATION, DOCKET NOS. RI64–208 AND RI64–291

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued January 24, 1964)

On September 27 and October 14, 1963, Crown Central Petroleum Corporation (Crown) submitted an offer of settlement in Docket Nos. RI64–208 and RI64–

---

[1] *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.* Examiner's Decision issued January 14, 1964.

[2] All prices expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] Other rate increases under Rate Schedule No. 9 suspended by the Commission are in Docket Nos. RI61–548 (20.8¢ per Mcf) and RI62–359 (21.2¢ per Mcf).

291, respectively, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offers involve proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Crown. The first, Docket No. RI64–208, relates to a sale made under Crown's FPC Gas Rate Schedule No. 3 in the Placedo Field, Victoria County, Texas (Texas R.R. Com. District #2) and the second, Docket No. RI64–291 relates to a sale made under Crown's FPC Gas Rate Schedule No. 2 in the East Bay City Field, Matagorda County, Texas (Texas R.R. Com. District #3). Each of the proposed increased rates were suspended by order of the Commission for the statutory period, which in each instance has not yet elapsed.

Under the terms of the offer, Crown proposes to eliminate the favored-nation and price redetermination provisions from the rate schedules, and to amend the periodic escalation provisions contained therein, and to establish 14.6¢ per Mcf rates for the instant sales. Crown's annual revenues will be about $4,323 less under the settlement rates than it would be if the suspended rates were to become effective. Crown states that TGT has concurred in the proposed settlements. No protests or objections have been filed to either offer.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Crown's offers of settlement shall not be construed as approval of any future increased rate filed in accordance with any reservations made therein. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving each of Crown's rates and rate schedules.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offers of settlement filed with the Commission by Crown on September 27 and October 14, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed with the Commission by Crown on September 27 and October 14, 1963, are hereby approved in accordance with the provisions of this order.

(B) Crown shall file, within 30 days from the date of issuance of this order, notices of change in rate providing for the 14.6¢ per Mcf rate specified in its offers of settlement, and executed contractual amendments to its FPC Gas Rate Schedule Nos. 2 and 3, eliminating the favored-nation and price redetermination provisions therefrom, and amending the periodic escalation provisions therein in accordance with its offers of settlement. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Crown has complied with the terms and conditions of the order, the rates and charges of 14.6¢ per Mcf at 14.65 psia, specified in its offers of settlement, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate pro-

ceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(D) The acceptance by the Commission of Crown's offers of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Crown, including area rate or other similar proceedings.

MEMORANDUM OPINION AND ORDER SEVERALLY DENYING APPLICATIONS FOR REHEARING, MOTION TO REOPEN FOR ADDITIONAL EVIDENCE, AND MOTION FOR ACCEPTANCE OF CONDITIONAL RATE FILING, AND GRANTING STAY

(Issued January 24, 1964)*

Syllabus

1. Commission *denies* applications for rehearing and motion to reopen; *grants* stay of conditioned price and refund requirements, pending judicial review; and in all other respects *confirms* prior opinion and order. P. 184.

Commissioners O'Connor and Woodward *dissenting* to denial of rehearing. Commissioners Ross and Black *dissenting in part.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

On December 9, 1963, we issued our Opinion No. 412 and Order in the above-entitled proceeding, 30 FPC 1438. Pursuant to Section 19(a) of the Natural Gas Act and Section 1.34 of the Rules of Practice and Procedure, the applicants have sought review of that decision as follows: (1) a joint application by the "G" docket applicants[1] alternatively requesting rehearing and reopening of the proceeding to permit the introduction of additional evidence, or the acceptance of conditional rate filings, or stay of the rate reduction and refund provisions of ordering paragraphs (E) and (F) pending judicial review; and (2) a joint application by the "CI" docket applicants[2] for rehearing and modification of the action

---

taken in their regard. The Public Service Commission of the State of New York also has applied for rehearing and reconsideration of the decision. We consider the applications in the order given.

The "G" docket applicants allege that the Commission erred (1) in the exclusion of the system-wide cost studies and other economic and financial evidence offered in support of their initial contract prices; (2) in the utilization of the "in-line" concept of area pricing in the determination of the initial price question in this proceeding; (3) in the determination of an "in-line" price of 15 cents per Mcf for Districts No. 2 and 4 and 16 cents per Mcf for District No. 3; (4) in the exclusion of various sales from consideration; (5) in the designation of the time period within which sales were considered in fixing the line; (6) in refusing to accept the historical relationship between Districts 2 and 3 and the allowance of different prices therein; (7) in conditioning the certificates upon the ultimate disposition of the rule-making proceeding in Docket No. R-199; and (8) in ordering refunds and the imposition of interest thereon. The listing does not contain numerous other subsidiary matters upon which error is also claimed. In sum it may justifiably be said that the applicants' specifications of error comprehend each and every determination made by us which in any way serves to limit the certificates applied for.

Our examination of the application on the above matters indicates that these allegations are, almost without exception, restatements of arguments previously advanced by the applicants and adequately covered in the Opinion. We are convinced that each issue raised in the application for rehearing was correctly decided and that a rediscussion thereof would serve no useful purpose. We affirm the determinations made in regard thereto.

Applicants move that the proceeding be reopened for the introduction of new evidence which has become available to them since the initial decision. This evidence consists of individual, entity-wide cost of service studies of one or more of the applicants adjusted to meet the allocation standards laid down in Opinions No. 338, 365, and 369, and certain composite cost-of-service exhibits developed for use in the South Louisiana area rate proceeding. Evidently, the primary purpose to be served by the introduction of the latter material would be to attempt to show that companies of the size of applicants earn a less than reasonable rate of return on their total oil, gas and liquid operations on a continental United States basis. Applicants contend that the aforementioned exhibits are material to the issue of whether their proposed prices are required by the public convenience and necessity and should be considered in determining the price issue in this proceeding.

We do not agree that the above material would be relevant to the determination of the initial price issue. The Opinion issued in this proceeding expressly rejected applicants' exceptions to the exclusion of its cost-of-service evidence on the ground, as stated in *Placid*, that evidence of this type ". . . is irrelevant to the determination of the initial price question in independent producer certificate cases." Although the May 31, 1962 order of the examiner excluding the proffered studies was based in part on a finding that improper allocation methods were utilized, our own conclusion was not restricted to the deficiencies in the original presentation. The revamping of these studies does not make them any more relevant than they were initially. The composite cost-of-service exhibits fail for the same reason. Accordingly, the motion to reopen will be denied.

Applicants further request that we either allow conditional rate increase filings to the rates presently being collected under the temporary authorizations, such filings to be effective as of November 2, 1961, or that we grant a stay of ordering paragraphs (E) and (F) pending judicial review of the decision.

Paragraph (E) relates to the filing of rate schedule supplements to reflect the conditioned price as the initial price; paragraph (F) provides for the making of refunds by February 7, 1964. In our opinion it would not be feasible to allow the rate filings under the terms proposed in the motion. In accordance with the action taken in an earlier case where rate reductions and refunds were ordered,[3] the provisions of paragraphs (E) and (F) will be stayed pending judicial review of Opinion No. 412. Otherwise, the motion will be denied.

The foregoing covers the applications for review submitted in Dockets No. G–19115 through G–19119 and G–19123 through G–19125. The "CI" docket applicants, while agreeing generally to the severance of their dockets from the others consolidated in the proceeding, request that the second sentence of ordering paragraph (D) be deleted. This sentence provides, "Pending further determination, the temporary authorizations granted in these dockets are continued without change." Applicants seemingly are concerned that we intend by this language to reimpose in these dockets the condition declared illegal by the Fifth Circuit and now on review before the Supreme Court, and that they would again be forced to secure judicial review of the temporary authorizations if the Circuit Court's decision is affirmed.

It appears that the applicants seek some assurance regarding the status of their temporary authorizations. We intend, of course, to abide by the decision of the Supreme Court in regard to the validity or invalidity of the condition contained in the outstanding temporary authorizations there on review. The statement that the temporary authorizations are continued without change means precisely that. It added nothing which the authorizations did not contain before. The application for rehearing will, therefore, be denied.

The New York Commission takes issue in its application with our decision to sever the "CI" dockets from the proceeding and hold them over for a new hearing on their permanent certificates, such hearing to be conducted in conjunction with other holders of temporary authorizations similarly situated. The primary emphasis of the State Commission is directed to its contention that the "in-line" price level for the period after the Policy Statement went into effect remained unchanged from that previously determined. Our reasons for refusing to decide the initial price question for these dockets are clearly stated in the Opinion and no purpose would be served by an extended repetition herein. As we have indicated, it was because of the lack of adequate evidence in the record to properly evaluate the changes which may have taken place in such period that we concluded that the severance was necessary. The application for rehearing does not convince us that we were in error in our conclusion or that anything remains other than to effect its denial.

The Commission finds:

(1) The assignments of error and grounds for rehearing and reopening set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 412, or which, having now been considered, warrant any change in, modification of, or rehearing of such Opinion and Order, except as specified below.

(2) The motion to reopen for the submission of additional evidence should be denied.

(3) Good cause exists for granting, in part, the motion for an amendment to the Order issued herein on December 9, 1963, so as to stay the actions required by paragraphs (E) and (F) pending judicial review of Opinion No. 412.

---

[3] *United Gas Pipe Line Company, et al.,* Docket No. CP60–36, *et al.,* Order issued November 5, 1963, 30 FPC 1209.

The Commission orders:

(A) The applications for rehearing filed in the above-entitled proceeding are hereby denied.

(B) The motion to reopen the proceeding is denied.

(C) The completion of the acts and compliance with the requirements set forth in ordering paragraph (E) of the Order accompanying Opinion No. 412 are stayed pending judicial review of said Opinion or until the Order otherwise becomes final, provided, however, that applicants shall deposit in a special account with a bank or trust company all sums received subsequent to December 9, 1963, in excess of the amounts prescribed by paragraphs (B) and (C) of the Commission's Order in Opinion No. 412, shall hold such monies intact, and shall maintain accurate records thereof and make reports with respect thereto to the Commission in compliance with such requests as may be made.

(D) The completion of the acts and compliance with the requirements set forth in ordering paragraph (F) of the Order accompanying Opinion No. 412 are hereby stayed for a period of 30 days after conclusion of judicial review of said Opinion, or until the time limitation for the filing of such review has expired. If after judicial review or otherwise the Order accompanying Opinion No. 412, as modified by this order, becomes final, applicant shall also promptly refund all excess amounts received after December 9, 1963, pursuant to paragraph (C) of this order, with interest at 7 percent per annum from the date of receipt to the date of payment.

(E) In all other respects said Opinion and Order is confirmed.

Commissioners O'Connor and Woodward *dissent* to that part of this opinion and order which denies the application for rehearing of Opinion No. 412 for the reasons set forth in their dissent thereto.

Commissioner Black *dissenting* in part.

Commissioner Ross *dissenting* to that part of the order granting severance.

BLACK, *Commissioner, dissenting in part:*

This statement is concerned only with the issue of severance of the "CI" dockets for further hearing to determine a separate in-line price for districts 2 and 3 sales under contracts executed after September 28, 1960. I voted with the majority in Opinion 412, but upon reconsideration am now persuaded that the Commission's decision to accord separate treatment to the so-called "post-policy statement sales" was improper. These parties who now seek to be severed out were afforded full opportunity to present relevant evidence concerning the propriety of their contract prices. The public interest dictates that such proceedings come to an end when the parties have been afforded a reasonable opportunity to present their cases. This is especially true here where during the remand period the producers in these severed dockets would continue to collect the unjustified price of 18¢ per Mcf while we examine into the "impact" of the Policy Statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP64-124

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1964)

On December 2, 1963, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP64-124 an application pursuant to Section 7(c) of the

Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of facilities to be constructed by Michigan Consolidated Gas Company (Mich Con) as a new delivery point from Applicant to Mich Con, which facilities are to be leased to Applicant and operated by it to enable Mich Con to render natural gas service to several communities in the north central and northeastern sections of the Lower Peninsula of the State of Michigan. Mich Con has obtained municipal franchises to distribute natural gas in these communities.

The estimated cost of the proposed new delivery point is $8,200 and the estimated annual operating expense, including the rental, is $1,719.

Mich Con, an existing customer and affiliate, has advised Applicant that it can serve the requirements of the new communities without any addition to its existing gas supply.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 22, 1964, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business at Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) The facilities hereinbefore described, as more fully described in the application herein, are proposed to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the operation, under lease, thereof by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The operation, under lease, of the proposed facilities by Applicant is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization granted hereinafter should be further conditioned upon Applicant's submitting a statement showing the date or dates on which Mich Con received authorization from the State of Michigan for the distribution of gas in the communities here involved, and also the date of initial operation of the subject new delivery point.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to operate, under lease, the subject facilities as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above is further conditioned upon Applicant's submitting a statement showing the date or dates on which Mich Con received authorization from the State of Michigan for the distribution of gas in the communities herein involved, and also the date of initial operation of the subject new delivery point.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP64–120

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1964)

On November 27, 1963, Trunkline Gas Company (Applicant), filed in Docket No. CP64–120 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation during the calendar year 1964 of miscellaneous field facilities, including field compressors, dehydration units, meter and regulator equipment, and gathering lines, to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $2,500,000, with no single project to exceed a cost of $500,000, and will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 22, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 4, 1950, in Docket No. G–882 (9 FPC 721).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulating of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Trunkline Gas Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58 (c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HUMBLE OIL & REFINING COMPANY, DOCKET NO. G-13732, ET AL.;[1] HUMBLE OIL & REFINING COMPANY (OPERATOR) ET AL., DOCKET NO. G-14927, ET AL.[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE AND CONTRACTUAL AMENDMENTS, REJECTING NOTICES OF CHANGE REQUIRING REFUNDS, TERMINATING PROCEEDINGS IN PART, AND TERMINATING PROCEEDINGS

(Issued January 27, 1964)

On October 4, 1963, Humble Oil & Refining Company (Humble) submitted an offer of settlement, pursuant to Section 1.18(e) of the Commission's Rules of

---

[1] The additional dockets involved herein are set forth in the Appendix hereto.

Practice and Procedure, in these proceedings, and therewith filed executed contract amendments and notices of change in rate under its Rate Schedule Nos. 12, 14 and 22. Humble filed an amendment to its offer on November 18, 1963. These proceedings relate to eight sales of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) in Texas Railroad Commission District Nos. 1, 2, 3 and 6.

Under the terms of the offer, Humble proposes to delete the favored-nation, price redetermination, and periodic escalation provisions from the rate schedules involved, and to waive its contractual right to file for any increases in rate, in excess of the settlement rates, until February 5, 1968, under Rate Schedule No. 14, and until November 1, 1968, under Rate Schedule Nos. 12 and 22. The estimated annual decrease in rates from those being presently charged and collected, is $42,417.

Humble, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to Texas Eastern under the subject rate schedules in excess of the settlement rates. The estimated total dollars to be refunded approximates $60,500, exclusive of interest. However, it may be that Texas Eastern will take the position that it is not presently under obligation to flow-through to its jurisdictional customers all or a part of their proportionate share of the amount of money it will receive from Humble. For the reasons set forth in our order in *Hunt Oil Co.*, Docket No. G–9065, *et al.*, issued July 16, 1963, 30 FPC 220, we shall condition our approval of Humble's settlement offer to require it to retain (without further interest obligation to it) the refunds due to Texas Eastern in a special account, and shall direct Texas Eastern to submit a report setting forth what it intends to do with the refunds if they are made to it, and, if it proposes not to pass them on to its jurisdictional customers why it believes it is entitled to retain these refunds.

On October 4, 1963, as noted above in connection with its original offer, Humble tendered notices of change in rate under Rate Schedule Nos. 12, 14 and 22, along with executed contract amendments.[3] The contract amendments are acceptable, but the proposed rate increases contained in the notices exceed the applicable area ceilings and are in excess of the rates proposed in the amended offer. We shall therefore reject the notices of change tendered on October 4, 1963.

In support of its offer, Humble cites the deletion of the favored-nation and price redetermination provisions from its gas sales contracts with Texas Eastern, and states that such provisions were important elements of consideration required by Humble under the contracts for the long-term commitment of its gas reserves to the performance of the contracts. Texas Eastern has concurred in the offer. No objections or protests to the offer have been filed by any party to any of these proceedings.

Since the proposed settlement rates are acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589 and the Seventh Amendment to the policy statement issued November 27, 1963 in Docket No. R–251, the public interest will best be served by accepting Humble's proposed offer of settlement, as conditioned herein.

However, we desire to make it clear that our conditional acceptance of the offer of settlement shall not be construed as approval of any possible future increased rates proposed by Humble.

---

[3] The contract amendments are designated as Supplement Nos. 16, 16 and 14 to Humble Rate Schedule Nos. 12, 22 and 14, respectively.

The Commission finds:

The proposed settlement of the proceedings herein, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Humble on October 4, 1963, as amended on November 18, 1963, and herein conditioned, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act, and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Humble on October 4, 1963, as amended on November 18, 1963, is hereby approved in accordance with the provisions of this order.

(B) Humble shall file, within 30 days from the date of issuance of this order, notices of change in its FPC Gas Rate Schedule Nos. 10, 12, 14, 22, 257 and 258, reflecting the settlement rates set forth in the appendix hereto, and executed contractual amendments to its FPC Gas Rate Schedule Nos. 10, 15, 19, 257 and 258, which Humble shall execute with Texas Eastern in conformity with Humble's offer of settlement, as amended, in all respects, in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The executed contract amendments filed with the Commission by Humble on October 4, 1963, are accepted as supplements to the respective rate schedules effective as of the date of this order.

(D) The notices of change in rate tendered by Humble on October 4, 1963, to its FPC Gas Rate Schedule Nos. 12, 14 and 22 are hereby rejected.

(E) Humble shall compute the refund to Texas Eastern to the date of the issuance of this order as the difference between the rates collected subject to refund under each of the rate schedules herein and the related settlement rates, in Docket Nos. G–18324, RI60–146, RI61–126, RI61–130, RI61–348, RI62–82, RI62–313, RI62–389 and RI63–137, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination.

(F) Humble shall retain the refund due to Texas Eastern, which it shall have computed in accordance with Paragraph (E) above, in a special account, with no further interest obligation after the date of issuance of this order, pending Commission action and further order respecting such monies.

(G) Upon notification by the Secretary of the Commission that Humble has complied with the terms and conditions of this order, the settlement rates set forth in the appendix hereto shall be effective as of the date of issuance of this order, and the proceedings in Docket Nos. G–13732, G–14927, G–16806, G–17784, G–18324, G–18470, G–19157, G–19747, RI60–146, RI60–220, RI61–126, RI61–130, RI61–132, RI61–348, RI62–82, RI62–313, RI62–389 and RI63–137 shall be deemed terminated insofar as such proceedings pertain to sales made under the rate schedules involved herein.

(H) Upon notification by the Secretary of the Commission in accordance with Paragraph (G) above, Docket Nos. G–13732, G–14927, G–16806, G–17784, G–18470, G–19747, RI60–146, RI61–126, RI61–130, RI61–132, RI61–348, RI62–82, RI62–313, RI62–389 and RI63–137 shall be severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(I) The acceptance by the Commission of Humble's offer of settlement is without prejudice to any findings or determinations that may be made in any proceedings now pending, or hereafter instituted by or against Humble.

NAFCO OIL AND GAS INC., DOCKET NO. G-17282

ORDER ACCEPTING OFFERS OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued January 27, 1964)

On October 30 and 31, 1963, NAFCO Oil and Gas Inc. (NAFCO) submitted offers of settlement in Docket No. G-17282 pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offers involve proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by NAFCO. The first relates to a sale made under NAFCO's FPC Gas Rate Schedule No. 1 in Liberty and San Jacinto Counties, Texas (Texas R.R. Com. District #3) and the second relates to a sale made under NAFCO's FPC Gas Rate Schedule No. 3 in Wharton County, Texas (Texas R.R. Com. District #3). Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and were made effective by NAFCO on June 1, 1959.

Under the terms of the offers, NAFCO proposes to eliminate the favored-nation, price redetermination and periodic escalation provisions from the rate schedules and to establish 15¢ per Mcf rates for the subject sales. NAFCO's annual revenues will be decreased about $32,000 from the presently effective rates. No protests or objections have been filed to either offer.

NAFCO, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedules in excess of the settlement rates.[1] The estimated total dollars to be refunded approximates $164,000, exclusive of interest.

The proposed settlements are consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order 264, issued March 27, 1963, 29 FPC 589, and their acceptance would serve the public interest.

However, we desire to make it clear that acceptance of NAFCO's offers of settlement shall not be construed as approval of any future increased rate filed in accordance with the reservation of NAFCO of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving each of NAFCO's rates and rate schedules.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offers of settlement filed with the Commission by NAFCO on October 30 and 31, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed with the Commission by NAFCO on October 30 and 31, 1963, are hereby approved in accordance with the provisions of this order.

(B) NAFCO shall file, within 30 days from the date of issuance of this order, notices of change in rate providing for the 15¢ per Mcf rate specified in its offers of settlement, and executed contractual amendments to its FPC Gas Rate Schedule Nos. 1 and 3, eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) NAFCO shall compute the refund to TGT to the date of issuance of this order as the difference between the rates collected subject to refund under each of the rate schedules herein and the settlement rates, making account for proper charges, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination.

(D) Upon notification by the Secretary of the Commission that NAFCO has complied with the terms and conditions of the order, the rates and charges of 15¢ per Mcf at 14.65 psia, specified in its offers of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, and the above designated proceeding shall be deemed terminated and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of NAFCO's offers of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against NAFCO, including area rate or other similar proceedings.

---

[1] NAFCO's FPC Gas Rate Schedule No. 3 is subject to a 0.21931¢ per Mcf dehydration charge by TGT, for which allowance must be made in computing the refund.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTHWEST GAS PRODUCING COMPANY, INC. (OPERATOR), ET AL., DOCKET NO. G-16714, ET AL.[1]

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE AND CONTRACTUAL AMENDMENTS, TERMINATING PROCEEDINGS, AND REQUIRING REFUNDS

(Issued January 27, 1964)

On April 18, 1963, Southwest Gas Producing Company, Inc. (Southwest) submitted an offer of settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in these proceedings. By letter, dated June 7, 1963, the Commission advised Southwest that its offer was not satisfactory in certain particulars. On August 16, 1963, Southwest filed an amendment to its offer. These proceedings relate to four sales of natural gas to three pipeline purchasers in four South Louisiana parishes.

Under the terms of the amended offer, Southwest proposes to delete the favored nation provisions from its rate schedules and to amend the periodic escalation provisions therein so as to provide for no increase in rate under its FPC Gas Rate Schedule Nos. 10 and 12 until January 1, 1967, and under its Rate Schedule No. 7 until November 1, 1967. Southwest is presently selling gas to United Fuel Gas Company (United) under The Atlantic Refining Company's FPC Gas Rate Schedule No. 63. Southwest proposed to file an application for a certificate of public convenience and necessity to make this sale, and will file its own rate schedule. Such schedule will not contain a favored nations clause, and will provide for no increase in rate until November 1, 1967.

Southwest proposed to charge rates below the area ceiling, with one exception. It proposes to charge a rate of 16¢ per Mcf, including tax reimbursement, for a sale of gas to Tennessee Gas Transmission Company in the Bell City Field, Calcasieu Parish, Louisiana. Its justification for exceeding the area ceiling of 14¢ per Mcf, plus tax reimbursement, as promulgated by the Commission in its Statement of General Policy, 24 FPC 1107, as amended, is its waiver of periodic rate increases for the moratorium periods, and elimination of favored nations provisions. We find no basis, however, for approval of a rate for this sale in excess of the applicable area ceiling of 15.75¢ per Mcf and accordingly we shall condition our acceptance of Southwest's offer to require it to reduce the rate under its Rate Schedule No. 7 to 15.75¢ per Mcf.

Southwest proposes a rate of 20.75¢ per Mcf for sales of gas made by it to Texas Gas Transmission Corporation under its FPC Gas Rate Schedule Nos. 10 and 12 in St. Mary Parish, Louisiana. On September 10, 1963, Long Island Lighting Company (Long Island) filed a comment regarding the proposed settlement rate for these sales. Although recognizing that the proposed settlement rate is, in each instance, the certificated rate, and is below the area ceiling, Long Island states that the Commission should condition its acceptance of Southwest's offer to conform these sales to other of our recent settlements, e.g., *Texaco Inc., et al.*, Docket No. G-13169, *et al.*, 28 FPC 247. The contracts for these sales were entered into 1957 and 1958, respectively, and as noted by Long Island, permanent certificates were issued at the settlement rate. The proposed rates are below the applicable area initial ceiling as now fixed, and are subject to review by this Commission in the consolidated proceedings in Docket No. AR61-2, *et al.* Therefore, pending our final determination in that proceeding, we shall accept the settlement rate for these sales.

---

[1] The additional dockets involved herein are set forth in the Appendix hereto.

Southwest, in its offer, proposes to refund the difference between the revenues charged and collected and those which would have been received under the proposed settlement rates, with applicable interest, in Docket Nos. G-16714, G-19536, RI61-128, RI62-78, RI63-92 and RI63-198. The estimated total dollars to be refunded is $191,843, exclusive of interest. Southwest's future revenues will be decreased approximately $47,386 annually as a result of the settlement.

In support of its offer, Southwest cites the deletion of the favored nation provisions from its gas sales contracts, amendment of its periodic price escalation clauses, refunds, moratorium periods, and other provisions not specifically noted herein, as being in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

We note that Southwest, in its offer, as amended, proposes that the settlement rates shall be subject to adjustment during the moratorium periods if the Commission should make a final determination in the South Louisiana Area Rate Proceeding, Docket No. AR61-2, *et al.* However, Southwest further proposes: "* * * that the price shall not in any case be reduced below the price already approved by the Commission * * *". All of our orders approving settlement proposals or agreements are unqualifiedly subject to final determination in area proceedings, or proceedings of a similar nature, and we will make no exception here.

Since the proposed settlement rates are acceptable under the provisions of the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended, the public interest will best be served by accepting Southwest's proposed offer of settlement, as conditioned herein. Our action herein shall not be construed, nor may it be, as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceeding, including area rate proceedings, or other similar proceedings, involving each of Southwest's rates and rate schedules.

The Commission finds:

The proposed settlement of the proceedings herein, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Southwest on April 18, 1963, as amended on August 16, 1963, and herein conditioned, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act, and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Southwest on April 18, 1963, as amended on November 18, 1863, is hereby approved in accordance with the provisions of this order.

(B) Southwest shall file, within 45 days from the date of issuance of this order, notices of change in its FPC Gas Rate Schedule Nos. 7, 10 and 12, reflecting the settlement rates set forth in the appendix hereto, and executed contractual amendments to its FPC Gas Rate Schedule Nos. 7, 10 and 12, which Southwest shall execute with its purchasers in conformity with Southwest's offer of settlement, as amended, in all respects, in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Southwest shall refund to United Fuel Gas Company and Tennessee Gas Transmission Company to the date of the issuance of this order as the difference between the rates collected subject to refund under each of the rate schedules herein and the related settlement rates and shall report to the Commission in writing, within 45 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination.

(D) Southwest shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order applicable to it.

(E) Any other party to the proceeding or settlement negotiations having objections to the terms of this order shall within 30 days from the date of issuance of this order set forth such objections in writing to the Commission (original and one copy), and shall serve copies thereof on the other parties.

(F) Upon notification by the Secretary of the Commission that Southwest has complied with the terms and conditions of this order, the settlement rates set forth in the appendix hereto shall be effective as of the date of issuance of this order, and the proceedings in Docket Nos. G–16714, G–19536, RI61–128, RI62–78, RI62–230, RI62–241, RI63–92 and RI63–198 shall be deemed terminated insofar as such proceedings pertain to sales made by Southwest under the rate schedules involved therein.

(G) Upon notification by the Secretary of the Commission in accordance with Paragraph (F) above, Docket Nos. G–16714, RI62–230, RI62–241 and RI63–198 shall be severed from the consolidated area rate proceeding in Docket No. AR61–2 without further order of the Commission.

(H) The acceptance by the Commission of Southwest's offer of settlement is without prejudice to any findings or determinations that may be made in any proceedings now pending, or hereafter instituted by or against Southwest, including area rate or other similar proceedings.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64–108

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 27, 1964)

On November 12, 1963, as supplemented on December 16, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP64–108 an application pursuant to Sections 7(c) and (b) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and for permission and approval to abandon facilities which are to be replaced or retired as follows:

(1) the construction and operation of an additional 2,000 horsepower of compression at each of three different locations: United Compressor Station, Grant County, Kansas; Alva Compressor Station, Woods County, Oklahoma; and Tonganoxie Compressor Station, Leavenworth County, Kansas;

(2) the replacement of approximately 20.5 miles and the looping of approximately 17.5 miles of existing system with new and larger lines;

(3) the reclamation of approximately 3.5 miles of existing lines and the sale of approximately 1.7 miles of line to Cities Service Oil Company;

all as more fully set forth in the application, which is on file with the Commission and open to public inspection.

The total estimated cost of construction proposed in this application is $3,206,440, which reflects the cost of removal and salvage credit for facilities to be abandoned.

The proposed facilities will be financed from short-term bank loans. Cities Service estimates that $8,000,000, of a total 1964 construction program costing $14,000,000 will be financed by such loans. The financing will be at the prime rate, which at present, is 4.5 percent.

All construction herein proposed is to be completed during the year 1964.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 22, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) Public convenience and necessity at present or in the future do not require the maintenance or operation of those two short stretches of pipeline of 3.5 and 1.7 miles respectively hereinbefore described. Therefore permission and approval of the proposed abandonment by Applicant should be allowed.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to install and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157,20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in operation not later than January 1, 1965, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations aforesaid.

(D) Permission for and approval of the abandonment by Applicant of the pipeline facilities hereinbefore described and as more fully described in the application, in this proceeding, be and the same are hereby granted.

(E) Applicant shall advise the Commission of the date of removal of those facilities so removed and the date of sale of the other facilities within 10 days of such removal and such sale, respectively.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITY OF LIBERTY, TEXAS v. GULF STATES UTILITIES COMPANY, DOCKET NO. E-7047

ORDER ACCEPTING RATE SCHEDULE FOR FILING AND TERMINATING PROCEEDINGS

(Issued January 29, 1964)

Complainant, City of Liberty, Texas on December 30, 1963 moved to dismiss the above-entitled matter. This proceeding was initiated on July 23, 1962, upon formal complaint of the City of Liberty which then sought, pursuant to the provisions of Section 202(b) of the Federal Power Act, to secure a firm wholesale electric power supply arrangement from Gulf States Utilities Company. The hearing in this proceeding set initially on December 4, 1962 has been continued from time to time upon joint request of City and Gulf States to afford those parties opportunity to resolve their differences.

The City operates a retail electric distribution system and formerly purchased a portion of its electric requirements from Gulf States under a short term contractual arrangement[1] filed with this Commission as Gulf States' Rate Schedule FPC No. 94.[2] The remainder of the City's electric requirements were generated by means of several small and relatively high cost internal combustion generating units operated by the City.[3]

Pursuant to an agreement with the City, Gulf States has undertaken to supply all of the City's electric requirements under the Company's standard Schedule 423 "Other Electric Corporations for Resale" as modified by Schedule 423-A and Rider A. Schedule 423 provides for monthly billings based upon blocked demand and energy charges, subject to fuel cost and power factor adjustments,[4] ranging from $2.00 per kw for the first 50 kw of demand to $1.25 per kw for all demands over 200 kw and 10 mills per kwh for the first 50,000 kwh to 5.5 mills per kwh for all kwh in excess of 200,000 kwh. The fuel cost adjustment is based upon a factor equivalent to a heat rate of 13,000 BTU per kwh and the power factor clause adjusts for power factors less than 80% and more than 90%. Under Schedule 423-A Gulf States will allow City a varying standby credit ranging from $1.00 per kw to $.50 per kw for generating capacity which the latter maintains in operating condition. Rider A provides the terms and conditions under which City alternatively may continue to generate a portion of its electric requirements or supply those requirements wholly with power purchased from Gulf States. On December 30, 1963 Gulf States tendered for filing, pursuant to Section 205 of the Federal Power Act, the foregoing proposed rate schedules for service to the City, which schedules have been tentatively designated as the Company's Rate Schedule FPC No. 96.

---

[1] Providing for the supply by Gulf States to the City of Liberty of 600 kw of maximum demand during the months of June through September 1962 and 1200 kw of maximum demand during the comparable months of 1963.

[2] The City of Liberty was advised by letter dated May 10, 1962 that any discontinuance by Gulf States of service under its Rate Schedule FPC No. 94 would be subject to prior approval of the Commission, *Pennsylvania Power Co.* v. *F.P.C.*, 343 U.S. 414, 422–424.

[3] 4490 kw aggregate generating capability.

[4] Additionally Schedule 423 provides for adjustments to reflect any future additional taxes.

Additionally, Gulf States has entered into an arrangement whereby the City purchased certain electric distribution properties of the Company formerly used to supply electric service at retail in a portion of the City of Liberty. As a part of that transfer of facilities Gulf States will supply, under a non-exclusive franchise, electric service at retail in certain areas not currently served by the City.

We think these arrangements represent, in general, a satisfactory solution to the problem raised in the City's original complaint and that acceptance of its motion to dismiss will accordingly be in the public interest. However, in accepting the City's motion to dismiss we do so without prejudice to any future action by the Commission regarding the lawfulness of Gulf States rates and charges under its Schedule 423. Available office data indicate that certain revisions therein may be appropriate in the light of current operations of the Company. These include the possible need for revision of the Company's fuel adjustment clause and a justification of the level of the Company's rates and charges under its Schedule 423. It is anticipated that further review of these matters will be conducted by Commission staff for purposes of formulating recommendations for possible Commission action.

The Commission finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 202, 205 and 206 thereof, that Gulf States' Rate Schedule FPC No. 96 be accepted for filing to become effective January 30, 1964 superseding the Company's Rate Schedule FPC No. 94 and that this proceeding be terminated all as hereinafter provided.

The Commission orders:

(A) Gulf States' Rate Schedule designated and referred to above as FPC No. 96 is hereby accepted for filing to take effect as of January 30, 1964 superseding that Company's Rate Schedule FPC No. 94. Invocation of the tax provisions of Rate Schedule FPC No. 96 will constitute a change in the Schedule within the meaning of Section 205(d) of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

(B) The motion of the City of Liberty for dismissal of the above-entitled proceeding is granted and this matter is hereby terminated.

(C) Nothing contained in this order shall be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract or practice affecting such service or rate provided for in the rate schedule as designated above, nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate.

(D) This order is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding involving the City of Liberty or Gulf States.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

ORDER DENYING MOTIONS FOR RECONSIDERATION

(Issued January 30, 1964)

On December 26, 1963, a joint motion for reconsideration of our "Order Instituting Area Rate Proceedings", issued in these proceedings on November 27, 1963, 30 FPC 1354, was filed by the eight natural-gas producing companies named in the caption hereof.[1] Specifically, the movants request the Commission (1) to cancel the November 27th order, or, if denied, (2) to allow respondents to the two newly initiated area rate proceedings "to present individual company cost presentation", or alternatively, the Commission is urged to assure them that the "final order or orders issued in these proceedings [will] include a 'savings clause' * * *" preserving to them an opportunity to adduce individual company evidence prior to the time when the area rates ultimately established become effective, if such area rates reduce any rates for sales of natural gas in the areas under investigation.

Our reasons for initiating additional area rate proceedings are set out in the November 27th order and need no further elaboration. The initiation of these two new proceedings and the enlargement in the coverage of fully effective producer rate regulation (an increase from approximately 40 percent to 75 percent of the natural gas sold in interstate commerce) provided by the Commission's ultimate decisions and orders fixing just and reasonable rates for the Hugoton-Anadarko and Texas Gulf Coast regions are consistent with our duties under the Natural Gas Act. There can be no question that the ratemaking objectives of these proceedings, instituted pursuant to Sections 4, 5, 10, 14, 15, and 16 of the Act, are in the public interest and should be achieved with minimum delay.

Procedurally, the administrative technique adopted by our order of initiating proceedings prior to scheduling actual hearings will contribute significantly, as in pending cases, to the identification of issues, to the planning of group participation, to the preparation and orderly distribution of evidence, and to the planning and establishment of the procedures to be followed during the course of two large and complex hearings. For these reasons and others contained in our order, proposals for its cancellation must be rejected.

---

[1] The joint motion is styled as an application for rehearing and reconsideration filed pursuant to the Natural Gas Act, Section 19(a) and the Commission's Rules of Practice and Procedure, Section 1.34. However, these sections provide for the filing of applications for rehearing only in connection with final orders and not procedural orders such as that issued November 27, 1963. See Section 1.30(e) of the Rules. We, therefore, treat the application as a motion for reconsideration.

The movants' request that we decide now, either to permit evidentiary cost presentations by individual companies during the instant area rate proceedings, or to promulgate a statement (a "savings clause") assuring parties desirous of making such presentations of an opportunity to do so prior to the issuance of an order making effective those area rates which we find to be just and reasonable, should be denied on the grounds that the first alternative is incompatible with the area rate concept and present consideration of the second alternative is clearly premature in the absence of any record evidence which might establish a need for such a clause.

We previously considered and disposed of almost identical motions filed by one of the present movants and others in the Southern Louisiana area rate proceeding. Our disposition there is equally applicable to the instant joint motion. In that proceeding, we stated:

> * * * With particular reference to individual company cost presentations, we have indicated in a number of orders issued in the Permian Basin area proceeding Docket No. AR61-1, *et al.*, that such presentations are not proper matters for consideration in determining any area price. Having so concluded, we shall not permit the introduction of individual company cost presentations in these proceedings. See Area Rate Proceeding, *et al.*, Docket No. AR61-2, *et al.*, 29 FPC 981, 982 Order Adding Respondents, Prescribing Hearing Procedures and Setting Hearing Dates, issued May 16, 1963.

On the motions for reconsideration, we adhered to this view and also explained why it would be premature to consider the propriety of "savings clauses" prior to the adoption of a final decision and order:

> In the *Phillips* case,[8] the Commission determined that individual company costs do not form an appropriate basis for fixing producer rates and that the area basis should be used. The Commission has reiterated on numerous occasions that individual company cost evidence would not be acceptable in these proceedings for the purpose of fixing the proper area price or prices. The movants have failed to demonstrate the invalidity of the area approach or to show why the Commission should now deviate from this course.
>
> In the Permian case, Docket No. AR61-1, *et al.*, the Commission has deferred ruling on the inclusion of so-called "savings clauses", since any action taken prior to a final decision in the proceedings necessarily would be premature. Similarly, in the instant proceedings, it is obvious that, prior to the time the Commission has before it the entire record, it would not be in a position to determine the appropriateness of a savings clause. Consequently, we will deny the motions in this regard without prejudice to future consideration by the Commission. See Area Rate Proceeding, *et al.*, Docket No. AR61-2, *et al.*, 30 FPC 400, "Order Denying Motions For Reconsideration", issued July 24, 1963.

The Commission orders:

The motion filed on December 26, 1963, by the above-named movants for reconsideration of the Commission's order of November 27, 1963, is hereby denied except insofar as it requests the amendment of the order to include a savings clause as to which the motion is denied without prejudice to future consideration by the Commission.

Commissioner Ross *dissenting.*

---

[8] Opinion No. 338, *Phillips Petroleum Company*, Docket No. G-1148, et al., issued September 28, 1960, 24 FPC 537.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CLAUD B. HAMILL, DOCKET NO. G-16860, ET AL.[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued January 30, 1964)

On December 9, 1963, Claud B. Hamill (Hamill) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Hamill. The offer relates to sales made under Hamill's FPC Gas Rate Schedule Nos. 2, 3, 4 and 6 in Colorado, Wharton and Starr Counties, Texas (Texas R.R. Com. Districts #3 and #4). Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and were made effective by Hamill on June 22, 1959, April 1 and September 28, 1960.

Under the terms of the offer, Hamill proposes to eliminate the favored-nation, price redetermination and the periodic escalation provisions from the rate schedules and to establish 15¢ per Mcf rates for the subject sales. Hamill's annual revenues will be decreased about $7,259 from the presently effective rates. No protests or objections have been filed to the offer.

Hamill, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedules in excess of the settlement rates.[2] The estimated total dollars to be refunded approximates $53,345, exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Hamill's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving each of Hamill's rates and rate schedules.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Hamill on December 9, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Hamill on December 9, 1963, is hereby approved in accordance with the provisions of this order.

---

[1] See the appendix attached hereto for the additional dockets involved herein.

[2] Hamill's FPC Gas Rate Schedule Nos. 2, 3, 4 and 6 are subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

(B) Hamill shall file ,within 30 days from the date of issuance of this order, notices of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and executed contractural amendments to its FPC Gas Rate Schedule Nos. 2, 3, 4 and 6, eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Hamill shall refund to TGT to the date of issuance of this order the difference between the rates collected subject under each of the rate schedules herein and the settlement rates, making account for proper charges, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from Tennessee.

(D) Upon notification by the Secretary of the Commission that Hamill has complied with the terms and conditions of the order, the rates and charges of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Hamill's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Hamill, including area rate or other similar proceedings.

G. H. VAUGHN AND JACK C. VAUGHN (OPERATOR), ET AL., DOCKET NOS. G-19894 AND RI60-379

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE OF CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued January 30, 1964)

On December 9, 1963, G. H. Vaughn and Jack C. Vaughn (Operator), *et al.*, submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Vaughn. The offer relates to two separate sales made under Vaughn's FPC Gas Rate Schedule No. 1 in San Patricio County, Texas (Texas R.R. Com. District #4). Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and were made effective by Vaughn on April 1, and November 9, 1960.

Under the terms of the offer, Vaughn proposed to eliminate the favored-nation, price redetermination and the periodic escalation provisions from its rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Vaughn's annual revenues will be decreased about $12,175 from the presently effective rates. No protests or objections have been filed to the offer.

Vaughn, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $38,421, exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Vaughn's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving each of Vaughn's rates and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Vaughn on December 9, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Vaughn on December 9, 1963, is hereby approved in accordance with the provisions of this order.

(B) Vaughn shall file, within 30 days from the date of issuance of this order, notices of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notices of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Vaughn shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, making account for proper charges, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases for determination, together with a copy of a release from Tennessee with respect to such refunds.

---

[1] Vaughn's FPC Gas Rate Schedule No. 1 is subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

(D) Upon notification by the Secretary of the Commission that Vaughn has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64–2 without further order of the Commission.

(E) The acceptance by the Commission of Vaughn's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Vaughn, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Charles R. Ross, Harold C. Woodward, and David S. Black.

ARKANSAS POWER & LIGHT COMPANY, DOCKET NO. E–7143

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued January 31, 1964)

Arkansas Power & Light Company (Arkansas Power), a corporation organized under the laws of the State of Arkansas, and doing business in the States of Arkansas, Tennessee, Missouri and Louisiana, with its principal business office located in Little Rock, Arkansas, filed an application on December 13, 1963 requesting authorization pursuant to Section 203 of the Federal Power Act for the purchase and acquisition of certain electric distribution facilities from Dierks Forests Inc. (Dierks), a corporation organized under the laws of the State of Delaware and authorized to do business in the State of Arkansas, with offices at Hot Springs, Arkansas.

Arkansas Power is engaged as a public utility in the generation, transmission, purchase, distribution and sale of electricity. Substantially all of its operations are in the State of Arkansas where it renders service in 61 of the 75 counties in the State. In addition it serves 5 customers in Missouri, 75 in Tennessee and 266 in Louisiana. Arkansas Power had a net plant of $291,440,000 as of September 30, 1963.

Dierks is chiefly engaged in the business of growing timber and manufacturing lumber and wood products in Garland County, Arkansas. Dierks provides electric service to approximately 345 customers who occupy residences or business structures, as its tenants, in or near the unincorporated community of Mountain Pine, Arkansas. Dierks does not regard itself as a public utility nor is it operating as a public utility under the laws of the State of Arkansas.

The facilities to be acquired by Arkansas Power consist of an overhead distribution system, operated by Dierks at 2400 volts, including poles, conductors, transformers, meters and all appurtenances used for the service rendered. The power for the distribution system is presently supplied from a 1500 kw generator in the lumber mill of Dierks but it is inadequate to supply sufficient electric service for the mill operation and the electric consumers. Arkansas Power will integrate the distribution facilities into its interconnected system, which is adequate to serve the load growth of the area, at an estimated cost of $2,500. It will continue the operation of the facilities and it will charge its approved regulated rates for rural areas or unincorporated areas generally throughout its service area.

Pursuant to an agreement entered into by Arkansas Power and Dierks on October 21, 1963, Arkansas Power has agreed to purchase the facilities for a cash consideration of $137,500. The application states that the facilities have never before been devoted to public use. The facilities will be recorded on Arkansas Power's books at acquisition cost of $137,500, which is "original cost" as defined in the Commission's Uniform System of Accounts. On the books of Arkansas Power, the cost of $137,500 will be classified in the following accounts under Account 101, Electric Plant in Service.

Distribution plant:	
Account 360, Land and land rights	$4, 819. 87
Account 364, Poles, towers, and fixtures	34, 472. 32
Account 365, Overhead conductors and devices	15, 276. 49
Account 368, Line transformers	21, 724. 31
Account 369, Services	30, 970. 76
Account 370, Meters	29, 906. 09
Account 373, Street lighting system	330. 16
Total	137, 500. 00

The proposed transaction which is subject to the authorization of the Arkansas Public Service Commission was authorized by its order, Docket No. U-1789, issued December 3, 1963.

Written notice of the application has been given to the Public Service Commission of the State of Arkansas and to the Governor of that State. Notice was published in the Federal Register on December 28, 1963 (28 F.R. 14451) stating that any person desiring to be heard or to make any protest with reference to the application should, on or before January 20, 1964, file petitions or protests with the Federal Power Commission, Washington, D.C., 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Arkansas Power is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 21, 1962, in Arkansas Power and Light Co. Docket No. E-7069 (28 FPC 844).

(2) By the proposed transaction, as described above, Arkansas Power will merge or consolidate with its facilities, subject to the jurisdiction of the Commission all of the distribution facilities of Dierks.

(3) The proposed acquisition of Dierks' distribution facilities by Arkansas Power, as described above, upon the terms and conditions specified in the application and subject to the provisions of this order, will be consistent with the public interest, as expressed in Section 203 of the Act.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the distribution facilities of Dierks by Arkansas Power, as referred to above and described in the application is hereby authorized and approved upon the terms and conditions and for the purpose set forth in the application, subject to the provisions of this order.

(B) Arkansas Power shall record the proposed transaction herein authorized and the facilities referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 180 days from the day of the issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DUKE POWER COMPANY, PROJECT NO. 2232

ORDER APPROVING PROJECT EXHIBIT

(Issued January 31, 1964)

On September 5, 1963, Duke Power Company, licensee for Project No. 2232, filed for Commission approval, Exhibit K showing the project boundary for the Cowan's Ford Development of the project.

The licensee also filed Exhibit F showing the right of use the licensee has acquired for lands within the Cowan's Ford Development. Commission approval of Exhibit F is not required.

No lands of the United States are involved.

The Commission finds:

Exhibit K, Sheets 5-A, 5-B, 5-C, and 5-D (FPC Nos. 2232-89 through 92) conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

The Exhibit K sheets described in the above finding are hereby approved as part of the license for Project No. 2232.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

GRAND RIVER DAM AUTHORITY, PROJECT NO. 2183

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued January 31, 1964)

Application was filed on July 11, 1963 by Grand River Dam Authority, licensee for major Project No. 2183, for further amendment of its license to exclude therefrom the presently authorized single circuit 110-kv transmission line and in lieu thereof to include a double circuit 110-kv transmission line.

The presently authorized line connects the step-up substation at the Markham Ferry plant to the licensee's existing Markham Ferry switching station, a distance of about 3.75 miles. The proposed double circuit line would extend a distance of about 2 miles from the Markham Ferry plant to the licensee's existing 302 transmission line extending from the Pensacola switchyard of licensed Project No. 1494 to the Markham Ferry switching station. The proposed line will be split with the north circuit going to the Pensacola switchyard and the south circuit going to the Markham Ferry switching station.

The proposed change is necessary and desirable for the reasons that: the double circuit line will provide two ties to the licensee's high-voltage system in lieu of one; the south circuit of the double circuit line will provide the same connection from the Markham Ferry hydro station to the Markham Ferry switching station as the presently authorized single circuit line; and the north circuit will provide a direct connection from the Markham Ferry hydro station to the Pensacola switchyard. The double circuit line would terminate close to the licensee's industrial load center.

No lands of the United States are involved.

The Commission finds:

(1) The proposed double circuit transmission line is part of a "project" as defined in Section 3 (11) of the Federal Power Act and should be included in the license as part of the project works.

(2) The license for Project No. 2183, further amended as hereinafter provided, is in the public interest.

(3) Exhibit M (Revised), filed as part of the application for amendment conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit M, now part of the license and which has been superseded, should be eliminated from the license.

The Commission orders:

(A) The license for Project No. 2183 is hereby further amended, effective as of January 1, 1964 as follows:

Paragraph I. The presently authorized 110-kv transmission line from the Markham Ferry plant to the Markham Ferry switching station is eliminated from the license.

Paragraph II. The proposed double circuit 110-kv transmission line from the Markham Ferry plant to the existing Line 302 which extends from the Pensacola switchyard of licensed Project No. 1494 to the Markham Ferry switching station is included in the license as a part of the project works.

(B) The aforementioned Exhibit M (Revised) is hereby approved as part of the license for the project, and the aforementioned superseded Exhibit M is hereby eliminated from the license for the project.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2106

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued January 31, 1964)

Application was filed on December 10, 1962 by Pacific Gas and Electric Company, licensee for major Project No. 2106, for further amendment of its license for the project located on the McCloud and Pit Rivers in Shasta County, California, and affecting lands of the United States within the Shasta National Forest.

The application for amendment, which relates to the McCloud-Pit Development, would: (1) eliminate therefrom the proposed Hawkins Creek Diversion Dam, Reservoir, and shaft connecting it to the McCloud Tunnel, and adit for driving the tunnel; (2) realign McCloud Conduit which then will consist of Tunnel No. 1 about 10,500 feet long, Hawkins Creek pipe crossing about 500 feet long, plus transitions into tunnels Nos. 1 and 2, the latter to be about 26,800 feet long; (3) relocate McCloud-Pit powerhouse to a point on Pit River about ½ mile upstream from the licensee's Pit 5 powerhouse of Project No. 233; (4) eliminate the extensive tailrace excavation previously planned downstream from its former location, and; (5) realign the Iron Canyon Conduit and McCloud-Pit penstock to the new location of the McCloud-Pit powerhouse, the conduit then to consist of Tunnel No. 1 about 4,800 feet long, a pipe about 1,100 feet long across an unnamed depression plus transitions into tunnels Nos. 1 and 2, the latter to be about 9,400 feet long, and McCloud-Pit penstock about 5,700 feet long.

The license order issued August 18, 1961 eliminated the Hawkins Creek Diversion. Therefore, it is not included in the license. The proposed changes are desirable for the reasons that: the elimination of the Hawkins Creek Diversion permits realignment of the McCloud Conduit and a reduction of about 2,700 feet in its length; and the relocation of the McCloud-Pit powerhouse will make it unnecessary to excavate a major tailrace channel downstream therefrom. The proposed changes would reduce materially the capital cost of the McCloud-Pit Development.

The proposed changes would result in a slight increase in the area which the McCloud-Pit Development occupies within the Shasta National Forest (5.48 acres), which will increase the amount of annual charges for such occupancy by $13.15, or from $2,613.58 to $2,626.73.

The Department of Agriculture, in reporting on the application, recommended, for inclusion in the license, a special condition for the protection and utilization of the Shasta National Forest.

Pursuant to request therefor, the licensee was advised by Commission letter dated October 8, 1962, that it would interpose no objection to the licensee proceeding with the construction of the realigned McCloud Tunnel (as proposed in the subject application) at the licensee's own risk, under a Forest Service Special Use Permit. We are hereinafter making this amendment effective as of October 8, 1962.

The Commission finds:

(1) Public notice of the application has been given. No protests have been received.

(2) The license for Project No. 2106 further amended as hereinafter provided is in the public interest.

(3) The increased amount of annual charges for recompensing the United States for the increased occupancy by the McCloud-Pit Development of national forest lands is reasonable as hereinafter fixed and specified.

(4) Exhibits K-2A, K-3A, K-4A and K-5A (FPC Nos. 2106-47 through -50), filed as part of the application, conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K-2, K-3, K-4 and K-5 (FPC Nos. 2106-22 through -25), now part of the license and which are superseded, should be eliminated from the license.

The Commission orders:

(A) The exhibits described in finding (4) above as conforming to the Commission's rules and regulations are hereby approved as part of the license for Project No. 2106, and the exhibits described in the same finding as being superseded are hereby eliminated from the license for the project.

(B) Pacific Gas & Electric Company's license for Project No. 2106 is hereby further amended in the following respects, effective as of October 8, 1962:

Paragraph I. The license is amended by authorizing the realignment of the McCloud Conduit; the relocation of the McCloud-Pit powerhouse; the elimination of the tailrace excavation previously planned downstream from its former location; and realignment of the Iron Canyon Conduit and McCloud-Pit penstock to the new location of the McCloud-Pit powerhouse.

Paragraph II. Subparagraph (ii) of Article 28 of the license is amended by changing the annual land charge figure of $2,613.58 to $2,626.73.

Paragraph III. The following additional article is added to the license:

Article 48. The Licensee shall cooperate with the Forest Service in the preparation of a recreational use study for the lands adjacent to the Iron Gate Reservoir and shall within one year from the date of completion of the development, file with the Commission for approval its proposed recreational use plan.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 417

ALABAMA-TENNESSEE NATURAL GAS CO., DOCKET NO. G-5471, ET AL.

OPINION AND ORDER ON PROPER RATE TREATMENT OF LIBERALIZED DEPRECIATION TAX DEDUCTIONS

(Issued February 3, 1964)*

Syllabus

1. Instant decision constitutes final element in determination of just and reasonable level of return for Alabama-Tennessee and proposed decision respecting those pipelines to which this specific issue was reserved. P. 209.

2. Commission *rejects* asserted denial of its discretionary authority to depart from policy of allowing normalized taxes and permitting 1.5 percent return upon accumulated deferred taxes. P. 210.

3. In enacting Section 167 of the Internal Revenue Code (liberalized depreciation), Congress did not prohibit rate flow-through to consumers of resulting pipeline tax savings. PP. 210, 211.

4. Merely because tax benefit is made available to both regulated and unregulated businesses alike, does not mean that former *pro tanto* cease to be subject to regulation. P. 210.

5. While agreeing with *Amere* and *El Paso* that congressional intent of Section 167 is to assist in modernization and expansion of industrial capacity, Commission does not conclude that this can only be achieved by normalization. P. 211.

6. Section 167, making utilities eligible for same benefits as non-regulated enterprises cannot be viewed as direction to Commission to allow them additional return equivalent to amount of tax savings. P. 213.

7. Commission *rejects* argument that it would be an abuse of administrative discretion to allow anything more than dollar total of currently payable taxes in income tax allowance of pipeline. P. 214.

8. Claim that normalization is required because Section 167 may be repealed *rejected* as speculative. P. 215.

9. Tax consequences of liberalized depreciation must be measured with respect to all properties of taxpayer. PP. 215, 216.

10. Where there is growth in size of gross plant normalization is premature and unnecessary. P. 216.

11. Fact that gas reserves may be exhausted in 21st century does not establish that there is present need for additional normalization. P. 218.

12. Rate flow-through is more effective stimulus to new investment than normalization since lower rates tend to generate higher volumes of sales and thus ultimately to require expansion of facilities. PP. 218, 219.

13. Existing provisions of Uniform System of Accounts respecting accumulated deferred tax balances are grounded on erroneous premise that liberalized depreciation results in mere tax deferral—not tax saving. P. 219.

14. Pipelines should be given option of retaining past tax accumulations as consumer-contributed reserves, or amortizing same over period of years by refunds or rate reductions. P. 220.

15. No return need be allowed prospectively on accumulated "deferred tax" balances since balances must now be regarded as consumer-contributed capital. P. 220.

---

*Order issued April 3, 1964, granted rehearing for further consideration, 31 FPC 768. Modified; rehearing and stay denied by Opinion No. 417-A, issued April 15, 1964, 31 FPC 928. Affirmed, *Alabama-Tennessee Natural Gas Co. v. F.P.C.*, 359 F. 2d 318 (CA5-1966); cert. denied, 385 U.S. 847 (1966)

16. Rates established for Alabama Tennessee and other similarly situated pipelines will reflect fair and reasonable return upon recognized rate base after deduction of accumulated balances in account 282. P. 220.
17. Use of liberalized depreciation results in permanent reduction in tax payable by natural gas pipelines which maintain either growing or stable plant. P. 221.
18. Commission *determines* proper rate treatment of liberalized depreciation tax deductions in proceeding under Section 4 of the Natural Gas Act.

Commissioners O'Connor and Woodward *dissenting*.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SWIDLER, *Chairman:*

This case was initiated by the deferral for separate decision, in Opinion No. 360 [1] of the issues raised therein as to the proper treatment of liberalized depreciation in Alabama-Tennessee's allowance for Federal income taxes. The specific issue is whether Alabama-Tennessee's allowance for Federal income taxes should be based on the liberalized tax depreciation deductions which it uses or on straight-line tax depreciation deductions and if the latter is used whether it should be permitted to earn a return upon the accumulated deferred tax funds, and if so, at what rate. This important issue was deferred because the Commission determined that it was appropriate to reexamine and reevaluate our policy thereon in light of our more recent experience. We therefore issued an order scheduling the matter for oral argument and invited the participation of interested persons as *amici curiae.*[2]

The same issue was also deferred in a number of Commission orders prescribing future rates for other natural gas pipeline companies, conditioned on the decision in this case.[3] In thus reserving this issue, we uniformly provided that any changed policy which might be formulated in this proceeding would have only a prospective effect on the rates and charges of the individual pipelines concerned. We are aware that a number of such pipelines have argued in these proceedings that the result we reach here cannot be made binding upon them in the absence of further proceedings. While we are not convinced as to the validity of such arguments, we shall afford such other pipelines an opportunity to show cause why the determination we are making here is not applicable to them. Accordingly, the decision rendered herein will constitute the final element in determining a just and reasonable level of return for Alabama-Tennessee and a proposed decision on this point with regard to the various other pipelines with respect to which this specific issue has been reserved.

Apart from those companies, however, it is evident that the decision to be rendered in this proceeding will have a substantial impact upon other regulated companies subject to this Commission's jurisdiction. In the nine years that liberalized depreciation deductions have been available, the natural gas pipelines and electric utilities have, respectively, accumulated $286,320,000 and $540,690,000 of deferred tax funds.[4] While our decision does not disturb these accumulations (which we are allowing the respondent and other companies under FPC juris-

diction to retain, but at a zero return for the future) but goes only to the question whether additional accumulations in those accounts should be permitted, this is a question of large importance to consumers generally as well as having industry-wide implications. We have therefore given appropriate weight to all material and relevant technical and scientific facts of established character which are within the ambit of our general knowledge as an expert body and may properly be officially noticed under Section 1.26(d) of the Rules of Practice and Procedure, as well as to the record in this case.

The issue before us is the proper rate-making treatment for Alabama-Tennessee and other regulated companies which claim the benefits of liberalized depreciation on their tax returns. We do not have before us the question whether a utility which has not exercised its option to claim the tax benefits of liberalized depreciation should have its rates fixed on the basis of the availability of such higher depreciation deductions, and nothing in this opinion should be taken as an indication of our views on that question. Also, we are not re-examining our present policies with respect to the rate treatment of accelerated amortization under Section 168 of the Internal Revenue Code in this proceeding.

Congress Did Not Prohibit Rate Flow-Through

At the outset, we are met with a vigorously asserted denial of our discretionary authority to depart from our presently established policy of allowing normalized taxes[5] and permitting a 1.5 percent return to be earned upon the accumulated deferred taxes.[6] Alabama-Tennessee, the Independent Natural Gas Association of America (INGA) and many of the pipeline interveners (hereinafter referred to as the pipelines) contend that Congress intended liberalized depreciation to serve as a tax incentive to the modernization and expansion of operating plant and that flow-through to consumers is illegal because it would defeat this statutory objective.

The legislative history of Section 167 like the language of the section, admittedly makes no reference to the manner in which taxes computed thereunder by regulated companies should be treated for rate-fixing purposes. We are therefore left without the aid of any contemporaneous expression of Congressional intent as to the proper regulatory treatment of liberalized depreciation.

The section was made applicable to both regulated and unregulated industries alike. An unregulated business availing itself of liberalized depreciation could *if competition permitted it to do so* use the tax savings for reinvestment in new plant. Accordingly it is argued, this option should also be available to any regulated company choosing to utilize liberalized depreciation.

The short answer is that merely because a tax benefit is made available to both regulated and unregulated businesses alike does not mean that regulated businesses *pro tanto* cease to be subject to regulation. Thus, it would hardly be contended that if Congress reduced the general corporate tax rate to encourage business expansion, as the President has proposed, regulated companies could continue to have their rates set on the basis of taxes calculated at the previous higher rate merely because unregulated companies could, if economic conditions permitted, retain the difference between the taxes they would have been required to pay under the old rates and those due under the new.

---

[5] The existing precedent as set out in Opinion No. 326, *El Paso Natural Gas Company*, Docket No. G–4769, 22 FPC 260, 266–267, is to the effect that a natural gas company will be permitted to include in its cost of service income taxes on the basis of straight line depreciation, while paying such taxes on the basis of liberalized depreciation.

[6] In Opinion No. 342, *Northern Natural Gas Co., et al.*, Docket No. G–19040, *et al.*, 25 FPC 431, it is concluded that the aforementioned use of liberalized depreciation should be taken into consideration in fixing a rate of return for the pipeline company by including the amounts in the deferred income tax account resulting therefrom as part of the company's capitalization and providing for an allowance of 1.5 percent return thereon.

In the case of the unregulated industries, tax benefits, like other cost reductions, need not be earmarked; the forces of competition determine whether savings will be passed on to the stockholders in dividends, set aside in a reserve, reinvested in new plant, or utilized to enhance the company's competitive position by a reduction in prices. The underlying premise of the regulatory process, on the other hand, is that the interplay of competitive forces is inadequate to assure determinations consistent with the public interest. The Commission's regulatory function is a substitute for the kind of competition that exists in the unregulated industries.

A general Congressional purpose to make tax benefits available to both regulated and unregulated taxpayers "does not mean that these tax benefits are to be translated into additional profits for the regulated company over and above a reasonable return on its investment . . ." (*El Paso Natural Gas Company* v. *Federal Power Commission*, 281 F. 2d 567, 571 (CA5–1960); cert. denied, 366 U.S. 912). The benefits to taxpayers contemplated by the Congress in adopting section 167 of the Internal Revenue Code were intended as a stimulus to investment. As we show *infra*, this intent can better be achieved in the case of natural gas pipelines by flow-through than by normalization. The pipelines are not thereby deprived of the benefits of liberalized depreciation; instead by permitting lower rates the benefits ". . . are available to the regulated companies to make it so much the easier for them, in competition with other fuels and in competition with other industries seeking the investor's dollar to earn a fair return . . ." (*ibid.*).

We are, of course, aware that a majority of the then Commissioners took a different view of this matter in *Amere Gas Utilities Co.*, 15 FPC 781 and *El Paso Natural Gas Co.*, 22 FPC 260. We have carefully reexamined the reasoning behind these opinions and, with all deference, cannot persuade ourselves to the same conclusion. The former opinion admits (15 FPC at 782) that "Section 167 of the Internal Revenue Code contains no specific mandate" for normalization. Instead, the opinions refer to a "clear Congressional intent" to have the authorization to all taxpayers to use liberalized depreciation assist in the modernization and expansion of industrial capacity (*Amere, supra* at 782, *El Paso, supra* at 266), which we do not dispute, and leap from this foundation to the unsupported conclusion that this can only be achieved insofar as the natural gas pipelines are concerned by providing for normalization. Superimposed on this line of argument is an assumption that the Congress, though it did not say so, must have intended liberalized depreciation to be treated as a permanent tax deferral, even if, because of the installation of additional facilities, "there will be a balance in the reserve accounts at all times in the foreseeable future" *Amere, supra*, at 782. The only basis for this contention seems to be a number of general statements in the committee reports on the bill authorizing liberalized depreciation to the effect that, insofar as individual items are concerned, liberalized depreciation results in a tax deferral rather than a tax saving, and the statement in the Examiner's decision in *Amere* (with which the Commission expressed its agreement (15 FPC at 781)) that "It must be *assumed* that the fact that on a composite basis, as compared with the treatment of separate units, with a growing plant income tax payments would always be less under liberalized methods than under the straight-line method was known to Congress." (*Amere, supra* at 776).[7] [Emphasis supplied.]

---

[7] The only other support the cited decisions purported to find in the legislative history of Section 167 was testimony by natural gas and electric utility officials to the effect that because of the inflation factor, straight-line depreciation hurt industries such as theirs with long-lived facilities. (*El Paso,* supra at 266) This argument would bear on the question of the proper rate of depreciation to be allowed these companies, but it does not demonstrate anything with respect to the rate-making treatment of liberalized depreciation for tax purposes.

We think none of the foregoing can possibly be characterized as a Congressional mandate for us to treat companies utilizing liberalized depreciation in any particular manner in the rate-making proceedings to which, as far as the legislative history of Section 167 indicates, Congress gave no consideration whatsoever at the time. On the contrary it seems clear to us that Congress left this matter to the sound discretion of the Commission. Of course, in our consideration of the matter in ratemaking proceedings we must give due consideration both to the question whether the use of liberalized depreciation by the particular types of company subject to our jurisdiction results in a tax deferral or a tax savings, and whether a proposed method for handling liberalized depreciation is consistent with and will enhance the general Congressional objectives in authorizing its use.

All three of the Federal circuit courts of appeals which have been called upon to consider the matter have expressly rejected contentions that our treatment of liberalized depreciation is dictated by any Congressional mandate or, that any Congressional intent can be spelled out of the legislative history as to how we should treat liberalized depreciation in rate-making cases. Thus in *El Paso Natural Gas Co.* v. *Federal Power Commission*, 281 F. 2d 567 (CA 5, 1960) certiorari denied 366 U.S. 912, an appeal stemming from the first Commission rate-making decision in which the Commission rested its normalization conclusion upon an appeal to a supposed Congressional directive (see 22 FPC 266), the Court instead stated (281 F. 2d at 572):

> We think there is nothing in the legislative history that would warrant our concluding that Congress intended the statutory depletion, deduction of intangible drilling expense, *and rapid depreciation* provisions of the Revenue laws to amend or modify the express language of [Section 5(a) of] the Natural Gas Act. [Emphasis added.]

It is, of course, true that the court in the *El Paso* case, after holding that with respect to tax savings "[no] theoretical amount not actually paid can be so included" in the company's cost of service (*ibid.*), went on to approve normalization of liberalized depreciation on the basis of its agreement with the Commission that "in practical effect this [liberalized depreciation] works a tax deferral rather than a tax savings" (*ibid.*). This conclusion however was based not upon any Congressional mandate but rather on indulgence of the Commission's finding that in practical effect a tax deferral rather than a tax savings was involved. It does not preclude a contrary determination by the Commission upon a different record and more comprehensive evaluation of the problem.[8]

In *Cities of Lexington, Kentucky, et al.*, v. *Federal Power Commission*, 295 F. 2d 109 (CA 4 1961), the Fourth Circuit, reaching the same result as in the *El Paso* case, expressed its approval of the earlier decision's conclusions as to the absence of legislative history modifying the Natural Gas Act with respect to the treatment to be accorded rapid depreciation or statutory authority to treat tax savings other than as a reduction in a company's cost of service (295 F. 2d at 117). And, referring to the differing treatments of liberalized depreciation by various state and Federal agencies, the Court observed (*id.* at 114):

---

[8] This was recognized by the Solicitor General in his brief in the Supreme Court in opposition to the petition for a writ of certiorari on the question filed by the State of California. After describing the two methods ("flow through" and "normalization") by which the various Federal and state regulatory agencies had approached the problem he stated (at pp. 11–12):

> From this survey, it appears that, whatever merit there may be in either method, the least that can be said is that a regulatory commission's choice between the two is assuredly within its discretion, depending on the particular views of the particular agency. No general issue of law is involved, only a discretionary choice among competing accounting systems. Such a choice is not one which warrants review by this Court. Under the same principle, the choice is one which can be changed by the Commission should it become convinced that the other method is preferable. Such a change can be made without disturbing the requirement that reserves already accumulated be used only for the originally intended consumers' benefit.

> It is obvious that we are confronted in this case with a problem in a special field which requires the exercise of expert skill that has been generally entrusted by state and Federal legislation to administrative regulatory tribunals whose decisions, in the absence of an abuse of discretion, should be followed by the courts.

Construing the Fifth Circuit's *El Paso* decision as having taken "the same course," the court "adopted" the course of deferring to the Commission's "exercise of expert skill" in the case before it (*ibid.*). Obviously, this decision's subsequent contrary determination based upon a rational analysis of facts demonstrating that liberalized depreciation resulted in tax savings rather than deferral would be equally sustainable.

Finally, there is the decision this last year by the District of Columbia Circuit in *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 316 F. 2d 659 (CADC), certiorari denied, 375 U.S. 881. The specific issue before the Court in that case was the right of the Commission to allow less than a "full return" upon funds which had accrued as a result of normalization of liberalized depreciation, and the Court accordingly carefully refrained from intimating any opinion concerning the validity of action by the Commission to adopt flow-through or any other form of treatment of liberalized depreciation. However in considering Panhandle's argument that the legislative history of Section 167 expressed a Congressional intent that a regulated company should benefit from liberalized depreciation at the expense of its ratepayers, the Court held (*id.* at 662):

> Nothing in the language or legislative history [of Section 167] indicates that Congress considered its regulatory consequences. Thus to infer that the statute materially altered fundamental principles of rate regulation—which requires rates to reflect actual costs of capital—it must appear that Congress intended to benefit [pipelines] to the exclusion of consumers. It does not so appear * * *

The Court went on to hold that the real question was whether the particular rate-making treatment afforded to a company utilizing liberalized depreciation was whether it "would be consistent with the Congressional policy underlying the tax statute"—*i.e.*, to "assist modernization and expansion of industrial capacity." And as indicated above its conclusion that the 1½% return allowed in Panhandle was a sufficient incentive to the continued use of liberalized depreciation, was expressly made without prejudice to a possible conclusion that a different type of regulatory treatment of the problem would also be appropriate.[9]

Certainly, the mere action of Congress in making utilities eligible for the same tax benefits as non-regulated enterprises cannot be viewed as a direction to this Commission to allow such utilities, in addition to a fair return on invested capital, an additional return equivalent to the amount of such tax savings. Neither the text of the Internal Revenue Act of 1954 nor any of the pertinent Committee reports is inconsistent with the flow-through of these tax benefits or requires us to declare that the purpose of such legislation would be frustrated unless utilities are permitted to retain the differential in tax payments. In fact, no part of the legislative history of the Internal Revenue Act of 1954 bears upon regulatory treatment of liberalized depreciation.

---

[9] The District of Columbia Court of Appeals in *City of Detroit* v. *Federal Power Commission*, 230 F. 2d 810 (CADC 1955) had characterized the legislative history of the accelerated amortization provisions of Section 168 of the Revenue Code as demonstrating a Congressional intent to benefit the taxpayer rather than its consumers, but these provisions and their history are different from those involved in Section 167, with which we are here concerned. The Court majority in the *Panhandle* case limited the application of the holding in the *City of Detroit* case to its own special circumstances and refused to adhere to it as controlling with respect to Section 167.

We are, therefore guided in our determination by two fundamental considerations which are basic to the determination of just and reasonable rates under the Natural Gas Act. First is the rule of law that only the amount of Federal income taxes actually payable if a reasonable return is earned can be included as an operating expense to be covered by the utilities' rates. As early as 1922 the Supreme Court in the case of *Galveston Electric Co.* v. *Galveston*, 258 U.S. 388 (1922) ruled that rates should cover as an operating expense "* * * all taxes which would be payable if a fair return were earned * * *" (p. 399)

Another consideration basic to our determination herein is our statutory responsibilities under the Natural Gas Act to assure that natural gas is sold in interstate commerce for resale at the lowest reasonable rate consistent with the maintenance of adequate service. As the Supreme Court recently stated in *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378, 388 (1959):

> The purpose of the Natural Gas Act was to underwrite just and reasonable rates to the consumers of natural gas. *Federal Power Comm'n* v. *Hope Natural Gas Co.*, 320 U.S. 591 (1944). As the original § 7 (c) provided, it was "the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest." 52 Stat. 825. The Act was so framed as to afford consumers a complete, permanent and effective bond of protection from excessive rates and charges.

The Commission must now reexamine the question of the proper method of reflecting liberalized depreciation in income tax allowances on the basis of its independent evaluation of the tax and rate consequences of normalization and flow-through in the light of the statutory standards of the Natural Gas Act and the clear legislative intent of the tax statute to benefit the nation's economy by stimulating new investment in capital facilities.

The Tennessee Valley Municipal Gas Association and certain interveners favoring flow-through believe that it is immaterial whether the use of Section 167 results in a tax saving or a tax deferral. In their view, the Commission must ignore any increase in future taxes because the customers of the utility are legally obligated to pay higher future rates to the extent necessary to compensate for such higher tax burdens. Therefore, these parties contend that it would be an abuse of our administrative discretion to allow anything more than the dollar total of currently payable taxes in the income tax allowance of Alabama-Tennessee and other companies similarly situated.

We have considered the arguments and the precedents cited in support of this position, but we believe it is unsound. Under certain circumstances, a refusal to normalize tax deferrals might well compel future customers to subsidize present ones, or shift to jurisdictional customers a tax burden properly chargeable to non-jurisdictional customers. These parties have erred in equating current taxes paid during the test year with the taxes properly allowable for rate-making purposes. Income tax allowances have never been mechanically geared to test year tax expenses. On the contrary, past tax expenses are significant only insofar as they constitute a guide to recurring tax obligations. Deferred taxes are merely one example of rate adjustments designed to normalize the actual taxes of the test year.

The assertion that this Commission as a matter of law can recognize only currently payable taxes regardless of the factual circumstances runs afoul of the relevant Court decisions which establish that the rate treatment of liberalized depreciation is a matter of administrative discretion.

In view of the foregoing considerations, we conclude that the choice between normalization and flow-through must be made in the light of the present and long-range tax consequences of liberalized depreciation and, specifically, upon the basis of whether additional accumulations of deferred tax reserves are necessary in the foreseeable future. In making this factual determination, we shall assume the continuation of present tax rates and of the laws and regulations governing the calculation of gross and net income for tax purposes.

By the same token, we are also rejecting the claim of the pipeline companies that normalization is required because Section 167 may be repealed at some future time. Rates must be based upon presently known facts and factually based projections of pertinent future conditions. We cannot justify the imposition of tax burdens upon the ratepayers on the basis of suppositions and speculations as the course of future amendments of the Federal income tax laws. If such speculation is to control our decision herein then we must speculate also on the likelihood of passage and probable terms of the pending legislation to reduce corporate income taxes, which would reduce the accumulations for deferred taxes needed to cover the past as well as the future and in addition, would reduce the amount of taxes to be included in the companies' cost of service.

The Tax Consequences of Liberalized Depreciation Must Be Measured With Respect To All Properties of The Taxpayer

We come now to the question of the practical consequence of the use of liberalized depreciation. Alabama-Tennessee and the various pipeline interveners in this proceeding assert that such use of Section 167 must result in an increase in future taxes equalling the reduction in present taxes. Alabama-Tennessee failed, however, to adduce any evidence supporting its position. Nor have any of the natural gas companies or electric utilities participating in this proceeding as *amici* suggested any factual basis to support their thesis of tax deferral. On the other hand, a witness for the Tennessee Valley Municipal Gas Association introduced exhibits and testimony,[10] which established that the use of liberalized depreciation deductions produced a tax saving; that flow-through of these savings to consumers would not burden future taxpayers; and that such flow-through resulted in stable rates and did not impair the financial integrity of the company or adversely affect its ability to attract capital for plant expansion.

The proponents of normalization argue that the Commission must evaluate the tax consequences of a regulated company's use of liberalized depreciation solely by reference to the taxes payable (or excused) upon the basis of specific assets or upon the basis of total assets acquired in a single year. It is axiomatic that, other tax elements remaining constant, the total taxes payable (or excused) with respect to each specific asset will be the same under the straight-line and liberalized methods of tax depreciation; but income taxes are not associated with specific assets or with the total capital additions made in any particular year. Moreover, the actual tax depreciation is based on the taxpayer's *total depreciable assets.* A utility's depreciable properties include assets of various vintages. Consequently, the "below normal" depreciation on older assets is conterbalanced by "above normal" depreciation on newer assets so long as the company continues the use of liberalized depreciation and continues to make capital additions. Under these conditions liberalized depreciation will always exceed straight-line depreciation and the accumulations established under normalized rate and deferred tax accounting will continue to increase until the dollar value of gross plant stabilizes. Even if the composite plant of a company remains stable, where the dollar value of retirements equals the cost of replacements, annual liberalized depreciation will not be lower than straight-line depreciation and the reserve established under normalization will not decline.[11] The significance of these mathematical conclusions is that a regulated utility will never be required to pay higher income taxes because of its election to claim liberalized depreciation unless its gross plant declines in dollar value as a result of lower demand or lower plant construction costs. Thus, the need to establish a reserve can only be determined upon the basis of an analysis of the relevant factors controlling the level of future expenditures for operating plant in a utility which is a going concern.[12]

---

[10] Ex. 48, 49 and 50; Tr. 1157–1198.

It is crucial in determining whether an income tax allowance for rate purposes should be limited to currently payable taxes to consider whether Section 167 tax benefits will occasion a reasonably certain increase in future taxes or whether they essentially are a permanent tax reduction. This is the first proceeding in which the Commission has deemed itself legally free to bring its expertise to bear on the resolution of this factual issue. Viewed as a matter of administrative discretion, the tax consequences of liberalized depreciation must be evaluated in the light of expert judgment as to probable future developments in such areas as demand for gas; plant capacity; the adequacy of gas reserves; the level of plant construction costs and the likelihood and impact of declining plant situations. We are fully cognizant of the fact that our inquiry cannot be limited to present conditions but must anticipate as well as possible the conditions of the future.

The proponents of normalization argue that a failure to recognize the certain loss of tax depreciation deduction on specific assets which have been rapidly depreciated can only be justified on the unrealistic assumption that new construction will continue forever. We agree that this is a speculative and doubtful assumption, but these parties have posed a false dilemma by visualizing the mechanics of payback in the context of a flat choice between indefinite plant growth and declining plant for a full life cycle. A decline in plant investment is not the only possible outcome upon the termination of growth. A relatively stable plant is, in fact, a probable and realistic alternative. Indeed, a utility may continue to operate at a constant level of sales volume and plant capacity for many years. Assuming that plant construction costs remain constant, the taxes experienced by such a utility will never increase above the level of those payable under the straight-line method of depreciation.

These considerations make it apparent that normalization is premature and unnecessary as long as there is growth in the size of the dollar investment in gross plant (caused by either increasing demand or higher construction costs). Furthermore, even the levelling off of gross plant investment would not justify normalization unless it was shown to be the likely precursor of a decline in the plant. Normalization before these conditions are realized means that the ratepayers are forced to provide funds to pay a hypothetical tax liability which may never become payable or, at the very least, to provide such funds many years in advance of the time when they are needed. Accordingly, so long as plant capacity is expanding such premature approval of rate normalization would result in tremendous and ever-increasing accumulations in the reserve account.

---

[11] Tr. 1167, Ex. 48, Committee on Accounts and Statistics, National Association of Railroad and Utilities Commissioners, Report of 67th Annual Convention, 1955, pp. 439–440; Eismer, *Depreciation Under the New Tax Law,* 33 Har. Bus. Rev. No. 1, pp. 66–74; Davidson, *Accelerated Depreciation and the Allocation of Income Taxes,* 33 Accounting Rev. 173; and two arithmetic charts presented by the Secretary of the Treasury to the Senate Finance Committee in connection with the recent Revenue Act of 1962 (hearings on H.R. 10650, 87th Cong. 2nd Sess., Part 1, p. 384).

[12] This Commission has never denied that continuing capital additions will forestall any future increase in taxes. However, it believed that this tax consequence was immaterial because the consumer had no legal claim to the tax benefits accorded under Section 167 (*Amere Gas Utilities Co., et al.,* 15 FPC 760, 782 (1956) and Brief 782 (pp. 16–17) filed by the Solicitor General in *People of the State of California and Public Utilities Commission of the State of California* v. *Federal Power Commission,* 281 F. 2d 567 (CA 5, 1960)).

Discussion of cumulative growth in the size of "deferred tax" accounts is more than academic. Between 1954, when Section 167 was enacted, and the end of 1962, the 40 Class A and Class B Natural Gas Pipelines subject to the Commission's jurisdiction amassed $272,027,245 in deferred tax funds attributable to liberalized depreciation. The increase was $50.7 million in 1960–61, and $53 million in 1961–62.

Accordingly, our principal task is to evaluate the present necessity for continued rate normalization in the light of all pertinent facts and circumstances affecting the likelihood that Alabama-Tennessee and other pipelines similarly situated will be faced with an actual increase in future taxes as a result of their current use of liberalized depreciation. In performing this task, we will give maximum weight to currently known facts and existing conditions. Nevertheless, we shall also consider predictions of future developments for the limited purpose of validating the inference to be drawn from the logical and legal presumption that present conditions will continue. Since, however, current rates cannot be based upon mere speculation and conjecture we must reject rate normalization unless the weight of all the pertinent data points to a definite probability of higher future tax payments attributable to the loss of depreciation tax deductions, under Section 167, in the reasonably foreseeable future.

Growth Prospects of Gas Pipelines

Alabama-Tennessee's Form 2 Annual Reports on file with this Commission show that its sales have increased from 9,504,752 Mcf in 1954 to 20,807,306 Mcf in 1962. Thus, it has experienced a substantial growth in demand for its services. Witness Van Scoyoc testified that natural gas pipelines were expected to continue their growth indefinitely (Tr. 1192). From 1954 to 1960, natural gas pipelines increased their gross plant by an average of 11.07 percent each year.[13] During this same period, electric utilities increased their gross plant at the smaller annual rate of 8.38 percent.[14]

Almost all responsible forecasts reflect the widespread belief that the gas pipeline industry will continue to expand at least until 1980. A recent report by the National Fuels and Energy Study Group to the Senate Committee on Interior and Insular Affairs, rendered on September 7, 1962 comprehensively surveyed and assessed all available information on energy in the United States. The study group concluded (at p. 37 of the Report) that the use of gas in 1980 will be somewhat less than double the 1960 usage and observed that the majority of the pertinent estimates clustered in the range between 20 and 23 trillion cubic feet. Moreover, three of the eleven forecasts projected future usage to the year 2000 and respectively estimated consumption at 15, 36 and 56 trillion cubic feet. Apart from the fact that two of these estimates envision continued growth for 40 years, the lowest estimate is still substantially above the 13.3 trillion cubic feet used in 1960. We are not aware of any forecast that the demand will decline below present market levels even by the end of this century. Although these estimates relate to gas consumption rather than to the capacity of gas pipeline plant, it is fair to infer that an approximate doubling of sales will generate a roughly proportional increase in plant investment. Thus, the level of plant investment in 1980 should be much higher than it is today. Confirmation of this conclusion may be found in a recent estimate by the Bureau of Statistics of the American Gas Association which predicts that the investment in gas pipeline facilities will increase from 24.7 billion dollars in 1962 to 42.4 billion dollars in 1972.

---

[13] Statistics of Natural Gas Companies, 1960.

[14] Statistics of Electrical Utilities in the United States, 1960.

In view of the foregoing, we believe that it is reasonable to conclude that the pattern of growth in demand and plant capacity with respect to Alabama-Tennessee and in the gas pipeline industry generally will continue for the reasonably foreseeable future.

Adequacy of Gas Reserves

INGA and the Illinois Commerce Commission have argued that rate flow-through is inappropriate for natural gas pipelines because they differ from other utilities, whose Section 167 tax savings have been used to reduce their rates, by virtue of their complete dependence upon a finite supply of a wasting asset. No factual data were offered in support of this general allegation.

The report of the National Fuels and Energy Study Group squarely rejects the thesis of these interveners. Thus, in discussing energy supply in 1980 it states that:

> Gas has been called a wasting asset so valuable that "conservation is paramount." We find no factual basis for this conclusion; in fact, we find no factual basis for any conclusion except that there will still be a satisfactory supply of gas in 1980 * * * [p. 304.]

We do not dispute the contention that economically extractable gas reserves will suffer exhaustion at some indeterminate future date. However, we know of no reliable claim that such exhaustion of gas supplies is certain or even probable within this century. The fact that our gas reserves may be exhausted in the 21st century certainly does not establish that there is a present need for additional normalization.

Rate Flow-Through Is a More Effective Stimulus to New Investment Than Normalization

The parties urging deferred tax treatment claim that unless regulated companies are permitted to retain the dollars made available by their use of liberalized depreciation, they will be deprived of the benefit of these accumulations to finance new investment. They further contend that rate flow-through will transfer all of such tax benefits to the ratepayers and thus nullify the intended tax incentive.

The major expenditures by natural gas pipelines for new facilities result from system expansion to serve additional loads. To a minor degree, investments reflect replacements to take advantage of improved technology, as in the occasional replacement of a compressor with another of higher efficiency. On the whole, however, the technology is sufficiently stable so that technological obsolescence is not a large investment factor. If new loads exist, the pipelines have always been able to attract the necessary new capital to finance the required expansion; they do not need to resort to interest-free loans from their ratepayers. However, no amount of additional funds will stimulate new pipeline investment unless the market for additional gas exists. In fact, if the pipeline's customers do not require additional facilities the facilities will not be built, even if the pipeline might otherwise be induced to make the investment, since this Commission is duty-bound to deny a certificate for any expansion which is not required by the public convenience and necessity.

Lower rates tend to generate a higher volume of sales and thus ultimately to require expansion of gas transmission facilities. Recent rate cases before this

Commission have repeatedly demonstrated that at current gas price levels many potential uses, particularly among the larger commercial and industrial users, are sensitive to relatively small variations in rates. We believe, also, that the effect of price changes upon house-holder demand cannot be ignored in a period when the level of gas rates is important in determining the extent to which natural gas can attract air-conditioning loads and resist the increasing competition from the all-electric home. We do not accept the argument that the reduction in unit rates resulting from flow-through will not be sufficiently large to generate any material increase in consumer demand.[15]

We are convinced that flow-through, rather than normalization, is the rate-making treatment of the liberalized depreciation tax saving which, by permitting lower prices, will stimulate increased consumer demand and corresponding additional investment in the pipeline industry as a whole and Alabama-Tennessee in particular.

In concluding that the adoption of flow-through will best carry out the Congressional purpose of stimulating additional investment in natural gas pipelines we have not ignored the argument that normalization will provide additional capital to the company to assist the financing of plant expansion. We do not believe that such additional capital is necessary for the expansion of natural gas pipelines or indeed would result in any expansion if made available.

Natural gas pipelines are allowed a rate of return sufficient to attract necessary new capital and, in fact, are constitutionally guaranteed the opportunity to earn a return which will serve that purpose. They are permitted to include an adequate cash working capital allowance in the rate base upon which their dollar return is calculated. In the past two decades pipelines have financed a tremendous expansion, at a cost of over $9 billion, and there is no indication that they will have any problems in financing the more moderate rate of expansion which is expected in the coming decades. Specifically, with respect to Alabama-Tennessee we found in Opinion No. 360, after reviewing the facts concerning that company's past operations that it had achieved a "favorable position in the eye of the investor" and an "ability to finance successfully" (27 FPC 1180 at 1190). In these respects, the situation of Alabama-Tennessee and other regulated companies differs from that of industries which have been traditionally hampered by their inability to generate funds internally and to secure new debt and equity capital. (*City of Pittsburgh* v. *Pennsylvania Public Utilities Commission*, 182 Pa. Super. 551, 573; 128 A. 2d 372, 383 (Superior Court, Pa., 1957); *City of Alton* v. *The Commerce Commission*, 19 Ill. 2d 76, 82, 165 N.E. 2d 513, 520 (Supreme Ct., Ill., 1960)).

The Accumulated Deferred Tax Balances Should Be Maintained But No Return Need Be Allowed Thereon

The question arises as to the proper disposition of the existing accumulations for "deferred taxes" of Alabama-Tennessee and the other pipelines utilizing liberalized depreciation. Under the existing provisions of our Uniform System of Accounts, which are grounded in the erroneous premise that liberalized depreciation results in a mere tax deferral, these accumulations would be amortized to income beginning when there is a payback of advance depreciation deductions taken on the specific assets with which such accumulations are connected and ending with the retirement of all such property units. However, as we have seen, the record demonstrates that these funds will not be needed for the purpose they were collected to serve under the present provisions tying them to specific assets.

---

[15] In addition to the direct stimulation of increased demand for gas, requiring new pipeline facilities, lower gas rates to householders will release consumer funds for other buying needs and lower contract prices to industrial users of gas will tend to be translated into lower prices for their goods, thus also indirectly stimulating the economy.

We are of course not now dealing with the question of whether as an initial matter these reserves should have been accumulated. The accumulations are already in existence. In these circumstances there would appear to be two possible alternatives; we can require the accumulations to be gradually dissipated or we can require them to be maintained as contingency reserves against even the remote possibility that due to some improbable but conceivable combination of circumstances future ratepayers may be called upon to defray the cost of higher taxes attributable to the use of liberalized depreciation in the earlier years. We believe that the pipeline companies should be given the option of retaining the accumulations as consumer-contributed reserves or of amortizing the accumulations over a period of years by refunds or rate reductions which will return the money to their consumers. The latter can be done only by directing that prior to any withdrawal of any part of the accumulated fund the pipeline can be directed to present the Commission with a plan outlining in detail how the accumulations are to be returned to their original source. Pending submission of such a plan and its approval by the Commission the accumulations will remain available as contingency reserves for use in the event that in any given year the company's taxes are greater than they would have been had it not been taking liberalized depreciation.

Accordingly, appropriate adjustments to the prescribed procedures for recording accumulated tax balances should be considered in a rule-making proceeding undertaken with a view to conforming such accounting to our rate-making determinations herein.

We must next consider whether this determination that liberalized depreciation results in a tax saving, rather than a tax deferral, requires any modification in our present policy of permitting gas pipeline companies to earn a 1.5 percent return on the amounts accumulated in their "deferred tax" accounts. It is clear, from our findings in this proceeding, that the accumulations presently standing to the credit of the companies in such accounts will not be needed in the foreseeable future to defray any increase in the taxes payable upon earnings from all depreciable properties used in rendering regulated service. Thus, these balances must now be regarded as consumer-contributed capital collected for a specific purpose of remote and improbable occurrence. Viewed in this light, the rate of return should be zero since rates must be fixed upon the basis of a company's actual total costs, including its cost of capital, and no cost has been incurred in the accumulation of these balances.

Our determination in this respect will not be retroactive but will apply only from and after the effective date of the order issued herein. Our prospective change in policy is dictated by the necessity to reflect the changed status of such accumulated balances.

In view of the foregoing, the rates established for Alabama-Tennessee and other pipelines similarly situated will reflect a return element based upon the application of the fair and reasonable return for each company to its recognized rate base, after the deduction of accumulated balances in Account 282.

Revision of the Uniform System of Accounts

The instant decision, although in terms applicable only to Alabama-Tennessee and other pipelines with respect to which this issue has been reserved will, properly and necessarily, serve as a precedent in other rate cases involving the income tax allowance for liberalized depreciation. Thus, our action here marks a departure from the presently established rate policy of normalization. Under that policy, we found it appropriate to authorize normalized tax accounting for companies using liberalized depreciation on their tax returns. Our new policy of rate flow-through clearly requires the elimination of this option and its replacement by a direction to follow actual tax expense accounting. Furthermore, as already noted, it is equally imperative to revise the present accounting system insofar as it governs the book entries for such balances.

Accordingly, we have directed our staff to prepare a notice of proposed rulemaking revising the Uniform System of Accounts to reflect the new regulatory policies determined herein.

The Commission further concludes and finds:

(1) In enacting the Internal Revenue Act of 1954, as amended, Congress did not attempt to prescribe the manner in which this Commission should reflect such tax benefits in rates established under the Natural Gas Act.

(2) The use of liberalized depreciation, under Section 167 of the Internal Revenue Code, results in a permanent reduction of taxes payable to the Treasury Department by natural gas pipelines which maintain either a growing or stable plant.

(3) Alabama-Tennessee will maintain a growing or stable plant for the foreseeable future.

(4) Rate flow-through will effectively and substantially promote expanded plant investment by regulated companies, including Alabama-Tennessee and will best implement the fundamental objective of Section 167 of the Internal Revenue Code, to benefit the national economy by stimulating plant modernization and expansion.

(5) Accumulated "deferred tax" balances should be maintained intact and retained by Alabama-Tennessee as a contingency reserve (not a segregated fund) and withdrawn only to offset any increased taxes resulting from a decline in over-all tax depreciation deductions, attributable to earlier use of liberalized depreciation, on all depreciable properties used in rendering public service, below the level of the normal tax deductions under straight-line depreciation, or until amortized pursuant to a plan approved by the Commission as provided herein.

(6) Upon reexamination of the present policy of basing income tax allowances for a company which pays taxes calculated under liberalized depreciation on the deductions available under straight-line depreciation, we find that there is no present factual justification for thus normalizing the prospective rates of Alabama-Tennessee and other natural gas companies similarly situated so that such rates should reflect only the actual taxes currently payable during the applicable test year in Docket No. G–19984 herein.

(7) Upon reexamination of the present policy of permitting a specific return of 1.5 percent to be earned upon the portion of the rate base equivalent in amount to accumulated "deferred tax" funds in Account 282, we find that Alabama-Tennessee and other natural gas companies similarly situated are not entitled to any return upon such customer-contributed capital so that the amount of such funds in Account 282 during the applicable test year in Docket No. G–19984 will be excluded from the recognized rate base herein.

The Commission orders:

(A) Within 20 days from and after the date upon which this decision becomes final, by failure to file a timely petition for rehearing or upon the denial of such a petition, Alabama-Tennessee shall reduce the rates presently in effect under Docket No. G–19984 by filing new rate schedules reflecting the lower Federal income tax allowance and the lower rate base herein found to be just and reasonable in finding paragraphs (6) and (7) above.

(B) If this decision is appealed and stayed by the reviewing court, within 20 days from and after the date of any affirmance of this decision by the court of review, Alabama-Tennessee shall file new rate schedules in accordance with the provisions of Paragraph (A) above.

(C) If this decision is appealed and stayed by the reviewing court, within 45 days from and after the date of any affirmance of this decision by the court of review, Alabama-Tennessee shall refund to its jurisdictional customers, for the period commencing on the date upon which this decision becomes final under the provisions of Paragraph (A) above and terminating on the date of such affirmance, the difference between the amounts collected in Docket No. G–19984 under the presently effective tariff sheets and those which would have been collected for such period under the rate schedules required to be filed in Paragraph (A) above, together with interest thereon at the rate of 7 percent per annum from the date of payment to Alabama-Tennessee to the date of refund.

Commissioner O'Connor *dissenting.*

Commissioner Woodward *dissenting.*

WOODWARD, Commissioner, *dissenting:*

I respectfully dissent from the majority's decision which finds that rate flow-through will best implement the fundamental objective of Section 167 of the Internal Revenue Code. The statute does not place it within the province of this Commission to confiscate a benefit provided by the Congress of the United States or to channel that benefit to present ratepayers for their exclusive advantage, thus placing the company and future ratepayers in jeopardy. Increasing a company's risk in order to benefit the present ratepayer defeats the very purpose of Section 167 of the Internal Revenue Code and thus defeats the intent of Congress.

The order adopted in the instant proceeding is totally inconsistent with prior Commission and court decisions which have consistently held that normalization effectuates the Congressional intent. It is not consistent with accounting regulations previously approved by the Commission and is inconsistent with accounting principals supported by a preponderance of opinion in the accounting profession.[1] The majority's error will have a national impact with consequences far transcending the importance of this particular case because it effects a fundamental and drastic change in our regulatory policy regarding the natural gas industry.[2] Our primary duty is limited to giving vent to the intent of Congress as expressed in the statute. The facts that follow will confirm that no interpretation or construction of a statute by this Commission may legally prevail over the plain language of a statute duly adopted so as to have the force of law.

---

[1] Accounting Research Bulletin No. 44 issued by the Committee on Accounting Procedure of the American Institute of Accountants, revised in July, 1958, stated, "Where material amounts are involved, recognition of deferred income taxes in the General Accounts is needed to obtain an equitable matching of costs and revenues and to avoid income distortion, even in those cases in which the payment of taxes is deferred for a relatively long period. * * *"

[2] Alabama-Tennessee is one of the smallest interstate gas pipeline companies in the United States. Its system consists of 140 miles of pipeline extending from a point of connection with its sole supplier, Tennessee Gas Transmission Corp. at Selmer, Tennessee, in an easterly direction to its eastern terminus at Huntsville, Alabama. The company serves 14 small resale customers, all but one of which are municipal distributors and five direct sales customers. As of December 31, 1959, Alabama-Tennessee had a net plant in service of slightly more than $5,000,000 with an accumulated reserve for deferred taxes of $100,000; *roughly one-half of one percent.*

Mr. Justice Brandeis has aptly noted that no accurate measure of plant consumption in any particular year has ever been devised.[3] The almost universal method of handling this inponderable has been to spread equally, over the service life of a property, the cost less the estimated salvage recovery. Prior to the adoption of the Internal Revenue Code of 1954, the law permitted "reasonable allowances" for depreciation for Federal Income Tax purposes and, as a result, most natural gas pipeline companies used the straight-line method of calculating depreciation for book, rate and tax purposes. With the overhaul of the income tax system by the Congress, Section 167 of the Internal Revenue Code of 1954 authorized various methods of accelerated depreciation in computing deduction for income tax purposes. The permissible accelerated methods enable the taxpayer to take, during the first half of the service life of the property, as much as two-thirds to three-fourths of the cost as a tax deduction. During the second half of the service life, the aggregate depreciation charge against taxable income would aggregate only one-fourth to one-third of the cost. Being limited to the net cost of the property, the aggregate depreciation charges against taxable income remain the same whether the straight-line or an accelerated method is used. Similarly, the total income taxes to be paid over the service life of the property will be the same, assuming no change in the tax rate. By its terms, the statute is designed to *alter the timing but not the amount of tax payments.*[4]

In essence, the effect of liberalized depreciation is to borrow, presently, a portion of future tax depreciation allowances and use them in computing the current year's income tax payable. The taxpayer incurs an actual cost in the year in which he elects the use of liberalized depreciation. Under established accounting principles, costs are to be recorded in the periods in which they are incurred and not necessarily in the periods in which cash is disbursed.

It must be concluded therefore, that there is more tax depreciation under liberalized depreciation during the early years and less in the later years; if there are less taxes in the early years there must be greater taxes in the later years. Faster depreciation will merely shift the tax deductions from later to early years—it will not increase the total reduction. The declining balance covers ultimate exhaustion. *The depreciation base may be recovered but once.*

As a matter of law, and as a matter of fact, there has been no reduction and no increase in the amount that may be deducted for depreciation purposes over the life of a given asset. What has been done is to rearrange the tax periods in which deductions may be taken for the recovery of that cost.

The key question is this: Do we use the statute as an excuse for a windfall for the current ratepayers and store up the liability for the future ratepayers and imperil the financial integrity of the company, or do we utilize the reserve method of accounting which is implicit in almost every item with which this Commission deals?

As an accounting matter, there is an expense incurred when there is a difference between the straight-line depreciation taken for general accounting purposes and liberalized depreciation taken for tax purposes producing a temporary withholding or deferral of income taxes. It must be recognized as an expense, although it is not paid out in cash because the business world does not operate on a cash basis; it operates on an accrual basis matching income with expenses for a particular period regardless of when the payment is made. Expense must be matched with income and that can be accomplished only by charging the full tax for a particular period allocable to the revenues for the period. That charge must be reserved and put aside so that when there is lesser depreciation to credit against taxes, the fund in the reserve will be available to make up the deficit.

[4] Emphasis supplied throughout this statement unless otherwise indicated.

Flow-through is totally incompatible with the Congressional purpose in authorizing liberalized depreciation since it treats a deferral of taxes as a permanent saving—it assumes that the benefit achieved in utilizing liberalized depreciation is immediately obtained through such saving.

There can be no dispute that the intent of Congress in enacting Section 167 of the Internal Revenue Code was to expand the economy of this nation by furnishing an inducement to industry to invest in new plant. The absence of any intent to reduce income taxes is also abundantly clear. The legislative history reinforces the natural consequences of the statute, namely, deferring taxes under Section 167.

The clear intent of Congress in enacting Section 167 was that the allowance of liberalized depreciation would accelerate recovery of plant investment costs, assist further plant expansion and stimulate additional plant investment, thus encouraging economic growth and benefiting the national economy.

The purpose of Section 167 is expressed in the legislative history of the 1954 Revenue Act which first permitted liberalized methods to be used in computing an allowance for depreciation. Both the House and the Senate reports[5] stated that the more liberal depreciation allowances for *"all segments of the American economy" should "assist modernization and expansion of industrial capacity, with resulting economic growth, increased production, and a higher standard of living."*

The report of the House Ways and Means Committee stated[6] "In addition to the rearrangement, however, your committee has made many substantive changes in the code. In general, the purpose of these changes has been to remove inequities to end harassment of the taxpayer and to reduce tax barriers to future expansion of production and employment."

The President of the United States, in his annual address to the Congress, supported his request for legislation authorizing liberalized depreciation by stating:[7] "I recommend that the tax treatment of depreciation be substantially changed to reduce the restrictions on new investment, which provides a basis for economic growth, increased production, and improved standards of living. * * * *Faster depreciation, it should be noted, will merely shift the tax deductions from later to early years. It will not increase total deductions.* The change should, in fact, increase Government revenues over the years because of the stimulation which it will give to enterprise and expansion."

The Secretary of the Treasury, testifying before the Senate Committee on Finance in support of the bill which became the Internal Revenue Code of 1954 argued: "Another provision of this bill allows more flexible changes for depreciation. * * * Here, again, the purpose is to stimulate employment, plant expansion, and modernization."[8]

After exhaustive hearings, the House Committee on Ways & Means and the Senate Committee on Finance concluded:[9] "More liberal depreciation allowances are anticipated to have far-reaching economic effects. The incentive resulting from the changes are well timed to help maintain the present high level of in-

vestment in plant and equipment. The acceleration in the speed of the tax-free recovery of costs is of critical importance in the decision of management to incur risk. The faster tax write off would increase available working capital and materially aid growing businesses in the financing of their expansion. For all segments of the American economy, liberalized depreciation policies should assist modernization and expansion of industrial capacity with resulting economic growth, increased production and a higher standard of living."

Section 167 makes no distinction between regulated and non-regulated industry although the legislative history makes it clear that Section 167 is applicable to all tangible and depreciable assets. The House Committee on Ways & Means so concluded:[30] "The liberalized depreciation methods provided in the bill are to apply to all types of tangible depreciable assets, including farm equipment, machinery, and buildings, rental housing, and industrial and commercial buildings as well as machinery and equipment. They are limited, however, to property new in use and, therefore, never before subject to depreciation allowances." The Senate Committee on Finance reached the same conclusion.[31] Chairman Millikin thus explained Section 167:[32] "The new method for depreciation will be available to all taxpayers with depreciable property."

On July 1, 1954 when the U.S. Senate was considering the enactment of H.R. 8300, which ultimately resulted in Section 167, Senator Wayne Morse of Oregon proposed an amendment to provide for normal depreciation procedures.[33] The Senator stated that private utilities which had utilized Section 168 of the Internal Revenue Code (accelerated amortization) had received what he termed a hand out at the cost of the taxpayers. He sought, by his amendment, to prohibit the same result with reference to Section 167. The amendment was defeated and H.R. 8300 was passed by the Senate on July 2, 1954.[34]

The Federal Power Commission has not been delegated power to administer the tax laws. As a matter of law, the taxes that are reduced temporarily under Section 167 are deferrals—not savings. As a matter of statutory law, the Congress has established a technique for deferring taxes and this Commission cannot, under the guise of expertise and discretion, convert what is an expense into a profit. No finding can achieve this absurdity, and no finding can establish as a matter of law that a tax incurred in a particular year, the payment of which is deferred to subsequent years, is not an expense.

The Commission's authority does not extend to matters of economic policy on a national scale nor does it extend to national policies on taxation. On the contrary, the Commission must administer the Federal Power Act and the Natural Gas Act in accommodation with the overriding purposes of national economic and tax policies, wherever expressed in the law.[35]

The Natural Gas Act does not authorize this Commission to rescind the benefits which Congress intended companies to receive and retain pursuant to Section 167. Not the slightest suggestion of a permanent saving appears in any part of the legislative history. The flow-through theory has no relation to the terms of legislative history of Section 167. The Commission being an arm of the Congress, is bound to effectuate and implement the intent of Congress.

The Commission has in the past recognized its duty to effectuate Congressional intent. Since the passage of Section 167 of the Internal Revenue Code, the

[35] See *Southern Steamship* case, 316 U.S. 31, 47.

treatment to be accorded by the Commission to liberalized depreciation deductions in the computation of income taxes for rate-making purposes has been well and soundly settled through a line of Commission and court decisions commencing with *Amere Gas Utilities Co., et al.*, 15 FPC 781, June 30, 1956. In that case the normalization method was employed by which the Commission recognized as a federal income tax expense an amount computed on the straight-line basis and, to the extent that the income tax computed on this basis exceeded the amount of the tax payable on the acceleration basis, the excess was charged as a tax expense and credited to a reserve for deferred taxes.

In its order the Commission states (p. 782): "Admittedly, Section 167 of the Internal Revenue Code contains no specific mandate to create a reserve account for deferred taxes. Nevertheless, we know of no way to effectuate the clear and obvious Congressional intent, except by doing so. * * * The argument that the sums in the reserve account will rightfully belong to the ratepayers, or that the ratepayers will bear any burden they do not now bear, by reason of the creation of the reserve, is wholly erroneous. * * *"

"It is clear that the charging of greater depreciation during the early life of property and the charging of less during the later life operates to create a deferral of income taxes. The fact that there may be continuing additions to plant, year by year, with the result that there will be a balance in the reserve account at all times in the foreseeable future, does not prove that there is no tax deferral. On the contrary, it proves that *there is a continuing tax deferral so long as additional facilities are being installed. This is precisely what Congress intended.* * * *"

"We cannot strike down an act of Congress if we think it unwise, or unnecessary to a particular industry, and enforce it only if it is in accord with our economic and regulatory philosophy. It is undisputed that Section 167 of the Internal Revenue Code does apply, and was intended to apply to regulated natural gas companies, such as Petitioner."

On July 2, 1956, the Commission forwarded letters to the Chairman of the Senate Finance Committee and the Chairman of the House Ways & Means Committee, enclosing copies of the Presiding Examiner's Decision, the Commission's Order in the *Amere* case and the dissenting opinion for the purpose of apprising the Congress that the Commission doubted the need, by the regulated natural gas industry, for the financial incentive provided by Section 167.

Significantly, Congress has left undisturbed the depreciation provisions applicable to pipeline and has not amended either the Internal Revenue Code or the Natural Gas Act to indicate that the Commission has misinterpreted the Congressional intent in its earlier orders. It can be concluded therefore, that Congressional action constitutes approval of the Commission's findings in a most direct fashion.[16] The Commission's prior interpretation that Section 167 was intended, and is still intended, to benefit the taxpayer and not the ratepayer, and that the legislative intent must be given full effect as applied to natural gas pipeline companies, is wholly valid and must be sustained.

Concerning this result, the Commission stated in *El Paso Natural Gas Company*, 22 FPC 260, 267 (1959); "Since that time Congress has not amended the Internal Revenue Code or the Natural Gas Act in this respect, thus affirming [the Commission's] interpretation of its intentions. Compare *United States* v. *American Trucking Association*, 210 U.S. 534, 549; *Signal Oil & Gas Company* v. *Federal Power Commission*, 238 F. 2nd 77 (CA3), certiorari denied, 353 U.S.

---

[16] *Helvering v. R. J. Reynolds Tobacco Company*, 1939, 306 U. S. 110, 115: *U.S. v. Dakota Montana Oil Company*, 1933, 288 U.S. 459, 466; *Panhandle Eastern Pipe Line Company v. Federal Power Commission*, 1956, 232 F. 2d 467.

923. * * *" The Commission held, "There is a deferral of taxes which will not injure (or aid) the consumer, who will reimburse El Paso for taxes both in the early years of the life of a given facility and in the later years just as though El Paso had never utilized liberalized depreciation."

In *United Fuel Gas Company*, 23 FPC 127, 131, 135 (1960)[17] the Commission found that the purpose of Section 167 is to assist expansion of facilities and economic growth and it is not to benefit consumers directly, but by the use of deferral accounting, consumers are to be saved from injury and that there is a deferral in taxes when liberalized depreciation is utilized. Further, "The statutes relating to taxation which we have construed herein must, under elementary principals of statutory construction, be reconciled with those of the Natural Gas Act if such is possible. Our action in this case, as well as in Opinion No. 326, *El Paso Natural Gas Company*, G–4769, gives meaning to all these statutes consistent with their language and with the clear Congressional intent. It is our task to adopt the regulatory plan we use to all applicable laws, and we may not test such statutes by any regulatory scheme we prefer or with which we are familiar, and then discard the statute if they do not seem to fit our plan."

Subsequently, the United States Court of Appeals for the Fifth Circuit affirmed the Commission's decision in the El Paso case, supra, with respect to its treatment of the funds accruing from liberalized depreciation in the case of *El Paso Natural Gas Company* v. *Federal Power Commission*, 281 F. 2nd 567, certiorari denied, 366 U.S. 912, wherein the Appellate Court found (at pages 574–575) that the effect of liberalized depreciation works a tax deferral rather than a tax savings and went on to approve the tax normalization method authorized by the Commission.

The Supreme Court's refusal of review is regarded as particularly significant because the Court of Appeals opinion squarely approved normalization on its merits, without reference to the discretion or expertise of the Commission. Obviously, this issue involves a legal, not factual determination; it is not a matter for the expertise or discretion of a regulatory agency, because it involves a determination of law by the Commission and does not involve an exercise of that peculiar knowledge which the Commission has because of its experience in a particular line.

On March 7, 1961, the Commission issued its Opinion No. 342, *In the Matter of Northern Natural Gas Company*, Docket No. G–19040, *et al.*, 25 FPC 431, wherein the Commission affirmed its position with regard to tax deferrals obtained through the use of Section 167.

In the cases cited and discussed above, the majority does nothing more than attempt to avoid the otherwise controlling effect of these decisions. The continued validity of these decisions has conclusively settled the questions in issue and has given statutory finality to them.[18]

The flow-through principle of accounting and rate regulation is fraught with obvious infirmities. Basically, flow-through accounting for income tax purposes is a rejection of accrual accounting and a reversion to cash-basis accounting. Only the current tax payment is recognized as an expense; no provision is made for any future tax. It is, in fact, a return to the principles which underlie the now thoroughly discredited retirement reserve accounting designed to equalize retirement charges. This archaic theory was based on essentially the same reasoning as that now proffered in support of the flow-through principle. "The public utility industry was the special victim of this misguided theory with

---

[17] Affirmed *Cities of Lexington, et al., v. F.P.C.*, 295 F. 2d 109 (CA4), (1961).

[18] See *Stacey Manufacturing Company* (237 F. 2d 605).

respect to depreciation. Until the depression brought stark reality to the industry, it was confidently assumed by a large segment of the utility industry and regulatory bodies that the retirement, or perhaps the retirement reserve, method would suffice.[19] No systematic procedure to reflect the full consumption of property in the income accounts for the current period and no reserve to measure the accrued consumption in the property accounts were deemed necessary. The distorted accounts, the overstatement of income, and the undermining of confidence yielded dire results for the utilities. The inadequacy and misuse of retirement reserve accounting that preceded sound depreciation accounting "opened the way to financial ruin."[20] It would be ironic were that devastating experience repeated because of a regulatory or judicial assumption that the cash requirements in the future to pay deferred tax expense allocable to current periods will be offset by other items of tax deduction from other properties."[21]

No one factor did as much to contribute to ruin or near ruin for the utility industry than the failure to maintain orderly systematic depreciation accounting. What was then being done at the instance of unthinking managements is now being urged by those purporting to speak for the ratepayer.

An analysis of the flow-through advocates primary argument pointedly reveals its impotence. They assume that, as long as utilities continue to grow rather than retrogress, there can be no need for a deferred tax reserve since the acquisition of new assets will prevent present tax reductions from being offset in later years by an increase in taxes beyond those that would be paid under straight-line depreciation. In short, what appears to be a tax deferral when viewed with relation to any individual asset is, in fact, a permanent saving when considered in light of a company's total operations.

"Such reasoning assumes a continuing or accelerating rate of growth—a circumstance that is hardly universal for utilities as a whole. Nor does it square with the basic considerations of reserve accounting. The reasoning would be equally applicable to charges for depreciation or provisions for pensions, neither of which is a present liability, in strict legal terms."[22] There is not a company in the country that does not make larger provisions today for pensions than they concurrently pay out. Yet the deferral is made and the accumulation established to meet the future liability when it inevitably comes due. It would be folly to eliminate all provision for future payments simply *because anticipatory exactitude cannot be achieved.*

The eminent economist, Prof. James C. Bonbright[23] conclusively counters the flow-through argument by stating: "True, under the plausible but somewhat speculative assumption made by the persons who advocate this argument, the continued use of accelerated depreciation accounting for tax purposes will not later increase the rate of income taxes to a rate higher than that which would follow from the use of straight-line accounting. But even acceptance of this somewhat risky prediction is not enough to disprove the wisdom of building up a deferred tax reserve. For it ignores the fact that companies now practicing accelerated depreciation accounting with respect to assets acquired since the year 1953 (a limitation imposed by the tax law) are presently enjoying the advantage of higher depreciation allowances on their newer assets without yet suffering any substantial off-setting disadvantages of the lower depreciation allowances on their older assets. This is a fictitious temporary advantage that cannot be expected to persist longer than a few more years. And it forbodes a probable later increase in effective income taxes assuming the continuance of the present 52% official rate, even if this increase should not get beyond the rate that would apply under straight-line depreciation accounting. A major purpose of the deferred tax reserve . . . is to provide both the companies and the later consumers with protection against this probable increased burden of taxation."

---

[19] The retirement reserve method, authorized by the Uniform System of Accounts for Electric Utilities, in 1922, was designed to spread the estimated retirement loss of "important retirement * * * but with due regard for amount of earnings available for this purpose in each year." [22] Swiren, *Op. Cit.,* 28 U. of Chi. L.R. at 637.

[23] Emeritus Professor of Economics, Columbia University—Article in Public Utilities Fortnightly, Vol. 69, May 10, 1962, No. 10 pp. 657–658.

In rejecting the offsetting theories advanced against deferred tax charges, Professor Maurice Moonitz of the University of California had this to say: "The fact that a going concern always has debts which are never 'really' paid off, because any given debt, when satisfied, is replaced by a new debt, is no argument for eliminating the debts from the financial statements."[24]

The Commission's positive assurance, "that the pattern of growth in demand and plant capacity with respect to Alabama-Tennessee and in the gas pipeline industry generally will continue for the reasonably foreseeable future,"[25] emphasizes the complete futility of the case for flow-through. Witness the following declaration submitted to the Supreme Court of the United States by the Commission, through the Solicitor General:

> Continued expansion of the indefinite future can more readily be assumed for the electric power and telephone industries than for gas pipelines, which are dependent on the continuing discovery of exhaustible reserves. * * *[26]

I would point out, however, that even in the electric power industry the advent of automation, the expanding influence of electronic development, and the research in direct conversion of heat or chemical energy into electricity deny any assurance of constancy in plant growth.

"The ultimate exhaustion of the supply is inevitable in the case of all natural gas companies." *F.P.C.* v. *Hope Natural Gas Company*, 320 U.S. 591, 606 (1944). What may appear to be a reasonable assumption of growth when applied to other industries, amounts to a false premise when applied to natural gas pipeline companies. You can build pipelines but you cannot build reserves. Neither the right to use liberalized depreciation nor any other tax incentive will induce a company to invest in capital assets for improvement or expansion beyond its reasonably appraised needs.

Regardless of whether the company will be compelled later to pay increased taxes, the fact remains that Congress intended, and the courts have held that companies should now have additional funds available. Section 167 was intended to benefit industry as a whole rather than consumers. Consumer interests are protected so long as they are not required to reimburse the utility for taxes in excess of those computed by the use of the straight-line method. Normalization is not a capital contribution made by the ratepayer—it is a loan from the Government which would be entitled to full normal taxes in the absence of Section 167. Should tax rates be reduced, the accumulated reserve remains under the control of the Commission which has the power to assure customers their full share of benefits from the accumulated reserve.

[24] Moonitz, *Income Taxes in Financial Statements,* 32 Accounting Rev. 181 (1957).

[25] *Supra* p. 218.

[26] Brief of the Federal Power Commission in Opposition to Petition for Writ of Certiorari, *California* v. *F.P.C.,* October term—1960, 599–615, certiorari denied, 366 U.S. 912 (1961).

The majority argues that there will not be an increased tax liability, but, if there should be, it can be met by increased rates. This argument fails under critical scrutiny. Both legal and economic principles militate against the reliability of such an assumption.[27] There can be no assurance that future Commissions will be willing to impose upon future consumers the onus of income taxes attributable to present taxable income. As the Illinois Commerce Commission said *In the Matter of Union Electric Co.*, 29 P.U.R. 3rd 177, 193–94: * * * "We sincerely doubt that a utility could reasonably expect that future increased income taxes resulting from the earlier deduction of declining balance depreciation for income tax purposes will be allowed in future rate determinations. * * *" This was also the conclusion of the Circuit Court in El Paso Natural Gas Co., *supra:* "* * * If the company were charged for rate making purposes with such 'savings' during the year in which the depreciable assets were acquired, and the rate resulting from such treatment of taxes was thereafter used for later years, as is here the case, it is clear that the Company would be paying higher taxes in subsequent years than in the test year, but would not be entitled to an adjustment in rates to cover the increase. * * *"

From the economic point of view, it simply cannot be assumed that, regardless of the state of the economy or of competitive technology, rates can always be raised to produce additional total revenues at any time in the future when such revenues are needed. Witness the state of the economy in the early 1930's, when rate increases might well have produced a geometric decline in total revenues.

The impact of this decision could well impair the financial integrity of any company that continues to use liberalized depreciation under the mandatory requirement of flow-through resulting in a detriment rather than a benefit to the consumer.[28] In practical effect this Commission's order can only be deemed to be irreparable.

Any use of capital involves all the hazards and risks of business enterprise including the risk that capital may not be available or available only at exorbitant costs at the time repayment is required. The majority can only be certain that there will be no impairment of financial integrity if, as they have assumed, there will be no future risk that is not provided for. There can be no such assurance when flow-through is required since flow-through is necessarily based upon the assumption that deferred taxes will never become payable in the future. No matter what platitudes are offered this contention *cannot be proven.* If prudent management believes that there is a future risk, this Commission must not, on the basis of assumptions that cannot be proved, deny management the right, a right conferred by the Congress of the United States, to guard against that risk.

However, when flow-through is adopted, with a consequent reduction in rates, there will be an increase in capital costs which would approximately offset any alleged benefit to the consumer. If utilities are not allowed to normalize liberal-

---

[27] Future ratepayers cannot be called upon to make up past losses. *Board of Public Utility Commission* v. *New York Telephone Company,* 271 U.S. 23 (1926).

[28] See *City of Alton* v. *Commerce Commission,* 19 Ill. 2076, 165 N.E. 2nd 513, 521–522: "If we could see clearly into the future and say with certainty that continued expansion was certain, and countervailing considerations were nonexistent, we would hold that the Commission may not permit current charges for a liability that will never arise * * * Rate regulation is a continuing process; greater experience may bring greater wisdom in dealing with these problems. * * * We think it permissible for the Commission to *safeguard the financial integrity of* utilities by recognizing as present expenses those tax liabilities which are deferred by use of accelerated depreciation for federal tax purposes."

ized depreciation taxes, they often elect to use straight-line depreciation for tax purposes.[29]

Moreover, it is fair to assume that flow-through accounting would tend to increase the reported earnings of all companies using liberalized depreciation; market prices of securities would not increase in relative proportion to reported earnings, since the quality of the "increased" earnings under flow-through accounting is much poorer than the quality of earnings under tax normalization accounting.

Consider the net result: Market prices of stocks of utility companies which use flow-through accounting tend to discount the added uncertainty inherent in the reported flow-through earnings which disregard the exhaustion of depreciation deductions and the increase in liability for taxes in later years. Informed investors must always investigate the quality of reported earnings and the prospect of future variations in earnings from levels currently reported. A decision to switch from normalization to flow-through would seriously affect the ability of each company to attract capital. "The FPC's tendency toward increasingly more stringent regulation of the interstate pipeline companies made the investment outlook for these equities less attractive than in former years."[30]

I strongly advocate that the Commission continue its acceptance of deferred tax accounting alike for purposes of report making and of rate regulation. Further, the resulting deferred tax reserve should serve only as a measure of financial protection and be excluded from the rate base. Since this capital represented by the reserve for deferred Federal income taxes is available to the company without charge, no recovery is required for that component in estimating the cost of capital. The full utilization of the capital provided by the reserve thus inures to the ratepayer without expense. This is warranted both by the principle that the utility should operate on the most economical basis consistent with good service and sound finance and the fact that the funds for normalizing the tax expense and accumulating the reserve are derived from consumers rates. The cost of service concept has proven to be sound, and, since there is no cost for this capital, none should be charged. This concept of normalization at zero return creates interest free capital which inures to the benefit of the ratepayer.

Many companies have been able to raise more funds internally as a result of liberalized depreciation and thus reduce their trips to the capital market. Certainly the increase in internally generated funds reduces industry's need for outside financing.

Cost of capital, both debt and equity, is a reimbursable expense to be recovered by revenues yielded by proper rates of charge. When costs of capital rise or fall, the revenue level which rates of charge must be fashioned to produce, requires appropriate adjustment. By the same token, when capital is provided, without cost, the company should not be entitled to impose a charge for money cost upon the consumer. Both investors and consumers share in the enhanced stability and improved competitive position in the financial markets derived from an increasing fund of interest-free capital.

Normalization assures equality of treatment to present and future customers. Each pays its fair share of depreciation and income tax; each benefits from the interest-free capital the Congress has provided. ***It avoids an unrealistic wind-***

fall to present customers and a reservation of unfair burdens to future customers. The normalization and reserve principles strengthen the capital structure of the utility and enhance its financial stability, facilitating financing of new capital requirements at reasonable costs. This is wholly in accord with the public interest we are sworn to protect. Any other result amounts to intolerable regulation.

O'CONNOR, Commissioner, *dissenting:*

It is axiomatic that the majority's decision, which does not compel jurisdictional industries to utilize Section 167 but which penalizes them if they do, will only result in these industries returning to straight-line depreciation. Section 167 will then become a useless anachronism, and this Commission will have on its record an opinion which not only defeated specific congressional intent, but which also forced an industry-regulator impasse. Thus, I wholeheartedly join Vice-Chairman Woodward's conclusion that normalization is the only proper regulatory treatment of the deferred tax reserves generated by Section 167. I am persuaded, however, not only that these tax deferments should be allowed to accumulate, but also that a return on these deferments should be allowed. The only question is: How much?

In the *Northern Natural Gas Company* case, a study was presented by Chairman Kuykendall which indicated that a 3.27075% return on deferred tax reserves generated the same net yield to the company as would a 6.25% return on an identical amount of capital acquired from normal industry sources, but with a 36% saving to Northern's ratepayers.[1] Although this study suggests that a return of 3% could justifiably be allowed on these reserves, recent judicial review has affirmed the propriety of a 1½% return.[2] Persuaded that this rate is neither so high as to impose a burden upon the consuming public, nor so low as to circumvent the purpose of Section 167 I respectfully conclude that the Commission further errs in not allowing a return of 1½% on deferred tax reserves.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP64-109

ORDER PERMITTING WITHDRAWAL OF JOINT PETITION TO INTERVENE, DENYING PETITION TO INTERVENE, AND AMENDING ORDER PERMITTING INTERVENTION

(Issued February 3, 1964)

On January 20, 1964, the Fuels Research Council, Inc., National Coal Association, Mid-West Coal Producers Institute, Inc., and United Mine Workers of America (Coal Interveners) filed a notice of withdrawal of their joint petition to intervene in this proceeding. In their notice of withdrawal the Coal Interveners recite the procedural history regarding the filing by Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) of its application in Docket No. CP64-109 and note that they were permitted to intervene in this proceeding by the Commission's order issued herein on December 18, 1963, subject to the Commission's subsequent order issued January 17, 1964, indicating that they had the burden of coming forward with evidence to prove the allegations of economic injury contained in their joint petition to intervene because such allegations had been challenged by Michigan Wisconsin.

---

[1] 25 FPC 431, 447-48 (1961).

[2] *Panhandle Eastern Pipe Line Co.* v. *F.P.C.* 316 F. 2d 659 (D.C. Cir. 1963), cert. denied 375 U.S. 881 (1963) where the "sole question" was the rate of return that should be allowed on deferred income tax reserves generated by Section 167.

The primary reason given for their request to withdraw is that (Notice of Withdrawal, p. 3):

> * * * it has been represented to these Intervenors that should the Commission not permit the use of the facilities in question for delivery of gas to Weston, Public Service would convert its Pulliam generating station located at Green Bay, Wisconsin, from coal to natural gas and would use the gas which would otherwise be consumed at Weston in Pulliam. * * * Assuming the accuracy of such representations, it would appear that should the use of the facilities at Weston, as proposed by Mich. Wis. not be approved, the boiler fuel gas usage involved would merely be shifted from one boiler station to another and the time and effort of the Commission and the parties, including these Intervenors, will have been wasted. * * *

On January 20, 1964, Milwaukee Gas Light Company (Gas Light) filed a petition for leave to intervene in this proceeding. Gas Light states that its late filing was made because it was unaware until after January 9, 1964, of the issues Iowa Southern Utilities Company had mentioned in its petition to intervene which had been filed in Docket No. CP64–109 on January 6, 1964. The "issues" to which Iowa Southern referred in its petition to intervene were the same matters which had been discussed in the notice of application issued December 18, 1963, in Docket No. CP64–109, providing for the filing of petitions to intervene on or before January 9, 1964. The reason given by Gas Light for the late filing of its petition to intervene does not constitute the "extraordinary circumstances" which would justify the Commission's granting of Gas Light's petition to intervene pursuant to Section 1.8(d) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Good cause exists to permit the Coal Interveners to withdraw their joint petition to intervene and to amend the order issued herein on December 18, 1963, so as to delete therefrom the granting of the Coal Interveners' petition to intervene in this proceeding.

(2) Good cause has not been shown, pursuant to Section 1.8(d) of the Commission's Rules of Practice and Procedure, to grant Gas Light's petition to intervene filed January 20, 1964.

The Commission orders:

(A) The Coal Interveners are hereby permitted to withdraw their joint petition to intervene filed herein on November 27, 1963.

(B) Milwaukee Gas Light Company's petition for leave to intervene, filed January 20, 1964, is hereby denied.

(C) The order issued December 18, 1963, in Docket Nos. CP62–57 and CP64–109 is hereby amended by deleting therefrom all references to the Coal Petitioners' joint petition to intervene, particularly such language as is contained in paragraph (F) of said order specifically permitting the Coal Interveners to become parties to this proceeding.

(D) In all other respects, the order issued December 18, 1963, in Docket Nos. CP62–57 and CP64–109 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; THE ATLANTIC REFINING COMPANY, DOCKET NO. G-11904, ET AL.

ORDER DENYING MOTION FOR MODIFICATION

(Issued February 3, 1964)

On December 10, 1963, The Atlantic Refining Company (Atlantic) filed a motion for modification of our order of November 27, 1963, in the above-entitled proceedings. Atlantic requests that the November 27 order be amended to state that the certificate issued in Docket No. G-11904 is issued at an initial rate of 17.5¢ per Mcf[1] rather than at 17.0¢ per Mcf as stated in that order.

At the time Atlantic filed its certificate application in Docket No. G-11904, February 6, 1957, the sale in question was covered by the Operator's (Cities Service Production Company (Cities Service)) certificate issued in Docket No. G-2721 on November 12, 1954, and Cities Service Rate Schedule No. 1. The initial rate under that certificate was 17.0¢ per Mcf but the effective rate (being collected subject to refund in Docket Nos. G-9510 and G-11325) at the time of Atlantic's filing was 17.8¢ per Mcf. Therefore, when Atlantic chose to file its separate application for a certificate, its first rate filing, related to the application in Docket No. G-11904 (R.S.-166), was treated as an increased rate, suspended, and allowed to go into effect subject to refund in Docket No. G-12159. Subsequently, Atlantic filed additional rate increases which have gone into effect subject to refund in Docket Nos. G-13440, G-16518, G-19536, R161-131, R162-77 and R163-93.

Atlantic cites Note (1), Appendix A, of the Commission's order approving settlement proposal in *Cities Service Production Company*, 28 FPC 1114, 1119 (1962) as authority for its contention herein. There, under a *company wide rate settlement* Cities Service refunded all amounts collected above 17.5¢ per Mcf under its Rate Schedule No. 1.

At the outset it must be noted that Atlantic does not propose to settle the matters in its rate suspension proceedings related to Rate Schedule No. 166; it merely seeks a certificate for a sale which will remain subject to the various rate suspension proceedings. Indeed, Atlantic states (Motion p. 2):

> * * * While this matter has no present significance, and even though it conceivably may have no later significance, Atlantic believes that the modifications proposed herein should be accomplished to avoid any possibility of later controversy.

We agree with Atlantic that this matter has no present significance since none of Atlantic's rate suspension proceedings are before us at this time. Atlantic's rate matters will be decided in Area Rate Proceeding, AR61-2, and not in this certificate proceeding. The certificate rate of 17.0¢ per Mcf was stated in the order of November 27, *supra*, so that Atlantic's initial price would be the same as Cities Service's last rate not subject to refund at the time that Atlantic elected to file its separate rate schedule. Cf. *Graridge Corporation (Operator), et al.*, Docket No. G-19246, *et al.*, Opinion No. 408, issued October 31, 1963, 30 FPC 1156.

The Commission finds:

The arguments set forth in the Motion For Modification filed in the above-captioned proceedings on December 10, 1963 present no sufficient reason for changing our determinations made in our order of November 27, 1963.

---

[1] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

The Commission orders:

The motion for modification filed by Atlantic in these proceedings on December 10, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; CONTINENTAL OIL COMPANY, DOCKET NOS. G-16840, G-17521, AND G-20242

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued February 3, 1964)

On January 8, 1964, Continental Oil Company (Continental) filed a motion for reconsideration of our order of December 18, 1963, denying Continental's motion for severance of the above-captioned Continental dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*, (hereinafter referred to as the Union Texas Proceeding) and rejecting Continental's offer of settlement. On January 24, 1964, Continental filed a supplement to its motion for reconsideration.

Although most of the terms of the Continental Settlement proposal are similar to the terms of other recent Union Texas Proceeding settlements,[1] the refund provisions proposed by Continental would result in substantially less monies being refunded than would be refunded had Continental followed the pattern established by the Humble Oil & Refining Company (Humble) settlement,[2] and, with one exception, followed in all Union Texas Proceeding settlements since.[3] The Humble settlement provided for full refunds for monies in excess of the settlement rate collected prior to the settlement effective date, April 1, 1963, in dockets in which the temporary certificates contained refund conditions and no refunds of such excesses in dockets in which the temporary certificates did not contain express refund conditions. Continental proposes to make refunds of ⅔ of the amounts above the settlement rates collected since the dates of initial delivery under all the temporary authorizations in these dockets. The temporary authorizations heretofore issued in Docket Nos. G-17521 and G-20242 contain express refund conditions while the temporary authorization in Docket No. G-16840 contains no refund condition.

As noted above and in our order of December 18, 1963, Continental's proposal would result in less money being refunded to its pipeline purchasers than would be refunded had it followed the pattern of the recent Union Texas Proceeding settlements. We are of the view that, except in unusual circumstances, all parties who chose to settle should be treated alike insofar as it is possible to do so. Continental has not shown any unusual circumstances which would allow a departure from the Humble pattern.

---

[1] See *e.g.* orders issued August 7, 1963, (Humble Oil & Refining Company) and October 9, 1963, (Gulf Oil Corporation and Socony Mobil Oil Company Inc.) in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, 30 FPC 456 and 979 respectively.

[2] See Footnote 1, *supra.*

[3] Since our approval of the Humble Settlement, we have approved the settlement of some 140 Dockets which followed the Humble pattern. The one exception was our order of December 18, 1963, in the Union Texas Proceeding concerning Docket Nos. G-14227 and CI61-1412 involving Union Texas Petroleum, a Division of Allied Chemical Corporation and Joseph E. Seagram & Sons, Inc., respectively. This was a unique case involving a court remanded Docket (*Public Service Commission of New York* v. *F.P.C.*, 361 U.S. 195) which was settled in July 1962 (*Texaco Inc.*, 28 FPC 247) except for acreage which had been assigned. Our order of December 18, 1963, in the Union Texas Proceeding approved the settlement for the assigned acreage upon substantially the same terms as the *Texaco Inc., et al.*, settlements including two-thirds refunds of excess monies collected from the date of initial delivery through June 30, 1962, and full refunds of excesses collected thereafter.

The Commission finds:

The arguments set forth in the motion for reconsideration filed in the above-captioned proceedings on January 8, 1964, as supplemented on January 24, 1964, present no sufficient reason for changing our determinations made in our order of December 18, 1963, herein.

The Commission orders:

The motion for reconsideration filed by Continental Oil Company in these proceedings on January 8, 1964, as supplemented on January 24, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; PAN AMERICAN PETROLEUM CORPORATION, DOCKET NOS. G-16946, G-19223, G-20049, CI60-133, CI60-777, CI61-143, CI61-355, CI61-808, CI61-974, CI62-724, CI62-782, CI62-1341, G-17977, CI61-127, G-10022; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. RP63-3

ORDER UPON RECONSIDERATION REISSUING ORDER IN PART AND DENYING MOTIONS

(Issued February 3, 1964)

On July 30, 1963, Pan American Petroleum Corporation (Pan American) filed a motion whereby it sought to settle the issues in its dockets which were consolidated with the proceedings in Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* By order issued November 19, 1963, 30 FPC 1324, we approved the Pan American settlement, but pointed out that our approval of the settlement would have the effect of confirming the legality of Pan American's collecting the 23.55¢ per Mcf rate[1] (collected under temporary authorization) in Docket No. G-16946, during the period from the date of initial delivery through March 31, 1963, because under the settlement proposal, no refunds would be paid for amounts collected during this period above the settlement rate of 20.625¢ per Mcf. Thus, we noted, approval of the settlement might have the effect of validating the triggering of other producer rates, at least during the period of the Pan American temporary authorization. Accordingly, we provided in that order that objections might be filed by parties to the proceeding.

We further provided (ordering paragraph (N)) that if objections were filed, the effectiveness of that order would be automatically stayed pending further orders of the Commission. As discussed more fully below, various parties have filed objections to the order of November 19, insofar as it concerns Docket No. G-16946 (Rate Schedule No. 242) and, accordingly, the order has been stayed.

Pursuant to ordering paragraph (N) of our order of November 19, responses were filed by Interveners Public Service Commission of New York (PSC) on

---

[1] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

December 16, 1963, Consolidated Edison Company of New York, Inc. (Consolidated Edison) on December 19, 1963, the United Gas Improvement Company (UGI) and Long Island Lighting Company (Long Island) on December 20, 1963, and by Philadelphia Electric Company on December 23, 1963. Pan American filed a motion for modification of the November 19, 1963, order on December 20, and, on December 27, filed a response to the objections filed by Interveners.

Pan American and the Interveners argue that the settlement was not intended to have any effect on issues in other proceedings and should not be construed by the Commission to have such effect. Pan American, UGI, Long Island and Consolidated Edison therefore request that we delete from our November 19 order all reference to any effects which the Pan American settlement might have on other proceedings.

Deletion of such language from the November 19, 1963, order would not change the views set out in that order, i.e., that approval of the settlement of Docket No. G-16946 without refunds back to the date of initial delivery confirms the 23.55¢ per Mcf rate for the period from the date of initial delivery through March 31, 1963.

PSC requests that the Commission, in the alternative,

(1) reject the Pan American Settlement *in toto;* or

(2) reject the settlement of Docket No. G-16946; or

(3) defer consideration of the settlement pending final determination of *P.S.C.* v. *F.P.C.*, CADC No. 17582 (*Skelly Oil Company*, 28 FPC 401, 28 FPC 1065).[2]

Philadelphia Electric agrees with PSC's second alternative. On the other hand, Pan American proposes that (should we deny its motion for modification) we accept its offer of settlement for all dockets except Docket No. G-16946, sever Docket No. G-16946 from the Union Texas proceeding,[3] "continue" Docket No. G-16946 subject to the offer of settlement and stay the order of November 19, 1963, insofar as it concerns Docket No. G-16946, pending further direction from the Commission. (Pan American does not state what the further direction might be.)

The parties have expended time and effort in arriving at the settlement of fifteen dockets, and the problems involving one docket should not be allowed to stop the settlement of the other fourteen. Therefore, we shall, in accordance with PSC's second alternative and the suggestion of Philadelphia Electric, reissue the order of November 19 conditionally approving the Pan American settlement except insofar as that order relates to Docket No. G-16946. The matters in Docket No. G-16946 will remain consolidated for disposition in the Union Texas proceeding.[4] This action substantially grants Pan American's alternative request, except that we shall reject the settlement proposal insofar as it relates to Docket No. G-16946 rather than "continue" it. Under the circumstances it would serve no useful purpose to "continue" it. Should circumstances change prior to ultimate conclusion of the Union Texas proceeding, Pan American and the other parties would be free to submit another proposal regarding this docket.

In view of this change from its proposal, we shall allow Pan American an opportunity to object to the terms of this order. Should Pan American so object, the settlement proposal shall be deemed rejected *in toto* and the matters will remain consolidated for ultimate decision in the Union Texas proceeding.

---

[2] The Court's decision affirming in part and remanding in part was issued on January 23, 1964, 329 F. 2d 242; cert. denied, 377 U.S. 963 (1964).

[3] Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*

[4] Presiding Examiner's decision issued January 14, 1964. The Secretary's notice of January 24, 1964, provides that parties have until February 17, 1964, to file exceptions thereto.

The Commission orders:

(A) Subject to the provision of paragraph (D) below, the "Order Severing Proceedings, Conditionally Issuing Certificates of Public Convenience and Necessity and Amending Order Issuing Certificate", issued in the above-captioned matters on November 19, 1963, is hereby reissued, except insofar as it relates to Docket No. G-16946 and except for ordering paragraph (N), effective as of the date of issuance of this order.

(B) The motion for severance filed by Pan American Petroleum Corporation on July 30, 1963, insofar as it relates to Docket No. G-16946 is hereby denied.

(C) The Motion for Modification filed by Pan American Petroleum Corporation on December 20, 1963, is hereby denied.

(D) Should Pan American Petroleum Corporation within fifteen days from the date of issuance of this order file with the Commission, and serve copies upon the parties to this proceeding, a notice in writing that it does not accept the terms of this order, then, Pan American's motion for severance and for approval of settlement proposal filed July 30, 1963, shall be deemed denied *in toto*, effective as of the date of such filing of notice.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP64-79

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 4, 1964)

On September 30, 1963, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP64-79 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 of miscellaneous field facilities to enable Applicant to take into its certificated main transmission pipeline system natural gas which will be purchased from producers thereof in the general area of Applicant's existing system, and to operate such facilities only to take natural gas from producers thereof who have received authorization from the Commission to sell natural gas to Applicant, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of such facilities is not to exceed a maximum of $4,169,900, with no single project to exceed a cost of $500,000, which costs Applicant proposes to finance from funds on hand, from cash generated by operations and from internal sources.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 31, 1964, the Commission on its own motion received and made a part of the record of this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $4,169,900, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Arkansas Louisiana Gas Company, to construct during the calendar year 1964 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $4,169,900, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITY OF OLIVET, KANSAS, DOCKET NO. CP64–100

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 4, 1964)

On October 31, 1963, the City of Olivet, Kansas (Applicant), filed in Docket No. CP64–100 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities Service) to establish physical connection of its transportation facilities with the facilities which the Applicant proposes to construct and operate and to sell and deliver to Applicant its third year peak day and annual requirements of 107 Mcf and 9,370 Mcf, respectively.

Applicant is a municipality as defined by Section 2 of the Natural Gas Act. It proposes to construct distribution facilities in Olivet and a lateral line approximately 1.5 miles in length to connect with the main transmission line of Cities Service at a point in Osage County, Kansas. There is no gas service presently in the community.

On November 12, 1963, Cities Service advised the Commission that it has no objection to rendering the proposed service of natural gas to the Applicant.

Notice of the filing of the application was issued on December 27, 1963, and was published in the Federal Register on January 4, 1964, (29 F.R. 113). The Kansas State Corporation Commission filed notice of intervention in this proceeding but by telegram received on January 17, 1964, stated that said intervention was in support of the application and requested expeditious granting thereof. No other petition to intervene or protest to the granting of said application has been filed.

The Commission finds:

(1) Applicant, City of Olivet, Kansas, is a municipal corporation organized and existing under the laws of the State of Kansas and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas within its boundaries and environs.

(2) Cities Service Gas Company is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(3) It is necessary and desirable in the public interest to direct Cities Service Gas Company to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant as hereinbefore described, all as more fully described in the application, and to sell and deliver to Applicant up to 107 Mcf of natural gas per day at 14.73 psia.

(4) Applicant should forthwith begin construction of the proposed facilities and be prepared to commence taking natural gas from Cities Service within one year from the date of issuance of this order.

The Commission orders:

(A) Cities Service Gas Company be and it is hereby directed to establish physical connection of its transmission facilities with the facilities to be constructed and operated by Applicant as hereinbefore described, together with such metering, regulating and appurtenant facilities as may be required and to sell and deliver to Applicant up to 107 Mcf of natural gas per day.

(B) Applicant shall be prepared to receive natural gas from Cities Service within one year from the date of issuance of this order and shall execute a service agreement with Cities Service in accordance with the Commission's rules and regulations.

(C) Cities Service shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP61-106; PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI62-1034

ORDER DENYING APPLICATIONS FOR REHEARING AND GRANTING MOTIONS FOR STAY

(Issued February 4, 1964)

On December 12, 1963, the Commission issued Opinion No. 413 and accompanying order in these proceedings, 30 FPC 1477, finding that 2.63 miles of pipeline built by Tennessee Gas Transmission Company (Tennessee) to connect its reserves in the Bastian Bay field to its interstate system are jurisdictional facilities built without authorization, and that the lease-sale transaction by which Pan American Petroleum Corporation (Pan American) transferred these reserves to Tennessee is a sale of natural gas subject to the Commission's jurisdiction and similarly without authorization. By paragraph (A) of its order, the Commission directed Tennessee to make such filings and take such steps as are necessary to bring it into compliance with the Natural Gas Act (Act) within six months. A similar provision in paragraph (B) directed Pan American to comply with the Act within a period of six months. Paragraph (C) directed Tennessee to maintain separate accounts of its costs relating to the Bastian Bay operations.

Application for rehearing of Opinion No. 413 and accompanying order was filed by Pan American on January 2, 1964, together with a motion for stay of ordering paragraph (B) pending rehearing, and, if the relief sought is not granted, until six months after the issuance of final mandate upon completion of court review proceedings under Section 19(b) of the Act. On January 10, 1964, Tennessee also filed application for rehearing and requested stay of the opinion and order pending rehearing and review.

The Commission finds:

(1) The applications for rehearing filed by Tennessee and Pan American present no new facts or principles of law which were not considered by the Commission when it issued its Opinion No. 413 on December 12, 1964, or which having now been considered warrant any change or modification of said opinion and accompanying order, except as found and ordered below.

(2) It is appropriate that upon filing of court review proceedings by Tennessee or Pan American the provisions of ordering paragraph (A) relating to Tennessee or of ordering paragraph (B) relating to Pan American, as the case may be, be stayed until six months after the issuance of final mandate upon completion of the court review proceedings.

The Commission orders:

(A) The applications for rehearing of Opinion No. 413 and accompanying order filed by Tennessee and Pan American are hereby denied.

(B) Upon filing of court review proceedings under Section 19(b) of the Act by Tennessee, the provisions of ordering paragraph (A) of the order accompanying Opinion No. 413 shall be stayed until six months after the issuance of final mandate upon completion of the court review proceedings.

(C) Upon filing of court review proceedings under Section 19(b) of the Act by Pan American, the provisions of ordering paragraph (B) of the order accompanying Opinion No. 413 shall be stayed until six months after the issuance of final mandate upon completion of the court review proceedings.

COMMISSIONER WOODWARD *dissenting.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, UNITED NATURAL GAS COMPANY, AND NORTH PENN GAS COMPANY, DOCKET NO. CP64-103

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 4, 1964)

On November 4, 1963, Transcontinental Gas Pipe Line Corporation (Transco), United Natural Gas Company (United) and North Penn Gas Company (North Penn) hereinafter referred to as (Applicants) filed a joint application in Docket No. CP64-103 for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing minor additional development of the Wharton Storage Field located in Potter and Cameron Counties, Pennsylvania,[1] all as more fully described in the application which is on file with the Commission and open to public inspection.

The second Intermediate Development Program of the Wharton Storage Field, which is the subject of the instant application, relates to the development of the Oriskany Horizon of that field for the purpose of increasing the deliverability thereof for the rendition of service to existing customers.

No added facilities are proposed. Transco will supply an additional 1,090,000 Mcf of cushion gas in the field, which supply will cost $353,269. This will provide for an increase in deliverability of 10,043 Mcf per day over the present volume of 130,425 Mcf per day and the prorated increase to each of the Applicants will be 8,818 Mcf for Transco, 980 Mcf for United and 245 Mcf for North Penn.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 31, 1964, the Commission on its own motion received and made a part of this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicants, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas; United

---

[1] The initial development was authorized by Commission Order issued January 18, 1963, 29 FPC 118, as amended by order issued February 1, 1963, 29 FPC 210. The first intermediate development was authorized by Commission Order issued November 20, 1963, 30 FPC 1335.

Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania; and North Penn Gas Company, a Pennsylvania corporation having its principal place of business in the Borough of Port Allegany, McKean County, Pennsylvania, are "natural-gas companies" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The Intermediate Development Program No. 2 for the Wharton Storage Field, as more fully described in the application in this proceeding, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The Intermediate Development Program No. 2 for the Wharton Storage Field as proposed by Applicants, Transcontinental Gas Pipe Line Corporation, United Natural Gas Company, and North Penn Gas Company in Docket No. CP64–103 is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, Transcontinental Gas Pipe Line Corporation, United Natural Gas Company, and North Penn Gas Company to further develop and operate the Wharton Storage Field to the extent provided for in Intermediate Development Program No. 2, all as more fully described in the subject application in Docket No. CP64–103.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon the Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP64–106

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 4, 1964)

On November 6, 1963, Transwestern Pipeline Company (Applicant) filed in Docket No. CP64–106 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation and operation for a period of six months beginning on November 1, 1963, of metering and regulator facilities and the sale of up to 3,000 Mcf of natural gas per day to High Plains Natural Gas Company (High Plains) for distribution and resale in the City of Spearman, Texas, all as more fully described in the application which is on file with the Commission.

High Plains will use the gas to assure maintenance of adequate service to its customers during the current winter season.

The estimated cost of the proposed facilities is $200.

By letter dated November 27, 1963, Applicant was granted a temporary certificate to install the proposed facilities and to sell and deliver gas to High Plains Natural Gas Company until April 30, 1964.

The subject sale will be made pursuant to a service agreement between the parties dated September 26, 1963, which provides that the rates shall be as set forth in Applicant's existing Rate Schedule SG–1.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 31, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G–14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the installation and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The installation and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to install and operate the proposed facilities and to sell and deliver natural gas for a period ending April 30, 1964, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

VALLEY GAS TRANSMISSION, INC., DOCKET NO. CP64-102

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 4, 1964)

On November 1, 1963, Valley Gas Transmission, Inc. (Applicant), filed in Docket No. CP64-102 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be produced or purchased from producers thereof in the general area of Applicant's existing system, at a total cost not to exceed a maximum of 500,000, with no single project to exceed a cost of $50,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 31, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Valley Gas Transmission, Inc., a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 27, 1962, in Docket No. CI60-542 (28 FPC 237).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $50,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Valley Gas Transmission, Inc., to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $50,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

BROOKHAVEN OIL COMPANY, DOCKET NO. RI64-358

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued February 5, 1964)

On December 9, 1963, Brookhaven Oil Company (Brookhaven) filed a motion for reconsideration of the Commission's order issued November 29, 1963, in the above-designated proceeding, providing for hearing on and suspension of the proposed change in rate designated as Supplement No. 21 to Brookhaven's FPC Gas Rate Schedule No. 3. In support of its motion Brookhaven states that it was improper for the Commission to consider the minimum guarantee of 1.0¢ per Mcf for liquids as part of the increased rate for the sale of natural gas in interstate commerce; therefore, the Commission should modify its order of November 29, 1963, by permitting Brookhaven to charge and collect the proposed rate without such rate being subject to suspension.

In Opinion Nos. 390 (29 FPC 1175) and 390-A (30 FPC 479), *El Paso Natural Gas Company, et al.*, Docket No. G-17849, *et al.*, we held that a contractual provision providing for a minimum guarantee for liquids should properly be considered as a component of the rate for the jurisdictional sale of gas in determining whether the rate was in excess of the applicable ceiling. Dealing specifically with this question in Opinion No. 390-A, page 480, we referred to the Examiner's decision for the rationale of our determination. In this connection, see the Examiner's decision issued September 4, 1962, therein (29 FPC 1191), pages 1207 and 1208. Consistent therewith, in the suspension order in Docket No. RI64-358, we treated the proposed increased rate as 14.0¢ per Mcf, *i.e.*, 13.0¢ per Mcf plus 1.0¢ per Mcf minimum guarantee for liquids.

The Commission finds:

The motion for reconsideration filed by Brookhaven on December 9, 1963, in the proceeding in Docket No. RI64-358, sets forth no new facts or legal considerations which were not fully considered prior to the issuance of our order of November 29, 1963, or which now having been considered warrant the modification of the said order.

The Commission orders:

The motion for reconsideration of the Commission's order of November 29, 1963, filed by Brookhaven Oil Company on December 9, 1963, is hereby denied.

COMMISSIONERS O'CONNOR and WOODWARD not participating.

OPINION NO. 418

PACIFIC NORTHWEST POWER COMPANY, PROJECT NO. 2243; WASHINGTON PUBLIC POWER SUPPLY SYSTEM, PROJECT NO. 2273

OPINION AND ORDER GRANTING LICENSE

(Issued February 5, 1964)*

Syllabus

1. High Mountain Sheep project and plan found preferable to mutually exclusive Nez Perce, and best adapted to comprehensive plan for developing relevant portions of Snake and Salmon rivers. PP. 250; 258.
2. Decisive difference between two projects is the effect on the fish problem. P. 251.
3. Commission *discusses* fish problem in connection with competing projects—finds High Mountain Sheep has decisive advantage since it permits postponement of dam on Salmon until fish problem is more clearly solved. PP. 258; 263.
4. Allegation that Examiner's handling of fish problem resulted in denial of due process to Washington Water Power *rejected* as not sustained by record and in any case not prejudicial. P. 262.
5. A balancing of equities in light of relative importance of power and fish claims in the particular case must be determinative—here fishery resource is major one. P. 263.
6. Differences in construction features or cost between applicants is not decisive because plans are not final and can be modified. P. 264.
7. Statutory intent of Sections 4(f) 5 and 10(a) is to give permittee first right to develop that reach of river to which permit relates. PP. 264, 265.
8. Preliminary Permit does not expire when license application is filed nor does it merge into license application. P. 268.

---

*Initial decision appears on p. 305. Rehearing for purposes of reconsideration granted April 3, 1964, 31 FPC 773. Modified; rehearing and stay denied by Opinion No. 418-A, issued April 30, 1964, 31 FPC 1051. Affirmed, *sub nom. Washington Public Power Supply System* v. *FPC.*, 358 F. 2d 840 (CADC-1966); cert. granted, 385 U.S. 926 (1966); Reversed, — U.S. — (1967).

9. Commission *concludes* that Pacific Northwest has statutory priority to develop High Mountain Sheep site—accordingly preference provisions of Section 7(a) are inapplicable. P. 270.
10. There is no record support that Pacific Northwest will be in violation of Section 10(h) or anti-trust laws. P. 274.
11. Commission *denies* Secretary of Interior's request that it recommend Federal development of High Mountain Sheep. PP. 275, *et seq.*
12. Commission *issues* major license to Pacific Northwest Power Company under Section 4(e) of the Federal Power Act.
    Chairman Swidler *dissenting.*
    Commissioner Black *dissenting.*

George Johansen for the Alaska Fishermen's Union

Joseph T. Mijich for the Alaska Fisheries Association

Harold A. O'Neill for the Association of Pacific Fisheries Puget Sound Salmon Canners

Malcolm S. McLeod for the Chinook and Cowlitz Indian Nations

James H. Cellars for the Columbia River Salmon & Tuna Packers Association

James B. Hovis for the Confederated Bands and Tribes of the Yakima Indian Nation

Albert A. Day and *Roy C. Atchison* for the Fish Commission of Oregon

Bert G. Johnston and *Joseph T. Mijich* for the Fishermen's Cooperative Association, Inc.

T. J. Jones III for Idaho Fish and Game Commission

Frank L. Benson and *John B. Kugler* for Idaho Public Utilities Commission

G. Heber Smith, Bruce Bowler and *James H. Cellars* for the Idaho Wildlife Federation

Joseph T. Mijich for the Makah Indian Tribe

Quentin Markishtum for the Makah Tribal Council

Evelyn Cooper and *Elmer McClure* for the National Hells Canyon Association, Inc.

Douglas W. Hager and *Joseph T. Mijich* for the Northwest Fisheries Association

Evelyn Cooper for the Northwest Public Power Association

Jonel C. Hill, Robert Y. Thornton and *Lloyd G. Hammel* for the Oregon Public Utility Commissioner

Robert L. Avery for the Oregon State Grange and the Washington State Grange

Donel J. Lane and *Robert Y. Thornton* for the Oregon State Water Resources Board

Charles S. Collins for the Oregon Wildlife Federation

Joseph T. Mijich for The Pacific Fish Conservation League, Inc.

Earl Coe, John A. Petrich and *John W. Riley* for the Washington Department of Conservation

Leo J. Gese for the Washington Department of Fisheries and Game

Stephen M. Reilly, Ernest M. Furnia and *John J. O'Connell* for the Washington State Fish and Game Commission

Roy A. Holland and *Joseph T. Mijich* for the Washington State Sportsmen's Council, Inc.

Donald A. Sander and *John D. Lane* for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

Ross, *Commissioner:*

This is a proceeding under Part I of the Federal Power Act involving applications by Pacific Northwest Power Company (PNPC) and the Washington Public Power Supply System (WPPSS) for a license to build a hydroelectric project on the Snake River at the confluence of the Salmon River on the Idaho-Oregon border. PNPC proposes to build a project at the High Mountain Sheep (HMS) dam site above the Salmon, and WPPSS proposes to build a project at the Nez Perce dam site just below the Salmon and alternatively, an HMS project.[1] The Secretary of the Interior, Intervener, urges that both applications be denied and federal construction be recommended. The proceeding is before the Commission upon exceptions[2] to the examiner's decision issued October 8, 1962, recommending a license to PNPC for the HMS project.

PNPC is an Oregon corporation qualified to do business in Oregon, Idaho, Washington, and Montana. It is a wholly owned subsidiary of four sponsoring companies, The Montana Power Company, Pacific Power and Light Company, Portland General Electric Company, and the Washington Water Power Company and was formed in April of 1954 for the purpose of providing a supplemental source of power to meet the future requirements of these companies. It does not itself own or operate any electric facilities.

WPPSS was created, as a joint operating agency, composed of 16 public utility districts of the State of Washington, pursuant to an order of the Department of Conservation and Development of the State of Washington dated January 31, 1957, and, under the laws of the State of Washington, is a municipal corporation. It was established for the purpose of acquiring, constructing, and operating electric generating and transmission facilities. It does not own or operate any electric facilities.

The history of these proceedings began April 8, 1955, when PNPC was granted a preliminary permit effective April 1, 1955, for a period of three years for Project No. 2173 consisting of the Mountain Sheep Development at river mile 192.6 and the Pleasant Valley Development at river mile 213.2 both on the Snake River above the confluence of the Salmon and the Imnaha thereby limiting to the greatest extent possible impact on the Columbia River salmon runs (14 FPC 644). PNPC filed an application for a license for this project on September 7, 1955, but the license was denied by the Commission on the ground that any combination of projects which included Nez Perce was consistently superior to any combination of projects which did not include Nez Perce (19 FPC 127, 131).

Thereafter PNPC filed an application for rehearing and stay of the Commission's order in which it asked for time and opportunity to determine what modifications of the project would accord to the determination of the Commission as the best comprehensive development of the resources involved. On March 20, 1958, just prior to the expiration of the three-year permit on March 30, the Commission issued an order denying rehearing and stay with the notation that an opinion and order would be issued later. It was in this situation that PNPC filed its application for a license for the High Mountain Sheep Development, identified as Project No. 2243, located between the confluences of the Salmon and the Imnaha at river mile 189.2 on the Snake. The filing was thus made within the three-year period specified in the permit. It was not until April 11, 1958 (19 FPC 353) that the Commission issued its opinion and order on rehearing in which it generally reaffirmed its decision on the superiority of Nez Perce over the applicant's Mountain Sheep-Pleasant Valley project.

---

[1] See Map, Appendix A.

[2] Filed by Idaho Fish and Game Commission, Oregon State Game Commission and Fish Commission of Oregon, WPPSS, PNPC, staff of this Commission, and the Secretary of the Interior.

On June 27, 1958, PNPC filed a petition requesting a declaratory judgment that the preliminary permit issued April 8, 1955, continued in force and effect, that the application for license in Project No. 2243 was filed in accordance with the preliminary permit, and that the preliminary permit maintained priority of application. This petition was withdrawn on September 28, 1959, with the explanation that the purpose for which the petition was filed was moot.

On March 15, 1960, WPPSS filed its application for the Nez Perce Project at river mile 186.2. Hearings were held in Washington and at Portland, Oregon from November 4, 1960, intermittently to September 12, 1961. On April 24, 1961, WPPSS filed a motion for leave to file an amendment to its Nez Perce application to construct an alternate HMS project. This motion was denied by the examiner, who was affirmed by the Commission on the ground that no good reason had been shown for the amendment at that stage (25 FPC 1004; 26 FPC 174). WPPSS, however, did introduce evidence on an alternative HMS project on rebuttal and at the end of the hearing moved to amend its application to include HMS. After the filing of voluminous briefs the examiner issued his decision October 8, 1962. He denied WPPSS's motion to amend and granted a license for PNPC's HMS project. Exceptions were filed to the examiner's decision as noted above including those by the Secretary of the Interior, who by order of December 14, 1962, was permitted to intervene out-of-time.

Evidence was submitted by the parties with respect to the three principal projects proposed: PNPC's proposal for the HMS site and WPPSS's proposals for both Nez Perce and HMS. All three projects would involve large concrete arched dams, reservoirs extending up the Snake River, and also up the Salmon River in the case of Nez Perce, and powerhouses containing turbines and generators. The evidence included detailed data on these proposals with a number of variations. Evidence was also submitted setting forth plans for a comprehensive development of the Snake River including these projects. For instance, plans of comprehensive development involving HMS also include a dam known as the Lower Canyon Project, on the Salmon River. Further details of the proposed projects and proposed plans of development will be discussed below. There is also evidence submitted on the need for additional power resources by the Pacific Northwest area and by the respective applicants. The evidence of regional resources took into account not only facilities in operation at the time the record was made, but also the effect of certain projects to be installed in the future including those to be built under the proposed treaty with Canada. We are also taking notice that since the close of the record additional projects have been scheduled including the Hanford atomic reactor which will supply power to WPPSS and private companies. On the basis of the evidence and the discussion below, we find that the HMS project is best adapted within the meaning of Section 10(a) of the Federal Power Act to a comprehensive plan for improving and developing a waterway, that PNPC should be given a license for the HMS project and that federal development should not be recommended.

THE PROPOSED PROJECTS AND PLANS OF DEVELOPMENT

An important preliminary question is whether a license should be granted for a project at the Nez Perce site or at the HMS site. This involves a consideration of the potentialities of each, including its adaptability to a comprehensive plan for improving the Snake and Salmon Rivers. While both PNPC and WPPSS submitted proposals for building a project at the HMS site, the physical differences between their proposals, as will be developed, are not so great as to make any appreciable difference in choosing between Nez Perce and HMS.

For the reasons set out below, we find that the HMS project and plan is preferable to the Nez Perce project and plan. The decisive difference between the two projects and their related plans is in their effect on the fish problem. The Nez Perce project would adversely affect the fish runs on the upper Snake, the Salmon and the Imnaha Rivers while the HMS project would not affect in any manner the fish runs on the Salmon River and its only considered impact would be on the fish runs on the Upper Snake where these runs are already impaired. In addition, the HMS project would undoubtedly have some impact on the smaller run on the Imnaha River. However, a canal proposed by PNPC as part of the HMS project would appear to have a substantial chance of continuing the existing fish runs.

The Nez Perce and HMS Snake River dam sites represent two of the most important remaining sites on the Columbia River system. As the attached map (App. A) shows, the Snake at the dam sites flows in a northwesterly direction between the states of Oregon and Idaho; the Salmon flows in from Idaho on the east side of the Snake. The Nez Perce site is at river mile 186.2 about 2.5 miles below the mouth of the Salmon, while the HMS site is at river mile 189.2 about eight-tenths of a mile upstream from the Salmon, but below the mouth of the Imnaha, which flows into the Snake from the west or Oregon side.

A. *Comparison of the Proposed HMS and Nez Perce Projects*

As proposed by PNPC the HMS project would consist of a concrete arch dam approximately 670 feet high from the river bed and would create a reservoir extending approximately 58 miles upstream on the Snake to the Hells Canyon dam site tailwater and 10 miles upstream on the Imnaha. The reservoir would have a gross storage of 3,600,000 acre-feet, of which 2,250,000 acre-feet would be usable with a normal drawdown. Two outdoor-type power houses would be located one on each side of the river near the base of the dam. Each turbine would be connected to a generator rated 175,000 kw. There would be five units initially with a total installed capacity of 875,000 kw.[8] Ultimately there would be ten units with a total installed capacity of 1,750,000 kw. Initial capability would be 1,000,000 kilowatts, and ultimate capability would be 2,000,000 kw.

The HMS project proposed by WPPSS would also consist of an arch dam at the same site and a reservoir with the same capacity. In a number of respects, not necessary to relate here in full, engineering details of construction would differ from the project proposed by PNPC. For instance, an indoor-type powerhouse would be located on the Idaho side of the river near the base of the dam with an initial installation of six generating units, each rated 200,000 kw. Provision would be made to house four similar units in a future underground powerhouse on the Oregon side. Maximum initial capacity would be 1,200,000 kw and ultimate capacity would be 2,000,000 kw.

As proposed by WPPSS in its application as amended in later testimony the Nez Perce project would consist of a concrete arch dam approximately 715 feet high. It would create a reservoir extending approximately 63 miles upstream on the Salmon, 61 miles upstream on the Snake to the Hells Canyon site tailwater and 10 miles upstream on the Imnaha. The reservoir would have a gross storage capacity of 6,600,000 acre-feet and usable storage of 3,130,000 acre-feet with a normal draw down. An underground powerhouse requiring an excavation would be located on the Oregon side of the river and would house the ten initial generating units rated 200,000 kw each or 2,000,000 kw in all. WPPSS plans another underground powerhouse for the Idaho side of the river, which would have six more units, so that the total generating capacity of the project would be 3,200,000 kw.

---

[8] Seven units were assumed for the purpose of company plans of comprehensive development.

(1) *Safety and stability of the dam sites and structures*—The parties have raised an issue as to the adequacy of the proposed sites for both of the proposed dams (as well as the Lower Canyon dam which is eventually to be part of an HMS plan, see pp. 255, 256, *infra.*), but particularly with respect to Nez Perce. The difficulty is geological. The rocks of the area consist of the Columbia River basalts overlying what is known as the Seven Devils formation, consisting of strong metamorphosed volcanic and sedimentary rocks. As the Snake River cut down through these rocks, it permitted lateral stresses to cause complicated fracturing of the rocks. At the Nez Perce site, according to the evidence, the possibility exists that on the left side of the site looking downstream large blocks of rock might slide along a sloping fault plane, but there is also evidence indicating that this would probably not occur because of certain other blocks of rock standing in the way and because the apparent faults might actually be welded by metamorphism.[4] Evidence also indicates doubt about the Lower Canyon site at mile 3.7 on the Salmon River, and the evidence is not sufficient to remove all doubt with respect to the HMS site. What is needed before construction can be authorized at any of these sites is a complete geological study carried out by a more elaborate program of borings. It will be necessary to provide, as recommended by our staff, that the licensee of any of the above projects shall engage qualified independent experts to report on the dam site and the proposed design of the dam before we approve the design drawings for the dam structure. But we do not believe that the evidence supports a finding that any of the sites are inherently unsafe or which would warrant a preference between Nez Perce and HMS on this basis. Specifically we agree with the examiner that the project structures proposed by PNPC and WPPSS for the HMS project can, subject to approval of final plans, be made safe and stable, but final design should be subject to further tests and to our approval as ordered below.

(2) *Costs and power benefits*—Although the record is burdened with conflicting estimates of costs for the HMS and Nez Perce projects on various assumptions, it is clear enough as noted by the examiner, that both the HMS project, as proposed for construction by either PNPC or WPPSS, and the Nez Perce project proposed by WPPSS are economically feasible. Furthermore the record makes clear that Nez Perce, which is the most costly project and, at the same time, produces the most power, shows the greatest excess of annual power values over cost.

WPPSS shows a project cost of $391,080,000 for Nez Perce and $213,000,000 for HMS; PNPC shows a project cost of $185,700,000 for HMS; the staff shows $369,120,000 for Nez Perce, $229,743,000 for WPPSS's version of HMS and $200,231,000 for PNPC's version of HMS.[5] In each case there is an excess of power value over cost—$23,410,000 and $17,482,000 for the WPPSS and FPC analyses of Nez Perce using a cost of money of 4.75 percent and 4.5 percent respectively; $16,792,000 and $12,209,000 for the WPPSS and FPC analyses of HMS using WPPSS financing with a 4.5 percent cost of money; and $5,788,000 and $4,267,000 using the PNPC and FPC analyses of HMS using PNPC financing with a cost of money of 6 percent.

---

[4] The change in structure of a rock as a result of heat, pressure or water.

[5] These cost figures and those to follow relating to the cost of the respective projects reflect WPPSS's revision of figures used by the examiner, for we agree with WPPSS that all cost comparisons should be uniformly computed on the basis for cost and value at site as had been stipulated on the record with respect to comparative plans.

Relying on the same project cost comparison evidence, the unit costs of energy to be generated by Nez Perce or the HMS project are not very different when approximately equivalent financing is used. Thus the cost per kwh is 2.7 and 2.5 mills for energy generated at Nez Perce and HMS using WPPSS figures and WPPSS financing, while the cost is 3.4 mills for either project using the staff figures and WPPSS financing. However, when the PNPC 6 percent cost of money is employed the unit cost per kwh for HMS rises to 3.5 mills under the PNPC analysis and to 4.2 mills under the staff analysis. The record does not directly show what the unit costs would be for Nez Perce power using PNPC's 6 percent financing.

We conclude from the cost comparison of the projects that Nez Perce is the project with the larger absolute excess of value over cost. However, assuming a common cost of money, the difference between the two projects with respect to the unit cost of the energy generated is not very great, even assuming WPPSS estimates, and non-existent assuming the staff's. PNPC's financing, compared to WPPSS's proposed financing, discussed further at p. 274, *infra*, however, would significantly increase the cost of the power sold to the buyer. This is because PNPC would receive a return that would cover its cost of debt and provide an allowance on its equity capitalization. In addition PNPC would incur Federal income taxes. On the other hand assuming WPPSS could finance with 4.75 or 4.5 percent debt it would be paying less for its capital and would pay no Federal income tax. This, of course, does not mean that Nez Perce is for this reason the better project, but merely that if there were no questions of priority and preference (which, of course; there are) this might be a factor favoring a WPPSS application for Nez Perce over a PNPC application for HMS, even if on the basis of comparable financing HMS was as good or better than Nez Perce. If, however, this kind of advantage were controlling as against a valid priority, we would in almost every case be required to grant the license to a municipal rather than a private applicant for a license. If this were so, the preference provisions in favor of states and municipalities in Section 7(a) of the Act would hardly be necessary, and the priority provisions of Sections 4 and 5 would be meaningless.[6]

(3) *Other benefits*—One of the benefits of either HMS or Nez Perce is the ability to store water and so lessen floods on the Columbia River. The initial flood control goal of the United States Corps of Engineers is to limit the flood flow on the Columbia at The Dalles to 800,000 cfs. This would require[7] 17.3 million acre feet of storage while the ultimate goal of a peak flow of 600,000 cfs at The Dalles would require 32.5 million acre feet of storage. The Corps report shows 8.3 million acre-feet existing or under construction. While the construction of Canadian storage[8] would add 8.45 million acre-feet and the Libby Project would

---

[6] As we understand it, one of the major reasons for the priority and preference provisions of the Act was to remove from Commission discretion the controversial issues as to whether competing public or private applicants could best serve the public.

[7] Corps of Engineers Report, March 31, 1961, p. 5.

[8] Canadian storage would be available upon the construction of certain projects on the Columbia River in Canada. The treaty between the United States and Canada providing for such storage was ratified by Congress in 1961, but not by the Canadian Parliament. A somewhat different arrangement for sharing the power benefits is now being negotiated.

add 5 million acre-feet to available storage, thus there still is an authorized use for further storage from a project on the Snake where flood flows, with the Salmon, amount to 6.2 million acre-feet.

The usable storage for flood control at HMS would amount to only 2,250,000 acre-feet compared with 5,015,000 acre-feet at Nez Perce, so that considered only as project versus project the latter would clearly be preferable on this point. As noted below, however, this preference is somewhat diminished in value by the fact that the HMS plan of development would eventually also include 3,265,000 acre-feet of storage for the Lower Canyon development on the Salmon,[9] so that the HMS plan of development would provide usable storage of 5,515,000 acre-feet. The record indicates that either of the rival projects can be operated satisfactorily for flood control.

The applicants have agreed on the annual values to be given their storage potentials. As of 1968 the value of the HMS storage is $1,840,000 compared to $5,300,000 for Nez Perce, but the Lower Canyon Project would add the value of $3,500,000 to the HMS plan. If Canadian storage becomes available, the value of HMS, Lower Canyon and Nez Perce storage would decrease to only $240,000, $370,000, and $560,000, respectively.

The record indicates that some of the recreational potentialities of the double Nez Perce reservoir are greater than for—HMS (or even for HMS with Lower Canyon). The large body of water created by the Nez Perce dam would provide greater opportunity for boating, camping, fishing, hunting and sightseeing than the HMS reservoir or the Lower Canyon reservoir, or both. However, these advantages are offset by the fact that the Nez Perce project would threaten recreational values of fishing for salmon and steelhead trout not only at the site of the reservoir but wherever fish originating on the Salmon River watershed may be caught from the headwaters to the ocean.

The record indicates that downstream navigation benefits achieved by controlled release of water would be of equal value with Nez Perce or HMS. The double reservoir of Nez Perce would permit greater scope for boating above the dam, but there is nothing to show that there is any importance in such navigation apart from recreation.

B. *Comparison of the Proposed Plans of Development*

In determining whether to license HMS, Nez Perce, or neither, the Commission must make the required findings under Section 10(a) of the Federal Power Act providing in part as follows:

> That the project adopted * * * shall be such as in the judgment of the Commission will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial uses, including recreational purposes; * * *.

To meet the requirements of the statute plans were submitted by WPPSS, PNPC and our staff for the "common reach" of the river,[10] and these parties submitted costs and other data with respect to the plans and variations of them.

---

[9] Assuming this development at mile 3.7 with a reservoir elevation of 1595 feet.

[10] Defined at the prehearing conference as extending from the tailwater of the China Gardens project at Snake River mile 172.5, elevation 845 to the normal pool elevation of the Hells Canyon project on the Snake River, elevation 1683 feet m.s.l., and to the normal pool elevation of the future Freedom project on the Salmon River, elevation 1780 feet m.s.l.

The evidence shows two major plans with variations, and they are mutually exclusive. One plan involves the HMS and related projects and the other plan involves Nez Perce, as well as additional projects. While these plans show the potentialities of development of either Nez Perce or HMS, the cost estimates of the parties respecting the same plan differ widely. Furthermore, as already indicated, more exploration is needed at the project sites so that final plans may differ from the estimates submitted herein. For this reason we do not find that the data submitted respecting these plans precisely represents the ultimate development of either plan, but we are satisfied that such estimates are approximately correct and do provide a satisfactory basis for comparing the two plans. We also note, as did the examiner, that there is no immediate proposal for the construction of projects incident to either plan other than the HMS and Nez Perce projects. Under these circumstances we think that the best way of exercising our responsibilities under Section 10(a) is to determine whether a grant of either the Nez Perce or HMS projects at this time would, the important time factor considered, preclude a superior development of the rivers involved.

The HMS plan consists of the HMS development on the Snake above the mouth of the Salmon, the Lower Canyon development utilizing an even larger head on the Salmon (either at mile 0.5 or 3.7), later possibly the Freedom project at mile 69.2 on the Salmon, and the small China Gardens development on the Snake some sixteen miles below the mouth of the Salmon. The Nez Perce plan consists of the large Nez Perce development on the Snake just below the mouth of the Salmon and the China Gardens development further down the river, either with or without the Freedom development and the Whitebird development, a combination fish trap and generating facility at the head of the Nez Perce reservoir on the Salmon River.[11]

PNPC proposes an HMS plan with an arch dam at HMS and an arch dam at Lower Canyon, mile 3.7. PNPC also introduced evidence on a Nez Perce plan. It excludes the cost of fish facilities from its plans as impossible to estimate and excludes the Whitebird and Freedom developments as uneconomic until development of the Crevice project further upstream on the Salmon. However, it did include evidence of Whitebird costs. WPPSS presents a Nez Perce plan with an arch dam at Nez Perce with the Whitebird development and, eventually, the Freedom development included. Its HMS plan employs a rock filled dam at Lower Canyon at mile 0.5 on the Salmon and includes the Freedom project for future development.

The staff originally presented comparative plans similar to those of PNPC, but on rebuttal proposed plans based upon an arch dam (the more economical type) at HMS, Nez Perce and Lower Canyon (mile 3.7), but did not include the relatively minor Freedom project or its costs.[12] We are of the opinion that the staff rebuttal presentation provides the most valid comparison between the two plans of development. However, the data presented by PNPC and WPPSS on power and costs are shown in the following table for informative purposes.

(1) *Power Production under the Proposed Plans*—The record shows that under most of the estimates, including the staff's revised comparison which we are adopting as most reasonable, the installed capacity would be slightly greater

---

[11] No Whitebird development was proposed in connection with the HMS plan, for the Lower Canyon dam utilizes greater head and would flood the Whitebird site.

[12] Presumably since Freedom power and costs would be equally applicable to both plans and thus represents a "wash" item.

under the HMS plan than under the Nez Perce plan as shown in the tables below:

	PNPC	Installed capacity (MW)	
		WPPSS	Staff revised[18]
HMS plan (HMS, Lower Canyon, China Gardens)	2,180	2,315	2,347
HMS plan (with Freedom and Crevice in operation)	2,700	2,315	
Nez Perce plan (Nez Perce, China Gardens, Whitebird)	2,062	2,235	2,268
Nez Perce plan (With Freedom and Crevice in operation)	2,626	2,240	

[18] Lower Canyon installed capacity of 910 MW and reservoir at elevation 1595.

The record also shows that under most conditions and stages of development of the Snake and Salmon, with and without Canadian storage, the HMS plan would exceed the Nez Perce plan with respect to nominal prime energy (energy during the critical winter storage control period), average annual generation and plant peak capability. This power differential in favor of the HMS plan results from one intrinsic advantage. That is the reservoir elevation at Nez Perce (or HMS) must be limited to approximately 1510 feet so as not to interfere with the Hells Canyon site upstream, but the Lower Canyon dam can be built to produce a higher reservoir and greater power.

(2) *Costs compared with power benefits under the rival plans*—Cost estimates for all projects were presented by PNPC, WPPSS, the Department of Conservation of the State of Washington and our staff. There were different original estimates and modifications of them leading to wide variations in cost resulting from different overall project layouts. A summary of some of the cost presentations is shown in the following table. The Freedom project, which would not change the difference in costs as between the two plans, is omitted from the figures. The figures reflect the HMS plan, as composed of HMS, Lower Canyon and China Gardens, and the Nez Perce plan, as composed of Nez Perce, China Gardens and Whitebird, shown on the previous table.

Summary of Construction Costs ($1000) Comparative Plans for Development of Middle Snake River

	HMS plan	Nez Perce plan
Without fish facilities:		
Staff (revised)[a]	$443,089	[b] $393,473
PNPC (direct)	405,673	[c] 403,098
WPPSS (rebuttal)	460,289	[b] 367,253
With fish facilities:[e]		
Staff (revised)	500,022	[d] 471,963
WPPSS (rebuttal)	522,000	[d] 429,000

[a] In making its revised presentation the staff actually used two different project layouts—in one a Harza design with all power plants located across the river, in the other a more economical design with power plants located parallel to the river. We are adopting this second comparison assuming also that the Lower Canyon Dam will have installed capacity of 910 MW and a reservoir elevation of 1595 feet.

[b] Whitebird costs omitted because part of these costs were charged to Nez Perce fish facilities.

[c] Without Whitebird costs amounting to $38,592.

[d] Includes Whitebird costs.

[e] PNPC did not present evidence of the cost of fish facilities.

In each case the Nez Perce plan is the least expensive. Using the PNPC figures this difference is only $2,575,000 (excluding Whitebird and fish facilities in each plan), but using the WPPSS figure the difference is $93,036,000.

As the examiner points out, the difference in cost between the HMS plan and the Nez Perce plan on the basis of the staff comparison ($49,616,000 without fish facilities) is about midway between the difference between the two plans using the PNPC figures and the difference between the two plans using the WPPSS figures. Because the staff's study alone compares the two plans on similar bases, in our opinion it reflects the approximate difference in cost between the two plans.

Annual costs vary roughly with the construction costs, and these are shown in the following table.

Annual Costs ($1,000)[a]

	HMS plan	Nez Perce plan
Without fish facilities:		
Staff (revised)	$28,337	[b] $24,992
PNPC (direct)	26,103	[c] 25,298
WPPSS (rebuttal)	29,030	[b] 23,377
With fish facilities:		
Staff (revised)	32,554	[d] 30,600
WPPSS (rebuttal)	33,373	[d] 27,865

[a] Using stipulated operations and maintenance and administrative and general expenses.
[b] Whitebird costs omitted because part of these costs were charged to Nez Perce fish facilities.
[c] Without Whitebird costs amounting to $2,266.
[d] Includes Whitebird costs.

As the data reflect, the greatest excess of the HMS plan costs over the Nez Perce plan costs are shown by WPPSS and the least excess by PNPC without the Whitebird development. In fact, PNPC shows an excess of the Nez Perce plan costs over the HMS plan costs counting in the Whitebird development. The staff revised estimates, which we adopt, fall in between.

As shown in the joint exhibit filed by the parties, with Canadian storage available, the annual power benefits of the HMS plan (HMS, China Gardens, Lower Canyon) are $56,649,000. By computation using the power values prescribed in the joint exhibit the power benefits of the Nez Perce plan (Nez Perce, China Gardens, Whitebird) also with Canadian storage amount to $54,367,000 per year. These figures and figures for other stages of river development both with and without Canadian storage show that the HMS plan produces greater power benefits than the Nez Perce plan. In any case annual power benefits exceed annual costs by substantial amounts for each plan, and we find they are each economically feasible.

The staff and the examiner compared the difference between the two plans as to annual costs and as to annual values and derived a net difference between annual cost and value for the two plans. The examiner found that using the staff's revised comparison the HMS plan is superior to the Nez Perce plan in a somewhat vaguely defined initial period, assuming the completion of Lower Canyon, but the Nez Perce plan is superior to the HMS plan in subsequent periods.

WPPSS objects to the propriety of the examiner's comparison arguing that the Lower Canyon project will not be in operation at the time the HMS project goes into service, that the China Gardens project will be delayed beyond the time either the HMS project or the Nez Perce project is completed, and that there is a premature assumption of seven units at HMS although the license application provides for five units. It is true that omission of the Lower Canyon project would show large net benefits in favor of the Nez Perce plan, the China Gardens development utilizes more head under the HMS plan and so favors that plan, and the more units at HMS, of course, the greater the benefits. Further, there is no question but that these developments may be delayed. However (apart from the fish problem) there is no reason to believe that Lower Canyon would not be built in due time since the evidence shows that Lower Canyon is economic of itself, and if the Lower Canyon project had to be delayed or totally precluded on account of the fish problem so would Nez Perce.

In our view of these and other circumstances the only significant comparative analysis of the two plans is on the basis of the eventual results when all projects which appear to be feasible are built and fully developed. On this basis, as the examiner found, the Nez Perce plan is somewhat superior to HMS. But, taking into consideration the present values of an early start on some of the major projects of a plan, we conclude that this superiority is not so great as to preclude a grant for HMS if, as we shall explain below, other considerations exist which make feasible the commencement of HMS construction now, but which would necessitate an indefinite delay in any Nez Perce construction. Thus the HMS plan has the advantage of permitting an immediate start on major facilities which can bring additional power to the area while the fish questions which are common to Nez Perce and Lower Canyon receive further study.[14] Specifically, in the terms of the statute, we find that despite the somewhat greater advantages which might eventually result from adoption of a plan including Nez Perce over one including HMS, adoption for present grant of the HMS project rather than the Nez Perce project will, for the reasons detailed below, be best adapted to a comprehensive plan for developing the relevant portions of the Snake and Salmon Rivers.

(3) *Other bases of comparison between the plans*—Flood control, navigation and recreation have already been discussed in connection with the Nez Perce and HMS projects. In general the differences between the two plans are not significant. Both plans will provide about the same navigation benefits, and substantial recreational benefits. The HMS plan produces a little more storage because the Lower Canyon dam can be built higher than Nez Perce, but the value of storage is reduced enormously in any case with the advent of the Canadian projects.

C. The Fish Problem in Connection with the Projects and Plans of Development

One of the most controversial issues in this proceeding concerns the ability of the applicants to provide for the movement of anadromous fish by their proposed projects. These fish, salmon and trout, as fingerlings, migrate down the rivers to the ocean and several years later as adults migrate up the rivers to their natal headwaters to spawn. The problem here is to determine whether the upstream migrants, which normally progress by swimming and jumping, and the downstream migrants, which are ordinarily carried by the current, can be guided or carried over high dams and through reservoirs such as HMS, Nez Perce or Lower Canyon. Our responsibility for this problem arises from Section 10(a) providing that the project adopted by us will be "best adapted" for improving or developing a waterway for, among other things, "beneficial public uses, including recreational purposes." While the proposed projects and plans are largely designed to produce power, under the statute we are required to consider whether the power use is consistent with recreational and other beneficial public uses including the use of the river for fishing and the production of fish for both sport and commercial purposes.

---

[14] While the record is not complete on the point, there are indications that the fish problem with respect to a Lower Canyon dam will present somewhat lesser difficulties than those involved at Nez Perce, since the problems created by the intermingling of waters from two different rivers will not be present.

According to the record the Columbia River is the greatest producer of Pacific salmon and steelhead trout in the United States. The most abundant species is the chinook salmon, but blueback, silver salmon and steelhead trout are also important. There are three races of chinook salmon, the spring, summer and fall chinook. Of these, the spring chinook, whose most significant source is the Salmon River, are said to be the tastiest and bring the highest prices.

Columbia River salmon have been important in the development of the Pacific Northwest for almost a century. They are caught not only from the river and its tributaries, but also from the Pacific Ocean along the coast. The commercial catch of Columbia River salmon is estimated to be worth $12,000,000 annually and the sport fishing attributable to the Salmon River alone, while no exact estimate can be made, may be worth as much as $8 million a year. The latter figure is based on the amount fishermen spend for the privilege of taking the fish. The value of the fish, of course, cannot be measured alone by the amount spent to take them or the value of the fish as food. Nor can the value be measured by the economic growth stimulated by sport and commercial fishermen. The record and the contentions of the fisheries' interests make it clear that conservation of the fish is an important public end, and we so find.[15]

While the estimating methods employed are subject to inaccuracies, the record shows that a much larger number of fish would be adversely affected by the Nez Perce dam than by the HMS dam. The witness for the Idaho Department of Fish and Game prepared a study based on a count of the fish passing the McNary dam on the Columbia River and an allocation of the fish to the various tributaries. The allocation was based on recovery of a certain number of tagged fish after death in the headwaters and on a comparison of sports catches at various points. The highest year's count for each species was used in arriving at total fish. The study shows 619,750 spring and summer chinook, fall chinook, blueback and steelhead counted at McNary of which 264,200 are estimated to reach the Nez Perce dam site. Of this number 152,700 are spring and summer chinook, of which all but 10.9 percent turn into the Salmon River. All of the 9,000 bluebacks also use the Salmon River, as well as 74.1 percent of the steelheads. On the other hand 85.7 percent of the 35,000 fall chinook continue up the Snake. Thus out of the total 264,200 reaching Nez Perce 75.7 percent are estimated to migrate up the Salmon and the 24.3 percent up the Snake, including 5.7 percent up the Imnaha.

WPPSS criticizes the derivation of these figures arguing that they are not accurate enough on which to base a decision. While no actual counts were made of the fish passing the Nez Perce and HMS sites and the estimates were based on small samples of tagged fish and questionnaires sent to a fraction of the sports fishermen, the estimates are accurate enough to be of significance because based on data systematically compiled and reasonable inferences. According to the record an actual count on the Snake or Salmon would be inordinately expensive. In our opinion the study referred to above in comparison with the record is sufficient to show that the Salmon River has been and still is of great importance for migrating fish, but that the Snake is now of much less importance.

---

[15] We note in this connection that parts of the Salmon River are included in a wilderness area by the Secretary of Agriculture, which is the subject of the Wilderness Bill, S. 4 the purpose of which is to preserve wilderness areas for the good of the whole people. Hearings before the Senate Committee on Interior and Insular Affairs on S. 4, 88th Cong., 1st Sess., pp. 275–276.

The applicants have not been unaware of this fish problem and have designed their projects in an attempt to solve it. At Nez Perce WPPSS plans facilities for upstream passage including a picketed barrier below the dam leading to a fish ladder 273 feet high, which in turn would lead to lock chambers where the fish would be subjected gradually to increasing water pressures and would be discharged into the reservoir 363 feet below the surface. The downstream migrants would be caught in traps in the form of V-shaped louver structures at the Whitebird barrier on the Salmon River and the Imnaha barrier on the Imnaha River, and would then be transported to Nez Perce by barge. A floating skimmer device would also be provided in the forebay of the dam. WPPSS would provide similar facilities at HMS.

The facilities planned by PNPC for upstream migrants at HMS include two fish ladders. One ladder would reach a canal extending 17 miles up the Imnaha River. The other would extend to a point on the dam from which hoppers would carry the fish over the dam and into the reservoir. Downstream Snake migrants would be delivered at the proposed Hells Canyon loading station for transfer by barge to the dam. Downstream Imnaha migrants would be guided by the Imnaha fish barrier to the Imnaha canal and discharged below the dam.

The fish facilities proposed for both upstream and downstream migrants offer a number of hazards. For upstream migrants there are uncertainties as to the operation of WPPSS's proposed barrier below its dam and its proposed fish lock particularly as to the effect of pressure on the fish and whether they will leave the lock. However, the Imnaha canal proposed by PNPC would appear to have a substantial chance of success. The canal would carry only Imnaha water and the fish ladders leading to it would carry principally Imnaha water (except for the introduction of Snake River water at one point on the ladder to attract any stray Snake River upstream migrants). The canal is proposed on the theory that the water from each stream has a distinctive chemical quality that is recognized by the fish spawned in that stream. There seems a good chance that the Imnaha canal will effect a segregation of the Imnaha fish in a natural manner compared with the confused situation discussed below that would develop in the reservoir above the Nez Perce dam.

As for the downstream migrants the louver barriers proposed by WPPSS are particularly suspect. These are based on the theory that a fingerling fish will follow along the louver in preference to passing with the water between the louver bars. This depends on the behavior of the fish and a lack of water turbulence in the approaches to the louver barriers. WPPSS has presented evidence and contends that its louver barrier at Whitebird will not be rendered ineffective by water turbulence and trash, including floating logs, because of the log barrier to be employed and methods for cleaning the trash racks. Nevertheless the record leaves us in considerable doubt whether the louver device will operate successfully on the Salmon where the current will be swifter and the depth greater than at previous installations. The method of collecting the fish in pipes, a secondary louver and tanks also raises grave questions as to whether the inevitable changes in the quality of the water surrounding the fingerlings will not disturb their instinct for returning to their natal headwaters to spawn.

The record shows, that the most important hazard to upstream migrants or downstream migrants passing the louvers is the reservoir created by the dam. As may be recalled the HMS reservoir would extend 58 miles up the Snake River while the Nez Perce reservoir would extend in two branches, one 61 miles up the Snake River and one 63 miles up to the Whitebird fish barrier on the Salmon River. The difficulty arises because the chinook are basically river fish and do not appear to adapt to the different conditions presented by a reservoir.

A reservoir exhibits a peculiar thermal structure. During the winter it is homogeneous with regard to temperature, but as the season advances a horizontal stratification results with the colder water sinking lower. Since Salmon River water is colder than Snake River water, it is possible, if not probable, that in the Nez Perce reservoir the water from the two rivers would be found in separate layers and be drawn off at different times. Presumably the upstream migrants reaching fish ladders might at one time be presented with water from one river and at another time water from the other river. If water quality is important in attracting the upstream migrants to their proper streams, as many experts believe, this stratification would be a source of confusion and delay. Also a source of confusion to the upstream migrants would be the predicted tendency shown by the record for water from the Salmon River arm of the Nez Perce reservoir to flow up the Snake River arm and vice versa. Again the fish are faced with a complicated problem in finding their way.

The velocity of flow in the Nez Perce or HMS reservoir would be very low compared with the free flowing stream or even compared to the flow in the reservoir of the McNary dam on the Columbia. Since the upstream migrants follow water flow and downstream migrants are carried by current, such low velocities offer a further obstacle to the passage of anadromous fish.

The record also shows that during the summer months the oxygen content of the water in the reservoir at the lower levels will fall to amounts which are dangerously insufficient for salmon. The decrease in oxygen content appears to be due to decomposed sinking dead organisms (plankton) from the upper layers of water. The record indicates that salmon require an oxygen content of approximately five parts per million, yet the oxygen content at the 250-350 foot level would fall in August to less than three parts per million.

Another phenomenon of importance is "residualism," a term used to describe the failure of anadromous fish to pass through the reservoir to the ocean. If loss of water velocity or accumulation of dissolved salts can cause the downstream migrants to remain in the reservoir, they are lost as perpetuators of the species, since residual fish do not spawn successfully.

WPPSS tries to rebut the evidence with respect to reservoirs. It cites testimony to the effect that it is not known how a salmon finds its way back to its home stream, that Salmon River water will not appear in the Snake River arm of the reservoir and that the salmon will be able to follow the cool lower strata of water to the upper end of the reservoir. As to the oxygen content issue, which would of course affect this cool lower water, WPPSS argues that the fishery witnesses' testimony did not take into account that the Salmon River contains pure, soft water which would not be conducive to high plankton production, the most important factor in oxygen consumption, and has exaggerated the time that water is retained in the reservoir.

These are matters which, in the present state of the knowledge of fish habits are highly controversial, and are not in our opinion clearly resolved in the record. There is abundant evidence, however, that a reservoir, such as the one that would be formed by the Nez Perce dam (or HMS) would provide many risks to the upstream migrants. Alternative methods of handling the problem suggested by WPPSS do not obviate these severe risks. Thus transporting adult fish in tanks involves the danger of injury and disease. Establishment of hatcheries would not necessarily be effective. While the propagation of fall chinook in hatcheries has been successful, the same is not true of spring and summer chinook although WPPSS argues that it could be done.

As a result of our consideration of the evidence raised in this copious record we agree with the contentions made by the fishery interveners and the staff that high dams and reservoirs present major obstacles to anadromous fish. In the present state of the art it is not possible to build facilities for fish passage with any assurance that they will be effective. The Nez Perce project affects both the Snake and Salmon Rivers and would endanger the fish runs on the Salmon; the HMS project affects only the Snake River where the fish runs are already impaired.

The Snake River fish runs are already subject to the constructed Brownlee and Oxbow developments and the Hells Canyon development, now under construction, of the Idaho Power Company (Project No. 1971, 14 FPC 55). In this connection we take notice that the Idaho Power Company seeks to abandon as ineffective the facilities for downstream migrants required by us at the Brownlee Project (see our order in Project No. 1971 of March 22, 1963). While the eventual effect of the present Snake River projects on the fish runs is not shown in the present record, another project on the Snake would obviously not constitute the threat to the Columbia River fish runs in any way comparable to a project on the untouched Salmon River. This appears to be also the view of the Corps of Engineers expressed in a report to the Secretary of the Army dated March 31, 1961, where it was stated that "at least 15 to 20 years might be necessary to resolve the problem that would be created by the Nez Perce project" while "The High Mountain Sheep project could be constructed now without being a serious hazard to the anadromous fishery." Likewise the Secretary of the Interior, whose department is largely responsible for the preservation of wildlife, stated in a letter of June 28, 1962, that a "calculated risk" at Nez Perce "would not be warranted" but that "The Mountain Sheep project represents less hazard to the fishery resource than the Nez Perce project."

We are well aware, that in reaching this conclusion we are departing from the optimism as to the efficacy of fish passage facilities on high dams which was reflected in the decision approving the application of the Idaho Power Company for its three developments on the Snake River (Project No. 1971)[16] as well as in the original decision on PNPC's application for the Mountain Sheep and Pleasant Valley projects. We can only state that nothing is this record made in the light of subsequent knowledge or which has come to our attention in the course of our day-to-day dealing with the problem in the past two years would justify continuing such optimism. We can hope for the best and we will continue to insist that any licensee building a high dam at a site which presumably involves major fish runs do everything possible within the limits of reasonable expense to preserve the fish runs. But as of now we understandably must assume that the best efforts will be only partly successful and that real damage may and probably will be done to any such fish runs.

WPPSS alleges it was denied due process as a result of the examiner's handling of the fish issue at the hearing. It complains that the rights of the parties were subordinated to considerations of speed and counsel was cut short in efforts to cross-examine the witness for the Idaho Commission. WPPSS also argues that PNPC was given first chance to cross-examine although PNPC's cross-examination was friendly rather than hostile, so that the witness was able to expand his testimony. When counsel for WPPSS attempted cross-examination, it says, objections were sustained on the ground that the subject matter had already been covered. We are of the opinion the WPPSS's allegations are not sustained by the record and that, in any case, the rulings made by the examiner were not prejudicial.

Although counsel for PNPC was allowed to cross-examine the witness for the Idaho Commission first and may have enabled the witness to amplify his testimony, this does not constitute error even if it could be argued that it lengthened the record unnecessarily. Counsel for WPPSS was permitted lengthy cross-examination of this witness; his examination covered some 150 pages in the transcript. WPPSS has set forth thirty-eight instances in which it alleges that the right to cross examine was improperly denied by the examiner. Upon consideration of the questions asked we think that the examiner was not in error in sustaining objections to the questions. In each instance it could reasonably be said that the questions were defective—irrelevant, argumentative, repetitious, or outside the competency of the witness—and we do not think the examiner erred. In several instances counsel for WPPSS secured an answer by a differently phrased question.

---

[16] 14 FPC 55.

Even assuming that some few of the examiner's rulings may have been legally erroneous they are not, we believe, prejudicial. The questions concerned a wide variety of subjects such as possible bias of the witness, fish counts and allocation of fish among river tributaries, angling activity, computation of numbers of downstream migrants on the basis of eggs layed, differences between the Brownlee dam and the proposed Nez Perce dam, comparison of the louver device at Whitebird with one on another river, the effect of water pressure on spawning, and the necessary size of fish ladders. These subjects are for the most part relevant, but none of the questions or their possible answers would cast doubts on the essential basis of our decision here that there are undeniably large numbers of salmon that make use of the Salmon River, that a high dam and reservoir represents a major danger to the fish runs despite WPPSS's best efforts to surmount the problem, and that the Salmon River runs will not be damaged by a dam at HMS.

In order to assure a sufficient flow of water to maintain fish life below the HMS dam the Idaho and Oregon Commissions have recommended amendment of the examiner's ordering paragraphs relating to flood control and navigation. While sympathetic with these Commissions' objectives, the record fails to justify adoption of this recommendation. The two commissions have also asked that conditions be inserted in the license providing for the replacement of fish and wildlife habitat affected by the license. We think this is too broad a requirement and will use the paragraphs relating to fish and wildlife which we are now employing in other licenses. These appear as Articles 16 and 53 in the conditions.

D. *Conclusion on the River Projects and Plans of Development*

As between the proposed HMS and Nez Perce projects we find that HMS itself is a smaller project with a lesser ability to generate power and a significantly lesser ability to store flood waters (a matter of importance only until the advent of Canadian storage). However, as a plan of river development the HMS plan, although somewhat more costly and possibly producing power at a higher unit cost, produces more benefits than the plan involving Nez Perce. While the estimates are contradictory, it does not appear that the net benefits of either plan are very much greater than the other. The HMS plan, however, has one decisive advantage over the Nez Perce plan. It permits postponement of a dam on the Salmon River until the fish passage problem is more clearly solved. On this basis we believe the HMS site rather than the Nez Perce site should be developed.

WPPSS argues that permitting the fishery issues to be a dominant consideration was inconsistent with past Commission actions. It is true that we have approved projects where some damage to fish appeared likely (see *City of Tacoma*, 10 FPC 424) in order to avoid denying the project. But this does not and cannot mean that the fishery resource must inevitably yield to power considerations. A balancing of equities, in the light of the relative importance of the two claims on our natural resources in the particular case must be determinative. Here the fishery resource is a major one. Insofar as a further dam on the Snake is concerned, we believe that the power factors outweigh the possible loss, even assuming that the best efforts at HMS will further diminish the already impaired fish runs there.

PROPOSED DEVELOPERS OF THE PROJECTS

Having narrowed the problem to the proposed HMS project and plan of development, we have before us PNPC's application for a license for this project, WPPSS's amendment of its Nez Perce application to include HMS, and the request of the Secretary of the Interior not to grant any license but to recommend Federal development. We do not think differences in construction features or differences in cost as between the two applicants for the HMS project are decisive because the plans are not final and can be modified and undesirable features eliminated.

As between the applicants, the initial question is a legal one, i.e., whether PNPC has a priority under its preliminary permit. If so, as we believe is the case here, the license should be issued to PNPC provided that it conforms to the requirements of the Act in other respects. For instance, in order that its project, HMS, be "best adapted" within the meaning of Section 10(a), there should be a sufficient market for its power. If PNPC has a priority under its preliminary permit, it will not be necessary to consider whether WPPSS would otherwise have a preference under Section 7(a), for that Section only applies "where no preliminary permit has been issued." Further, it is not necessary to resolve other questions relating to WPPSS such as its legal capacity to undertake a project outside of its own state.

Finally, we have before us the issues raised by the Secretary of the Interior in his request that federal construction be recommended. The most important of these issues is whether a non-federal licensee can effectively coordinate the operation of a Snake River project with the federal projects downstream and whether a probable delay as a result of federal construction would prevent the region and PNPC from obtaining needed power resources.

A. *PNPC's Priority Under its Preliminary Permit*

This legal question is twofold: did the preliminary permit granted PNPC on April 8, 1955 expire before its stated term of three years in the absence of any order terminating the permit; and was the permit limited to the site described in the application for a preliminary permit or did the permit extend to that project which was best adapted to a comprehensive development of that reach of the river?

A preliminary permit is issued under Section 4(f)[17] of the Act to enable an applicant for a license to make studies and gather data and at the same time under Section 5[18] to maintain its priority of application. Section 4(f) specifically states that the permits are to enable applicants to secure the data and perform the acts required by Section 9. The latter requires that each applicant submit to the Commission "maps, plans, specifications and estimates of cost as may be required for a full understanding of the proposed project." Section 5 refers to the permit as being "for the sole purpose of maintaining priority for a period, not exceeding three years, for making examinations and surveys, for preparing maps, plans, specifications, and estimates, and for making financial arrangements." The statute limits the purpose of the permit to priority to avoid any interpretation that it represents permission to begin construcion. The statute does not prevent but clearly contemplates that proposals and plans made at the time the permit was issued may be changed as a result of investigations made by the permittee. At the same time the permittee is protected by the permit from rival applicants while incurring expenses in the investigation of a project intended and required by Section 10(a)[19], to be best adapted to a comprehensive development of the reach of the river involved.

---

[17] *Sec 4.* The Commission is hereby authorized and empowered—(f) To issue preliminary permits for the purpose of enabling applicants for a license hereunder to secure the data and to perform the acts required by Section 9 hereof: * * *

[18] *Sec. 5.* Each preliminary permit issued under this Part shall be for the sole purpose of maintaining priority of application for a license under the terms of this Act for such period or periods, not exceeding a total of three years, as in the discretion of the Commission may be necessary for making examinations and surveys, for preparing maps, plans, specifications, and estimates, and for making financial arrangements. Each such permit shall set forth the conditions under which priority may be maintained. Such permits shall not be transferable, and may be cancelled by order of the Commission upon failure of permittees to comply with the conditions hereof or for other good cause shown after notice and opportunity for hearing.

We consider it evident that the statutory intent of these provisions is to give a permittee the first right to develop that reach of a river to which the permit relates. Any other interpretation would make the permit meaningless, for if another party could obtain a permit or apply for a license for a nearby project that would develop substantially the same head as the one described in the original permit, there would be no protection to the first permittee. Likewise, if another project affecting essentially the same reach of the river were not considered within the original permit, the original permittee could apply for a separate three-year permit for such project and could thus tie up the development of the river for a period of time substantially in excess of that contemplated in the statute. Thus, to construe these statutory priority provisions narrowly would be, in effect, to write them out of the Act.

To interpret the priority afforded by a permit as limited to a single project would also be contrary to the two most significant objectives of the Act, namely, to encourage the development of our nation's water resources, and to insure that such development would be best adapted to the fullest use of the river, considering all uses. Who would be willing to undertake substantial and expensive investigations looking toward development of a river if a permit were good only in the event—the unlikely event—that the results of the investigations coincided precisely with the permittee's guesstimate at the time the permit application was filed? In this connection, it is the experience of the Commission that a project is rarely constructed at the same exact site and in the same fashion as originally contemplated. Indeed, we are unaware of a single instance where this is true. For example, in the *Alabama Power* case[20] the permit listed specifically five developments on the Coosa River in Alabama. The license also provided for five developments covering approximately the same reaches of the Coosa River but with three of them in different locations.[21] In the *Grant County* case[22] the permit described one dam, Priest Rapids, at river mile 397 on the

---

[19] *Sec. 10(a)*. That the project adopted, including the maps, plans and specifications, shall be such as in the judgment of the Commission will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes; and if necessary in order to secure such plan the Commission shall have authority to require the modification of any project and of the plans and specifications of the project works before approval.

[20] *Alabama Power Co.*, 13 FPC 1235, 18 FPC 265.

[21] The permit described projects at river miles 13.5, 67.5, 105.7, 148.5 and 227.0, while the license described projects which are located at river miles 12, 51, 98, 147, and 227.0.

[22] *Public Utility District No. 2 of Grant County*, 13 FPC 1462, 14 FPC 1067.

Columbia River, but the license described two dams for the same reach of the river, Priest Rapids at river mile 397 and Wanapum at river mile 415.

If priority extended only to that project described in a permit, the pressure would be great upon the permittee not to explore fully alternative projects which might be superior. Clearly, if such investigations were conducted and an alternative development were considered preferable, the first permittee would be in danger of losing its opportunity to develop needed generating capacity as a result of its own actions. Thus, a narrow interpretation of the priority provisions would serve to undermine the objectives of Section 10(a) of the Act which is designed to insure the optimum development of our water resources. As a unanimous Commission recently held:[38]

> It [preliminary permit] is granted in a situation where the feasibility of a project in a particular stretch of a river has not as yet been demonstrated. It gives the permittee a priority over other non-Federal parties in order to encourage the investigations of projects which otherwise might never be investigated or built.

In view of the incongruity of a narrow interpretation of the priority afforded by a permit with the fundamental objectives of the Act, as well as the specific provisions on priority itself, it would require a compelling showing to convince us that PNPC's preliminary permit is of no effect respecting PNPC's HMS license application. To the contrary, we view the numerous terms of PNPC's permit as describing that type of permit contemplated by the Act.

There are six specific articles in the permit which required PNPC to cooperate with various federal, state and other interested agencies for the purpose of evolving the best development of the Snake, irrespective of the detailed description of the project as tentatively proposed. Article 10 required PNPC to cooperate with the U.S. Forest Service to develop a plan for alleviating damage to and achieving maximum utilization of National Forest resources. In Articles 11 and 12, the permittee was obliged to negotiate and cooperate with the U.S. Fish and Wildlife Service and various commissions of the states of Idaho and Oregon in formulating measures in the interest of fish and wildlife conservation. Article 13 required PNPC to cooperate with enumerated State departments and commissions and with the U.S. Forest Service regarding the recreational phases of the project. PNPC was required by Article 14 to cooperate with the Bureau of Mines concerning mineral resource possibilities. Most importantly, Article 15 required PNPC to cooperate with the Corps of Engineers and the Bureau of Reclamation "* * * with the object of determining a plan of development for the two sites best adapted to a comprehensive plan of development of the water resources of the Snake River." To adopt a narrow interpretation of the permit would be anamolous in that PNPC would be required to develop the best plan of development when it would thereby lose its priority to carry out the development.

WPPSS emphasizes that language in paragraph (A) of PNPC's permit, i.e., "This preliminary permit is issued * * * for the sole purpose of maintaining priority of application for a license for Project No. 2173 * * *." However, the specificity in applications for permits required by our regulations arose from the necessity of limiting unnecessary reservations of land for power purposes to the detriment of the public. The legislative history of the Water Power Act evidences a grave concern with undue reservations of public lands for such purposes.[24] It was for this reason that our regulations were designed to provide a detailed description of the lands occupied by the project. While it is not possible to achieve these desired results in every case, as here, we do not view those situations as adequate justification for abandoning our attempts to insure a sensible program of land withdrawals. Thus, as stated above, our regulations governing the filing of applications for preliminary permits require the specification and the location not only of the lands to be used but also of the major project works. Any application for a permit failing to contain the required specificity would be rejected under our Rules. Section 4.81 of our regulations under the Federal Power Act which specifically deals with the filing of applications for preliminary permits, as well as Section 1.14(a) of our Rules of Practice and Procedure, specifically provide for such rejection.

---

[38] *Georgia Power Company*, Project No. 2303, "Order Denying Application for Preliminary Permit", issued April 2, 1962, 27 FPC 663.

While the detailed description of site in both the application and in the resulting permit enables a sensible program of land withdrawals, we do not believe that this aspect should be or is controlling with respect to the scope of a permit.[25]

Moreover, we view the language in paragraph (A) of the Commission's order above cited as emphasizing the fact that no construction authority was being granted, but only a priority to conduct investigations. In several early proceedings, various parties appeared in opposition to preliminary permits when the opposition related to the project itself, and not to the priority aspects of a project.[26] In these cases, the Commission emphasized that only a priority was involved and that the merits of the project ultimately sought was the subject matter of license application.

The scope of a preliminary permit containing language identical to that in PNPC's permit was specifically considered in the *Montana* case.[27] Montana was the permittee for proposed Project No. 2164 (at mile 36.4) and 2163 (at mile 60.7) on the Flathead River. Previously, Montana had been issued a permit for Project No. 2135 at mile 68.6. Project No. 2163, if constructed would have inundated Project No. 2135. Subsequently, Montana filed for a fourth permit, identified as Project No. 2223. If constructed, this project would develop the same reach of the river as Projects Nos. 2163 and 2164. On January 8, 1957, the Confederated Salish and Kootenai Tribes filed an appearance in opposition to Montana's application for a permit for Project 2223. They characterized that application as an attempt to secure an unlawful priority to apply for a license.[28] The Secretary of the Commission had previously requested additional support for the grant of the permit since it appeared that Montana's existing permits enabled it to conduct the necessary studies regarding Project 2223. In response, Montana agreed that the same reach of the river was involved in its existing permits as was covered by Project 2223. Nevertheless, it pointed out that proposed Project 2223 was substantially different from the projects contemplated under permits 2135, 2163 and 2164 and went on to describe some of these major differences. Nevertheless, the Commission denied the application for a permit for Project 2223 as unnecessary. That order carefully explains that the amendment was denied because the examinations, surveys and other acts, the performance of which is contemplated under a preliminary permit could be made with respect to Project 2223 under the outstanding preliminary permits for Projects 2163 and 2164. The Commission made this finding notwithstanding the different identification numbers assigned to the two proposals. The holding in this contested proceeding cannot be reconciled with the minority's position.[29]

[25] After carefully selecting and citing the general requirements of the regulations, the minority assert that it can find no unyielding requirements of specificity. If the minority had gone further and considered Exhibits E, F, H and I prescribed by Section 4.82(k), the specificity we referred to would have been discovered. Exhibit H, for example, requires:

> *Exhibit H*, A general map showing the nature of *the proposed project, its principal features and their location, and the location of the project as a whole with reference to some well-known town or stream.* On this map shall be placed a line indicating the approximate project boundary of the area to be occupied by the principal project works, such as, dams, reservoirs, forebays, waterways, and powerhouses, but excluding transmission lines, and *where necessary in order to determine the location of such structures on the ground, there shall be shown on the map their relative positions with respect to permanent monuments or objects that can be readily recognized from descriptions thereof noted on the map.* (See specifications for drawings, § 4.42.) [Emphasis added.]

[26] *E.g., Linoma Power Co.*, 8 FPC 999 (1949)

[27] *The Montana Power Co.*, 17 FPC 834. Actually this language is found in virtually every preliminary-permit granted by the Commission. In fact, we are not aware of any permit containing broader language.

Both Staff and WPPSS argue, in effect, that the priority granted by a permit, irrespective of the scope thereof ceases to have independent efficacy upon the filing of a license application. We disagree. Section 5 provides for priority "for such period or periods, not exceeding a total of three years * * *." It does not state that a permit expires when a license application is filed nor does it state that a permit somehow "merges" into a license application. Moreover, Article 3 of PNPC's permit specifies certain conditions under which the priority granted by the permit will be lost. None of these conditions is present in this case. Staff and WPPSS place substantial weight upon an opinion of the FPC General Counsel given in 1923. This obscure opinion is not mentioned in any Commission determination of which we are aware. Moreover, the basic issue discussed in that opinion is whether priority extends beyond the term specified in a permit in situations where a permittee filed a license application within the duration of the permit. On this point, there is no dispute. But that is quite a different question from the one involved here, i.e., whether a permit terminates upon the filing of license application. As the minority correctly recognize in one place, the instant case represents the benchmark decision on the latter issue.

PNPC's original license application for a two-dam Mountain Sheep Pleasant Valley development places the dams at a slightly different location than the permit described. And PNPC actually made investigations under the permit of no fewer than three different one-dam High Mountain Sheep developments.[30]

---

[28] Subsequently, these tribes filed an application for a preliminary permit for Project No. 2285 which involves the same reach of the Flathead River.

[29] The minority allege the requested amendment in that case specified a project "at precisely the same site the applicant was already exploring under an existing permit for a smaller dam." A careful review of the *Montana* record does not support this allegation. But even if it were true, the scope of a project and its effect on adjacent lands, waters and other potential projects are affected not only by the site of a project but also by several other features, such as its height. The minority further point to the *Appalachian case* (17 FPC 8, 19 FPC 169) in which an amendment was allowed. That case involved a request for a completely new project—14 miles away—in addition to that already the subject of a permit.

[30] Tr. 1474–5, Project No. 2173

This was consistent with the Resolution of PNPC's Board of Directors, embodied in its application for a permit, which authorized its officers

> "to apply * * * for a Preliminary Permit * * * to make studies, surveys, and investigations of the feasibility of hydroelectric power developments *in the vicinity of the* Mountain Sheep and Pleasant Valley Hydroelectric sites on the Snake River, in the States of Idaho and Oregon, for the purpose of enabling the company to secure the data and perform the acts required by law for filing an Application *or Applications* for the issuance of a license or licenses;" [Emphasis supplied; Exhibit B, application for preliminary permit.]

After the Mountain Sheep-Pleasant Valley application was denied, PNPC was fully aware of the fact that the term of its permit soon would expire. In its application for rehearing of the Commission's Opinion and Order denying the license, PNPC requested the Commission to protect its priority in addition to its argument for the licensing of Mountain Sheep-Pleasant Valley. It asked that the matter be set down for rehearing to consider such modification of its project as would represent the most comprehensive development of the resources. Article 3 of its permit specifically provided for the Commission's modification of the plans submitted by the permittee as, in the judgment of the Commission, would be best adapted to a comprehensive plan of development. PNPC pointed out particularly that an HMS dam between the Salmon and Imnaha had not been considered by the Commission. Nevertheless, on March 20, 1958 (19 FPC 353) the Commission issued an order denying rehearing stating that an opinion would be issued later.

PNPC was faced with a serious problem. Its three-year permit would expire April 1, 1958. It might have obtained an amended permit specifying Nez Perce, but this was most doubtful in view of the *Montana* case, *supra*. More importantly, PNPC adhered to its position that any project which blocked the fish runs on the Salmon was not the best development. While its application for rehearing was denied, there was no opinion and PNPC could not know whether its priority would be preserved by Commission action under Article 3 of its permit. In the meantime, additional studies indicated the probable geological feasibility of the HMS site, and PNPC filed a license application for a project for this site, a site 3.4 miles below the initially proposed Mountain Sheep development.[31] Subsequent to the filing of this license application, the Commission released its opinion on rehearing declaring its view that any combination of projects which includes Nez Perce is consistently superior to any combination which does not include Nez Perce. Interestingly, the Commission did not make the requested finding that a Nez Perce project represented the most comprehensive development of the Snake, considering all uses. Thus, while the dream of Nez Perce was considered adequate justification for a denial of an alternative development, it is anamolous that the Commission apparently lacked the necessary conviction to make or direct appropriate modification of PNPC's plans under Article 3 of the permit to specify Nez Perce.

---

[31] In a footnote, WPPSS makes the argument in cursory fashion that PNPC's HMS license application was incomplete when it was initially filed, and was not completed until after the term of the preliminary permit had expired. Section 4.81 of our regulations and 1.14(a) of our Rules of Practice referred to above provide for rejection of applications tendered to the Commission which do not contain the requisite information. PNPC's HMS license application was not rejected but was accepted for filing by the Commission. The fact that additional data was requested here, as in most cases, and submitted does not change our view regarding the adequacy of the filing or the correctness of its acceptance. WPPSS's contention is untimely and unmeritorious.

As a matter of fact, PNPC is to be commended for sticking with its concept regarding the proper development of the Snake. With the issuance of the Commission's opinion on January 20, 1958, indicating its conclusion that Nez Perce represented the best development of this reach of the Snake, it would have been an easy matter for PNPC to have promptly filed a license application specifying this site. This it did not do. Rather, it insisted that any proposal which would block the Salmon River was not best adapted to comprehensive development. While equitable considerations are not relevant to determining the scope of a preliminary permit, we are nevertheless constrained to observe the irony involved in rejecting PNPC's proposal to develop the Snake when its HMS application would promptly have been granted had the Commission properly analyzed the relative merits of a Nez Perce project.

Our dissenting colleagues also recognize the need for flexibility and attempt to avoid any interpretation of a permit which would impose the "impossible demands" of requiring parties to guess in advance of exploratory studies conducted under a permit. The minority's solution, i.e., filing of amendments to permits, is incomplete because the all important question remains: Does a party having a permit have a right to an amendment to the permit for a project concerning the same stretch of the river? The minority carefully fails to answer this critical point. If they answer negatively, their solution is frustrating and fatuous since it would encourage parties to perform useless activities. If they answer affirmatively, they are simply imposing additional filing requirements of no substance since, in effect, a party obtains priority to a given stretch of the river under the original permit.

The dilemma of the minority may be attributable, at least in part, to its misunderstandings on two important points. First, our decision will not result in tying up our nation's waterways for extensive periods to the exclusion of applicants accorded preference by Congress. Private parties do not have exclusive rights to permits. Preference parties not only have an equal chance to obtain a permit but, in addition, have a preference for a permit guaranteed by Section 7(a). A second major misconception is that our decision would somehow fail to give adequate notice to preference parties of the developments contemplated under a permit. Once a party, preference or otherwise, has a permit describing a project which would develop a specific stretch of river, everyone is on notice that the permittee has priority to construct at least the project described in the permit. Quite clearly, this would foreclose *any* development on that stretch of the river contemplated by any other party. It is therefore inconsequential, as far as notice is concerned, if the construction plans are altered as long as the same reach of the river is involved.

We therefore conclude that PNPC is entitled to priority for its application to develop the HMS site. Accordingly, the preference provisions of Section 7(a) are not applicable with respect to WPPSS. Section 7(a) states that, as a matter of law, preference rights to state and municipal bodies apply only in those situations where no preliminary permit has been granted, regardless of our individual predilections. Even the minority ultimately reveals its concurrence with this limitation, although this concession is nearly lost in its extended discussion of the legislative history of preference, a discussion, incidentally, with which we agree.

In the event our decision on priority is adjudged to be erroneous, it would be necessary, under Section 7(a), to give WPPSS a reasonable opportunity to make its plans equally well adapted to those of PNPC and to evaluate such plans following a hearing thereon. An important element to be developed at the hearing would be WPPSS's need for HMS power. As stated below, the present record is sorely deficient respecting the existing generating capacity of the entities comprising WPPSS. This information would be essential in any determination of the entitlements of WPPSS to a preference under Section 7(a).

This as well as additional data would also be required regarding the financial feasibility of the WPPSS proposal. As pointed out below, we would not grant a license to WPPSS in the absence of far better showing of its ability to finance HMS construction.

Following the hearing on this issue, we would then determine if preference properly accrues to WPPSS, and the effect of such a preference, if any, in the light of all the other factors relevant to a disposition of these applications. We cannot make such a determination at this time, nor is there any reason so to do in view of our finding that PNPC has priority. For the same reason, it is unnecessary to resolve the serious question respecting the legal status of WPPSS outside the State of Washington. Section 9(b) of the Federal Power Act expressly requires from license applicants:

> (b) Satisfactory evidence that the applicant has complied with the requirements of the laws of the State or States within which the proposed project is to be located with respect to bed and banks and to the appropriation, diversion, and use of water for power purposes and with respect to the right to engage in the business of developing, transmitting, and distributing power, and in any other business necessary to effect the purposes of a license under this Act.

Idaho has a statute governing this situation. Section 61-327 of the Idaho Code states:

> No title to or interest in any property located in this State which is used in the generation, transmission, distribution or supply of electric power and energy to the public or any portion thereof, shall be transferred or transferrable to or acquired by directly or indirectly by any means or device whatsoever, any government or municipal corporation, quasi-municipal corporation or governmental or political unit, subdivision or corporation organized or existing under the laws of any other state; * * *

Both the Idaho and Oregon Utility Commissions object to the licensing of WPPSS on the basis of WPPSS's failure to comply with state laws. Moreover, a U.S. District Court has found that WPPSS lacks authority from its own state of Washington to develop hydroelectric projects outside the State.[32]

Without deciding this issue, nevertheless the very existence of these acts, however controversial, belies the minority's easy assurance that WPPSS is so qualified. The *First Iowa* case which they cite expressly recognizes a dual system of control by the states and the federal authority:

> In the Federal Power Act there is a separation of those subjects which remain under the jurisdiction of the states from those subjects which the Constitution delegates to the United States and over which Congress vests the Federal Power Commission with authority to act. To the extent of this separation, *the Act establishes* a *dual* system of control. The duality of control consists merely of the division of the common enterprise between two co-operating agencies of the Government, each with *final* authority in its own jurisdiction. [328 U.S. 152, 167, emphasis added.]

---

[32] *WPPSS* v. *PNPC,* 217 F. Supp. 481 (1963)

B. *Power Resources and Requirements*

Evidence was presented by PNPC, WPPSS, and staff on the load requirements of the Pacific Northwest and on resources to meet these requirements by both PNPC and WPPSS. The figures submitted by the parties differ somewhat because, among other things, PNPC used a different area and did not include old steam capacity in the resources. Staff used lower growth figures since population and industrial growth did not measure up to earlier estimates. The figures are extensive and based on estimates as to future loads and resources. They take into account proposed projects such as Monumental, Boundary and Libby, and also the effect of storage under the proposed treaty with Canada, ratification of which was assumed in 1961. The figures, however, do not take into account demand and additional resources that may be available from the proposed inter-tie with California. The effect of the evidence, assuming a further three-year deferral of the Canadian treaty ratification, is to show a substantial deficiency in both capacity and in average energy during the critical storage control period (usually the winter months) at least by 1970–71 in an amount that is substantially greater than the power that would be available from the HMS project.

The Secretary of the Interior argues that the future power deficiency will be removed by the construction of additional projects on the Snake and Columbia and by the Hanford nuclear project. In fact, he says, that by 1967–68 the area will be faced with substantial surplus resources. PNPC itself admits that since the record was closed nine projects have been scheduled in addition to those included in PNPC's evidence. It is natural, of course, that as time passes other projects will be authorized by Congress and scheduled. Otherwise, large deficiencies would develop that would have to be met by more expensive steam generation. We will take notice that such projects are scheduled, including the Hanford atomic reactor, but it appears that at least part of the capacity of HMS could be used on a regional basis by the year 1970–71 assuming ratification of the Canadian treaty this year. The record shows that Canadian storage postpones the regional need for power a year or so. Because of the need of further investigation of the site, preparation of final plans and construction, the HMS project will not be in service in any case until around 1970.

Of more significance in our opinion than the regional power situation are the load and resources of the PNPC companies themselves. The evidence shows, taking into account deferral of the Canadian storage, that the PNPC companies can use the power from the HMS project as soon as 1964–65, and that by 1970–71 the deficiency would be substantially greater than the power that would be available from the HMS project.

We are aware that the four companies have acquired further resources since the preparation of the figures; namely, a share in the Hanford and Wells projects. This is material outside of the record, but it would not appear that these additional resources would meet the load deficiencies in 1967–68 and later, even with HMS.

The Secretary and WPPSS argue that PNPC can obtain its requirements elsewhere; that is, from the Northwest Power Pool, including BPA. The Secretary says that the possibility is extremely remote that he will "pull back" power now sold to private companies. This action could be taken pursuant to the Bonneville Act,[38] which provides that the administration shall "give preference and priority to public bodies and cooperatives" (Section 4(a)) and that "in the case of a contract with any purchaser engaged in the business of selling electric energy to the public, the contract shall provide that the administrator may cancel such contract upon 5-year notice in writing if in the judgment of the administrator any part of the electric energy purchased under such contract is likely to be needed to satisfy the requirements of the said public bodies or cooperatives referred to in this Act" (Section 5(a)). Actually, under letter of August 10, 1960, the Secretary exercised the "pull-back" provision in providing for a declining schedule of deliveries (none in 1966–67 and none after 1970). In view of these statutory provisions, it is our opinion that PNPC is not able to rely on any power supply that BPA may have available, and the company can reasonably claim a need for its own supply. In fact, we think it owes a duty to its customers to obtain power that is not subject to this statutory disability.

---

[38] 16 U.S.C. § 407.

In contrast to PNPC we find that WPPSS and its members and the public power agencies that would participate in Nez Perce do not have the same need for generating capacity as PNPC. According to the record, WPPSS's loads will be met by the generating resources of its own members, and by BPA until 1970. While WPPSS argues that it has no assurance that BPA will be able to supply power to it after 1970, and that in any case the price will go up, WPPSS has a preference for BPA power while PNPC does not. Thus WPPSS is in a far better position to include BPA power as a resource in its planning than is PNPC. WPPSS has failed to show on the record the amount of power resources owned by its members and participating agencies, but we take notice that they are considerable and that WPPSS has failed to take them into account in making its presentation of a need for power. The sketchy evidence in the record on this point shows that the WPPSS member organizations operate generating plants and will operate a plant on the main stem of the Columbia, and that the Cowlitz County PUD operates a steam plant and the Grays Harbor PUD another steam plant. In fact, by the year 1970–71 WPPSS would have available assured resources including power from BPA now available and that withdrawable from others in the amount of 1,907 mw or 144 percent of the estimated load.

To add the resources of HMS to those of WPPSS would be adding a surplus to the resources available to WPPSS. The record shows that WPPSS and its members contemplate disposing of this surplus power to other public agencies, then to industries and private utility companies under contractual provisions that permit the drawback of the power when it is needed by the WPPSS participants. It is relying for the disposition of its power on 46 public agencies which in reply to a letter from WPPSS had signed commitments for the power. While we would not require firm contracts for the power these commitments were on the express condition that the power to be purchased would be at a cost which would make it attractive compared to other long-range alternatives and on mutually satisfactory terms. Whether or not WPPSS and its participants prefer to take HMS power and let the BPA power go to the private utilities, or prefer to hold on to the BPA power and sell the HMS power does not change the result. WPPSS has available power, not set forth in the record, and also BPA power for which it has a preference, while the PNPC companies do not have any preference for BPA power and can use the entire output of HMS as soon as it can be expected to come into operation. The record indicates that a project will not be needed to meet the loads of public agencies in the Pacific Northwest, including those of WPPSS, until some indefinite time after 1970. This is consistent with the statement of the Secretary of the Interior that BPA is suffering a reduction in revenues because of a lack of market for its power.

In summary as to the need for power, we conclude that the PNPC sponsoring companies will be able to use HMS power as soon as it is available. On the other hand WPPSS has failed to demonstrate any need for such power now or in the foreseeable future. We emphasize, however, that if it were not for our determination that PNPC has priority under the permit we would give WPPSS further opportunity to show its need for power and its ability to finance, so that it might show that its project was "equally well adapted" within the meaning of Section 7(a).

On financing, briefly PNPC would raise the necessary funds by selling equity for 15 percent of the capitalization to the organizing companies and floating a public bond issue for the remaining 85 percent of the capitalization. While the high debt ratio has been questioned, a higher ratio has been employed for other power generating projects.[24] The combined capital ratio of PNPC and its sponsor companies using their capitalization as of December 31, 1960, would be 65.48 percent for long-term debt, 4.35 percent for preferred stock, 26.86 percent for common equity, and 3.31 percent for deferred Federal income taxes. The record supports the saleability of PNPC's bonds, and no question has been raised as to the ability of the sponsor companies to finance their participation in the proposed project. We agree, however, with the recommendation of the staff that any PNPC license be conditioned so as to require submission of a complete plan of financing prior to the beginning of construction. WPPSS on its part would finance its project through bonds.

C. *Restraint of Trade*

WPPSS argues that PNPC is a combination in restraint of trade citing Section 10(h) of the Power Act which provides as follows:

> That combinations, agreements, arrangements or understandings, express or implied, to limit the output of electrical energy, to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited.

WPPSS argues that PNPC is a combination of utilities to monopolize for themselves the largest remaining power site on the Snake River, and to deprive all other competing public utilities of access to the power, and this would lead to control over the entire economy of the Pacific Northwest. It also says that the four PNPC companies will fix prices for power, on the theory that they are guaranteed a 6 percent dividend on their capital contributions, and this will put a floor under the prices of PNPC must charge. WPPSS also sees a violation of Section 1 and 2 of the Sherman Act[25] in the allocation of fixed portions of the power generated to each of the four organizing companies. However, we agree with the examiner that there is no support in the record that PNPC or the four companies will be in violation of Section 10(h) or the anti-trust laws.

PNPC's proposal is based upon a normal business need to obtain a supply of power, and this will be accomplished by the issuance of a license by a governmental body. It is true PNPC and its component utility companies are not exempt from the anti-trust laws. Immunity from the anti-trust laws is not lightly implied. *California* v. *F.P.C.*, 369 U.S. 482, 485. However, the anti-trust laws do apply differently to regulated companies. See *F.C.C.* v. *RCA Communications, Inc.*, 346 U.S. 86, 93. Utilities are necessarily monopolies within their areas whether they be telephone companies, power companies or gas pipelines, but there is nothing to show that PNPC is trying to monopolize the sources of power in the Pacific Northwest. Of course, it seeks to gain control over the HMS site, but this type of control is inherent in licenses issued under the Act and was clearly intended by Congress.

---

[24] *Ohio Valley Electric Corporation, et al.*, 36 S.E.C. 304; see *South Carolina Generating Co.*, 16 FPC 52, 61.

[25] 15 U.S.C. § 1 and 2.

There is here no price fixing combination, for each company will fix its own prices subject to regulatory control. The four companies have entered into an arrangement to pay the costs of their supply affiliate, PNPC, and to receive a dividend on their capital contributions. Such an arrangement is, of course, subject to our regulatory control under the Federal Power Act. *Pennsylvania Water & Power Co.* v. *F.P.C.*, 343 U.S. 414; *Safe Harbor Water Power Corporation* v. *F.P.C.*, 179 F. 2d 179 (CA3) certiorari denied 339 U.S. 957 These companies are not competitors in the industrial sense, and in our view this method of obtaining a supply of power was reasonable particularly in view of the enormous costs involved. There is no "public policy that forbids, *per se*, an expansion of facilities of an existing company to meet the needs of new markets * * *." *United States* v. *Columbia Steel Co.*, 334 U.S. 495, 526.

Likewise, the division of the power between the four companies is not in violation of Section 10(h) or the anti-trust laws. This is a joint venture to obtain a supply of electric energy. We have here a business requirement and no attempt to monopolize (*United States* v. *Columbia Steel Co.*, *supra* at p. 527), although, of course, PNPC is seeking cotnrol of the HMS site in accordance with the Power Act.

D. *Federal Development*

Whether we should recommend federal development rather than development by PNPC is an important issue. We think this issue must be resolved against federal development contrary to the arguments of the Secretary of the Interior. The applicable Section 7(b) of the Power Act provides as follows:

> Whenever, in the judgment of the Commission, the development of any water resources for public purposes should be undertaken by the United States itself, the Commission shall not approve any application for any project affecting such development, but shall cause to be made such examinations, surveys, reports, plans, and estimates of the cost of the proposed development as it may find necessary, and shall submit its findings to Congress with such recommendations as it may find appropriate concerning such development. [41 Stat. 1067; 49 Stat. 842; 16 U.S.C. 800]

We agree with our staff and the examiner that the record supports no reason why federal development should be superior to development by PNPC, and we see no reason why we should withhold a license and recommend that the United States build the project.

While we have extensive material before us on the position of the Secretary of the Interior, there is no evidence in the record presented by him to support his position. The Secretary contends initially that we are in effect bound to a decision in favor of federal development, because Congress has made a determination that the water resource (i.e., the Columbia and Snake Rivers) should be federally developed to the extent of nine-run-of-river dams downstream and that the development of the large storage at HMS affects this federal development. We agree, of course, that in meeting our responsibilities under Section 7(b) we should consider the past history of a river basin as it sheds light on the future. While it is true that there are nine federal projects, authorized or constructed on the Snake and Columbia Rivers downstream from the projects here proposed,[36] it is also relevant that we have previously authorized major non-government projects on the main stem of the Columbia above the confluence with the Snake[37] and on the Snake above the HMS site.[38]

---

[36] Bonneville, The Dalles, John Day, McNary, Ice Harbor, Lower Monumental, Little Goose, Lower Granite, and Asotin.

The fact that the Congress from time to time has authorized considerable federal development within this expansive river basin does not compel a determination that federal development is appropriate with respect to all projects on the river. Our decision must rest upon an evaluation of all the factors relevant to the development on this reach of the Snake at this time.

The factors argued by the Secretary in support of federal development are that federal development offers lower costs, that flood control can be better effected by flexible federal operation than by limitations written into the license, that the Interior Department can better prevent damage to fish than provisions in the license and inadequate supervision by us, that federal development can better provide recreational facilities for an expanding population, and that full co-ordination of the Northwest Power Pool is possible only if the United States constructs and operates the project. He adds that immediate construction of the project would produce an excess of power in the Pacific Northwest which would cause large losses to BPA and severe harm to the economy of the region.

Cost savings to consumers at the expense of the taxpayers of the country at large may, of course, follow from federal development as a result of low cost financing and absence of tax obligations. If this possibility were the criterion, it would be our duty to recommend federal development in almost all cases. Obviously the Federal Power Act does not contemplate any such result.

While flood control (in the event of Canadian storage) and navigation are objectives of lesser significance relative to the proposed projects, provisions in a license with respect to these matters were recommended by the Chief of Engineers, United States Army, were included by the examiner in his recommended decision and will be included substantially here. The proposed project will provide substantial recreational opportunities. In accordance with recommendations made by the Assistant Secretary of Agriculture we shall provide, as did the examiner, that the licensee shall co-operate with local, state and federal agencies in the study and preparation of a recreation public use plan and that such a plan be filed for approval by the Commission. In addition, Article 17 places an affirmative obligation upon the licensee to construct and operate such recreational facilities as may be necessary and desirable.

As for the fish problem we shall provide, as did the examiner, that the licensee shall construct protective devices and modify the project works and operations as we may prescribe hereafter upon our own motion or upon the recommendation of the Secretary of the Interior or the state conservation agencies. We shall also provide that should the United States desire to construct fish handling facilities, the licensee shall permit the United States to use its property free of cost. We see nothing to lead us to believe that the Federal Government could do more. Specifically, there is nothing in this record to indicate that the purposes described above will not be served as adequately under the license conditions as would be the case under federal development.

The Secretary of the Interior puts considerable stress on the factor of co-ordination arguing that a federal project would be better co-ordinated with other federal projects downstream. We agree that the Secretary (or any single operator) normally would have a superior ability to co-ordinate the operations of HMS with the other affected projects on the river. But there is no evidence upon which we can determine the scope or the seriousness of this matter in the context of a river system which already has a number of different project operators and an existing co-ordination system, i.e., the Northwest Power Pool.[39] The parties comprising PNPC are among those having projects on the river. They are members of the Pool and their record of cooperation is good. PNPC has designed its project to be operated and co-ordinated with the Northwest Power Pool in order to benefit all members. To implement this co-ordination and operation we shall use a provision substantially as found in the Wells Project license[40] as requested by both PNPC and the staff, to provide that the licensee shall operate the project in complete co-ordination with the Northwest Power Pool. We have continuing jurisdiction and will insist that this be done. The record does not show that federal ownership is necessary to achieve this result or that proper co-ordination would not be achieved in the absence of federal development.

---

[37] See *e.g.*, Priest Rapids, Wanapum, Rock Island, Rocky Reach, Wells.

[38] The Brownlee, Oxbow and Hells Canyon developments of the Idaho Power Company.

In short, on the basis of the record here, plus such information of which we can take official notice, there is little if anything which would persuade us that federal development of HMS was inherently superior to licensing it to PNPC even assuming that the actual choice we had before us was between federal construction now and non-federal construction now. But these are not the true alternatives. The Department of Interior has frankly admitted it has no present intention of seeking authorization to commence construction or planning to construct an HMS project. Under these circumstances, federal construction of an HMS project is not forseeable even assuming Congress would be willing to authorize a federal project where PNPC is willing and eager to construct it under the terms, conditions and provisions of the Federal Power Act.

One of the principal reasons for the Department's opposition to non-federal construction appears to be its concern over a decline in BPA revenues which it feels might be accelerated if HMS power were made available directly or indirectly to some of its existing customers. As indicated above, however, we are convinced that PNPC specifically will have a need for the additional power which could be made available by early construction of HMS, and the Pacific and the West Coast areas, in general, will have a need for the power at the time HMS will be completed. In summary, the delay inherent in federal construction would foreclose power coming on the line at a time when it will be required. This disadvantage outweighs those benefits which Interior contends would result from federal construction (i.e., superior co-ordination and non-power benefits discussed above), assuming *arguendo*, that such benefits would be realized.

To conclude, Section 7(b) of the Act provides for federal construction where, in our judgment, there is some good reason showing that the development of any water resource for public purposes should be undertaken by the United States. HMS is principally a power project. Neither the record nor our general knowledge of the Columbia River System discloses any major benefits which would result from federal construction over that by PNPC. In the event PNPC is adjudged not to have priority, it might then be necessary to re-evaluate the Secretary's proposal. This would be particularly appropriate respecting WPPSS since its fortunes are so inextricably intertwined with those of the Interior Department.

---

[39] This Pool is a voluntary arrangement among utilities, both public and private in the Pacific Northwest area, including BPA for the co-ordination and operation of their affected systems.

[40] Public Utility District No. 1 of Douglas County, Washington, Project No. 2149, 28 FPC 128, 133.

RECENT DEVELOPMENTS

On January 22, 1964, it was announced that President Johnson and Prime Minister Pearson signed an agreement under the Canadian Treaty herein referred to. This agreement provides:

1. A schedule for completion of the Canadian storage projects as follows: Duncan Lake, April 1, 1968; Arrow Lakes, April 1, 1969; and Mica, April 1, 1973.

2. The U.S. will use its best efforts to arrange a sale to a single U.S. purchaser of the downstream power benefits for a 30 year period after completion of each project.

3. The total downstream benefits are initially 2,800,000 kws of dependable capacity and about 4 billion kw hours of energy annually.

4. These power benefits will have declined to about 660,000 kw annual dependable capacity and about 4 billion kw hours of energy annually at the end of 30 years.

5. The U.S.[41] and Canada will share equally in the power benefits described above.

6. It is contemplated that the purchaser of the Canadian entitlement will be a non-profit organization now being formed in the U.S. by certain public and private utilities in the Pacific Northwest.

Implementation of this agreement will significantly reduce the superiority of Nez Perce over HMS for flood control purposes as described here in p. 253; 258 and 263, *supra*. In addition, this agreement will substantially add to the power resources of the Pacific Northwest. Nevertheless, there is nothing which presently indicates that this new supply of power obviates the feasibility of licensing the HMS project to PNPC at this time. Accordingly, the Commission has decided that a license should be issued, as previously determined.

The Commission further finds:

(1) The Snake River is a navigable water of the United States at least as far upstream as the upper limits of the reservoir of either the High Mountain Sheep or the Nez Perce Projects (*In re Idaho Power Company*, Project No. 1971, Opinion No. 283, 14 FPC 55, 72). The respective project works will be located on lands of the United States, and the reservoir will inundate lands of the United States.

(2) Pacific Northwest Power Company is a private corporation organized under the laws of the State of Oregon as a wholly-owned subsidiary of four sponsoring companies, namely, The Montana Power Company, Pacific Power & Light Company, Portland General Electric Company, and Washington Water Power Company.

(3) Washington Public Power Supply System is a municipal corporation organized and operating under and by virtue of the laws of the State of Washington, for the purpose of acquiring, constructing, and operating electrical generating and transmission facilities.

(4) Pacific Northwest Power Company, on March 31, 1958, filed an application under the Federal Power Act for the proposed High Mountain Sheep Project (No. 2243), also referred to as the Middle Snake River Project, to be located at river mile 189.2 on the Snake River just above the confluence of that river and the Salmon River.

(5) Washington Public Power Supply System, on March 15, 1960, filed an application under the Federal Power Act for the proposed Nez Perce Project

---

[41] Under the treaty BPA will have about 70 percent of the U.S. share and the owners of the non-federal base system projects will have the balance.

(No. 2273) to be located at river mile 186.2 on the Snake River just below the confluence of that river and the Salmon River.

(6) Public notice of these proceedings has been given as required by the Act.

(7) Either the High Mountain Sheep or the Nez Perce Project, whichever may be constructed, would be located in or along a navigable water of the United States and would otherwise affect the interests of interstate or foreign commerce.

(8) The Department of the Interior has requested that the Commission recommend to Congress that the High Mountain Sheep Dam should be built by the United States.

(9) Subject to the terms and conditions hereafter specified, the HMS project is best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(10) PNPC has a statutory priority for its application for the High Mountain Sheep Project (No. 2243) by virtue of a preliminary permit issued by the Commission on April 8, 1955 and WPPSS is not entitled to a preference under Section 7(a) of the Federal Power Act.

(11) Subject to the terms and conditions set forth below, the plans of PNPC to develop the HMS site are best adapted to conserve and utilize in the public interest the water resources of the region, and PNPC is able to carry out such plans.

(12) The development of the HMS project should not be undertaken by the United States itself.

(13) The installed horsepower capacity for the HMS project here authorized is 1,166,700 horsepower for the purpose of computing the administrative annual charge.

(14) The amount of the annual charge to be paid under the license for the HMS Project for the purpose of reimbursing the United States for the cost of the administration of Part I of the Act is reasonable as hereinafter specified.

(15) It is desirable to reserve for future determination the amount of annual charges to be paid under a license for the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands.

The Commission orders:

(A) A license is hereby issued to PNPC (hereinafter referred to as Licensee) under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of the first day of the month in which acknowledgment of acceptance thereof is filed with the Commission by PNPC for the construction, operation and maintenance of Project No. 2243, to be known as the High Mountain Sheep project of the Snake River and its tributaries, Idaho and Oregon, affecting navigable waters of the United States and the interest of interstate or foreign commerce and lands of the United States within and outside of Wallowa, Nez Perce and Payette National Forests, subjject to the terms and conditions of the Act which are incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(i) The proposed project consists of: All lands constituting the project area and enclosed by the project boundary or the limits or which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the applicant or by the United States; the general location of such project area being shown and described by certain exhibits which formed part of the application for license, or amendment thereof and which are designated and described as follows:

Exhibit	FPC No.	Showing
J	2243-1	General map of project area.
K (as amended)	2243-2 through 4, 6 through 20 and 43 (amended and revised).	Project area (tentative).

(ii) All project works consisting of a concrete arch dam approximately 670 feet high, creating a reservoir extending about 58 miles upstream to Hells Canyon tailwater (Project No. 1971) on the Snake River and about 10 miles upstream on the Imnaha River with normal water surface area of about 17,300 acres and gross storage capacity of 3,600,000 acre-feet at normal water surface elevation 1510, of which 2,250,000 acre-feet would be usable with a draw down of 173 feet; a chute-type radial-gate controlled spillway located at the right abutment; low level intakes; two outdoor type powerhouses, one on each side of the river immediately downstream of the dam, having an initial installation of five units with each turbine rated 285,000 horsepower at 550-foot head and each generator rated 175,000 kw (184,000 kva at 0.95 power factor); three on the (left bank) Oregon side and two units on the (right bank) Idaho side, with provisions in the plans for the addition of five similar units, two on the left bank and three on the right bank; and appurtenant electrical and mechanical facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by other exhibits which also formed a part of the application for license as amended and which are designed and described as follows:

Exhibit	FPC No.	Showing
L Sheet 30, amended and revised	2243-44	General plan.
L Sheet 31, amended and revised	2243-45	Profile and sections.
L Sheet 32, amended	2243-37	Powerhouse plans.
L Sheet 33, amended and revised	2243-46	Powerhouse cross-sections.
L Sheet 34, amended and revised	2243-47	Intake and spillway sections.
L Sheet 35, amended and revised	2243-48	Arch dam.

M: "General Description and Specifications of Equipment" regarding High Mountain Sheep project.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful, in connection with the project or any part thereof, whether located in or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(B) This license is also subject to the terms and conditions set forth in revised Form L–6, November 1, 1963, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Navigable Waters and Lands of the United States" which terms and conditions designated as Articles 1 through 37, are attached hereto and made a part hereof, except for Article 7, 8, 9 and 15 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 38. The Licensee shall commence construction of the High Mountain Sheep project within two years of the effective date of this license, shall thereafter in good faith and with due diligence prosecute such construction and shall complete the project and place it in operation within seven years from the effective date of this license.

Article 39. The Licensee shall engage at least three qualified independent consultants for the purpose of reviewing and reporting on the exploration program of the dam site, the excavation plan for the dam foundation treatment and the design of the arch dam and other major hydraulic structures. The report of the consulting engineers shall be submitted for Commission consideration not later than the date upon which design drawings (Exhibit L) for the dam structure are filed pursuant to Articles 40, 41, and 42.

Article 40. The final design of the arch dam shall be verified by an acceptable method of analysis (such as the trial load method) and reviewed by the use of structural models.

Article 41. The final design of the spillway shall be based on hydraulic model tests.

Article 42. The Licensee shall submit, in accordance with the Commission's rules and regulations, revised Exhibit L drawings for the project structures and Licensee shall not begin construction of the project works until the Commission approves the exhibit.

Article 43. The Commission reserves the right to determine at a later date what transmission facilities shall be included in this license as part of the project works.

Article 44. The Licensee shall consult with the Forest Service in determination of the centerline location of transmission lines on or affecting national forest lands and shall secure concurrence of the Forest Service to the specific location of those lines occupying lands administered by the Forest Service.

Article 45. The Licensee shall not make any claim under the authority of this license against the United States or any water users' organization claiming through the United States for any damage resulting from any future depletion in the flow of the waters of the Snake River and its tributaries for the irrigation of lands and other beneficial consumptive uses.

Article 46. The Licensee shall make available to the Idaho State College. upon further order of the Commission at the request of the Idaho State College, reasonable sums of money not to exceed $7,500 for the purpose of undertaking an archeological survey and salvage excavations prior to construction and flooding.

Article 47. The Licensee shall, in order to secure maximum recreational benefits, make every reasonable effort to maintain the water surface of the High Mountain Sheep reservoir at the highest level practicable from June 15 to September 15, of each year, as is consistent with the primary purposes of the reservoir to provide pondage for Licensee's daily, weekly, monthly or seasonal power requirements; requirements of downstream releases; and flood control.

Article 48. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 49. The road or roads constructed, owned or controlled by the Licensee for the project developments, shall be made available without charge to the Forest Service, its timber operators, permittees, and other users, for the orderly administration, development, and protection of the national forests involved, and for operations necessary and incident to project development, provided that such use may be limited by reasonable safety and traffic control requirements. In appropriate circumstances and as agreed to by the Forest Service, the Licensee may require payment of the user to cover a fair share of the road maintenance costs.

Article 50. The Licensee shall, prior to impounding water, clear all lands in the bottom and margins of the reservoir between a plane five feet below ultimate low water elevation (El. 1337) of the reservoir and the plane at normal pool elevation of the reservoir, and shall cut all brush and trees below the lower plane so that none protrude above elevation 1332. The Licensee shall clear and keep clear to an adequate width lands of the United States along open conduits; and shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margin of the reservoir which may die due to operation of the reservoir shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the statisfaction of the authorized representative of the Commission.

Article 51. In the interests of flood control downstream from the project, the Licensee shall operate the project in accordance with an agreement to be entered into by the Licensee and the United States Corps of Engineers for the purpose of determining detailed operating procedures for use during flood periods, in accordance with the following principles:

a. The total live storage space of about 2,250,000 acre-feet between elevation 1337 and elevation 1510 mean sea level will be made available for flood control use if and as required.

b. The reservoir level will be no higher than elevation 1475 by 1 March each year to provide about 600,000 acre-feet of storage space for flood control use at that time each year. Additional storage space will be made available between 1 March and the beginning of the flood period to insure the availability on 1 May of the total capacity needed for flood control as estimated by the Corps of Engineers.

c. The space made available as set forth above will be retained until capture of flood flows is requested by the Corps of Engineers, subject to involuntary storage as may be required due to excess of inflows over outlet capacity, or until refilling is authorized by the Corps of Engineers. In the event of involuntary storage during flood control operations, full storage capability will be regained as soon as possible.

d. During the flood storage period controlled outflows will be as warranted by the flood control requirements as determined by the Corps of Engineers with due regard to the requirements for the optimum multiple purpose operations of the project. When the Columbia River discharge at the Dalles is 600,000 cfs or higher the daily outflow may be reduced to a minimum of 10,000 acre-feet; except that during years of severe flood conditions the daily outflow may be reduced to a minimum of 4,000 acre-feet; below 600,000 cfs discharge at the Dalles, the outflow will be determined with due consideration given to all purposes of the project.

e. A discharge capacity of 65,000 cfs at minimum pool elevation 1382 is to be provided by the Licensee. This discharge capacity is based on the gated outlet capacity plus one half of the ultimate turbine hydraulic capacity.

The agreement will be subject to review from time to time as requested by the Licensee or the Corps of Engineers.

Article 52. In the interest of navigation the project shall be operated in accordance with the following requirements:

a. Minimum flow of not less than 13,000 cfs will be maintained at Lime Point, Idaho, during annual storage refill season when determined to be required by the Corps of Engineers in the interest of navigation. Flows of up to 16,500 cfs may be required at other times when determined by the Corps of Engineers to be necessary in the interest of navigation.

b. River fluctuations in the reach between Lewiston and Lime Point resulting from project operation shall not exceed a rate of one and a half feet per hour on the rising stage, and one foot per hour on the falling stage unless otherwise approved by the Corps of Engineers.

Article 53. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior, the Oregon State Game Commission, the Fish Commission of Oregon, or the Idaho Department of Fish and Game, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 54. The Licensee shall prior to beginning of operation of the Low Hells Canyon development of Project No. 1971, enter into an agreement with the Idaho Power Company, Licensee for Project No. 1971, to compensate that Company for backwater effect on the Low Hells Canyon development of Project No. 1971 constructed in accordance with plans approved by the Commission, resulting from the operation of the High Mountain Sheep project with maximum normal pool at elevation 1510 feet at the High Mountain Sheep dam. In the event no satisfactory agreement is concluded by such time, then upon the application of the Idaho Power Company, the Commission shall fix and determine the compensation to be made by Licensee for such encroachment after notice and opportunity for hearing.

Article 55. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of its upstream and downstream fish passage and handling facilities with those for Project No. 1971 of Idaho Power Company, as the Commission may direct upon recommendation of the Secretary of the Interior, the Oregon State Game Commission, the Fish Commission of Oregon, or the Idaho Department of Fish and Game.

Article 56. The Licensee shall pay to the United States the following annual charges:

a. For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations. The authorized installed capacity for such purposes is 1,166,700 horsepower;

b. For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands exclusive of those used for transmission-line purposes an amount to be fixed hereafter by the Commission; and

c. For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands for transmission-line purposes an amount to be fixed hereafter by the Commission.

(C) The exhibits described in paragraph (A) above are approved as part of the license for the project.

(D) The Licensee shall within one year from the effective date of the license, file with the Commission a plan of financing for Commission approval, and the

Commission reserves the right to require such additional information as it may deem necessary before taking final action on the plan of financing. The Licensee shall not commence construction prior to Commission approval of a plan for financing the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

(F) The motion filed by WPPSS on September 12, 1961, for leave to conform its pleadings to the evidence is hereby granted.

(G) The application of WPPSS for license for Project No. 2273 is hereby denied

(H) The request of the Secretary of the Interior that Federal development be recommended is hereby denied.

(I) The examiner's opinion and findings are hereby adopted as part hereof to the extent not inconsistent herewith.

(J) Exceptions not granted are hereby denied.

Chairman Swidler *dissenting*.

Commissioner Black *dissenting*.

Form L-6 (Revised November 1, 1963)

TERMS AND CONDITIONS OF LICENSE FOR UNCONSTRUCTED MAJOR PROJECT AFFECTING NAVIGABLE WATERS AND LANDS OF THE UNITED STATES

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, specifications, and statements described and designated as exhibits and approved by the Commission in its order as a part of the license until such change shall have been approved by the Commission: Provided, however, that if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed changes which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. Said project works shall be constructed in substantial conformity with the approved exhibits referred to in Article 2 herein or as charged in accordance with the provisions of said article. Except when emergency shall require for the protection of navigation, life, health, or property, no substantial alteration or addition not in conformity with the approved plans shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct. Minor changes in the project works or divergence from such approved exhibits may be made if such changes will not result in decrease in efficiency, in material increase in cost, or in impairment of the general scheme of development; but any of such minor changes made without the prior approval of the

Commission, which in its judgment have produced or will produce any of such results, shall be subject to such alteration as the Commission may direct. The Licensee shall comply with such rules and regulations of general or special applicability as the Commission may from time to time prescribe for the protection of life, health, or property.

Article 4. The construction, operation, and maintenance of the project and any work incident to additions or alterations, whether or not conducted upon lands of the United States, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall furnish to said representative such information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 5. Insofar as any material is dredged or excavated in the prosecution of any work authorized under the license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with navigation, and will be to the satisfaction of the District Engineer, Department of the Army, in charge of the locality.

Article 6. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of navigation on the navigable waterway affected; and the operations of the Licensee, so far as they affect the use, storage and discharge from storage of water affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 7. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of cost, such of its lands and its rights-of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 8. The Licensee shall furnish free of cost to the United States power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

Article 9. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army.

Article 10. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 11. The actual legitimate original cost of the original project, and of any addition thereto or betterment thereof, shall be determined by the Commission in accordance with the Act and the Commission's rules and regulations thereunder.

Article 12. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 13. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 14. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 15. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 16. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 17. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 18. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 19. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 20. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 21. Upon the completion of the project, or at such other time as the Commission may direct, the Licensee shall submit to the Commission for approval revised maps, plans, specifications, and statements insofar as necessary to show any divergence from or variations in the project area and project boundary as finally located or in the project works as actually constructed when compared with the area and boundary shown and the works described in the license or in the maps, plans, specifications, and statements approved by the Commission, together with a statement in writing setting forth the reasons which in the opinion of the Licensee necessitated or justified variations in or divergence from the approved maps, plans, specifications, and statements. Such revised maps, plans, specifications, and statement shall, if and when approved by the Commission, be made a part of the license under the provisions of Article 2 hereof.

Article 22. In the construction and maintenance of the project, the location and standards of roads and trails, and other land uses, including the location and condition of quarries, borrow pits, spoil disposal areas, and sanitary facilities, shall be subject to the approval of the department or agency of the United States having supervision over the lands involved.

Article 23. In the construction and maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines, and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads. None of the provisions of this article is intended to relieve the Licensee from any responsibility or requirement which may be imposed by the other lawful authority for avoiding or eliminating inductive interference.

Article 24. The Licensee shall make provision, or shall bear the reasonable cost, as determined by the agency of the United States affected, of making provision for avoiding inductive interference between any project transmission line or other project facility constructed, operated, or maintained under the license, and any radio installation, telephone line, or other communication facility installed or constructed before or after construction of such project transmission line or other project facility and owned, operated, are used by such agency of the United States in administering the lands under its jurisdiction.

Article 25. The Licensee shall clear such portions of transmission line rights-of-way across lands of the United States as are designated by the officer of the United States in charge of the lands; shall keep the areas so designated clear of new growth, all refuse, and inflammable material to the satisfaction of such officer; shall trim all branches of trees in contact with or liable to contact the transmission line; shall cut and remove all dead or leaning trees which might fall in contact with the transmission line; and shall take such other precautions against fire as may be required by such officer. No fires for the burning of waste material shall be set except with the prior written consent of the officer of the United States in charge of the lands as to time and place.

Article 26. Timber on lands of the United States cut, used, or destroyed in the construction and maintenance of the project works or in the clearing of said lands shall be paid for in accordance with the requirements of and at the current stumpage rates applicable to the sale of similar timber by the agency of the United States having jurisdiction over said lands; and all slash and debris resulting from the cutting or destruction of such timber shall be disposed of as the officer of such agency may direct.

Article 27. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon request of officers of the agency of the United States concerned, to prevent, make advanced preparations for suppression, and suppress fires on lands occupied under the license.

Article 28. The Licensee shall interpose no objection to, and shall in no way prevent, the use by the agency of the United States having jurisdiction over the lands of the United States affected, or by persons or corporations occupying lands of the United States under permit, of water for fire suppression from any stream, conduit or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license, or to the use by said parties of water for sanitary and domestic purposes from any stream or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license.

Article 29. The Licensee shall be liable for injury to, or destruction of, any buildings, bridges, roads, trails, lands, or other property of the United States, occasioned by the construction, maintenance, or operation of the project works or of the works appurtenant or accessory thereto under the license. Arrangements to meet such liability, either by compensation for such injury or destruction, or by reconstruction or repair of damaged property, or otherwise, shall be made with the appropriate department or agency of the United States.

Article 30. The Licensee shall allow any agency of the United States, without charge, to construct or permit to be constructed on, through, and across the project lands, conduits, chutes, ditches, railroads, roads, trails, telephone and power lines, and other means of transportation and communications not inconsistent with the enjoyment of said lands by the Licensee for the purposes stated in the license. This article shall not be construed as conferring upon the Licensee any right of use, occupancy, or enjoyment of the lands of the United States other than for the construction, operation, and maintenance of the project as stated in the license.

Article 31. There is reserved to the appropriate department or agency of the United States, or of the State or county involved, the right to take over, maintain, and supervise the use of any project road as a public road after construction of the project works is completed.

Article 32. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary or useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: Provided, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new licensee under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume responsibility for payment and discharge, of all liens or incumbrances upon the project or project property created by the Licensee or created or incurred after the issuance of the license: Provided, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such project property than was necessary to acquire for its own purposes as Licensee.

Article 33. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determinations to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as the Commission may prescribe.

Article 34. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 35. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines from lands of the United States and restore said lands to a condition satisfactory to agency having jurisdiction over the lands and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 36. The right of the Licensee and of its transferees and successors to use or occupy navigable waters or lands of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 37. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.

SWIDLER, Chairman, *dissenting:*

I dissent from the Commission's action in granting a license for the High Mountain Sheep Project to the Pacific Northwest Power Company, because the Commission has rejected the command of Section 7(a) of the Act to grant WPPSS a preference. This dissent is limited to that single question; I accept the result reached by the majority on the question whether the High Mountain Sheep Project or the competing Nez Perce Development is "best adapted to a comprehensive plan" of development for the Upper Snake River. I do not dissent on this phase of the case despite the superiority of Nez Perce as a hydroelectric development because on this record it is improbable that the anadromous fish runs on the Salmon River could be preserved if Nez Perce were constructed.

This fact is crucial inasmuch as the applicants have not attempted to carry the burden of demonstrating, and the record does not demonstrate, that it would be in the public interest to approve Nez Perce at the cost of the destruction of the anadromous fish runs.

I

The Preference Clause of the Federal Power Act Requires that a License Be Granted to WPPSS

In my judgment section 7(a) of the Federal Power Act, the preference clause, requires the Commission to award a license in this case to WPPSS, a preference applicant. I consider this to be the plain meaning of the words used by the Congress in section 7(a).

Section 7(a) provides as follows:

> In issuing * * * licenses where no preliminary permit has been issued * * * the Commission *shall* give preference to applications therefor by States and municipalities, provided the plans for the same are deemed by the Commission equally well adapted, or shall within a reasonable time to be fixed by the Commission be made equally well adapted, to conserve and utilize in the public interest the water resources of the region; * * * [Emphasis supplied.]

The command is flat. The preference accorded WPPSS by the statute is mandatory and is qualified by only one exception, the case in which another applicant has obtained a prior preliminary permit pursuant to sections 4(f) and 5 for the particular project for which it seeks a license.

Before discussing the Commission's reasoning in support of its attempt to bring PNPC within the one narrow exception to the preference clause, it will be instructive to examine the legislative history of the Act in order to appreciate the importance which Congress placed on its mandate to the Commission to comply with the provisions for a preference to public agencies.

If the language left any doubt, the legislative history shows that section 7(a) was designated to cover precisely the case before us. Rarely has Congress visualized with such prescience the possibility that the administrators of a statute would attempt to frustrate the Congressional intent, and been at such pains to make clear what it meant. Indeed the Congressional intent that the preference applicant be licensed in the circumstances of this case would hardly have been clearer if Congress itself had designated it as the licensee by name. The Commission's decision is therefore particularly egregious and unfortunate.

The Federal Water Power Act was finally passed in 1920, after more than a decade of abortive attempts to pass an effective Act dealing with the water resources of the country.[1] The idea of giving a preference to municipalities or other state agencies—which has become a standard feature of Federal water resource development legislation—appeared in the history of water power legislation as early as 1914, in H.R. 16673 (Ferris Bill No. 1), which passed the House on August 24, 1914, but failed in the Senate.

The early prototypes of the Water Power Act of 1920 framed the preference provision in discretionary terms, empowering but not requiring the Commission to give preference to public bodies.[2] As finally enacted the discretionary language was eliminated and instead the law states that the Commission "shall" give preference.

During the hearings before the House Committee on Water Power on the

---

[1] The history of water power legislation through June 24, 1919, is set forth in House Report No. 61, accompanying H.R. 3184, June 24, 1919, Committee on Water Power, 66th Congress, 1st Session, p. 2, *et seq.*

[2] *e.g.*, H.R. 16673, 63rd Cong., 2d Session (for text see H. Rept. 842, June 16, 1914, 63rd Cong., 2d Session) ; S. 1419, 65th Cong.. 2d Sess. (See Exhibits A & B in H. Rept. No. 715, 65th Cong., 2d Sess.)

Administration-backed water power bills, the idea of a mandatory preference was first broached by Congressman (later Senator and Vice President) Alben W. Barkley who offered an amendment to section 7 to require that preference "shall" be given, saying:

> * * * what we want is to get section 7 amended so as not to provide that this Commission may give preferences to municipalities, but that they shall give preference to municipalities whenever the conditions are equal or similar.[3] [Emphasis supplied.]

The bill that emerged from Committee did not contain Mr. Barkley's amendment, still leaving the granting of preference within the discretion of the Commission.

When the bill was debated in the House, Mr. Doremus offered an amendment to the first paragraph of section 7 (underlined words are additions; words with lines through them are deletions):

> That in issuing preliminary permits or licenses hereunder the commission ~~may in its discretion~~ shall give preference to applications therefor by States and municipalities provided the plans for the same are deemed by the commission ~~to be best~~ as well adapted to conserve and utilize in the public interest the navigation and water resources of the region as the plans of other applicants; * * * (56 Cong. Rec. 9775).

Mr. Doremus made it clear, in response to a question by Mr. Welsh, that his amendment:

> * * * makes it *mandatory* upon the commission to grant the license to the State or municipality, if the plans submitted by it are, in the judgment of the commission, as good as those submitted by the private applicant. [Emphasis supplied.] (56 Cong. Rec. 9804.)

The amendment was then modified further, by eliminating the words, "as well," and the last words, "as the plans of other applicants." (56 Cong. Rec. 9805.) It was then passed by the House. As passed, it read as follows:

> That in issuing preliminary permits or licenses hereunder the commission shall give preference to applications therefor by States and municipalities provided the plans for the same are deemed by the commission adapted to conserve and utilize in the public interest the navigation and water resources of the region

Thus, the amendment originally proposed by Congressman Barkley in the House Hearings was accepted and, as we know, eventually became a part of the Act. In the Senate, the change of the words "may in its discretion" to "shall" was made without discussion (59 Cong. Rec. 1532).

Under the terms of section 7 as originally proposed a preference applicant was entitled to a preference if its plans as initially submitted "are deemed by the Commission equally well adapted * * * to conserve and utilize in the public interest the water resources of the region." But the Congress went even further to make the preference for municipalities meaningful and effective.

It was during the concluding debates of the Congress on the Federal Water Power Act that the words "or shall within a reasonable time to be fixed by the Commission be made equally well adapted" were added to section 7. The amendment was sponsored by Mr. Sinnott in the House of Representatives and his reasons for introducing it are directly in point:

> Mr. Chairman, * * * I do not want to see a municipality foreclosed and concluded in case its plan is not as good as some other plan. I think if the municipality or the State is willing to amend or modify the interest filed by it and make that plan as good as the other plan filed, that it should have

---

[3] Hearings before the House Committee on Water Power, House of Representatives, Parts 1–4, 65th Cong., 2d Sess., 1918, p. 814.

> that opportunity, and my amendment seeks to give the municipality that opportunity to modify and amend its plan and make it as good and as efficient as any other plan filed. (58 Cong. Rec. 2037–2038.)

Mr. Sinnott's amendment passed, emerged as part of section 7 of the Federal Water Power Act, and remains in the present Act.

The Commission, while not basing its holding on this point, apparently was influenced by its conclusion that WPPSS does not have as great a present need for the power from HMS as does PNPC and that WPPSS could not market all of the power to public agencies until "some indefinite time after 1970." Even if we assume that the "equally well adapted" requirement applies to WPPSS's marketing plans, in itself a doubtful interpretation, the legislative history makes plain that WPPSS need not show an immediate market to preference customers for all of the HMS power. In fact, such a requirement was expressly rejected by the Congress.

After Mr. Sinnott's amendment to section 7 passed, an amendment was offered to limit the preference for municipalities and States to "the extent such power is to be used by such States and municipalities for State or municipal purposes." (58 Cong. Rec. 2039.) This amendment was defeated by the House after Mr. Sims, with a remarkable understanding of the future growth in the demand for electricity, stated in opposition:

> The gentleman's amendment would prevent a city or town from applying for a license and developing water power unless the city at the time it applied for it had need, for purely municipal purposes, for the whole amount of power to be developed. All cities are growing. Suppose here is a city that has a population of 100,000. There is a water-power site within reach of the city of 100,000 population, and it will produce power fully developed for a city of 200,000. Now the gentleman's amendment would prevent that city from receiving a permit or making application—would prevent it from having an opportunity to develop the site—unless it can use the whole output for immediate municipal purposes.
>
> * * * * * *
>
> These things were well studied in the committee, as the gentleman knows, and our intention was in every case to give the State or municipality preference for a permit and license and without charge to the extent of the power used for State or municipal purposes. To deny a license unless the city or municipality or State shall couple with it that it will develop only to the extent it may be needed for municipal purposes is vicious and wrong in principle. (58 Cong. Rec. 2039–40.)

The example used by Congressman Sims in speaking against the amendment to limit the preference is analogous to the case at hand. WPPSS has proven with reasonable certitude that it will develop a market among its members and other supporting public and cooperative agencies during the 1970's for the power that would be produced by the Nez Perce project.[4] *A fortiori* this market would absorb the output of the smaller HMS project. It has also been shown that there is likely to be a regional market for this output, both prior to and during the 1970's, no matter who is operating the project, and WPPSS is essentially a regional power supplier. The situation is essentially that which Congressman

---

[4] The options and commitments held by WPPSS represent a total estimated average load in 1971 according to WPPSS of 1992 megawatts or, according to PNPC's claim, of 1324 megawatts, and in ten year's time these loads can be expected to approximately double. Estimated dependable capacity for Nez Perce is approximately 1850 mw; for PNPC's—HMS project, 930 mw; and for the WPPSS—HMS project, 1218 mw.

The growth in the loads of the public agencies, on either basis can thus absorb the output of the HMS project in the next decade.

Sims posited of a preference agency which can ultimately, if not immediately be expected to consume the entire output of a site. The case for WPPSS then falls squarely within the boundaries of a clearly articulated Congressional intent.

A portion of Mr. Sinnott's statement in support of his proposed amendment to section 7 bears repeating at this point:

> * * * I do not want to see a municipality foreclosed and concluded in case its plan is not as good as some other plan. I think if the municipality or the State is willing to amend or modify the plan first filed by it and make that plan as good as the other plan filed, that it should have that opportunity, and my amendment seeks to give the municipality that opportunity * * *

Mr. Sinnott's amendment was adopted.

The legislative history thus demonstrates that Congress intended no loophole in providing that a municipality which has a preference over a competing non-preference applicant must be given a preference and also afforded reasonable time to make its plans equally well adapted to conserve and utilize the water resources in the public interest. Even the opponents of section 7 were aware of the implications of the section. As Senator Phipps stated in the Senate debate (59 Cong. Rec. 1173):

> * * * under the provisions of the bill [a] municipality can look over the ground and file on it, either the same or, as they may think, a better plan and secure the permit, to the disadvantage of the one who first discovered the possibilities of the stream.

This seemed grossly unfair to the opponents of section 7, but they lost. What they opposed came to pass and became the law. Section 7 was passed precisely to cover the situation in the case before us, and the wisdom and fairness of that Act are not here for decision. The expressed intention of the proponents of section 7, the stated fears of the opposition, as well as the clear language of the section itself, compels the conclusion that WPPSS is entitled to a license in this proceeding. To hold otherwise is to substitute our balancing of the equities for the command of Congress.

II

PNPC is not Entitled to a Priority Under its Preliminary Permit

The starting point in determining the application of the preference clause in this case is to examine its meaning in relation to the over-all scheme of the statutory provisions relating to preliminary permits. PNPC cannot overcome the preference to WPPSS unless it has a priority by virtue of a presently effective preliminary permit for the HMS project.

Section 4(f) of the Federal Power Act authorizes the Commission to issue a preliminary permit to applicants for the purpose of securing the data necessary to support a license application for a hydroelectric project. Section 4(f) expressly requires that the Commission:

> * * * before granting such application, shall at once give notice of such application in writing to any State or municipality likely to be interested in or affected by such application; and shall also publish notice of such application * * * in the county or counties in which the project or any part thereof or the lands affected thereby are situated.

Section 5 provides that permits shall be for the sole purpose of maintaining priority of application for a license during the period required for making preliminary examinations and surveys for a project, but not exceeding a total of three years.

The statute standing alone clearly gives the Commission discretion in granting a permit to define the scope of the grant by limiting it to a specified project. Indeed, it would seem that a definite description of the scope of the project and

the limits of its boundaries was expressly contemplated by the above-quoted requirements of section 4(f) so that agencies entitled to a preference would not lose their rights without clear notice and opportunity for a hearing.

The preliminary permit is the means designated by Congress for initiating a hydroelectric license proceeding and municipalities are entitled to a preference for permits as well as for licenses. It cannot be assumed that Congress intended that the permits, which are the sole means of extinguishing their preference rights, were to be awarded in such vague and uncertain terms that preference agencies would have no notice that their preference interest in particular locations was involved in a permit application. At any rate, the permit granted to PNPC was not vague and uncertain, but was definite and limited. The statute impels the conclusion that a permit should not be broadened beyond its terms for purposes of defeating the statutory preference to a license.

The preliminary permit on which PNPC relies had its genesis on November 9, 1954, when PNPC filed an application for a preliminary permit for Mountain Sheep and Pleasant Valley Projects on the Snake River. The cover of this application reads in pertinent part as follows:

Pleasant Valley Hydroelectric Project
for
Mountain Sheep Hydroelectric Project
. . .
and
Pleasant Valley Hydroelectric Project

A preliminary permit was granted to PNPC by the Commission "for the sole purpose of maintaining priority of application for a license for Project No. 2173 (Mountain Sheep-Pleasant Valley)." Upon the basis of this application and permit, PNPC now asserts a claim of priority in licensing under section 5 of the Federal Power Act[5] for an altogether different project sited at a different location, High Mountain Sheep.

The question whether PNPC can claim priority over WPPSS on the strength of this preliminary permit is a three-fold one: whether HMS was within the scope of its preliminary permit issued for the Mountain Sheep-Pleasant Valley project; whether the preliminary permit remained effective after the denial of its license application for the MS–PV project and whether PNPC's license application for High Mountain Sheep was perfected within the three years statutory limit of a preliminary permit. PNPC cannot prevail unless all three questions are answered affirmatively. In my judgment all three must be answered negatively.

As recounted by the majority, PNPC applied and was issued a preliminary permit to expire April 1, 1958, for the MS and PV dams. The public notice of the preliminary permit for the project was limited to a description of the proposed MS and PV dams. There was no suggestion that the permit was to cover any other project. The Commission, on April 8, 1955, granted PNPC just exactly what it requested—a preliminary permit—"for a license for Project No. 2173 (Mountain Sheep-Peasant Valley)."

After receiving this preliminary permit PNPC filed an application for a license covering these two dams, and after a hearing this license application was denied by the Commission on January 20, 1958. PNPC limited its studies under the permit to the two-dam development for which it had sought a license because the two-dam development avoided interference with salmon runs up the Imnaha River. PNPC specifically instructed its engineers to confine their investigations to sites above the mouth of the Imnaha (PNPC Brief, pp. 327–28). The reports made by PNPC to the Commission under its preliminary permit also reveal that

---

[5] The text of section 5 of the Federal Power Act is set forth at p. 264.

no studies were made of the HMS site during the three-year term of the permit.

Let us assume for discussion purposes with the majority that PNPC's preliminary permit remains in effect eight and one-half years after it was issued. What is its scope? Did it in fact cover the HMS project?

I believe that plain provisions of the permit and the facts of this case make clear that the HMS project, for which PNPC is today awarded a license, was not within the scope of the preliminary permit for Mountain Sheep-Pleasant Valley, and that PNPC cannot legitimately claim a priority right to a license for the HMS project.

It is dispositive of the whole case that PNPC never sought—indeed, that it deliberately avoided seeking—a preliminary permit for HMS. The application for preliminary permit for Mountain Sheep-Pleasant Valley Project No. 2173 specifically described the two dams in the project, giving their location and their capacity, and the permit was issued "for the sole purpose of maintaining priority of application for Project No. 2173 (as described) * * *." The preliminary permit's application to these two specific dams was made plain from the outset, as we have already noted, by the very cover of the application, as well as by every detail of the text.

HMS is a project for a single dam of different size and generating capacity and located below the mouth of the Imnaha River, in contrast to the Mountain Sheep and Pleasant Valley projects. The order issuing the preliminary permit, PNPC's studies and reports under the permit, the hearing on the initial application for license, the denial of license for Mountain Sheep-Pleasant Valley—all of these related only to the Mountain Sheep-Pleasant Valley development, to the exclusion of HMS.

It would seem to be beyond question that the priority afforded by a preliminary permit is limited to the site specified therein. As the Commission said in *Chatanika Power Co., Inc.*, Project No. 2294, 26 FPC 751 at 752.[6]

> The permit * * * represents a valuable privilege, for it prevents others from securing consideration of an application for the *particular site in question* during the term of the permit. [Emphasis supplied.]

The *Chatanika Power Co.* case is but another application of the established rule of law that a governmental grant of a permit is to be strictly construed. As the Supreme Court stated in *Louisville Bridge Co.* v. *U.S.*, 242 U.S. 409 at p. 417 (1917):

> * * * when private rights of an indefeasible nature are sought to be derived from regulatory provisions established in the exercise of this power, the case is peculiarly one for the application of the universal rule that grants of special franchises and privileges are to be strictly construed in favor of the public right, and nothing is to be taken as granted concerning which any reasonable doubt may be raised.

In this case PNPC applied for and was granted a permit for the two specific sites and the terms of the permit were completely clear that it was limited to those sites. I do not mean to suggest that the Commission could not grant a permit with a broader scope but it is hard to imagine how a permit could state its limitations any more clearly than was done in the instant case.

I therefore conclude that the Commission never intended that the preliminary permit cover the HMS project which was completely different from Mountain Sheep and Pleasant Valley; and that in fact the preliminary permit by its terms did not include the HMS project.

This is not to say that an applicant must accurately guess in advance of exploratory engineering studies under a preliminary permit the exact results of these studies. No such impossible demands need be read into the Act. Rather, it is the applicant's responsibility to seek an amendment reflecting any significant changes in the scope of the permit which become warranted by the studies. Amendments to preliminary permits are authorized by the Commission's regulations. (Regulations under the Federal Power Act, Section 4.84). Obviously the statutory notice requirement for the protection of preference customers would be meaningless if the scope of a permit were not limited by its words and could be enlarged by unilateral action of the permittee without knowledge of other interested parties whose rights may be affected. PNPC has shown its awareness of the need for such amendments in other license proceedings (13 FPC 1656) and in the present proceeding, as reflected in a motion it made and later withdrew for a declaratory order seeking a ruling on the scope of the preliminary permit upon which it now relies.[7]

---

[6] See also *Linoma Power Co.*, 8 FPC 999 at p. 1000, cited by the majority where the Commission refers to "a particular project covered by the permit."

To be sure, it is desirable that an applicant be allowed flexibility and be encouraged to study all reasonable alternatives, including those not known at the time of application for a permit. The way to obtain this flexibility, however, is by allowance of needed amendments, not by construing permits which purport to cover specific projects as being in effect a charter for a broad stretch of the river, thereby concealing the scope of the permit from the public and interested preference customers.

The rule enunciated by the majority means that a permit for a particular project affords the applicant a priority over any other projects "affecting essentially the same reach of the river." Applied to this case it means that the preliminary permit to PNPC for two low dams granted it a priority over any other applicant for High Mountain Sheep or Nez Perce, both of which projects affect the same reach of the Snake River, even though both High Mountain Sheep and Nez Perce are downstream from the two low dams, flood out portions of other rivers (the Imnaha and the Salmon) and by any fair standard are different projects from the MS–PV project.

I find the majority's reasoning both mystifying and unreasonable.

The majority position is mystifying because it interprets a permit application as meaning something other than what it says. Were some compelling reason of Congressional purpose advanced in support of this transmutation, I might be persuaded, but no reason is given. The proper course for an applicant in PNPC's circumstances, as already suggested, is either to file a general description of the proposed project in its permit application which would put everyone on notice of its broad scope or to file a specific description and later seek to amend it to reflect any significant changes.

The majority's position is unreasonable because of the inadequate notice—indeed, the wholly false and misleading notice—provided by a preliminary permit under this interpretation, and the resulting failure to give potential competing applicants and other interested parties the statutory notice to which they are entitled. This is no mere academic point, as illustrated by the present proceeding. We should bear in mind that Nez Perce was a project which had already been separately identified as a desirable project by the Corps of Engineers and endorsed by many of the preference agencies in this proceeding at the time PNPC applied for the preliminary permit. It is beyond belief that the preference agencies would at that time willingly have acquiesced in the award of a preliminary permit for the Nez Perce Project or for the HMS Project for which they would have been entitled to a preference. Under the circumstances it must be assumed that the preference agencies would have objected to an award of a preliminary permit under Project No. 2173 if they had been aware that it covered a high dam—that is, if they had been fairly placed on notice that Nez Perce or

---

[7] See page 299, *infra.*

HMS was within the contemplation of the application as originally filed. Thus, to require specificity in the application, and thereupon to construe it as covering projects not specified, would result in depriving potential preference applicants of an opportunity to preserve the preference rights guaranteed by the statute. I cannot acquiesce in an interpretation of the statute so lacking in fairness. If the majority's view prevails, permittees may tieup the development of great stretches of our nation's waterways for a decade or more by a single permit, to the exclusion of applicants accorded an express preference by Congress.

There is a second and independent reason why PNPC may not claim a priority for the HMS project: its preliminary permit and the priority incidental thereto were by operation of law terminated upon the denial of the first license application for the MS–PV project for which the permit was granted.

A preliminary permit under the Federal Power Act is but a step in the licensing process, incidental and preliminary to the issuance or denial of a license. The permit is issued "for the sole purpose of maintaining priority of application for a license." (Sec. 5.) In legal terms, it merges in the license to which it is incidental. Once this sole purpose has been served by final Commission action on the license the preliminary permit ceases to exist.

The question of the maximum duration of the priority of a permit holder was raised early in the history of the Commission. Must the priority expire with the termination of the permit itself if the license application for the same project is still pending? This is the literal interpretation of section 5, which provides that the permit "shall be for the sole purpose of maintaining priority of application for a license * * * for such period or periods, not exceeding a total of three years, as in the discretion of the Commission may be necessary * * *." However, since the total time for prosecuting an application for license may exceed three years from the date of the permit, this interpretation might afford the permit applicant little practical protection in some cases. Such considerations apparently moved the Chief Counsel for the Commission to advise the Commission in an opinion, formally approved by the Commission on April 30, 1923[8] that the priority attaches to the license application for which the permit was issued (if timely filed) and continues until the license is granted, denied or withdrawn. Under the opinion PNPC's permit expired six years ago. The majority chooses to stigmatize this as an "obscure opinion." The short answer is that the Commission adopted the opinion as its own and took the unusual step of publishing the opinion in its Third Annual Report to Congress. It was evidently regarded as a major exposition and clarification of the purposes of the statute.

The Chief Counsel's Opinion reads in part as follows:

> * * * The priority given by a preliminary permit attaches before use and before a definite application for use can be made, and subsists until application for license in proper form is filed in conformity with its requirements, or until the time which it grants for that purpose expires. When application for license, duly perfected, as required by the commission, is filed, the preliminary permit has served its purpose. The priority attaches to the application for a license and attends it until the application is withdrawn or is granted or rejected by the commission. It has no time limit, and can be lost only by withdrawal of the application having been filed by the permittee, when entitled to priority, such priority attached to the application and will continue for such time as may be used by the commission in granting or denying the application.

---

[8] Reported to Congress in the Commission's Third Annual Report to Congress (pp. 222–23).

The twofold aspect of the Chief Counsel's opinion should be emphasized; first, that once the license application is filed pursuant to a permit, the permit merges with the license application; and second, that the priority may live beyond the term of the permit, but that its continued existence hinges upon the disposition of the license application. That is, once the license is denied or granted, or the application for license withdrawn, the priority has served its purpose and is terminated.

The Commission's order granting PNPC's preliminary permit provided that the permit was "for the sole purpose of maintaining priority of application for a license for Project No. 2173 [Mountain Sheep-Pleasant Valley]." By the Commission's standard of the past four decades PNPC's preliminary permit was terminated by the denial of its license application for Mountain Sheep-Pleasant Valley Project No. 2173. The only other reasonable interpretation of the language of section 5 is less favorable to PNPC and would terminate the priority with the expiration of the permit or no later than three years after filing, as was the practice prior to adoption of the 1923 Opinion by the Commission.

Another controlling question, which the majority opinion ignores, is whether PNPC's preliminary permit, regardless of its scope, remained effective after its expiration date of March 31, 1958, to afford PNPC a priority with respect to the High Mountain Sheep Project. Section 5 of the Act provides that a preliminary permit maintains "priority of application for a license * * * for such a period * * * not exceeding a total of three years * * * as * * * may be necessary for making examinations and surveys, for preparing maps, plans, * * *" needed to support the license application. Section 9 expressly requires that "each applicant for a license hereunder shall submit to the Commission—such maps, plans, specifications, and estimates of cost as may be required *for a full understanding of the proposed project.*"

The 1923 opinion of its General Counsel which the Commission adopted held that "if a permittee within the time prescribed by his permit has filed an application for a license *in proper form and accompanied by the required data,* his priority will not expire with the expiration of the period of the permit but will continue for such time as may be used *by the Commission* in granting or denying the application." [Emphasis supplied.]

On March 31, 1958—the last day before the preliminary permit for Mountain Sheep-Pleasant Valley expired—PNPC filed what purported to be a license application for the High Mountain Sheep Project (or perhaps even Nez Perce since the application left this possibility open).

The PNPC filing of March 31, 1958, was not complete as an application for a license. In fact, on April 23, 1958, the Commission's Secretary wrote PNPC to request that it supply a variety of basic information required to be submitted with a license application, observing "that additional information and data are required for an understanding of the proposed project including the proposed project boundary." A copy of the Commission's letter of April 23, 1958, is attached hereto as Exhibit A.

The fact that PNPC's filing of March 31, 1958, for HMS did not contain sufficient information for an understanding of the project is not a mere technical deficiency in the circumstance of this case. A motion taking issue with PNPC's attempt to assert a priority for HMS or Nez Perce and moving to dismiss the application on the very ground of failure of the application to comply with the Commission's requirements was filed by the National Hells Canyon Association and the Northwest Public Power Association on April 18, 1958, a motion which the Commission has never acted upon. The motion correctly points out that the PNPC license application was incomplete and that by letter of March 11, 1958 (a copy of which is attached as Exhibit B hereto) PNPC itself had advised the Commission that it would need 10 more months in which to make a study of the High Mountain Sheep Project. Indeed it was not until after the expiration of the three-year period of the permit that PNPC made the studies to secure the information to complete its license application for HMS. It was over 10 months later on February 23, 1959, and again on September 28, 1959, before the license application for the HMS project was amended to provide sufficient detail to proceed with the licensing process.

As the Commission pointed out in *Robert P. Wilson, et al.*, Opinion No. 364, dated October 10, 1962: "The intent of the Federal Power Act is to have applicants act diligently and complete all the necessary investigations during the period of the preliminary permit." [28 FPC 571 at 573]

In my judgment, the facts of this case make it clear that PNPC did not "complete all the necessary investigations during the period of the permit." Its priority expired before PNPC obtained the data and filed the information that is a statutory requirement for perfecting a license application with the Commission.

The majority gives two other reasons in support of its position. First, it states that while the Commission's regulations require a precise rather than a generalized description of proposed projects in preliminary permits, the purpose is not to define the scope of the permit but merely to meet the requirements of section 24 of the Federal Power Act for reservation of proposed power sites from public entry. Second, that PNPC was led by actions of the Commission to believe that it would have been pointless and unnecessary to seek an amendment to its preliminary permit following the denial of the Mountain Sheep-Pleasant Valley license application. The reasoning of the majority is not persuasive on either of these counts.

The relevant regulation governing the filing of preliminary permits provides as follows:

> § 4.82 *Contents of Application*
>
> Each application for preliminary permit shall * * * set forth in appropriate detail the following information in the order indicated:
>
> * * * * * * *
>
> (e) The location of the project, the region of its location designated by adjacent cities and towns, the name of the stream on which the proposed project will be located, and a statement of the extent to which commerce is carried thereon.
>
> (f) The lands of the United States which will be affected by the proposed project.
>
> (g) A general description of the project and the proposed scheme of development including an estimate of the proposed installed capacity, and the average annual output.

The information requested is essential in determining whether a permit should be granted and to provide preference agencies with adequate notice of the scope of the application. I can read into these provisions no requirement that would have prevented PNPC from asking for a permit which would have included HMS or Nez Perce instead of limiting its request to the MS and PV sites. Certainly no such mandate can be found in such terms as "a general description of the project" and "the region of its location designated by adjacent cities and towns."

In addition to the provisions quoted above, § 4.82(k) of the Regulations requires that there be filed with the application as Exhibit H a "general map showing the nature of the proposed project, its principal features and their location, and the location of the project as a whole with reference to some well-known town or stream." Again, I am unable to find an unyielding requirement for a permit limited to the precise project description or designation which PNPC sought and received. Obviously the Commission would be free to allow an applicant to file a general description in the first instance to afford notice of the stretch of the river covered by the permit and later identify the project with greater specificity.[9]

The majority's assertion that the precise description of the project in this case relates only to the administration of § 24 of the Federal Power Act is far fetched indeed. It strains the imagination to accept the suggestion that the regulations were drafted exclusively to implement a routine function relating to land withdrawals, but serve no function in defining the scope of a priority which overcomes the rights of preference applicants that Congress took great pains to protect. Such an interpretation is in direct conflict with the overriding purpose of the Act to protect preference applicants and with the provisions of section 4(f) of the Act which require notice to States and municipalities and landowners in every county affected by a project before a permit is granted. That this reasoning will not hold up is borne out by the records of the Commission which show that no formal power site withdrawal was made in this proceeding, because the maps filed with the preliminary permit were not sufficiently accurate to serve as a basis for a formal withdrawal.[10] The specificity the majority insists is essential for power site withdrawals thus is lacking in this proceeding, and the asserted justification of the majority opinion vanishes.

The majority's other reason to support its position is that PNPC was led by actions of this Commission to proceed as it did in 1958 without seeking an amendment of its preliminary permit, relying primarily upon an order of the Commission in the *Montana Power Co.* case.[11] This citation is not a Commission opinion but is a brief formal order innocent of any explanation germane to this case of why the Commission rejected the proposed amendment. The majority's heavy reliance upon *Montana Power* is a clear indication that there is no precedent for the decision in this case. There was no competing preference or private applicant then before the Commission in that proceeding, there was no priority issue, no need for a preliminary permit, and certainly no need for an amendment. Moreover the rejected permit application was for a project at precisely the same site the applicant was already exploring under an existing permit for a smaller dam.

If PNPC wished to base its course of action on Commission precedents it should have relied on our action in the *Appalachian* case,[12] a contested case decided after *Montana Power* on January 24, 1958, where an amendment to a preliminary permit was requested and granted, making changes comparable to those involved in the applicant's switch in the present proceeding from one project to another.

Judging by the Commission's customary standards, the public and competing license applicants were entitled to believe that PNPC's priority of application expired with our denial of the license application of Mountain Sheep-Pleasant Valley in 1958. At any rate the fate of PNPC's priority certainly was put in doubt following the denial of a license in 1958, and it was therefore PNPC's responsibility to ask the Commission for clarification. This much PNPC itself appears to have recognized, for on June 27, 1958, before undertaking further investigations, it filed a motion for a declaratory order to ascertain the status of the permit and priority. This motion reflected PNPC's awareness of the position taken by the National Hells Canyon Association and Northwest Public Power

---

[9] By the terms of the regulation a permit broader in scope could be accommodated since a proviso to § 4.82(k) states: "That any exhibit not incorporated as a part of the application shall be certified in conformity with § 131.4 of this chapter," (§ 131.4 being merely a certification form).

[10] Considering the known deficiencies of topographic mapping in many sections of the country, we may safely assume that this defect is unlikely to be an isolated case.

[11] 17 FPC 834 (June 1957).

[12] 17 FPC 8, 19 FPC 169.

Association that the preliminary permit for the Mountain Sheep-Pleasant Valley project did not survive the denial of the license. On September 28, 1959, after having made further investigations at its own risk prior to a Commission ruling on its motion, PNPC sought and obtained leave to withdraw its motion. In deliberately postponing decision on the continuing validity of the permit and the extent of its priority rights, if any, PNPC took a calculated risk which did not improve its legal position.

While not reaching the issue of WPPSS's authority under state law to build the HMS or Nez Perce project, the majority indicates that there is a "serious question respecting the legal status of WPPSS." On this issue I need only say that in my opinion under section 9(b) of the Federal Power Act the authority of WPPSS is a matter for this Commission and not the courts to decide initially in the context of this license proceeding. I personally entertain no such doubts as my colleagues concerning the authority of WPPSS to build the project or its compliance with the requirements of section 9(b). *First Iowa Hydro-Electric Cooperative* vs. *Federal Power Commission*, 328 U.S. 152 (1946); *PUD No. 1 of Pend Oreille County* vs. *Federal Power Commission*, 308 F. 2nd 318 (CADC 1962), *cert. den.* 372 U.S. 908 (1963), *reh. den.* 372 U.S. 956 (1963). See also *City of Tacoma* vs. *Taxpayers of Tacoma*, 357 U.S. 320 (1958); *State of Washington Dept. of Game* vs. *Federal Power Commission*, 207 F. 2nd 391 (9th Cir. 1953) *cert. den.*, 347 U.S. 936 (1954).

This case represents the first direct legal contest concerning the construction of section 7(a) in relationship to sections 4(f) and 5. In this benchmark decision the majority of the Commission proposes to interpret sections 5 and 7(a) in a manner which gives the priority of a preliminary permit great and elastic reach while narrowly circumscribing the scope of the preference clause. They have done violence to the statute on both scores.

EXHIBIT A

FEDERAL POWER COMMISSION
WASHINGTON 25, D.C.

Project No. 2243—Oregon and Idaho

April 23, 1958

ROBERT D. YEOMANS, *Secretary,*
Pacific Northwest Power Company,
P.O. Drawer 1445, Spokane 10, Washington

DEAR MR. YEOMANS:

Reference is made to the application for license for the Middle Snake River project No. 2243 filed with the Commission on March 31, 1958. The Commission staff has made a preliminary examination of the application and the exhibits filed and finds that additional information and data are required for an understanding of the proposed project, including the proposed project boundary.

It is noted that Exhibits H and I are to be submitted at a later date. These exhibits should be supplemented by your power study and power market study for the proposed project. In this connection it is requested that you furnish a copy of your transmission study.

It is also noted that Exhibit L drawings filed with the application show area geology, a geologic section, and logs of drill holes taken from "Interim Report No. 4, Mountain Sheep Dam, Portland District Corps of Engineers" dated December 22, 1947. It is requested that you furnish a geology report for the Middle Snake River project. It is also requested that you advise the Commission of your plan for foundation exploration and when the exploration will be completed and submitted as a supplement to your application.

In connection with any dam which you propose to construct, it is requested that you furnish design criteria and analysis and information as to your plans for additional analysis of the structure prior to construction.

With reference to the Exhibit N which you advise will be furnished later, it is requested that an estimate of cost with breakdown by major items for the Middle Snake River project be submitted as soon as possible. This should be supplemented by a detailed estimate of cost showing quantities and unit costs, together with other related construction costs. It is also requested that you submit your report on economic feasibility of the proposed Middle Snake River project.

It is requested that you advise as to the date when the data outlined above may be expected. Page 4 of the application states that applicant proposed to prepare and present appropriate information on alternative developments. Please advise as to when such information will be submitted.

A copy of this letter is being furnished to Smith, Gray, Hill & Rodgers, and Leighton & Sherline.

Very truly yours,

[S] J. H. GUTRIDE,
Secretary.

EXHIBIT B

PACIFIC NORTHWEST POWER COMPANY
P.O. Drawer 1445
SPOKANE 10, WASHINGTON

March 11, 1958

MR. JOSEPH H. GUTRIDE, *Secretary,*
Federal Power Commission,
Washington 25, D.C.

DEAR SIR:

Applicant has received a copy of letter from the attorney for the intervenors, dated March 4, 1958 and addressed to Commissioner William R. Connole. Attorney for intervenors misapprehends the relief requested. This letter is in reply thereto.

In assignment of error number 7, applicant refers to the Nez Perce and High Mountain Sheep projects, the latter of which is located below the mouth of the Imnaha and above the mouth of the Salmon. Preliminary investigation indicates that High Mountain Sheep with subsequent development of Lower Canyon would have approximately 500,000 acre feet more storage and about 150,000 kilowatts more installed capacity than Nez Perce. Under paragraph 3 of its prayer, applicant proposes to study the High Mountain Sheep project on a comparative basis with Nez Perce. Such a study is necessary before a final determination can be made as to the project which will constitute comprehensive development under the provisions of Section 10(a) of the Federal Power Act.

Approximately ten months will be required to complete such study, depending upon the extent of drilling and engineering that may be necessary.

Specifically, in undertaking such comparative analysis, applicant will:

(a) Make geological investigations and studies;

(b) Do such engineering work, including preparation of maps, plans and specifications, as may be necessary, to determine problems of construction, quantities of earth and rock to be moved, materials and supplies required, type of structure to be built, and such other determinations as may be relevant to make comparable estimates of cost;

(c) Determine the amount of storage usable for flood control and power production;

(d) Carry out power routing studies and power capabilities;

(e) Determine flood control routing and effectiveness of flood control;

(f) Investigate the extent and cost of facilities required for the consideration of fishery resources and recreation opportunities.

Applicant will report the results of such study to the Commission and to all parties.

Applicant intends to prepare and file an amended application for a license for such project as appears as a result of such study to be economical and practical and meets the requirements of Section 10(a) of the Federal Power Act.

Applicant does not expect a license to be granted without a further hearing.

We are making the same distribution of this letter to the Commission as was made by counsel for intervenors, and are mailing copies to the parties as noted below.

Yours very truly,

PACIFIC NORTHWEST POWER COMPANY,
[s] John J. Burke,
By JOHN J. BURKE, *President.*

PRELIMINARY STATEMENT AND CONCLUSIONS

Levy, *Presiding Examiner:* This proceeding involves rival applicants for licenses to build mutually exclusive hydroelectric projects at sites[1] just above (High Mountain Sheep) and below (Nez Perce) the confluence of the Snake and Salmon Rivers on the Idaho-Oregon border.

It is concluded, in summary, for all the reasons hereinafter set forth, that Pacific Northwest Power Company should be licensed to construct the High Mountain Sheep project. The High Mountain Sheep plan emerges from this record as the comprehensive plan of development for the common reach which provides for prompt and optimum multi-purpose development of the water resource under the standards of Section 10(a) of the Federal Power Act. Its major component, the High Mountain Sheep project, is best adapted to achieve such development.

In the prior proceeding on the proposed Low Mountain Sheep and Pleasant Valley developments (Project 2173) the Commission concluded "that any combination of projects for the comprehensive development of the Mountain Sheep river basin which includes Nez Perce project is consistently superior to any combination of projects which does not include Nez Perce project." (Opinion and Order on rehearing issued April 11, 1958). That conclusion was reached in a different proceeding involving a different application and record. Moreover, no one was then applying for a license to build the Nez Perce project; no specific Nez Perce application was pending. Consequently, the Commission's earlier statement of view is not *res judicata* in this subsequent comparative proceeding.[2] Administrative license proceedings look forward, not backward, and licensing policy must change with new facts and changing conditions. Pacific Northwest Power Company's investigations and studies since 1958, in support of its current High Mountain Sheep application, insofar as they are part of the record in this proceeding, demonstrate that the power potential of the High Mountain Sheep plan would have a greater value initially than the Nez Perce plan of $3,973,000 annually.[3] At approximately 1985 the High Mountain Sheep plan benefits would have a monetary value exceeding the Nez Perce plan benefits of $2,640,000 annually (High Mountain Sheep plan $49,644,000—Nez Perce plan $47,004,000). The High Mountain Sheep plan of development, fully installed, will have, at all times and under all conditions, greater annual power benefits and greater annual flood control benefits than the Nez Perce plan of development.

---

[1] See Location Map, PNPC Exh. 1. (Citations to the record are illustrative and for the purpose of aiding the Commission in any review. They are not intended to indicate the sole basis in the record for the statement or findings).

These additional benefits will involve greater capital costs ranging from $11,040,000 to $49,616,000, according to Staff estimates (See Appendix C). These costs are justified, however, by the greater power and flood control benefits of the High Mountain Sheep plan, and by its greater feasibility and flexibility. The High Mountain Sheep project, its major component, can be built safely now, without delay, without risk to the major fishery resource of the Salmon River, and without adding substantially to the existing problem of maintaining the run of the main Snake River. There is substantial doubt in the record as to whether the left abutment at the Nez Perce site will safely support the thrust of the proposed Washington Public Power Supply System arch dam; or whether the underground powerhouses and orifice spillway can be constructed as presently designed within WPPSS' current estimate ($391,080,000). Moreover, the Nez Perce project cannot be built now without constituting a major hazard to migrating fish, particularly the spring and summer chinook and steelhead in the Salmon River. The Lower Canyon project, which would also constitute a major hazard to migrating fish, can be deferred until after the completion and evaluation of current Department of Interior fish studies, further site exploration, and until its construction is required under the standards of the Federal Power Act.

Pacific Northwest Power Company, rather than WPPSS, is entitled to a license to build High Mountain Sheep because its timely efforts, expenditures, and investigations have produced the comprehensive plan and the project best adapted to that plan. These expenditures were made pursuant to a preliminary permit issued by the Commission on April 8, 1955, for this purpose, and its reasonable expectations should not be thwarted absent strong public policy considerations not present in this record. PNPC's organizing companies have executed firm commitments to purchase the entire output of the project and will need the power as of the earliest date that the High Mountain Sheep project can be expected to be in service. PNPC has demonstrated a need and a market for the output as well as its ability to finance the construction of the project.

WPPSS has failed to establish a need or a market for the output of either Nez Perce or High Mountain Sheep, or that it has the ability now to finance the construction of any project that might be licensed to it in this proceeding. WPPSS' market is based on the anticipated general demand for electric energy in the Pacific Northwest, principally from PNPC's sponsor companies, not on any contractual commitments entered into by specific customers. The record in this proceeding does not indicate that it has complied, or attempted to comply, with state laws concerning its right to construct the proposed projects within the States of Oregon and Idaho, or to carry on a public utility business in those states. Moreover, Section 7(a) of the Federal Power Act does not require the Commission to grant WPPSS' motion to amend its Nez Perce application so as to authorize a license for High Mountain Sheep, nor should it do so.

---

[2] "A Commission like a court, may, indeed should, change its finding and order if on rehearing it is of a different mind. *Cia Mexicana De Gas S.A.* v. *F.P.C.*, 167 F. 2d 804, 806 (C.C.A. 5. 1948). See *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 289, 292 (3rd Cir. 1956). See also *F.T.C.* v. *Raladam Co.*, 316 U.S. 149 (1942).

[3] High Mountain Sheep plan $57,436,000—Nez Perce plan $53,463,000. See Applicants' Joint Statement, Part J, Annual Power Benefits.

The public benefits, and comprehensive development which will be achieved by the construction of the High Mountain Sheep project can be effectuated now, with the issuance of a license for non-Federal development. If Federal development is recommended, as requested by the Secretary of the Interior, it will probably result in the postponement of any development of this site for an indefinite period of time.

On March 31, 1958, PNPC filed an application for the High Mountain Sheep development, Project No. 2243, at about river mile 188.9, to be located on the Snake River above the mouth of the Salmon River.[4] On April 8, 1955, PNPC was granted a preliminary permit effective April 1, 1955, for a period of three years for Project No. 2173, consisting of two developments on the Middle Snake, namely, Mountain Sheep development at approximately river mile 192.8, and Pleasant Valley development at approximately river mile 212.8 (14 FPC 644), and on September 7, 1955, PNPC filed a license application covering the same reach of the river for a proposed hydroelectric project (Project No. 2173) known as the Mountain Sheep-Pleasant Valley Hydroelectric Project. Following some 54 days of hearing in 1956, an initial decision recommending licensing was issued by the Presiding Examiner on July 23, 1957. The application was denied by the Commission in a decision dated January 20, 1958 (19 FPC 127); and an application for rehearing denied in March 20, 1958 (19 FPC 353).

On March 15, 1960, WPPSS filed an application for a license for the Nez Perce Project No. 2273, a mutually exclusive project, located just below the mouth of the Salmon River in the same stretch of the Snake River at about river mile 186. Hearing on PNPC's application was originally fixed for March 21, 1960, by order of the Commission dated February 1, 1960. Following the filing of WPPSS' application for Nez Perce on March 15, 1960, proceedings on the two competing applications were consolidated by Commission order of March 30, 1960, and the consolidated hearing was postponed to July 18, 1960. Notice of both applications was duly published on October 26, 1959 (PNPC) and March 23, 1960 (WPPSS).

PNPC is an Oregon corporation qualified to do business under the laws of the States of Oregon, Idaho, Washington, and Montana. It is a wholly owned subsidiary of four sponsoring companies,[5] the Montana Power Company, Pacific Power and Light Company, Portland General Electric Company, and the Washington Water Power Company, and was formed in April of 1954 for the purpose of providing a supplemental source of power to meet the future requirements of these companies (Tr. 144–147, 1777–1779). PNPC does not itself own or operate any electrical facilities.

---

[4] A chronological list of written pleadings, filings, orders and rulings from March 31, 1958 to date is set forth in Appendix A.

[5] A detailed description of these companies is contained in the Presiding Examiner's initial decision, Project No. 2173, p. 12 *et seq.* [Unreported.]

WPPSS was created as a Joint Operating Agency, composed of 16 public utility districts of the State of Washington, pursuant to an order of the Department of Conservation and Development of the State of Washington dated January 31, 1957, and, under the laws of the State of Washington, is a municipal corporation. It was established for the purpose of acquiring, constructing, and operating electrical generating and transmission facilities (WPPSS Exh. 1, Tr. 406, 418-421). WPPSS does not own or operate any electric facilities.

Intervening Parties[6]

Pursuant to Section 1.8(a)(1) of the Commission's Rules of Practice and Procedure the PUBLIC UTILITY COMMISSIONER OF OREGON and the IDAHO PUBLIC UTILITIES COMMISSION gave notice of their intervention on December 1, 1959 and December 3, 1959, respectively in Project No. 2243. The IDAHO PUBLIC UTILITIES COMMISSION gave further notice of intervention in Project No. 2273 on April 18, 1960.

Other parties were granted intervention by the Commission's Orders of May 20, July 13, August 16 and September 16, 1960, respectively. These parties are listed below:

PROJECT No. 2243

NATIONAL HELLS CANYON ASSOCIATION AND
  NORTHWEST PUBLIC POWER ASSOCIATION[7]
IDAHO FISH AND GAME COMMISSION AND
  IDAHO FISH AND GAME DEPARTMENT
COLUMBIA RIVER SALMON & TUNA PACKERS ASSOCIATION
STATE WATER RESOURCES BOARD OF THE STATE OF OREGON

  WASHINGTON STATE GRANGE

Prehearing Conferences and Hearing

Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure, prehearing conferences were held on May 16 and 17, June 15, and October 31, 1960, respectively. The results of these conferences are set forth in prehearing transcript No. 1, (Tr. 100–111) in 23 prehearing conference exhibits, and in the Presiding Examiner's Notice of September 28, 1960, covering procedural matters.

The hearing convened in Washington, D.C. on November 4, 1960, and was concluded on September 12, 1961.[8] There were approximately 97 days of hearing, including a 15-day session at Portland, Oregon, in March 1961, for hearing in the fisheries' phase during which period the Examiner inspected the sites accompanied by representatives of the Staff and Applicants. In all, some 77 witnesses testified, 14,327 pages of transcript, and 633 documentary exhibits (many of them consisting of voluminous charts, designs and statistics) were received in evidence. Initial briefs were filed by the Applicants on January 15, 1962, and by Staff and Interveners[9] on March 1, 1962. Reply briefs were filed by the Applicants on April 2, 1962. Supplemental briefs, in response to the Commission's order of July 6, 1962, reopening the record, were filed on or about July 30, 1962.[10]

Jurisdiction

In the prior proceeding (Project No. 2173) the Commission described the Snake River as follows:

---

[8] The hearing originally concluded on July 24, 1961, but was reopened on July 26 to comply with the Commission's Order of July 25, 1961, setting aside the Presiding Examiner's ruling that certain WPPSS proposed rebuttal testimony be excluded. This evidence was received in the record on September 12, 1961, at which time cross-examination was waived, and the hearing concluded.

[9] The following Interveners filed briefs: State of Washington Department of Conservation, Idaho Wild Life Federation, Fishing and Game Agencies for States of Idaho, Oregon and Washington, Washington State and Sportsmen's Council, Inc. Oregon Wildlife Federation, Fishermen's Cooperative Association, Inc., Northwest Fisheries Association, Alaska Fishermen's Union, Pacific Fish Conservation League, Makah Indian Tribe, Columbia River Salmon & Tuna Packers Association, Idaho Public Utilities Commission, Public Utilities Commissioner of Oregon.

[10] The briefs total approximately 2,008 pages.

> The Snake River is the largest tributary of the Columbia River. The Columbia River Basin is described by the United States Army Corps of Engineers (House Document No. 531, 81st Congress, 2nd Session) as the largest present producer and the largest potential source of hydroelectric power on this continent, as the primary salmon-producing stream in the United States and as carrying active barge navigation over 300 miles inland. *In the Matter of Pacific Northwest Power Company*, 1958, 19 FPC 127, 129.)

In its decision of August 4, 1956, *In the Matter of Idaho Power Company*,[11] 14 FPC 55, 72, the Commission found the Snake River, from its junction with the Columbia River up to the mouth of Henry's Fork (at about river mile 868), a navigable water of the United States. This includes the reach of the Snake River involved in this proceeding. Once found navigable, the waterway remains so. (*U.S.* v. *The Appalachian Power Company*, 311 U.S. 377, 408). Consequently, under Section 23(b) of the Federal Power Act, a license is required for the construction, operation, or maintenance by either applicant of the Nez Perce or the High Mountain Sheep projects, each of which would be located in the navigable reach of the Snake River. In addition, these proposed projects would occupy lands of the United States within the Wallowa, Nez Perce and Payette National Forests.

The term "Middle Snake River" as used in this proceeding includes the portion of the Snake River and its tributaries between Lewiston, Idaho and Weiser, Idaho. Going upstream from Lewiston, the major tributaries are the Grand Ronde, the Salmon, the Imnaha, the Powder and the Burnt Rivers. The Middle Snake Basin has extremely rough terrain and comparatively inaccessible and sparsely populated areas consisting of eroded canyons through mountainous country. A stretch of approximately 100 miles downstream from Weiser, Idaho is commonly referred to as "Hell's Canyon." The mean discharge at the Nez Perce site just below the confluence of the Snake and Salmon Rivers is estimated at 30,600 cfs with the maximum and minimum mean monthly flow being indicated at 115,000 cfs in May 1928 and 9,200 cfs in September 1924. The flow at this site for the greatest known flood in 1894 is estimated at 250,000 cfs (Division Engineer's Report, Vol. I p. 364).

The Issues

The basic issues in this proceeding are which of the proposed projects is best adapted to a comprehensive plan of development for all public purposes as required by Section 10(a) of the Act; which, if any, should be licensed, and to whom should the license be issued. This in turn depends upon a wide range of engineering, geologic, economic, financial, legal, and policy considerations of varying importance, including the safety and stability of the proposed dam sites and project structures, the impact of the proposed projects on the fishery resource, comparative economic and financial feasibility, the needs and market for the power output of the proposed projects, the relative qualifications and legal status of the competing applicants, and an overall comparison of the proposed plans and projects in terms of design, costs, benefits, and other relevant factors.

An additional issue raised by the Secretary of Interior's letter of June 28, 1962 (Exh. 43-A) is whether the Commission should recommend Federal development of the High Mountain Sheep project pursuant to Section 7(b) of the Act.

---

[11] See *National Hells Canyon Association* v. *F.P.C.*, 237 F. 2d 277 (CADC), cert. den. 353 U.S. 924.

Pending Motions

The following pending motions require disposition:

1. A motion filed by WPPSS on July 24, 1961, to amend its Nez Perce application to conform to the exhibits and testimony submitted on rebuttal in support of revised Nez Perce designs and cost estimates. This proposed amendment is consistent with WPPSS' timely filed Nez Perce application. The project and site remain the same (See *City of Seattle and Pend Oreille PUD No. 1, Project No. 2144*).

The motion is granted.

2. A motion filed by WPPSS on September 12, 1961, for leave to amend its Nez Perce application, Project No. 2242, to include a project at High Mountain Sheep, described in rebuttal exhibits and testimony, as an alternative in the event the Commission denies its Nez Perce application and decides to license a project at High Mountain Sheep.

This motion is denied. The proposed amendment is inconsistent with WPPSS' pending Nez Perce application, contrary to the Commission's Order of Consolidation of March 30, 1960, its Rules of Practice, and contrary to the public interest. A similar motion filed April 24, 1961, for leave to file an amendment to its pending Nez Perce application for a license to construct an alternative High Mountain Sheep Project was denied by the Presiding Examiner on May 2, 1961, and affirmed by the Commission by order dated May 19, 1961.[12] The Presiding Examiner's ruling reviewed the prior chronology of the hearing and found that the proposed amendment was untimely under the Commission's Order of Consolidation of March 30, 1960, and that no explanation or justification for the failure to amend prior to the commencement of the hearing in November 1960 had been presented.

This is all the more true of the pending motion filed on September 12, 1961, after the conclusion of the hearing. The sole justification is that the amendment is now offered to conform WPPSS' license application to the evidence, including its alternate proposal for High Mountain Sheep presented as part of its rebuttal attack on PNPC's High Mountain Sheep Project. The motion, however, seeks a WPPSS license for the rival High Mountain Sheep Project. This goes far beyond the proper scope of a motion to conform the pleadings in the Nez Perce application to the evidence.

The merits of the rival plans and projects have been an issue raised by the competing applications from the very beginning. Nez Perce and High Mountain Sheep are mutually exclusive projects; the licensing of one excludes the other. Since WPPSS is maintaining and not withdrawing its application for Nez Perce, the motion to amend is in essence an application for a license to build any project the Commission is willing to license. If the Commission is persuaded that High Mountain Sheep should be built, PNPC, the principal proponent, rather than WPPSS, the opponent, should be licensed for the project its investigations, expenditures, and advocacy have brought to fruition. The granting of WPPSS' motion is not in the public interest and will not advance the objectives of the Federal Power Act—to promote water resource development.

At the opening of the hearing, Counsel for WPPSS explained that the decision of WPPSS to file on the Nez Perce site was not based on a desire to prevent PNPC from getting a license for this reach of the river, but because of their belief in the superiority of the Nez Perce Project.

---

[12] A petition for rehearing filed June 20, 1961, was denied by the Commission on July 20, 1961. The Commission's order stated that the motion, if considered as one to amend the pleadings to conform with the evidence, would be premature and should be denied without prejudice to its renewal at the appropriate time.

> We are in here to see to it that the Nez Perce Project is licensed, and we intend to take every step that is necessary to that end, including whatever procedural steps we feel in all good faith and honesty are necessary to protect our position. This is our one and only motivation and objective. (1 Tr. 38.)

The managing director for WPPSS testified to the same effect:

> We recognized the need and obligation of the companies to provide a future power supply. It was with no intent to prevent them from obtaining a future power supply, but rather insurance of full development of this reach of the river that we were primarily concerned with, and the production of the added benefits in low cost power and flood control that would result. And in view of all the circumstances the existence of this legislation, the fact that hearings had been scheduled on the Mountain Sheep project, brought us to the conclusion the time had arrived for the public agencies to make application for a license on Nez Perce.
>
> * * * * * * *
>
> I am sure had (PNPC) * * * seen fit to make a filing on the Nez Perce project, in my opinion the public agencies wouldn't have made a filing on the Nez Perce project. (23 Tr. 4448.)

The applications were consolidated for hearing and the hearing proceeded on the theory that the issue before the Commission was the respective merits of the rival plans of development—WPPSS' Nez Perce or PNPC's High Mountain Sheep. PNPC allegedly has made total expenditures, including the prior proceeding, approaching $5,000,000; WPPSS has spent $1,250,000. If WPPSS intended applying for a license to build High Mountain Sheep as well as Nez Perce, it should have given notice thereof "* * * within five days next preceding the commencement of or during a hearing * * *" (Rule 1.11(a)). No justification or extraordinary circumstances have been set forth in WPPSS' motion to explain its delay in notifying the Commission and PNPC prior to the conclusion of the hearing that it was now an applicant for the High Mountain Sheep project. Moreover, WPPSS' inferior showing, discussed elsewhere, in terms of its market needs, ability to finance, and compliance with local law all apply equally to WPPSS' ability and capacity to build High Mountain Sheep as well as Nez Perce. The argument that WPPSS' preference rights under Section 7(a) of the Act require the granting of the motion is without merit as pointed out in the discussion of WPPSS' status under Section 7(a) of the Act.

Accordingly, the motion to amend WPPSS' license application to add the High Mountain Sheep project is denied. Section 7(a) does not require this amendment and the public interest would not be served by it. On the contrary, the Commission would have great difficulty in encouraging future investigation of the nation's water resources by private nonpreference utilities. Moreover, the fair and orderly conduct of comparative proceedings under rules designed to achieve procedural due process with minimum delays requires that the parties be bound by the pleadings and positions on which the hearing has been conducted and has proceeded to a conclusion. If at the end of a long and expensive hearing an applicant can adopt his rival's plan without abandoning his own, the fairness of the procedure itself becomes suspect. This principle antedates the common law. "Drink waters out of thine own cistern, and running waters out of thine own well" (Proverbs 5:15). Rather than functioning as an aid to the Commission in promoting prompt, optimum development of our water resources and in selecting the best applicant to insure successful development, the hearing becomes a trap for the unwary. Nor does the public interest require the contrary. I am persuaded by the entire record that High Mountain Sheep, if licensed, will be built sooner by PNPC than by WPPSS, which still maintains that it is an inferior project and should not be constructed by anyone.

3. PNPC's motion filed April 11, 1962, to Strike Certain Material from WPPSS' initial brief.

This motion is denied. The material referred to is discussed in the briefs and is a part of the argumentation contained therein. The record is not expanded by references in the brief to material which is not in evidence.

4. PNPC's motion filed June 11, 1962 (as amended June 15, 1962) to Strike the Reply Brief of WPPSS on the ground that "on not less than 49 pages of the said Reply Brief there are references to factual and opinion evidence that is not in the record." (WPPSS' Answer filed June 28, 1962).

The motion is granted to the extent that the reply brief purports to discuss the results of a field investigation of the Nez Perce site conducted by two unidentified WPPSS geologists after the filing of the initial briefs in this proceeding. The results of this post-hearing field investigation are not in evidence and no petition to reopen the proceeding for its admission was made or granted. WPPSS had ample opportunity to present rebuttal testimony on this issue and cross-examined PNPC's geologic witnesses at great length. No new facts are cited justifying the use of this extra-record evidence and none appears.

5. The following motions are granted:

(a) WPPSS' motion filed January 4, 1962 for Leave to Substitute Complete Copy of Order of Director of Conservation, State of Washington.

(b) Applicants' joint motion filed January 15, 1962 To Admit Joint Exhibit (Part D through Part K).

(c) PNPC's motion filed January 15 To Reopen Record and Admit Additional Evidence (PNPC's Exhs. 132 and 133).

(d) Joint motion filed January 29, 1962 To Reopen Record and Admit Additional Evidence (1961 Corps Report).

Description of Projects Proposed for Licensing

PNPC's High Mountain Sheep Project No. 2243

The PNPC design as described by Witness Bonin provides for a variable radius, variable thickness concrete arch dam approximately 670 feet high above the riverbed having a crest length of about 1460 feet at elevation 1520 m.s.l. terminating at a thrust block and spillway on the right bank and a combination gravity dam and thrust block on the left bank (Tr. 182, PNPC Exhs. 13 and 16).

The dam would create a reservoir extending approximately 58 miles upstream on the Snake River to the Hells Canyon tailwater and 10 miles upstream on the Imnaha River. The reservoir would have a normal water surface of about 17,300 acres and a gross storage capacity of 3,600,000 acre-feet at normal water surface elevation 1510 m.s.l., of which 2,250,000 acre-feet would be usable with a normal drawdown of 173 feet to elevation 1337 m.s.l. Drawdown to 1212 m.s.l. (a drawdown of 298 feet) would provide a total usable volume of 3,100,000 acre-feet (Tr. 228–9). The spillway located on the right bank would be a chute-type design controlled by three 50-foot wide by 50-foot high tainter gates mounted over an ogee section with a flip type bucket at the end to direct discharge into the river. Additional discharge capacity of 65,000 cfs at elevation 1382 m.s.l. would be provided by eight low level discharge valves. The combined discharge capacity of the spillway and sluices would be 300,000 cfs at maximum pool elevation of 1517.5 m.s.l. (Tr. 230, PNPC Exhs. 13 and 16.)

The penstocks (18' inside diameter) are of steel and pass through the dam at approximately elevation 1160, then travel from the downstream face of the dam with intermediate supports as required through open cut excavation to the powerhouses.

Two outdoor-type powerhouses would be located one on each side of the river near the base of the dam. The Oregon side powerhouse would initially have three units installed with provisions for two future units. The Idaho side powerhouse would initially have two units installed with provisions for three future units. The initial installation would consist of five generating units with each turbine rated at 285,000 horsepower at a 550-foot net head with full gate opening (PNPC Exh. 13). The turbine would be directly coupled to a generator rated at 175,000 kilowatts (184,000 kilovolt-amperes at 0.95 power factor) making a total turbine capacity of 1,425,000 horsepower and a total generator capacity of 875,000 kilowatts. (For purposes of the comparative plans of comprehensive development, seven generating units are assumed in operation (Tr. 234, PNPC Exh. 16)). Ultimate installation is to consist of ten generating units with a total turbine capacity of 2,850,000 horsepower and a total generator capacity of 1,750,000 kilowatts. The initial and ultimate capabilities will be 1,000,000 kilowatts and 2,000,000 kilowatts, respectively. Fifteen single-phase, 70,000 kva main power transformers would be located on the powerhouse roof connecting to a switchyard located on the Oregon side adjacent to the left abutment of the dam at elevation 1720 m.s.l.[13] The switchyard would be connected to the Applicant's proposed interconnected primary transmission system by ties at the Middle Snake Project Substation.[14] The access road would extend 25 miles from Imnaha, Oregon, to the project site (Tr. 202, 231–34, PNPC Exh. 13, Joint Exh. Part G).

WPPSS Nez Perce Project No. 2273

The Nez Perce Project proposed for licensing by WPPSS in its supplemental direct testimony[15] consists of a double curvature concrete arch dam approximately 715 feet high having a crest length of about 1570 feet at elevation 1520 m.s.l. terminating at a thrust block on the right bank and the canyon wall on the left bank. The dam would create a reservoir extending approximately 63 miles upstream on the Salmon River, 61 miles upstream on the Snake River to Hells Canyon tailwater, and 10 miles upstream on the Imnaha River. The reservoir would have a normal water surface of about 31,000 acres and a gross storage capacity of 6,600,000 acre-feet at normal water surface elevation 1510 m.s.l. of which 3,130,000 acre-feet would be usable with a normal drawdown of 122 feet to elevation 1388 with provision for additional drawdown to elevation 1296.5 for flood control, providing a total usable storage of 4,700,000 acre-feet (Tr. 661–64). The spillway with an approximate capacity of 480,000 cfs would be provided by an orifice-type design consisting of nine orifices each controlled by a 16-foot wide by 30-foot high tainter gate. The downstream lip of these orifices would be at elevation 1230 m.s.l. Additional discharge capacity of about 120,000 cfs would be provided by twelve low level valves (Tr. 10,099; 10,102; 10,114–6; WPPSS Exhs. 142, 143).

---

[13] See Joint Exhibit, Part G, for compilation of physical data.

[14] Suggested transmission lines are as follows: Three lines to Lewiston, Idaho—230 kv—approximately 43 miles; line from Lewiston to Walla Walla, Washington—230 kv—approximately 71 miles; line from Lewiston to Spokane, Washington—230 kv—approximately 106 miles; line from Lewiston to Anaconda, Montana—230 kv—approximately 234 miles, line from project to Imnaha, Oregon—230 kv—approximately 21 miles; line from project to Portland, Oregon—345 kv—approximately 297 miles (Tr. 3722–23, PNPC Exc. 20).

[15] The project as described above and proposed by WPPSS in suplemental direct testimony differs from the project as described in the application for license as amended and presented in WPPSS' direct testimony (Tr. 10,096–10,118). The principal differences are a change in arch dam geometry, a change in spillway design from a side channel-type to an orifice-type with orifices located near the center of the dam, and a change in type and location of the powerhouse from an indoor-type located across the river just downstream from the toe of the dam to an underground-type located in the left bank.

An underground powerhouse requiring an excavation of about 85 feet wide by 175 feet high and about 820 feet long located on the Oregon side of the river would house ten generating units. The generator floor would be at elevation 902 m.s.l. Five banks of three single-phase transformers each rated at 155,000 kilovolt amperes would be housed in a transformer hall requiring an excavation approximately 50 feet wide by 43 feet high and 700 feet long. This hall would run parallel to the powerhouse with its floor at elevation 919 m.s.l. Another excavation about 33 feet wide by 40 feet high by 700 feet long with its floor at about elevation 977 m.s.l. would be required for operation of draft tube gates, and would be connected to the draft tubes by shafts approximately 40 feet by 20 feet extending vertically to the bottom of the draft tubes at about elevation 831 m.s.l. (Tr. 10,070; 10,104–107; WPPSS Exhs. 142, 144.)

Initial installation would consist of ten generating units with turbines rated at 290,000 horsepower each at 570-foot head at full gate, directly connected to generators rated 200,000 kilowatts each (210,000 kilovolt-amperes at 0.95 power factor) for a total installed turbine capacity of 2,900,000 horsepower and generator capacity of 2,000,000 kilowatts. Maximum initial capability would be 2,235,000 kilowatts. (Tr. 10,069; 10,022; WPPSS Exhs. 144, 145). Another underground powerhouse is planned for the Idaho side of the river (Tr. 10,160, WPPSS Exh. 142) which would house six more turbines and generators ultimately making the ultimate turbine capacity 4,640,000 horsepower with a total generator capacity of 3,200,000 kilowatts (Joint Exh. Part G). A 345-kilovolt cable will be used to connect the transformers in the transformer hall to the overhead lines at the surface. These overhead lines will then carry the power to a switchyard on the Idaho side of the river approximately one and one-half miles downstream from the dam (Tr. 462, 10,070; 10,093; WPPSS Exh. 15).

The proposed access road to the project would extend southwesterly from Winchester, Idaho, to the operator's camp and then to the project (Tr. 468, 10,117; 10,234).

WPPSS' transmission system proposes to integrate the Nez Perce Project with the Bonneville Power Administration grid, and assumes construction and wheeling by BPA. (WPPSS' br. pp. 29, 159, Tr. 583, 5820). Four basic 345 kv steel tower lines are proposed, extending from Nez Perce to Santiam, Oregon, to McNary, Oregon, to Lewiston, Idaho, and to Spokane, Washington, for a total distance of 634 miles, plus a possible line to Pocatello, Idaho, for an additional distance of 338 miles (Tr. 5,788). At the terminus of each of the lines a 600 mva 345/230 kv step-down substation with auto transformers is proposed (Tr. 586).

WPPSS' High Mountain Sheep Project No. 2273

WPPSS presented a High Mountain Sheep Project in its rebuttal testimony (WPPSS Exhs. 264–267) at the same site as PNPC's project, river mile 189.2 on the Snake River. The project, for which WPPSS seeks a license, if its Nez Perce application is denied, consists of a double curvature concrete arch dam approximately 670 feet high having a thrust block and spillway on the right abutment and a thrust block on the left abutment with an overall crest length of 2040 feet at elevation 1520 m.s.l. The dam would create a reservoir extending about 58 miles upstream to Hells Canyon tailwater on the Snake River and 10 miles upstream on the Imnaha River. The reservoir would have a normal water surface of about 17,300 acres and gross storage capacity of 3,600,000 acre-feet at normal water surface elevation 1510 m.s.l. of which 2,250,000 acre-feet would be usable with a normal drawdown of 173 feet to elevation 1337. The spillway would be of the chute-type design controlled by three 50-foot wide by 60-foot high tainter gates. Additional discharge capacity would be provided by seven low level outlets. An indoor-type powerhouse would be located on the Idaho side of the river near the base of the dam with an initial installation of six units (Tr. 12,940). Provisions would be made to house four similar units in a future underground powerhouse on the Oregon side (Tr. 12,942, WPPSS Exh. 264). The initial installation would consist of six generating units with each turbine rated 290,000 hp at 550-foot head and each generator rated 200,000 kw (210,000 kva at 0.95 power factor), for a total installed turbine capacity of 1,740,000 hp and generator capacity of 1,200,000 kw with 2,900,000 hp and 2,000,000 kw ultimately (Tr. 13,054). Maximum initial capability would be 1,377,000 kw. Nine single-phase, 155,000-kilovolt-ampere, power transformers would be located on a transformer deck adjacent to the powerhouse (Tr. 13,055). Location of the switchyard facilities has not been defined.

Access to WPPSS' High Mountain Sheep site will be by road which would go downstream on the right side of the river and cross the Salmon River at about mile 0.5 and then to Winchester, Idaho (Tr. 12,940).

Safety and Stability of Dam Sites and Structures

High Mountain Sheep Dam Site

Both applicants agree that the High Mountain Sheep site, located on river mile 189.2, is safe and adequate for a thin arch dam (PNPC br. 106, WPPSS br. 63, Tr. 12, 134, 12,317). The canyon walls consist of metavolcanic rock, about 200 feet apart at normal river level, rising steeply above the river. Crest length to height ratio is estimated to be 2.2 to 1 (Tr. 179–181). However, WPPSS witnesses Schultz and Thompson believe that considerably more exploratory work must be done before designs are finalized and that the PNPC's estimate of $90,000 for this work is inadequate. Additional exploration will, of course, be necessary before construction can proceed to establish foundation lines, the extent of foundation treatment, and other details required for final design. The Staff recommends that the result of additional geological exploration "should be passed on by an independent board of qualified experts before any construction can be started." This recommendation is incorporated in Article 32 of the Staff's proposed order. (p. 244 of brief)

Obviously, the Commission will need technical assistance to fix foundation lines and other details for final design purposes. To this extent, the advice of qualified consultants is necessary and desirable. It is the Commission's responsibility, however, to determine the safety and adequacy of the dam site and to approve the final design of the arch dam. This responsibility cannot be shared with a so-called "independent board." The record establishes, and I find, that the High Mountain Sheep dam site is safe and adequate to support the proposed arch dam and related structures.

Nez Perce Dam Site

The adequacy and safety of the Nez Perce Dam site, a critical issue in this proceeding, produced over 2000 pages of conflicting expert testimony. WPPSS witness Schultz testified that the foundation rocks are "favorably oriented with respect to the direction of thrust from the arch dam loads" (Tr. 560) and that the site is geologically adequate for the revised WPPSS designs, including the proposed powerhouse (Tr. 9870). WPPSS witnesses Geuss and Willey of the Harza Engineering Company agree that the site is suitable for a thin arch dam.

Another witness for WPPSS, geologist Thompson, testified that it would be impossible for the huge mass of rock on the right abutment to be moved by the thrust of the dam (Tr. 12,385).

All three PNPC witnesses concluded that the Nez Perce Dam site was not suitable for the proposed thin arch dam and related structures. No Staff[16] witnesses testified on the adequacy and safety of the various dam sites. PNPC witness Fox made the most thorough investigation, spending eight days in the mapping of the Nez Perce site (Tr. 11,526-11,561, PNPC Exh. 89), and walking over all significant faults and areas inaccessible from the river, after transportation to such areas by helicopter. He testified that

> * * * Of the 121 faults and fractures I have mapped as representative of geologic conditions at Nez Perce, and the many more I have observed and not mapped, there is not one that is "favorably oriented" from the point of view of thrust from arch dam loads. [Tr. 11,554-5.]

When asked his opinion as to the geological feasibility of a Nez Perce arch dam, Fox stated that "* * * a stable abutment cannot be found in the left part of the canyon wall, in the general area of the proposed axis" (Tr. 11,558). After reviewing the proposed left abutment outline on the overlays (PNPC Exhs. 93 and 106) he concluded that

> * * * no further consideration should be given to an arch type of dam for the Nez Perce site. I am certain that further exploration cannot possibly overcome the impossible and unsatisfactory conditions now apparent at the Nez Perce site [Tr. 11,559.]

Fox testified that movement has already taken place in the left abutment down the dip of flow plane L35 (Tr. 11,697-700), that the probability of movement in the future is greater (Tr. 11,722), and that the fractures are probably open for a depth of 150 to 200 feet (Tr. 11,702).

PNPC witness Livingston, an expert in rock mechanics[17]—the behavior of rocks under stress—spent five days in a detailed exploration of the Nez Perce site (Tr. 11,853-5). He interpreted and analyzed the principal faults, fractures and geological features, mapped most extensively by Fox on PNPC Exh. 89, determining the actual planes of rock as indicated by surface measurements of their strikes and dips and the projection of their planes underground. He concluded that the slabs of rock resting on L35 and L17 in the left abutment show definite evidence of movement and have already failed at point F in picture No. 2 of PNPC Exh. 106 (Tr. 11,830, PNPC Exh. 93, Field Picture Nos. 4, 7, 8, 9, 10). The forces of gravity plus the thrust of the arch dam will tend to move the slabs of rock resting on L35 downstream along L35 as a sliding surface. He then made a stability analysis assuming no shear resistance along fault L35 on the basis of the evidence of vertical movement[18] along fault L35 (Tr. 11,827, PNPC Exh. 129). If shear resistance (C) becomes zero (Tr. 13,868), the ratio between stabilizing and sliding forces, utilizing the shear friction formula (WPPSS Exh. 21),

---

[16] The Staff concluded, however, that "In the light of the evidence in the record, the Nez Perce site cannot be accepted as safe and adequate, regardless of the condition of the right abutment, until a stability analysis has been completed with actual subsurface information." (Staff br. pp. 32-33.)

[17] "It is obvious that the immediate future will witness a great emphasis on further development of the science of rock mechanics" (Engineering News-Record p. 26, July 13, 1961).

[18] Livingston testified with regard to L35: "I have observed a relative displacement near river level of eight inches, and I am of the opinion that the absolute displacement already is in excess of two feet * * *" (Tr. 11,827; see PNPC Exh. 129).

$$Q=\frac{FV+CA}{H}$$

is 0.65–1 (Tr. 12,095, 13,853). Since the forces which tend to make the mass slide are larger than the forces which tend to stabilize, this analysis indicates that the left abutment will fail.

WPPSS witness Veltrop made a similar stability analysis assuming shear resistance in faults L35 and L17 (Tr. 13,155). His favorable geological assumptions produced a favorable stability analysis—5.1 at the left abutment (Tr. 13,125)—a shear-friction factor above 4.0, normally regarded as an adequate factor of safety against sliding along the joints (Tr. 13,132). Veltrop, a highly skilled arch dam designer, concluded that "the foundation rock at Nez Perce is very adequate indeed to support the loads imposed on it by the arch dam" (Tr. 9,987).

The difficulty lies in Veltrop's favorable geological assumptions. An arch dam is no safer than the subsurface on which it rests.[19] There is substantial evidence in the record that shear has already taken place in the fractures at the left abutment. Consequently, adequate shear resistance cannot be assumed with safety.

The evidence of movement in the left abutment comes from experienced, thorough and qualified geological witnesses (Fox and Livingston) who made the most detailed analysis in the proceeding. While the results of subsurface exploration leave a wide margin for interpretation, the Commission cannot assume the existence of favorable subsurface conditions in the face of specific evidence of instability. On the contrary, it should assume the worst foundation conditions compatible with the available data of probative value. On this basis, there is substantial doubt in the record as to whether the left abutment at the Nez Perce site will safely support the thrust of the proposed arch dam.

WPPSS supports the geological adequacy and safety of the Nez Perce site with the results of its unconfined compression tests, water pressure tests, abutment stability analysis, and the geological appraisals of Schultz and Thompson. The issue raised, however, is not the compressive strength of individual rock specimens but of the abutment as a structural unit. If, as has been testified, the left abutment is already parted by major faults and fractures which provide natural sliding planes dipping downstream and riverward, and movement has already taken place, these tests do not establish stability. No water pressure tests or drill holes were made by WPPSS in the critical area of the left abutment where PNPC witnesses testified movement has taken place.

WPPSS witness Thompson testified:

> * * * None of the holes on the left side of the canyon, *i.e.*, Holes NP–6, NP–1 or NP–2, encountered what I would classify as unsound rock below comparatively shallow depths. Therefore, there is no valid justification for assuming that unsound rock is present in the left abutment area at the depth to which abutment excavation would be made. [Tr. 12,424.]

WPPSS Exhibits 24–A, 135 and 136 reveal, however, that drill holes NP–1 and NP–2 are located at the river's edge slightly upstream from the left abutment area and at an elevation below this area, and that drill hole NP–6 is so located that the bottom of that hole is more than 20 feet above the point where the crest of the arch dam would contact the abutment. (See PNPC Exh. 93 field pictures 19 and 20; and PNPC Exh. 106, picture No. 1.)

---

[19] See Bonin's testimony (Tr. 3072–3): "the real problem is in the foundation rather than in any fear of buckling." The Malpasset Dam collapse has been attributed to movement in the left abutment due to sliding along a seam of weak material (Engineering News-Record, February 15, 1962, p. 58, Karl Terzaghi).

WPPSS witness Schultz testified:

> Q. Dr. Schultz, the hole NP-6 was drilled to an elevation of 1546, according to WPPSS Exhibit 24-A, approximately 26 feet above the top of the dam, and holes NP-1 and NP-2 started respectively at elevations 905 and 900.
>
> Now, it appears therefore that you do not have any drill hole at all in the left abutment of the proposed arch dam, is that correct?
>
> A. That is essentially correct. [Tr. 5640.]

Schultz's explorations were confined to the abutment area below elevation 1300 m.s.l. on the left abutment and between elevations 1300 m.s.l. and 1400 m.s.l. on the right abutment.

Similarly, there are no water pressure tests from the left abutment area of the proposed arch dam. Moreover Schultz acknowledged that the left abutment contained unstable areas. Thompson spent less time at the site and made no calculations to support his optimistic interpretation of conditions at Nez Perce or his pessimistic evaluation at Lower Canyon. Consequently I find the testimony of Fox and Livingston more persuasive with respect to the instability of the left abutment at Nez Perce, and geological conditions at Lower Canyon.

The evidence as to the instability of the left abutment has produced post hearing developments. WPPSS' reply brief (IV-33) states that after the filing of the initial briefs it had two unidentified geologists visit the site and examine L-35 and L-17. This "new" evidence is then discussed at some length to refute the testimony of Livingston and Fox.[20] WPPSS then suggests (p. IV-35) "that the record be reopened if the Examiner or the Commission should have any doubt as to the stability of the left abutment." WPPSS had every opportunity to rebut the geologic testimony of PNPC's witnesses Fox and Livingston during the hearing. The Commission's Rules of Practice and Procedure provide an orderly method by which WPPSS may file a petition to reopen the proceeding for the purpose of taking additional evidence. No such motion or petition has been filed nor have any facts been set forth requiring or justifying reopening of the extended and voluminous record in this proceeding. Obviously, the suggestion that the record be reopened to satisfy any doubts the Examiner or the Commission may have with regard to the stability of the left abutment may be made equally with regard to any doubts adverse to WPPSS' contentions.

If the sole bar to licensing Nez Perce were doubts as to the stability of the left abutment it could be argued that the record should be reopened not for the admission of the unspecified "evidence" of unidentified geologists, but for additional testimony of designated geologists after further extensive geological exploration and investigation. But as indicated elsewhere throughout this decision, the public interest does not require the licensing of Nez Perce, and the prompt optimum development of the Middle Snake would best be served by licensing High Mountain Sheep.

---

[20] On June 11, 1962, PNPC filed a motion to strike WPPSS' reply brief on the basis of its "references to factual and opinion evidence that is not in the record." The motion states in part (p. 14) "we could counter the purported new geological testimony by introducing the results of our own further investigation, necessarily undertaken after the reply brief of WPPSS was received, which shows the alleged geological features do not exist as claimed in the WPPSS brief. But such a riposte would only add error to error."

Lower Canyon Dam Site

No one is applying for a license to build Lower Canyon at this time. Its geology is relevant, however, since it is an essential part of the High Mountain Sheep plan for the comprehensive development of the Middle Snake River, recommended by both PNPC and the Staff.

WPPSS contends that the Lower Canyon site at mile 3.7 is geologically infeasible as a site for a dam of any type and suggests a more expensive rockfill dam at mile 0.5 as feasible. It relies on the alleged conclusions of the Corps of Engineers, citing its 1958 study of the Middle Snake River as follows:

> Investigation shows that the joint or fracture systems occur throughout the area and where their strikes parallel the course of the stream, the valley walls are unstable even though of hard durable rock. Between river mile 3 and 5, the river parallels these fracture trends, and recent and ancient rock falls and slides of large magnitude can be observed. Consequently, this reach is not considered suitable for a dam of the height proposed. (Vol. 1, [p. 272.) WPPSS br. p. 69.]

This 308 report was preliminary with no indication of any detailed foundation investigation. It does not reflect the later study of Bonin, Fox, and Livingston in this record or the more recent report of the Chief of Engineers dated March 31, 1961, which contains the following comment: (p. 8)

> * * * Since the preparation of the Division Engineer's report the results of additional investigations at the High Mountain Sheep and Lower Canyon sites have become available, which indicate rather conclusively that a concrete arch dam is feasible at the High Mountain Sheep site. This dam, built to provide a full pool at elevation 1510, would cost roughly $44 million less than the concrete gravity section dam proposed by the Division Engineer, but raised to the same elevation ($198 million vs. $242 million). *There is some chance that an arch dam also might be substituted for the more expensive rock fill dam at the Lower Canyon site, but a conclusion cannot be reached until further borings are made. This additional study can wait until the advance engineering and design stage immediately prior to initiating construction.* [Emphasis supplied.]

WPPSS also relies on the testimony of Schultz and Thompson: Schultz spent one day at the mile 3.7 site and inspected the 0.5 site by boat and not from the ground. He did not testify that an arch dam could not be built at the Lower Canyon site, but rather that the amount of excavation required to insure stability would make construction uneconomical (Tr. 12,115). Thompson was more affirmative. He concluded that the thrust of an arch dam would cause failure at the abutments of the mile 3.7 site (Tr. 12,728).

The Staff takes the position that more extensive geological exploration is necessary "before it can be said that the Lower Canyon site can or cannot be used as a site for an arch dam." (Staff br. p. 36.)

The feasibility of this site was supported by PNPC witnesses Bonin, Fox and Livingston. Fox spent about three weeks examining this site (Tr. 11,744). Bonin testified that he examined the fault system mentioned in the Division Engineer's report very carefully before he concluded that the site was suitable for an arch dam (Tr. 204). Exploratory work included three core borings in the right abutment and eleven test pits (PNPC Exh. 16, p. 101). The three diamond drill holes were pressure tested with satisfactory results. Livingston made a stability analysis of the Lower Canyon right abutment against the thrust of the PNPC arch dam using the same assumptions at critical points that he used at Nez Perce—no shear resistance along fault R12. He found it to be stable with a safety factor of 2.44 (Tr. 12,042).

I am persuaded that the geological adequacy of Lower Canyon is sufficiently established to justify its inclusion in proposed plans for the comprehensive development of the Middle Snake River. Its significant geological features have been extensively identified, measured and mapped. Thompson's contrary testimony is based on insufficient site investigation, an absence of precise measurements and calculations, and the application of different assumptions as to the depth or extension of faults and fractures at Nez Perce and Lower Canyon (Tr. 12,710-1, 12,736, 12,756).

More extensive geological exploration will be necessary, however, to support any license application for a thin arch dam at Lower Canyon.

Designs of Project Structures

There are many different designs in the record and many hearing days were spent in cross-examination on hundreds of design details (See PNPC br. 133-240). These differences do not significantly affect the operation or power benefits of the various projects. They do affect substantially the capital cost estimates and the economic evaluation of the rival projects and alternative plans.

Moreover, these designs are not construction designs or plans. They are preliminary designs provided for the purpose of Federal Power Commission license proceedings. Neither the applicants nor their witnesses assume any obligation to maintain construction costs within the amounts estimated for these preliminary designs.

The designs proposed for High Mountain Sheep by PNPC and WPPSS raise no important problems provided the licensee proceeds with the more refined analysis and study necessary for final, detailed construction designs. The adequacy and safety of the revised Nez Perce designs[21] (WPPSS Exhs. 139-145), however, are contingent upon the geology of the site. WPPSS witness Willey explained that the greatest single reduction in cost in the latest revised Nez Perce design is achieved by the use of an underground powerhouse which permits placing the spillway and outlet works in the middle of the dam, thus eliminating considerable excavation and concrete (Tr. 10,098, 10,124-7, 10,130).

On the basis of the geological testimony of Fox and Livingston there is considerable doubt as to whether an underground powerhouse is feasible. Fox testified he could not recommend an underground powerhouse until extensive further underground exploration was completed (Tr. 11,556). Livingston testified that construction of these underground powerhouses, even if possible, would be very costly (Tr. 11,826). If the underground powerhouse design is abandoned, the cost of the necessary design revisions will radically affect the total project cost and the comparative economics of the rival plans.

The Staff recommends that, "since neither proposed project has been finally designed nor foundation fully explored * * *, the following general conditions should apply to either Nez Perce or the High Mountain Sheep Project, whichever is licensed for construction:" (Staff br. p. 47.)

(1) The final design of the arch dam shall be verified by an acceptable method of analysis (such as the trial-load method) (Tr. 1498) using design criteria mutually agreeable to the Licensee and the Commission staff;

(2) The final design of the arch dam shall also be reviewed by the use of structural models (Tr. 1498, 2215, 2219, 2220);

---

[21] The last change in designs produced a $32,900,000 reduction in the cost estimates—$340,900,000 to $308,000,000.

(3) The spillway for the project shall be reviewed and modified, if necessary, by the use of hydraulic models which demonstrate the flow capacities and characteristics for the various reservoir water surface levels, operation of various combinations of gates, and for effect of discharge on other project structures (Tr. 2143, 2215, 3147–8) including vibration studies;

(4) The final design of the dam and other project structures shall be reviewed by an independent Board of Consulting Engineers;

(5) Consideration shall be given to prestressing the joints of the dam with grout pressure in order to improve the stress distribution in the dam (Tr. 2193, 3074–A);

(6) Consideration shall be given to the effect of spray from spillway operation in locating transmission lines leading from the dam (Tr. 2518-19); and

(7) The method of foundation treatment shall be approved by the Board of Consulting Engineers mentioned in (4) above (Tr. 4762).

Flood Control

The initial flood control goal of the Corps of Engineers in its Main Control Plan (H.D. 531)—limiting the 1894 flood flow from 1,240,000 cfs at the Dalles to a peak flow of 800,000 cfs—can be achieved by construction of Canadian storage (8.45 million acre-feet) and the Libby Project (5 million acre-feet). The further goal, reduction to 600,000 cfs, will require additional storage of 7.6 million acre-feet, or a total of 325 million acre-feet of usable storage.[22] Projects now in being or under construction will provide 8.3 million acre-feet. The flood flows of the Snake and Salmon Rivers amount to 6,180,000 acre-feet (Tr. 712).

Flood control storage is provided for at Nez Perce, High Mountain Sheep and Lower Canyon. China Gardens and Whitebird provide only pondage. Applicants have agreed that the annual flood control values as shown on page 10 of PNPC Exh. 19 may be used for purposes of comparison.[23] While flood control

---

[22] (Corps Report, March 31, p. 5.)

Storage conditions	1894 Flood at The Dalles, cubic feet per second	Usable Storage, millions of acre-feet	
		Total required	Available from projects existing or under construction
a. 1894 conditions	1,240,000		
b. Existing, and under construction	1,030,000	8.3	8.3
c. Initial flood control objective	800,000	17.3	10.8
d. Canadian and Libby storage added to existing and under construction	720,000	24.6	11.2
e. Ultimate flood control objective at The Dalles	600,000	32.5	11.5

(Footnotes omitted.)

[23]

	Usable storage, acre-feet	Without Canadian storage		With Canadian storage
		1968	1985	
High Mountain Sheep	2,250,000	$1,840,000	$2,260,000	$240,000
Lower Canyon (mile 3.7, Elev. 1595)	3,265,000	3,500,000	4,300,000	370,000
	5,515,000	5,340,000	6,560,000	610,000
Nez Perce	5,015,000	$5,300,000	$6,500,000	$560,000
Difference HMS Plan over NP Plan	500,000	40,000	60,000	50,000

storage for the High Mountain Sheep Plan exceeds that of the Nez Perce Plan by about 10 percent, the annual value differential is about one percent. This analysis indicates that the flood control benefits of the two plans are substantially equal for comparative purposes (Staff br. p. 186).

Recreation

WPPSS witness Yoemans, a landscape architect, expressed the belief that the recreational potential of the Nez Perce project "would exceed Grand Coulee * * * within about five years after its completion" (Tr. 724). PNPC witness Robinson, Chairman of its Board of Directors, described extensive picnic and boating facilities planned for High Mountain Sheep at an estimated cost of $500,000 (Tr. 149–151; 1781, 1866–67, 1958).

The Staff considers the recreational benefits of the two plans similar—"what can be said for one can be said for the other" (Staff br. p. 144). If the comparison is limited to the two projects, construction of the High Mountain Sheep dam would leave undisturbed stream side fishing on the Salmon River and the sports fishery in the Idaho area. An estimated 811,350 juvenile steelhead were caught by angling in Idaho waters in 1958 (INT. Exh. 10) in an estimated 113,898 fishing trips. The letter reports of the Department of Agriculture (FPC Exhs. 39, 40) recommend license provisions to insure adequate recreational use of the reservoir areas.

Navigation

The proposed projects and plans of development will open large areas to transportation by boat now virtually inaccessible. The Corps of Engineers has recommended the same license conditions for both projects (FPC Exhs. 37, 38) to insure maintenance of downstream navigation channels.

Power Output

(1) The Rival Projects

The proposed Nez Perce project would develop the head on the Snake River between the Nez Perce site at river mile 186.2 and the Low Hells Canyon site at river mile 247.3 and the head on the Salmon River from its mouth to river mile 63.0. The proposed High Mountain Sheep project would develop the head on the Snake River between the High Mountain Sheep site at river mile 189.2 and the Low Hells Canyon site. Power output is based on streamflow available at the Nez Perce and High Mountain Sheep sites from historical flows for the 1928–1948 period modified by upstream irrigation depletions (Prehearing Conference Exhs. 15 through 20).

Both the High Mountain Sheep project and the Nez Perce project would have an overlap on the Low Hells Canyon development tailwater of about 35 feet. An agreement will be required between the Idaho Power Company and a licensee for a project in the Middle Snake River to compensate the former for losses resulting from the effects of the overlap (Tr. 193–4).

The Chief of Engineers in his letter report dated March 31, 1961, transmitting the Division Engineer's Report to the Secretary of the Army, stated that during detailed study and design it may be found advantageous to construct the High Mountain Sheep dam to provide a reservoir pool a small amount higher than elevation 1510.

To determine power output, operation of both projects has been coordinated with the Northwest Power Pool[24] (Tr. 276, 278, 641). The system power development was assumed to be approximately 16,000,000 kilowatts when either the High Mountain Sheep project or the Nez Perce project comes into service.[25] Reservoir drawdown for either project would normally begin September 15, continuing until April 15, with drawdown depending upon forecast operation.

Witness Alspaugh (PNPC Exh. 17) estimated the dependable capacity of High Mountain Sheep to be 930,000 kilowatts with an initial installed capacity of 875,000 kilowatts and average annual energy generation to be 5,483,000,000 kilowatt-hours (626,000 average kilowatts). The Staff estimates a dependable capacity of 930,000 kilowatts and an average annual energy generation of 5,195,000,000 kilowatt-hours (593,000 average kilowatts) (FPC Exh. 21).

The initial installed capacity proposed by WPPSS for the High Mountain Sheep project is 1,200,000 kilowatts. With this capacity and assuming coordinated operation, WPPSS estimated the dependable capacity to be 1,218,000 kilowatts and the average annual at-site generation to be 5,720,000,000 kilowatt-hours or 653,000 average kilowatts.

WPPSS estimated the dependable capacity of the Nez Perce project to be 1,850,000 kilowatts with an installed capacity of 2,000,000 kilowatts and average annual at-site generation of 9,417,000,000 kilowatt-hours or 1,075,000 average kilowatts. The Staff estimate of the power output for the Nez Perce project is a dependable capacity of 1,867,000 kilowatts and an average annual energy generation of 8,532,000,000 kilowatts or 974,000 average kilowatts (FPC Exh. 22).

The Comparative Plans

The power potentials of the rival plans[26] of development are set forth in Tables 2 through 5 of Part I, Applicant's Joint Statement, for the four different levels of development assumed by the applicants during the initial and subsequent period. The initial period assumes a system power development of approximately 16,000,000 kilowatts when either High Mountain Sheep or Nez Perce comes into service. The subsequent period assumes a system power development of approximately 30,000,000 kilowatts. The prehearing conference report (p. 6) established the 1968 and 1985 systems for the comparative studies.

Loads and Resources

In the prior (1956–57) proceeding, Project No. 2173, the Presiding Examiner concluded that by 1965 PNPC's four organizing companies will have serious deficiencies in dependable power capacities.[27] This conclusion is equally valid in

---

[24] See Joint Exhibit Part F. The Northwest Power Pool is a voluntary arrangement among thirteen utilities of the Pacific Northwest area for the coordination of the operation of the affected systems. Participating utilities include all utilities that have major hydroelectric facilities in the Northwest.

[25] Output data at the project sites are estimated by PNPC and WPPSS in Tables 1 and 1A of Joint Exhibit Part I.

[26] High Mountain Sheep Plan includes High Mountain Sheep, Lower Canyon, China Gardens; Nez Perce Plan includes Nez Perce, Whitebird, and China Gardens.

[27] (Initial Decision p. 17) It is clear from the foregoing that the production from all present plants and all plants proposed as above described will fall short of meeting the power requirements of the four organizing companies. It is estimated that after 1964, there will be substantially no firm power available to these companies from any of the federal projects because of requirement contracts between Bonneville and its preferential customers. Consequently, it is incumbent upon these public utilities to take prompt action to provide additional supplies of power." [unreported]

1962. PNPC's witness Porter presented an estimate of electric loads and resources for each of the four organizing companies and totals for the four companies on a fiscal year basis, 1961–70.[28]

These resources include all presently owned hydro facilities plus resources under firm purchase contracts covering the Priest Rapids, Wanapum, and Rocky Reach Projects. They do not include power available under 20-year BPA contracts since power is not assured to the PNPC sponsor companies after August 31, 1964.

The estimates of area load requirements and resources presented by the applicants and staff for the Pacific Northwest are substantially similar.[29]

---

[28] Estimates of Electric Loads (PNPC Exh. 28):

Operating year	Peak load megawatts	Energy load in megawatts	
		Average annual	Average storage control period
1960–61	3,215	1,947	2,030
1964–65	4,137	2,490	2,599
1969–70	5,650	3,373	3,526

Estimates of Electric Resources (1936–37 Water Conditions):

Operating year	Firm resources in megawatts	
	Average annual energy	Average energy storage control period
1960–61	1,530	1,595
1964–65	1,996	2,084
1969–70	2,103	2,198

[29] Estimates of Electric Loads:

Operating year	PNPC exhibit 30		WPPSS exhibits 63 and 160A		Staff exhibits 28 and 29	
	Peak load	Energy load	Peak load	Energy load	Peak load	Energy load
1960–61	10,215	6,885	NA	NA	9,680	6,450
1964–65	12,819	8,407	12,910	8,890	12,118	8,390
1969–70	17,004	10,751	18,009	12,430	16,430	11,505

NOTE: Peak load is in terms of megawatts; energy load is in terms of average annual energy in megawatts; staff energy load converted from kwh.

Estimates of Electric Resources (1936–1937 water conditions):

	PNPC exhibit 30	WPPSS exhibit 63
1960	6,863	N. A.
1964–65	8,319	8,473
1969–70	9,248	9,525

WPPSS has no electric facilities and its loads[20] will be those acquired by contract.

All three forecasts indicate deficiency beginning by 1965, and increasing substantially in each year thereafter. Even if High Mountain Sheep was in service in 1966–1967, PNPC's organizing companies would still have a power deficiency (PNPC Exhs. 28, 30). BPA power under the 20-year contract cannot be relied upon as a firm resource since the four companies have been given notice by BPA that there is no assurance that power will be available for them after 1963–1964 (Tr. 2307, 2328–30, PNPC Exh. 29). PNPC's organizing companies, therefore, will require the entire output of High Mountain Sheep as soon as it can be expected to come into operation. Absent High Mountain Sheep, the four sponsor companies may be forced to build alternative high cost thermal plants (Tr. 397–398). The availability of Canadian storage would delay the need for either project about one and one-half years (PNPC Exh. 42–A, Tr. 2391).

BPA has assured all public agencies that it can take care of their electrical requirements until 1970 (Tr. 4320, 10574). WPPSS estimates that the total load of the[21] public agencies that have signed options to purchase Nez Perce power will be 1324 average annual megawatts in 1971; it estimates the total output of Nez Perce at 1,166 average annual megawatts (WPPSS Exh. 40 Rev.). Clearly, therefore, Nez Perce will not be needed to meet the load of public agencies in the Pacific Northwest, including WPPSS until after 1970. The basic market for Nez Perce power before 1971, therefore, is that furnished principally by the deficiency of the PNPC organizing companies (PNPC Exhs. 28, 30, 42, and 42–A).

Economic Feasibility

While they dispute each other's cost estimates, PNPC and WPPSS are agreed that both the Nez Perce and High Mountain Sheep projects are economically feasible for construction under license within the range of interest and discount rates of record and within such fluctuations thereof as are reasonably predictable.

---

[20] These are estimated by witness Hurd for public agency participants and public agencies in the BPA service area as follows (WPPSS Exh. 112):

Estimates of Electric Loads of Nez Perce Public Agency Participants

Operating year	Peak load megawatts	Average annual energy load in megawatts
		(*)
1966	1,900	1,016
1971	2,600	1,324

Estimates of Electric Loads of Public Agencies in BPA Service Area

Operating year	Peak load megawatts	Average annual energy load in megawatts
		(*)
1966	4,800	2,626
1971	6,200	3,379

*Converted from kwh.

[21] These utilities are assured of all federally generated power, in excess of that sold for industrial purposes, by virtue of the preference clauses in the several federal marketing acts (See Section 4(a) of the Bonneville Act).

The economic feasibility of both projects is graphically illustrated in Table 2 of the Staff's brief (p. 78) which shows in tabular form the installed capacity, output, annual value, annual cost and excess of value over cost for each project, as found in the record. This table, however, does not contain an estimate of the output of the High Mountain Sheep project with an installed capacity of 1,200,000 kilowatts. With this adjustment[32], the estimates of annual costs and values in Table 2 are adopted as reasonable and proper for the limited purpose of demonstrating the economic feasibility of both projects.

Financial Feasibility

The requirements for financial feasibility include adequate statutory authority, a satisfactory tax situation, long-term power sales and wheeling contracts, construction bids at prices comparable with estimates, reasonable net interest costs, and bonds to be delivered with the unqualified approval of a nationally recognized firm of municipal bond attorneys (Tr. 842–3, 851–2).

The basic requirement, however, is an assured market for the power to be generated. A sufficient percentage of the output of the project must be sold under firm long-term power contracts to responsible utilities or other major responsible users at rates adequate to pay all costs. *City of Seattle, Washington*, 26 FPC 54 (July 10, 1961, pet. for rehearing den. Sept. 6, 1961). The more firm the anticipated revenues, the more favorable the relationship between anticipated revenues and costs, the greater is the applicant's ability to finance the project.

Pacific Northwest Power Company

PNPC's plan of financing was described by witnesses Robinson, Chairman of the Board of Directors of PNPC, and Gordon, a senior partner in Kidder, Peabody & Co., a leading investment banking firm. The four organizing companies, whose financial standing and credit are not questioned, have committed themselves to execute "take-or-pay" power purchase contracts covering the entire project output at annual payments equal to financing, operating, maintenance, and other annual charges (PNPC Exhs. 32–35). The organizing companies intend purchasing the 15 percent equity proposed for PNPC, then to secure a revolving bank loan of 60–70 million dollars to minimize interest charges during construction, and finally to float a public bond issue of about 222 million dollars secured by a first mortgage on the property (Tr. 1738, 1741, 1755–6, 4177). Gordon testified that the bonds would be readily saleable at interest rates ranging from 4.80 to 5 percent at any debt-equity ratio from 65 percent to 90 percent (Tr. 402–3, 4127). The equity, if sold to the public, would be readily marketable (Tr. 4160).

Both WPPSS and the Staff question the alleged absence of a plan of financing and the "controversial 85–15 percent debt-equity ratio." The Staff agrees that there are special circumstances where a higher debt-equity ratio than the conventional 60–40 is justified citing *In the Matter of Ohio Valley Electric Corporation et al.*, 36 S.E.C. 304, where an eventual debt-equity ratio of 97½ to 2½ percent was approved on the basis of a contract by the Atomic Energy Commission for the entire output.

The combined equity ratio of PNPC and its sponsor companies as of December 31, 1960, using a capitalization of $257,100,000 for PNPC, would be as follows: Long term debt, 65.48 percent ($821,409,000), Preferred Stock 4.35 percent ($54,621,000), Common Equity 26.86 percent ($336,983,000), Deferred federal income taxes 3.31 percent ($41,583,000). See Annual report for 1960, Item D by reference. The ability of the sponsor companies to finance their participation in the proposed project has not been questioned.

---

[32] See Appendix C.

Moreover, as noted by the Staff (p. 90) the proposed ratio is flexible and will be set at the time of financing "at the ratio producing the lowest cost to the consumer, with adequate security to the investor, and subject to approval of regulatory agencies having jurisdiction" (PNPC br. p. 54). The Staff recommends that any PNPC license be conditioned so as to require submission of a complete plan of financing prior to the beginning of construction and execution of appropriate long term power contracts. Whether or not, as argued by WPPSS, PNPC and its organizing companies will be subject to the Public Utility Holding Company Act is not now before this Commission and is outside the scope of this proceeding. This issue was raised in the prior proceeding, Project No. 2173, where the Presiding Examiner commented as follows (p. 34): [unreported]

> Section 204(f) of the Act states that the provisions thereof shall not extend to a public utility organized and operating in a state under the laws of which its security issues are regulated by a state commission. It appears that the regulatory agencies of the States of Washington, Oregon and Montana do exercise regulation over the securities of the organizing companies.
>
> The fact remains, and it is a fact which is recognized by all of the parties to this proceeding, that the Applicant's capital structure, its debt-equity ratio, and the sale and disposition of its securities will be subject to the supervision and authority of the Securities & Exchange Commission, and that the approval of that Commission must be procured before the financing can be accomplished.
>
> Section 318 of the Act specifically excludes from the jurisdiction of this Commission those who are with respect to the issue, sale, or guarantee of securities or the acquisition or disposition of any securities subject in those respects to the jurisdiction of the Securities & Exchange Commission. There is implicit in every license the requirement and the expectation that the licensee will act in accordance with the laws of the United States. It will not be assumed here, therefore, that the Applicant will not comply with such laws or the regulations of the Securities & Exchange Commission or any other Governmental agency established in accordance therewith.

Washington Public Power Supply System

William R. McGill of Wainwright and Ramsey, John T. Monzani of Kuhn, Loeb & Co., and E. Barron Rockwell of Halsey, Stuart & Co. testified as financial witnesses on behalf of WPPSS.

Under the original plan of financing drafted by Wainwright and Ramsey, consultants in municipal financing, a total of $463,000,000 was to be raised by revenue bonds (Tr. 822–3, WPPSS Exh. 77) as compared to $391,080,000 for the revised Nez Perce design[38] (WPPSS Exh. 161) submitted by WPPSS in its supplemental direct testimony (Tr. 1017 *et seq.*, WPPSS Exhs. 142–147). The proposed bond issue approximates 140 percent of the estimated construction cost of the project.

WPPSS' plan of financing does not cover tax costs allegedly because a realistic figure was not available (Tr. 6537). No studies were made, however, to determine or estimate tax costs (Tr. 6510, 6680); nor is any cost included for transmission to load centers or customers (Tr. 6509, 6534–5). These costs

---

See footnote on next page.

were estimated by WPPSS consultants R. W. Beck & Associates at an additional $138,000,000, with estimated annual costs of $9,346,752 (Tr. 840–2).

Any sound plan of financing must provide for the contingency that WPPSS might have to build its own transmission lines.[34] As stated by WPPSS witness McGill:

> * * * I have been advised by R. W. Beck and Associates that transmission facilities do not now exist that would enable Washington Public Power Supply System to transmit the power generated to potential users in southern Idaho, or in Washington, Oregon and northern Idaho. To accomplish the delivery of Nez Perce power to the points where potential users can take it, it was necessary to consider the possibility that, in the event the U.S. Government or others did not or, for some reason, could not build the necessary transmission lines, they might have to be built by the Washington Public Power Supply System. [Tr. 840.]

The original plan of financing contemplated the borrowing of six years' interest as protection against construction delays (Tr. 6560–1). The revised plan eliminates capitalization of one year's interest or $21,992,500, and assumes accelerated construction plus net revenue of $3,000,000 by operating six units during the fifth year. The existence of net revenues also assumes that transmission lines have been built and the execution of "take or pay power" sales contracts at rates adequate to pay for all costs (Tr. 10,732–4, 10,745). The bond reserve fund at the beginning of construction is eliminated and deferred to the end of the fifth year by using the sixth years' interest (Tr. 10,732–3).

Other WPPSS revisions include using investment earnings to retire bonds instead of using such earnings to offset operating expenses, calculating interest earned during construction on a "cash flow" rather than an arithmetic average method, changes in the estimated construction schedule, power supply, engineering etc. (Tr. 6657, 6678, 6681).

These changes, and the assumptions on which they are based, make the revised plan less attractive to prospective lenders and more difficult of realization. The basic missing element, however, is the essential requirement for financial feasibility—an assured market. To carry out any financial plan, WPPSS must demonstrate the existence or probability of firm long-term power contracts for the output of Nez Perce at rates sufficient to meet all its costs. As pointed out by the Staff, WPPSS has no independent resources or credit (Staff br.

---

[33] The proceeds under the two plans would be applied as follows (Staff br. p. 92):

Item	WPPSS Exh. 77	WPPSS Exh. 161 Rev.
Construction Costs (including costs of engineering and contingencies)	$340,900,000	$308,000,000
Working Capital (recommended by Harza Engineering (Tr 830))	2,000,000	2,000,000
Bond Reserve (equivalent to one year's interest @ 4¾% and to be maintained as long as any bonds are outstanding (Tr. 830, 6558–9))	21,992,500	----------
Bond Discount and Finance Expense (approximately $25 per $1000 or 2½% (Tr. 830))	11,575,000	9,777,000
Interest (six years' interest during construction amounting to $131,959,000 less interest earned during construction amounting to $45,422,000 (WPPSS Exh. 77 revised))	86,532,500	*71,303,800
Total bond issue	463,000,000	391,080,000

*Total interest of $111,457,800 less investment earnings of $37,154,800 and estimated net revenues from partial operation in 5th year in the amount of $3,000,000 (Tr. 10,691-3, 10,734–45.)

[34] There is no evidence in this record, contrary to WPPSS' assertion (WPPSS br. p. 200) that these transmission lines will be built by BPA. Nor did any BPA official testify as to the "likelihood" of such construction.

p. 106). It does not now own or operate any electric generating facilities; it has no customers or loads. WPPSS' "assured market" is based on the anticipated general demand for electric energy in the Pacific Northwest, not on any contractual commitment entered into by specific customers (WPPSS br. p. 179).

WPPSS relies on power reservation agreements whereby each utility furnishing financial support (24 non-member Public Utility Districts, municipalities and cooperatives in addition to its 14 member PUD's) has an option on a portion of the Nez Perce project output proportionate to the amount of its advances (WPPSS Exh. 107, PNPC Exhs. 51–54). While WPPSS is bound to sell should any of the 40 participants execute their options, they are not obligated to buy.[28] Nor is there any demonstration in this record that they will need Nez Perce power when it comes on the line.

The load growth of the public agencies that have signed options to purchase Nez Perce power is estimated by WPPSS to average about 65 megawatts of average annual energy per year during the seven-year period 1960–66, and about 60 megawatts per year during 1967–71 (WPPSS Exh. 112). In 1971, the total load of these public agencies is estimated at 1324 megawatts.

The record indicates that the public agencies, including all of the option signers, will have an assured supply of power from the Bonneville Administration until some time after 1970, and for an indefinite period in the future depending upon Bonneville's situation and their own generation (Tr. 4593). BPA states in its current load and resource forecast entitled "Power Outlook 1960–1970", dated October 1960: (Item E by Reference, Tr. 2697–9).

> * * * On the basis of present load estimates and resources schedules Bonneville Power Administration can supply the energy requirements of the public agencies through 1970–71 under the most adverse streamflow conditions of record, and under these same conditions the indicated requirements of the private utilities in excess of their own resources can be served through 1963–64. However, if non-Federal hydro resources now under construction are used for the supply of utility loads these requirements of the private utilities can be supplied through 1964–65 (FPC Exh. 42, p. 1).
>
> * * * Public agency requirements are somewhat less than a year ago as a result of both slightly lower load estimates and an increase in their own resources. For example, the City of Tacoma's Mayfield plant is now allocated to serve utility load and will reduce Tacoma's purchase of Federal power. Nevertheless, total public agency requirements on the Federal system will nearly double from 1,679,000 average kilowatts in 1960–61 to 3,137,000 average kilowatts in 1970–71. It is estimated these requirements will be served in full throughout the period of this Power Outlook. [p. 5.]

In BPA's annual report for 1960 (p. 2) the statement is made that "for the first time in nearly 15 years, BPA finds it is in a period of surplus power instead of power scarcity." Clearly, Nez Perce will not be needed to meet the total loads of all the public agencies in the Pacific Northwest until some time after 1970, without reference to the growth in their own generation. WPPSS witnesses Hurd and Gallup testified that it will be necessary for the option signers to replace Bonneville power with Nez Perce power, and suggested that the option signers would be willing to pay for higher cost Nez Perce power to assure an ample power supply in the future (Tr. 20, 43, 45, 61, 85). It is unrealistic, and I find no basis in the record, to assume that the option signers would voluntarily give up priority BPA power costing approximately three mills to purchase Nez Perce power costing a minimum of 20 to 30 percent higher than the present wholesale cost of BPA power (Tr. 4530, 4532). Nor is there any evidence in the record that the 40 option signers have the intention or the financial resources to take or pay for higher cost surplus Nez Perce power for an indefinite period until their load growth requires its utilization.

---

[28] See "Agreement for Reservation of Certain Output of Nez Perce Project," par. 5, WPPSS Exh. 107.

WPPSS policy witness Hurd conceded that "for a few years at least" there would be available power and energy in excess of requirements (Tr. 4406, 4320, 4321). He suggested that industry and private utilities would pick up the slack.

The major markets for this slack, as indicated by the Bonneville Power Outlook report, are the private utilities consisting primarily of the sponsoring companies making up PNPC, namely, the Montana Power Company, Pacific Power and Light Company, Portland General Electric Company, and the Washington Water Power Company.

As recognized by the Staff (Staff br. p. 66) the four sponsor companies will have a deficiency of 695 megawatts of average annual energy in 1966–67. Without High Mountain Sheep, they may be forced to build alternative high-cost thermal plants. BPA power is not a firm resource for the future since the four companies have been given notice that there is no assurance that BPA power will be available for them after 1963–64 (Tr. 2307–2308–2330, PNPC Exh. 29). The public agencies have that assurance, plus increased generation from Priest Rapids, Wanapum, and Rocky Reach (Tr. 2301). Nor would the availability of Canadian storage significantly change the urgent need of the sponsor companies for additional firm hydro generation.

Realistically, therefore, the basic markets for Nez Perce or High Mountain Sheep power are the companies making up PNPC. There is nothing in the record to indicate that these companies have any interest in purchasing this power from WPPSS, or that any other companies are presently willing to do so. As stated by PNPC witness Warren:

> While I would hesitate to hazard any guess as to the probable trends of prices in the decade from 1970 to 1980, I would point out that if a license is denied to us for High Mountain Sheep for immediate construction on the theory that our needs would be taken care of by juggling of power supplies just as I have described it, the result is to expose our customers to whatever hazard of price movements which may occur in a period of 20 years from this date which increases the capital costs of power supplies. We consider that our customers are entitled to have low cost hydroelectric power to serve their own needs. We will need the power by the time High Mountain Sheep can be built. WPPSS, its members and associates will not need any power before 1970, and probably not before 1975. [Tr. 10,575.]

The result of this comparison is that Washington Public Power Supply System in 1970 will have approximately 14.2 percent of the total customers in the area and 14.4 percent of the resources. On the other hand, Pacific Northwest Power Company will have 41.4 percent of the total customers and only 21.5 percent of the resources.

Expressed in another way, the preference group as a whole and the Washington Public Power Supply System specifically are now assured that they will be able to serve their entire loads in 1970 through hydroelectric power, but the Pacific Northwest Power Company will have a substantial portion of its load that must be served from other sources of energy. This will be

> true even with a license for High Mountain Sheep granted by this Commission. [Tr. 10,579, 10, 580.]
>
> The Nez Perce Project is entirely disproportionate to the needs [or] of ability of the Washington Public Power Supply System. It represents more than ten years' load growth for the Washington Public Power Supply System. The System, therefore, would require that other utilities undertake the financial responsibility of maintaining the availability of Nez Perce for the System until the System needed Nez Perce. Sound utility management would indicate that the System should undertake (as it has in the Packwood Project) projects commensurate with its needs. [Tr. 10,581.]

WPPSS obviously anticipates the sale of Nez Perce power to private utilities, even though these companies have made it clear that they are not willing to enter into any such commitments (WPPSS br. p. 185). The Staff agrees (br. p. 106) that WPPSS has not demonstrated that it is able to carry out its proposed plan of financing citing the absence of firm power contracts, assured market, and the failure to take into account transmission costs, taxes, or wheeling charges. It proposes, however, that WPPSS be given two years to obtain binding power contracts (presumably from the companies making up PNPC) and otherwise demonstrate its ability to finance the Nez Perce or the High Mountain Sheep Project.

Since the public agencies have first call on WPPSS power (whether generated at Nez Perce or High Mountain Sheep) the substitution of WPPSS for Bonneville[56] as a wholesaler of power brings the PNPC group no closer to the solution of their basic problem—a long-term, firm assurance of generation adequate for their own growing needs. The PNPC group are already committed to purchasing surplus non-Federal power from public agencies at Priest Rapids, Wanapum, and Rocky Reach.[57] I know of no public policy designed to encourage the shift of market from BPA to WPPSS, or to compel the private utilities to meet their increasing needs from non-federal public agencies on a short-term pullback basis.

WPPSS has failed to establish the existence of firm power contracts for the power output of Nez Perce or High Mountain Sheep. In lieu of firm contracts, WPPSS has listed its members, potential buyers, the results of market surveys, and ultimate regional needs. Its own financial witnesses, however, testified that prior to the issuance of its revenue bonds it would have to have under firm contract sufficient customers to cover all its costs. But even more basic is its failure to demonstrate an assured market for the power when it comes on the line in 1968. It may be some time after 1970, and probably not before 1975, before WPPSS and its members will need power above and beyond their own resources, plus federally generated power. Accordingly, WPPSS has demonstrated no real need for the output of Nez Perce or High Mountain Sheep within any reasonably close period of time.

An assured market is particularly essential to WPPSS since only the revenues from the proposed project itself are available to meet its financing costs. WPPSS has no other revenues or available source of funds, no take or pay contracts, to tide it over while it seeks to develop markets.

---

[56] BPA 1960 annual report states (p. 16) that: "Increased non-Federal generation, most of which was transferred over the Bonneville Power Administration transmission system, resulted in reduction in BPA sales to privately owned utilities and to Cities of Seattle and Tacoma, Washington.

[57] The group's long-term purchase arrangements helped provide the financing for these projects licensed to Grant County and Chelan PUD's (Tr. 146).

Nevertheless, the Staff suggests, citing the Commission's decision in the matter of *First Iowa Hydroelectric Cooperative*, 6 FPC 227, 230,[38] that WPPSS be granted a hunting license for two years to round up the reluctant private utility and industrial customers that will be needed to demonstrate the existence of firm power sales contracts.

The Commission's understandable desire in the First Iowa case not to prevent construction of a desirable project[39] obviously has little application to evaluating the comparative merits of financial plans presented by competing applicants. The issue here is which of the two applicants has made the more persuasive demonstration of financial feasibility for its proposed project. PNPC has established the existence of an assured market for the entire output of High Mountain Sheep on the part of its four organizing companies. The organizing companies, with assets of $1,467,746,072,[40] agree to obligate themselves to take or pay for the entire output of the project at annual payments equal to total costs. PNPC's equity and first mortgage bonds will be readily saleable.

WPPSS, on the contrary, relies on the potential regional need for the output of its proposed project. The Commission recently indicated, however, that the regional need[41] for hydro generation alone is not enough to justify a finding of financial feasibility where a competing applicant has demonstrated its own need for the power to be generated and the superior financial feasibility of its project.

In the matter of *City of Seattle, Washington*, 26 FPC 54 (July 10, 1961)*, the PUD had shown no firm commitments for the purchase of its Z-Canyon power; whereas the City of Seattle, the competing applicant, had established that it needed all the power to be produced by its Boundary Project. The Presiding Examiner found that the absence of power purchase commitments rendered PUD's showing of financial feasibility inadequate, and that this inadequacy was not cured by adopting Seattle's need or the regional need for additional power in the Pacific Northwest. The Commission, in denying a Petition for Rehearing, stated in pertinent part:

---

[38] The Staff relies on the following language: * * * Obviously, no independent concern such as the Cooperative could hope to obtain firm commitments on any proposed bond issue in advance of Commission authorization of a license. While we do not regard the mere license authorization to construct a water power project subject to Federal jurisdiction as being any guarantee of economic feasibility, it does not seem to be our function under the Act to prohibit construction of a desirable project which an applicant appears to be able to finance merely because complete financial arrangements have not been made, when as a matter of business practice such arrangements depend upon the license authorization initially. On the other hand, if only superficial showing of financial ability had been made by the applicant, or no financial house had indicated any interest, and it appeared that the license authorization was being sought merely for trading purposes, we would not be justified in authorizing a license no matter how desirable the development might be economically. In addition to these considerations, we noted that the Cooperative and its predecessors have already reported large expenditures in furtherance of the development.

[39] A project, apparently, that was never constructed because the licensee could not make the necessary financial arrangements (PNPC reply br. p. 46).

[40] See 1961 stockholders' report (Form 2) on file with the Commission:

PPL—$663,247,000
MPC—280,667,638
WWP—265,783,857

[41] Regional needs may be so pressing and so well established that it is unnecessary to determine the precise market before issuing a license. This was the case in *Power Authority of the State of New York*, 12 F.P.C. 172, where demand was so great potential customers were seeking priorities for the applicant's output. That situation has no application to the present problem of choosing between competing applicants or to the facts in this case.

*Aff. Aug. 30, 1962 (C.A.D.C.) sub. nom. *PUD No. 1 of Pend Oreille County* v. *F.P.C.*, 308 F. 2d 318; cert. den. 372 U.S. 908.

> PUD contends that the Commission erred in concluding that Z Canyon is financially unfeasible because of lack of market for its power. The Examiner devoted eighteen pages of his decision to a showing of PUD's failure to prove the financial feasibility of its proposals. PUD has not demonstrated an existing and potential market for Z Canyon power and the record shows that such a demonstration is necessary before PUD could successfully negotiate its contemplated bond issue. [pp. 2, 3.]

I conclude, therefore, that WPPSS has failed to establish its ability to finance the proposed Nez Perce or High Mountain Sheep projects. PNPC has demonstrated the financibility of its High Mountain Sheep project. Assuming, as Staff does, that WPPSS could, if given two years, come up with an acceptable plan of financing, PNPC's project is presently more attractive to lenders and offers a greater assurance of financial feasibility and early construction. No public interest or policy has been suggested for licensing WPPSS to wholesale power to the PNPC group, able and anxious to supply their own urgent needs, where the financial feasibility of the WPPSS project depends derivatively on the needs of the competing applicants' organizing companies. On the contrary, it is, and has been the policy of the Commission to encourage public utilities under its jurisdiction to anticipate future loads and to expand to meet their own needs. See *City of Seattle, Washington*, cited *supra*, and *Pacific Power & Light Co.* Op. 354, issued April 17, 1962 [27 FPC 623 at 625 and 628]

Fishery Resources, Facilities and Passage

Section 18 of the Federal Power Act, as amended, provides in substance that the Commission shall require the construction, maintenance, and operation by a licensee at its own expense of such fishways as may be prescribed by the Secretary of the Interior. No recommendation of proposed facilities has been made by the Secretary of Interior for either project. However, the Department of Interior, in a letter dated November 21, 1960 (FPC Exh. No. 42) taking the position that "initiation of a project in the Middle Snake area is not requisite at this time", reports that advice may be transmitted at a later date—presumably after the Commission has decided which project, if any, to license. The Department's position was reaffirmed by Secretary Udall in a letter to the Chairman dated March 15, 1961, urging delay in licensing any Middle Snake project "pending completion of accelerated fish studies" (FPC Exh. 42B).

Finally, on June 28, 1962, the Secretary stated that "Our Studies to date show little promise of a sudden major breakthrough which could produce a satisfactory solution to the fish problem at the Nez Perce site by the end of 1964." The Secretary recommended construction of High Mountain Sheep by the United States "Taking all resources into account, we believe that the Mountain Sheep Dam on the Snake River represents the optimum development."

Undoubtedly, as in other cases involving fishways, final design and approval of fishways and fish programs will be made after licensing but before construction is authorized. Both applicants concede the importance of the fishery resource and have submitted cost estimates for proposed fish facilities.

1. At the outset, it is necessary to evaluate the magnitude of the fishery resource which would be affected if either Nez Perce or High Mountain Sheep is constructed. We can then consider which of the competing plans is best

adapted to permit the preservation and development of the fishery resource involved. The fishery resource at these projects includes spring and summer chinook salmon, fall chinook salmon, blue back salmon, and steelhead. According to the best available estimate,[48] approximately 264,200 adult salmonoids will present themselves annually at the Nez Perce Dam site, more than one-third of the total [619,750] of the entire Columbia River anadromous fishery resource that passes McNary Dam. Of these, roughly 200,000, or 75 percent, enter the Salmon River for spawning, and the remaining 64,200, or approximately 25 percent, pass the High Mountain Sheep site. Of 152,700 spring-summer chinook passing the Nez Perce site, 136,000 will enter the Salmon River, while the remainder of 16,700, or 10.9 percent, will proceed up the Snake River past the High Mountain Sheep site. Of 35,000 fall chinook passing Nez Perce, 5,000 will proceed up the Salmon River while the remainder of 30,000, or 85.7 percent will proceed up the Snake River past the High Mountain Sheep site. Of 9,000 blue-back passing Nez Perce, all will enter the Salmon River, and of 67,500 steelhead at Nez Perce, 50,000 will enter the Salmon, while the remainder of 17,500 or 25.9 percent, will proceed up the Snake past the High Mountain Sheep site.

This estimate indicates, and I find, that the greater portion of the sports and commercial fishery resource involved in these proceedings is to be found in the Salmon River. "The Salmon River is by far the most important fish producing tributary in the entire Columbia River Basin" (FPC Exh. 42 letter from Secretary of Interior to Chairman, FPC dated 11-21-60, p. 4).

It has been estimated that over $200,000,000 has already been invested in fish preservation facilities on the Columbia River.[49] The cost of fish facilities at eight federal dams on the main stem of the Columbia River alone has been estimated at $156,000,000. The cost of such facilities at Priest Rapids will be about $10,000,000, and at Rocky Reach about $9,000,000. This does not include the proposed cost of fish facilities at Nez Perce (31-43 million) or High Mountain Sheep (11-15 million), or costs of operating and maintaining the facilities and costs of research. The commercial catch of the Columbia River is estimated to be worth around $12,000,000 annually (CRSTPA Exh. 4), and the sport fishery attributable to the Salmon River alone as much as $8,000,000 (Tr. 978). While WPPSS does not consider the fish count estimates presented as reliable, it does concede significant monetary, cultural, aesthetic, and recreational value to the commercial and sport fishery attributable to the spawning areas above the proposed projects.

In any event, it is established federal policy to maintain the Columbia River fishery resource (including the Salmon and Snake River contribution) and to pay a high price, if necessary, to insure salmon preservation. This does not mean that the Commission will, or should, refuse a license solely because a proposed project may be detrimental to the conservation of migratory fish. As the Chairman recently observed, "We cannot allow the fish problem to paralyze the Commission in acting on hydroelectric license applications." (Address before the American Public Power Association, San Juan, Puerto Rico, May 15, 1962). The fundamental standard is "The public interest." See *F.P.C.* v. *Sierra Pacific Power Co.* 350 U.S. 348, 355. The harmful effect of a proposed project on the conservation of anadromous fish is only one—however important—of various public interest factors which must be considered in determining which plan is best adapted to water resource development for power, navigation and flood control, as well as fish maintenance. *In the Matter of City of Tacoma*, 10 FPC 424 (1951). The goal is optimum use of the river under a plan which permits maximum development of all water resources, including power and fish, involved in comprehensive river development. Fish are not "the sole controlling resource" (WPPSS reply br. p. X-7). If that goal cannot be achieved, the Commission must balance any adverse effects of the proposed projects on fish against the overall benefits to power, flood control, navigation, and other beneficial water uses.

2.

a. *WPPSS Upstream Fish Facilities at Nez Perce*

The upstream fish passage facilities proposed by WPPSS for the Nez Perce project include a picketed lead barrier downstream across the power plant discharges. The barrier is angled downstream across the river and designed to move migrants towards the right bank to the area of the fishway entrance, thus preventing the fish from approaching the powerhouse tailrace tunnels, or from being trapped at the base of the dam. The applicants' joint statement agrees that a picketed barrier of the type proposed can be physically erected and maintained in the river. However, it does not agree that such picketed barrier would function for the purpose intended, or that the cost estimate is adequate.

Two slotted entrances are provided into a 16-foot wide fish ladder having its low-water entrance at elevation 874. The ladder extends into a tunnel in the left bank up to the fish locks at elevation 1147, a maximum climb in one-foot steps of 273 feet.

There are two pressure lock chambers at the head of the ladder where the fish will be subjected gradually to water pressures equal to those existing at the same elevation in the reservoir. The fish are then expected to leave the lock and enter the reservoir guided by attraction flows through the turbine intakes and further induced by means of a brail sweep located in the lock chamber.

After the fish have presumably swum through the reservoir, they will pass through upstream migrant fish ladder facilities provided at the Whitebird fish barrier on the Salmon River, or a similar facility at the head water of the Nez Perce reservoir on the Imnaha River. The Whitebird ladder is 16 feet wide, whereas the Imnaha ladder is 10 feet wide (WPPSS Exhs. 155 and 156). Both have a slope of one on ten.

b. *WPPSS Downstream Facilities at Nez Perce*

The most important features of the Nez Perce downstream fish passage facilities are the louver by-pass installations proposed at both the Whitebird barrier on the Salmon River and the Imnaha barrier on the Imnaha River at the head of the Nez Perce reservoir. At these barriers the fingerlings which have been spawned upstream will be screened, sorted, and gathered for barging to the Nez Perce dam. The louver structure (WPPSS Exhs. 155 and 157) is made up of closely spaced vertical metal bars arranged in the form of a "V" with the opened end at the upstream of the structure. At the apex of the "V" there is a full depth of vertical slot that connects with a by-pass pipe. The fish are directed to the by-pass slot, which they presumably enter with the flow of water, where they are carried to a second screening device, the secondary louver, in which louvers are again employed to divert the fish from the bulk of the flowing water with which they enter the structure. The fish are then graded and passed to holding tanks at loading areas for transportation to Nez Perce dam by barge.

A floating skimmer device is also provided in the forebay of the dam to collect those fingerlings that have entered the reservoir forebay, and collect them for passage through the dam in a vertical chute and flume where they will be discharged into the Snake River downstream to the picketed lead barrier structure at elevation 920 (WPPSS Exhs. 151, 152, and 153).

c. *WPPSS Fish Facilities at High Mountain Sheep*

The fish passage facilities proposed by WPPSS for the High Mountain Sheep project are basically the same as those proposed for Nez Perce except for changes necessitated by the fact that a conventional powerhouse is proposed for High Mountain Sheep, and an underground powerhouse is proposed at Nez Perce (WPPSS Exhs. 313–320). The upstream facilities proposed by WPPSS at the High Mountain Sheep dam include a standard attraction and powerhouse upstream collection system, a fish ladder extending from the powerhouse along the downstream face of the dam to the area of the power intakes, and two pressure fishlocks extending through the dam and discharging at elevation 1152 (WPPSS Exhs. 314, 316). Downstream migrant facilities include a louver at the Imnaha barrier for transfer of downstream migrants by tank to the High Mountain Sheep dam. At the dam itself, a downstream migrant floating skimmer and unloading facilities will be located where the fish will be transported through a helical chute and exit flume and discharged downstream into the Snake River (WPPSS Exhs. 317 and 318). An upstream migrant fish ladder is located at the Imnaha fish barrier.

3. *PNPC Fish Facilities at High Mountain Sheep*

Upstream migrant facilities for Snake River fish at High Mountain Sheep dam include an attraction, collection, and transportation system at the powerhouse (PNPC Exh. 65); two fish ladders, one extending to the Imnaha Canal for a height of about 585 feet and the other from the powerhouse collection system to the tramway structure at elevation 955 (PNPC Exh. 66). The fish are carried in hoppers over the dam and into the reservoir.

Upstream facilities for Imnaha fish include a ladder entrance discharging Imnaha River water, a fish ladder 6000 feet long, and a 17-mile canal extending to the pool of the Imnaha fish barrier. A fish ladder is also located at the Imnaha fish barrier to permit fish to ascend the Imnaha from the reservoir itself.

Downstream Snake River migrants will be delivered at the proposed Hells Canyon loading station for transfer to barge or boat and released below the High Mountain Sheep dam. Downstream Imnaha migrants will be diverted at the Imnaha fish barrier by a concrete gated dam, screening and trashrack structure, and by-passed into the canal to be discharged below the dam (PNPC Exhs. 66 and 67).

Lower Canyon

Lower Canyon, whether located on the Salmon at mile 0.5 or mile 3.7, poses fish passage problems similar to Nez Perce. No license application is pending for this site and no one is proposing development with specifically designed fish facilities. The Staff points out, and I agree, that the Lower Canyon reservoir presents simpler passage problems than Nez Perce since it does not have multiple runs of Salmon, Snake, and Imnaha fish, multiple tributaries, reverse flows, and the problems associated with these additional obstacles to successful migration (Staff br. p. 192).

a. *Discussion of Fish Passage Facilities and Problems*

The reservoirs that will be formed behind the proposed Nez Perce and High Mountain Sheep dams constitute a major hazard to migrating fish. The Nez Perce reservoir will extend up the Snake River 61 miles to the tailwater of the Low Hells Canyon dam, 63 miles up the Salmon to the Whitebird fish barrier, and 10 miles up the Imnaha to the Imnaha fish barrier. All upstream migrants must pass through the reservoirs to reach up-river spawning beds above the proposed dams. Migratory salmon are basically river fish, and large reservoirs of the size and depth proposed change their natural environment with complex and adverse biological consequences. The change from the river to large and deep reservoirs produces changes in temperature, velocities of flow, stratification, oxygen content, and migratory patterns. There is substantial testimony that these changes will seriously impede maintenance of the fishery resource.

During the winter season, the reservoirs will be relatively homogeneous with no regular variation in temperature or stratification either vertically or along the length of the reservoir. In the spring the temperature of the surface layers will begin to increase, as will the temperature of the inflowing waters, but at a less rapid rate. The inflowing volume will sink below the reservoir surface seeking its own density level at some intermediate depth. As the water warms through the summer, vertical stratification will strengthen, reaching maximum intensity in August when the temperature difference approaches 40° F (PNPC Exh. 100). Temperature differentials affect fish migration and mortality.

WPPSS proposed to exit adult migrants into the Nez Perce reservoir at elevation 1147, 363 feet below the normal water surface (1510) in the vicinity of the turbine intakes. The power intake at Nez Perce is at elevation 1110 feet, or 400 feet below the normal water surface.

Dr. Pritchard, a PNPC witness, testified that the deeper layers in all thermally-stratified reservoirs exhibited oxygen deficiency during the period of thermal stratification. He testified that the dissolved oxygen content of the waters between 250 and 350 feet would begin to decrease in March to less than four parts per million in July and less than three parts per million in August and September. Wendell Smith, a fisheries biologist, testified that the Washington State Pollution Commission uses a standard of five parts per million, "below which salmon are believed to be in jeopardy" (Tr. 14,087).

Another hazard present in these reservoirs is "Residualism"—the failure of downstream migrants to pass through the reservoir to the ocean. Ralph W. Larson, a fisheries biologist employed by the Washington State Department of Game, testified that the normal pattern for a downstream migrant is to move downstream with the current at river speed, its head facing the current, its tail pointed downstream (Tr. 1399). Large reservoirs with deep currents and low velocities increase the time spent in the reservoir—a critical factor. The fish may decide not to leave. They are then lost forever as perpetuators of the anadromous species, since residual fish do not spawn successfully (Tr. 1400, 1458).

Forrest Hauck, fisheries biologist for the Idaho Department of Fish and Game, testified that five times the amount of residualism on the average might be expected in the Nez Perce pool as would be found in the High Mountain Sheep pool based upon the numbers of fish affected (Tr. 1458–9). He indicated that temperature, timing and water quality all may contribute to residualism. Seaward bound salmon and steelhead undergo a change in physiological functions in which they become adjusted to saline waters. Dissolved salts in the reservoir may be adequate in amount to satisfy their migratory instinct and induce residualism. Evaluation studies are underway at Brownlee to show the effect of the reservoir on residualism and related factors (Tr. 9108, 9282–3).

The applicants are agreed that the in-reservoir conditions of velocity, temperature, stratification, and oxygen content will be substantially the same in the Nez Perce and High Mountain Sheep reservoirs. However, Nez Perce, in addition to affecting the greater fishery resource of the Salmon River (unaffected by High Mountain Sheep) presents reservoir passage problems of much greater complexity and under conditions substantially more adverse than those presented at High Mountain Sheep reservoir. At Nez Perce, upstream Salmon, Snake, and Imnaha River migrants will be discharged 363 feet below the surface of the reservoir in the vicinity of the power intakes under pressures of 145 pounds psi. The effect of this pressure on the fish, at depths below their normal migration level in fresh water in an area where oxygen deficiencies may prevail is unknown.

Hauck suggested that the failure of migration at Brownlee was due to the changes in environment from river to reservoir—current conditions, stratification, temperature changes, oxygen deficiencies, salt content and other ecological factors. At Nez Perce, three different runs of fish, Salmon, Snake, and Imnaha, will have to find their way through the reservoir to the appropriate natal stream and their respective spawning grounds. The Chinook migration season coincides with the period of thermal stratification with multiple vertical layers of Snake and Salmon River water extending up both the Snake, Salmon, and Imnaha arms of the reservoir. These reverse flows, with Snake River water in the Salmon arm and Salmon water in the Snake arm, may confuse the fish and lead them away from their natal stream (8171–8179, 11,138). Water quality problems are minimized at High Mountain Sheep which leaves open the migratory route of the major salmon runs.

WPPSS' facilities are designed to exclude downstream Salmon River migrants from entering the reservoir by means of a louver barrier at Whitebird. Small louver type fish diverters are in use at various installations—the largest at Tracy in an irrigation canal with a capacity of 5000 cfs. The percentage of salmon passing down the river that are successfully diverted into the by-pass by these louvers ranges between 13.4 and 80 percent (Tr. 1433).

The proposed Whitebird installation dwarfs existing louvers and is considered experimental by the fishery agencies. It would handle variable flows from 2500 cfs to a maximum of 120,000 cfs, or up to 24 times as much water in volume as Tracy. Each louver bay will be 60 feet deep—a depth at which turbidity would have the greatest effect on visual reaction. The Staff concludes that many problems remain to be solved before the louver barrier can be adapted for use at Whitebird, including turbulence, control of velocity of approach, icing conditions, trash accumulation and removal, and handling of stream flows up to 120,000 cfs (Staff br. p. 119).

WPPSS' proposed floating skimmer some 60 miles downstream in the forebay of the Nez Perce reservoir is similar to the skimmer at Brownlee and is designed to attract downstreams migrants that evade the louver system. The fishery agencies consider the Brownlee skimmer a failure (Tr. 1411, 1444, 8228) and attach little value to the proposed Nez Perce skimmer.

The fishery agencies also object to WPPSS' pressure locks, an essential part of the upstream passage facilities, on the ground that it has never operated successfully at any dam and has too many untested mechanical features. The Staff emphasizes uncertainties in the operation of the fish lock, including its mechanical features, the effects of pressure on adult salmon and steelhead (Tr. 8854, 8484), the possibility of impingement of fish on trashracks after release from the lock (Tr. 8959), exiting of fish from the lock (Tr. 8407), and the actual capacity of the lock (Tr. 8483).

WPPSS offers to subject all aspects of its proposed fish facilities to intensive study, experimentation, and pre-construction testing. This would include the response of adult fish to pressures encountered in the proposed lock chambers, the sufficiency of the oxygen content Nez Perce reservoir, the lower barrier etc. If these tests should prove the facilities inadequate, WPPSS contends that alternatives are available.

Definitive tests, however, cannot be made and evaluated until after the Nez Perce dam is constructed and it will then be too late to make changes without great risk to the fishery resource and greater project costs. The suggested WPPSS alternatives—trapping and hauling of upstream migrants past the dam, aeration at the turbines, a full height fish ladder, transporting the adults by barge through the reservoir, and the relocation of the Snake and Imnaha runs to the headwaters of the Salmon—offer no greater promise of sustaining the runs than WPPSS' primary proposals. The increase in mechanical handling and the confinement of the fish during transportation will increase disease problems and mortalities. The break in the continuity of water quality and the migration route of the juvenile fish and the returning adults introduce elements that have not been tested or evaluated and are deemed unsatisfactory by the fishery agencies (Fish Agency br. p. 20, Fish br. 8-11). Relocation of the Snake and Imnaha runs to the headwaters of the Salmon may in fact mean abandonment of all the Snake River runs above the mouth of the Salmon. Edward M. Mains, fisheries biologist, testified for the Washington State Department of Fisheries that, while fall chinook have been raised by artificial spawning channels, fish farms and hatcheries, results with regard to spring and summer chinook—the major Salmon River fishery resource—have not been satisfactory (Tr. 1372-1373). Accordingly, artificial spawning does not appear likely to alleviate the adverse effects of blocking the Salmon River insofar as the evidence of record is concerned.

WPPSS emphasizes the accelerated research program of the Department of Interior announced in the Secretary's letter to the Chairman, March 15, 1961 (FPC Exh. 42B). Secretary Udall stated in part: "We have set the end of 1964 as the target date by which time to learn as much as possible the direction in which a sound development program should go." The letter urges no license to any applicant "* * * pending completion of the accelerated fish studies * * *" and states

> * * * In discussions with our fish biologists, we have concluded that a solution to the problem of downstream fish passage has not yet been found either for the proposed High Mountain Sheep Project nor the proposed Nez Perce Project.

An earlier Department of Interior letter dated November 21, 1960, stated in pertinent part " * * * There are at present no known means for protecting the fishery resources of the Salmon River if either the Lower Canyon or Nez Perce Project were constructed (FPC Exh. 42)."

The fishery interveners support experimentation but urge that it be kept above the mouth of the Salmon. As stated by the Idaho Wildlife Federation

> To continue experimentation to solve anadromous fish passage problems at high dams with large long reservoirs is important, and the Snake River with its three Idaho Power Company licenses already above the mouth of the Salmon is the place this should be done. The failure of successful fish passage at Brownlee is supplying now some of the negative answers from experimentation. To keep the experiments above the mouth of the Salmon for many years is paramount, and that is why the High Mountain Sheep Project of the Pacific Northwest Power Company is the proper development for the middle Snake. [Br. of the Idaho Wildlife Federation, pp. 4-5.]

Licensing policy must be based on evidence currently available and capable of evaluation. The Department of Interior holds out no promise or expectation that its "accelerated fish studies" will be successful at the end of 1964, or by any other date; nor has any other fishery agency,[44] local, state or federal. None of the ten fishery biologists that appeared in this proceeding [including WPPSS biologist Dr. Holmes] testified [45] that the proposed Nez Perce fish facilities which from an engineering point of view are designed with great boldness, technical skill, and imagination, would successfully pass and preserve the existing runs. Achievement of successful passage is a biological as well as an engineering problem. Biologists simply do not now know what conditions must be created to provide successful fish passage through large and deep reservoirs and around high dams. As summarized by the fishery agencies:

> The proposed fish passage plan of WPPSS is based upon a combination of untried, untested, unsatisfactory and controversial elements, piling risk upon risk to the extent that no biologist, including that of WPPSS will predict that it will work. [Br. p. 22.]

The High Mountain Sheep dam above the mouth of the Salmon, however, creates new problems only with regard to the minor fishery resource [less than 6 percent] of the Imnaha. Upstream the main Snake River run is already jeopardized by Brownlee, Oxbow, and, soon, the Hells Canyon dam.

In its most recent report to the Secretary of the Army dated March 31, 1961, the Corps of Engineers evaluates the possible impact of fishery research on Nez Perce as follows: (p. 8)

> However, the problem of passing migratory fish at high dams, in the opinion of authoritative sources, cannot be resolved in less than 8 to 10 years, and, because of the unique fisheries problem presented, they state that at least 15 to 20 years might be necessary to resolve the problem that would be created by the Nez Perce project * * *
>
> The High Mountain Sheep project could be constructed now without being a serious hazard to the anadromous fishery, since it would affect less than 3 percent of the fish passing McNary Dam in addition to that already affected by existing projects on the Middle Snake River.

The current position of the Department of Interior on the prospects for succesfully passing fish at the Nez Perce site is contained in the Secretary's letter of June 28, 1962 (Exh. 43–A) requesting that the Commission recommend Federal construction of the High Mountain Sheep Dam.

> 2. The fishery resources are vitally involved. The Fish and Wildlife Service of this Department is studying intensively the passage of fish, both upstream and downstream, over large structures and through long storage reservoirs. *Our studies to date show little promise of a sudden major breakthrough which "could produce a satisfactory solution to the fish problem at the Nez Perce site by the end of 1964,"* which was the tentative date for completion of the accelerated research program. *A calculated risk that by that time, or within a few years thereafter, Nez Perce could*

---

[44] Extracts from their testimony are contained in PNPC's brief p. 67 *et seq.*

[45] The fishery agencies comment on the research program as follows:

There is no question in anyone's mind that the passage of fish at high dams has not been solved. Congress has recently appropriated funds in the amount of several million dollars for the initiation of research to attempt to solve the problems related to fish passage at high dams. The *research program has been outlined to cover the next seven or eight years with a critical review of the findings at the end of 1964 to determine what steps might be taken in the comprehensive development projects in the Northwest at that time.* Both Nez Perce and High Mountain Sheep are high dams. Both applicants offer features in their fish passage facilities which are experimental in nature. In other words, these particular features of fish passage at high dams have not been worked out or evaluated at high dams anywhere in the world. [Emphasis supplied.]

> *be accommodated to the anadromous fish runs representing 75 percent of the anadromous fish resources of the Snake River basin would not be warranted on the basis of what these studies are showing. The Mountain Sheep project represents less hazard to the fishery resource than the Nez Perce project.* We hope the research program will develop effective means for fish passage which can be incorporated into new and existing projects, including the Mountain Sheep project. Additional study and research during the operation of a middle Snake River project may disclose improvements which can and should be made to protect still further the fish runs. Construction and operation of the project by the United States will assure that every effort will be made promptly to preserve and improve this important fishery resource in the light of experience and changing technology. The flexibility and relative ease with which facilities for effective fish passage could be incorporated in a multiple-purpose Federal project should be compared with the difficulties that would be encountered in a project constructed and operated by a non-Federal entity. Particularly acute problems involving extensive readjustments for additional costs would be certain to arise. [Emphasis supplied.]

Finally, WPPSS adverts to the Commission's comments in its 1958 decision to the effect that "the biological problem at Nez Perce is generally similar to that at other high dams." (*Matter of Pacific Northwest Power Co.*, cited *supra*, p. 135). The "promising outlook" at Brownlee has not materialized and the record in this proceeding does not support an optimistic outlook for the success of the proposed Nez Perce fish passage facilities. The Staff concludes (Staff br. p. 193), "This record no longer justifies that conclusion", referring to its belief in the earlier proceeding that "there was some basis for believing that the problem could be solved with a reasonable degree of success."

The Rival Plans of Development

Section 10(a) of the Federal Power Act provides in pertinent part that all licenses issued shall be subject to the following conditions:

> That the project adopted * * * shall be such that in the judgment of the Commission will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial uses, including recreational purposes; * * *

A comprehensive plan provides for prompt and optimum multipurpose development of the water resource.[46] The proposed project to be licensed must be "best adapted" to achieve such development.

Both plans develop all the available head, and both are comprehensive in that they provide for all practical uses of the river.[47] The High Mountain Sheep project is the major component of PNPC's plan of development and the Nez Perce project is the major component of WPPSS' plan. Their relative merits turn on a comparison of the costs and benefits of component developments and on which project is best adapted to attain optimum development at the earliest time with the smallest sacrifice of natural values.[48]

---

[46] The Federal Power Act looks to prompt development of water resources where such development is feasible and in the public interest, and it gives to the Commission discretionary power to delay utilization only where such delay is found to be imperative. (*In the Matter of Virginia Electric Power Company*, 10 FPC 1.)

[47] The "common reach" includes the Snake River from the Low Hells Canyon normal pool elevation of 1683 to the China Gardens elevation of 845, and the Solomon and Snake Rivers from the Freedom normal pool elevation of 1.780 to the China Gardens tailwater elevation (Prehearing conf. Report p. 5).

The Commission must consider the component developments and plans not only from the point of view of power costs and benefits but also flood control, navigation, irrigation, recreation, fish and wildlife, and "other beneficial public uses" as that phrase is employed in Section 10(a). Accordingly, we proceed to an analysis of the rival plans and their component projects to determine which will more readily achieve prompt and optimum development of the resources involved. It should be noted that, other than the competing projects proposed for licensing, neither applicant is proposing the construction of any other projects or developments in either plan. The superiority or inferiority, however, of alternative plans of development does not depend on the pendency of applications to construct all of the component projects. The Commission has the power, once it adopts a particular plan, to require an applicant to conform his proposed project to the Commission's plan of development even though it may mean changing sites, locations, structures, capacity, or timing.

PNPC's High Mountain Sheep plan includes an arch dam at High Mountain Sheep, Snake River mile 189.2, elevation 1510, with an initial installation of seven units (1,400,000 kw) and an ultimate installation of ten units (maximum capability—2,000,000 kw). An arch dam is included at Lower Canyon Salmon River, elevation 1595, mile 3.7 with an initial installation of four units (800,000 kw) and an ultimate installation of seven units (1,400,000 kw) in a single powerhouse. The China Gardens site is a gravity dam, elevation 945, with an initial installation of three units (300,000 kw), an ultimate installation of five units (500,000 kw) at normal pool elevation of 945.

PNPC's Nez Perce plan includes a gravity dam at the Nez Perce site with an initial installation in two powerhouses of eleven units (2,090,000 kw) an ultimate installation of seventeen units (3,230,000 kw) (PNPC Exhs. 16 and 19). The Whitebird development is omitted from PNPC's plans as uneconomic. While PNPC's plan develops all the available head, its Nez Perce plan has a smaller capability both initially and ultimately,[49] because of more efficient use of storage in its High Mountain Sheep plan.

WPPSS' Nez Perce plan includes the Nez Perce project as proposed in its amended license application, a Whitebird project consisting of three generating units, rated 23,000 kva, each installed in a skeleton powerhouse built as part of the Whitebird fish barrier dam, and the China Gardens project, as explained in the testimony of WPPSS' witness Willey, based on Corps of Engineers estimates (Tr. 489, WPPSS Exh. 271).

WPPSS' High Mountain Sheep development is identical with the project for which WPPSS has alternatively applied for a license except that the flood discharge capacity has been reduced (Tr. 106). Its Lower Canyon development consists of a rock fill dam about 700 feet high located at mile 0.5 on the Salmon (Tr. 12,932).

---

[48] When there is a choice to be made among several development plans, the plan which achieves greatest utilization of the water at the earliest time, thus serving the people to the greatest extent, is the plan given prime attention. (*Grand River Dam Authority, Project No. 2183*, 25 FPC 646, (1961).)

[49] PNPC Exh. 16:

	Initial	Ultimate
	Kw	*Kw*
High Mountain Sheep plan	2,500,000	3,900,000
Nez Perce plan (without Whitebird)	2,315,000	3,605,000

The Staff originally presented comparative plans similar to PNPC's plans, except that the Whitebird development was considered in its Nez Perce plan. On rebuttal, however, the Staff plans were similar to those presented by WPPSS with certain adjustments, including an arch dam layout at Lower Canyon mile 3.7, at elevation 1588 (Tr. 13,589). The Staff's High Mountain Sheep plan is designated as Plan A-1 and its Nez Perce plan as B-1.[60]

Construction Costs

Cost estimates for all projects in the common reach were presented by PNPC, WPPSS, the Staff, and the Department of Conservation, State of Washington.[61] WPPSS presented completely revised designs and cost estimates in its supplemental and rebuttal presentations, except for China Gardens. In addition, WPPSS witness Bleifuss submitted three revised designs for Nez Perce (WPPSS Exhs. 275-281), two for Lower Canyon, (WPPSS Exhs. 283-284) and two for Whitebird (WPPSS Exhs. 285 and 286). Each modification in design produced a different cost estimate. The record contains cost estimates from six different sources—the Corps of Engineers, obtained from the 1958 Division Engineer report, Ebasco, Harza, Bleifuss, Thomas, and Staff. For the Nez Perce development alone there are fourteen different estimates[62] in the record ranging from $288,709,000 in WPPSS Exh. 278 to $403,400,000 in WPPSS' original presentation in Exh. 19-A. These differences in cost are due to different overall project layouts—reservoir elevations, installed capacity, geological analysis, foundation lines, length of spillways, powerhouse locations, powerhouse designs, and major items of equipment (Joint Statement, Designs and Costs, Part H).

PNPC comparative analysis using its Green Book design (PNPC Exh. 16) shows construction costs of the alternative plans as $368,600,000 for High Mountain Sheep plan and $397,000,000 for the Nez Perce plan, including Whitebird. Without Whitebird, the cost drops to $361,000,000. If as recommended by Staff in its direct case (FPC Exhs. 44 and 57), an Ebasco type arch dam is substituted for the gravity design at Nez Perce, the Nez Perce plan costs $390,600,000 with Whitebird and $354,600,000 without.

This demonstrates, asserts PNPC, that for the initial[63] period the High Mountain Sheep plan would have 177,000 kw more nominal prime, 74,000 kw more average energy generation, and 147,000 kw more peaking capability (Applicants' Joint Statement, Part I, Table 2).

> The High Mountain Sheep Plan would have an annual power value of $57,436,000—$3,973,000 more than the Nez Perce Plan (Applicants' Joint Statement, Part J). Under the subsequent period, without Crevice storage, the High Mountain Sheep Plan has a superiority of 85,000 kilowatts of nominal prime energy, 64,000 kilowatts of average annual energy and 139,000 kilowatts of peaking capability (Applicants' Joint Statement, Part I, Table 5) and would have an annual power value of $49,644,000—$2,640,000 more than the Nez Perce Plan (Applicants' Joint Statement, Part J). The High

---

[60] Detailed data for developments of PNPC's and WPPSS' comparative plans are shown in Tables of Physical Data, Projects of Alternative Plans, Joint Exhibit, Part G. Project physical data for Staff plans are shown in FPC Exhibit 61.

[61] PNPC Exhs. 16, 19; WPPSS Exh. 20-A; Department of Conservation DCW Exh. 7; FPC Exhs. 17, 32, 80, and 83.

[62] Staff points out that these costs are not comparable "since some include fish facilities, some do not, some include interest during construction, some do not" (Staff br. p. 172).

[63] *Initial Period*—System power development of approximately 16,000,000 kw assumed prevailing when either High Mountain Sheep or Nez Perce comes into service (See Joint Statement, Part I).

> Mountain Sheep Plan of Development also provides greater flood control benefits than would the Nez Perce Plan of Development, approximately $50,000 annually 'PNPC Exh. 19, page 6). [PNPC br. p. 7.]

Consequently, argues PNPC, the additional benefits of the High Mountain Sheep plan over the Nez Perce plan justify an additional capital investment of $68,000,000.

WPPSS argues that you can build one dam (Nez Perce) cheaper than two dams (High Mountain Sheep and Lower Canyon) and that PNPC understates the cost of the High Mountain Sheep plan and overstates the cost of the Nez Perce plan (WPPSS br. p. 85 *et seq.*) (Tr. 12,807, WPPSS Exh. 254). It disputes PNPC's use of a gravity dam design at Nez Perce and its assumed foundation lines at High Mountain Sheep and Lower Canyon. It refers to comparisons by WPPSS witness Bleifuss and the Corps of Engineers. In Bleifuss' "Truest Comparison" (WPPSS Exh. 290), the Nez Perce plan is cheaper than the High Mountain Sheep plan by $50,174,000 ($312,693,000 vs. $362,867,000) (WPPSS br. p. 115). The latest report of the Chief of Engineers, March 31, 1961, comments as follows (p. 8):

> The water resource potential of the lower Middle Snake Basin can also be realized through construction of the High Mountain Sheep Dam on the Snake River and the Lower Canyon Dam on the Salmon River. This combination will produce greater benefits than the Nez Perce project but at a greater cost and a lower justification ratio. Since the preparation of the Division Engineer's report, the results of additional investigations at the High Mountain Sheep and Lower Canyon sites have become available, which indicate rather conclusively that a concrete arch dam is feasible at the High Mountain Sheep site. This dam, built to provide a full pool at elevation 1510, would cost roughly $44 million less than the concrete gravity section dam proposed by the Division Engineer, but raised to the same elevation ($198 million vs. $242 million). There is some chance that an arch dam also might be substituted for the more expensive rock fill dam at the Lower Canyon site, but a conclusion cannot be reached until further borings are made. This additional study can wait until the advance engineering and design stage immediately prior to initiating construction. Even with the reduced cost of High Mountain Sheep Dam, the combination of that dam with Lower Canyon Dam would still cost more than Nez Perce Dam ($384 million vs. $296 million, with the Snake River reservoirs at elevation 1510). The combination also would have a lower justification ratio than Nez Perce (2.23 to 1 vs. 2.91 to 1) if we assume that either of the two alternative developments would be built in the near future.

WPPSS concludes that while the two plans, when completed develop substantially the same power and flood control benefits a truly comparative study of capital costs shows a differential of $90,000,000 to $93,000,000 in favor of the Nez Perce plan of development. "The single most serious mistake is the assumption that an arch dam can be constructed at the mile 3.7 Lower Canyon site, which is geologically impossible for this purpose" (WPPSS br. p. 147).

Comparison of the alternative plans of development is of little value unless comparable and consistent project layouts, designs, cost estimates, and installations are utilized. Each applicant's estimates favor its own plan of which its proposed project is a major part. In large part this results from the selection of the most expensive site and layout for the opponent's projects. WPPSS' use of a rock fill dam at mile 0.5 adds about $49,000,000 to the cost of High Mountain Sheep plan.

Staff witness Shepley testified that his final quantity estimates were based on the consistent use of the independent elastic arch method so that a truly comparative economic study of the two plans could be made. The arch dam is the most economic design. Its consistent use in both plans facilitates a genuinely comparative analysis and comparison of the quantities of construction materials (Tr. 7255, 7274, 7275, 13,569).

The Staff use of an arch dam at the High Mountain Sheep, Nez Perce, and Lower Canyon (mile 3.7) sites for the purpose of making a comparative analysis of the rival plans is reasonable and proper. If an arch dam is used at Nez Perce, the use of an arch at Lower Canyon mile 3.5 is equally justified on the basis of the geologic evidence in this record to determine the relative economic merits of the two plans.

The Staff used two different project layouts for its comparative analysis. Comparision I used a Harza design and located all power plants across the river (FPC Exhs. 64–66). Comparison II, the more economic design, located the power plants on the banks parallel to the river (FPC Exhs. 67–69). The amount of concrete and excavation from Staff project layouts for Nez Perce was 66 percent and 43 percent, respectively, of the total for High Mountain Sheep and Lower Canyon.[54]

The Staff's estimates in Comparison II are about halfway[55] between that of PNPC and WPPSS and are used in Tables 8 and 9 to compare the annual costs and benefits of the rival plans for the four levels of development (Staff br. pp. 177–188). This "broad brush" approach is adopted by WPPSS in its reply brief (p. VI–I).

The Staff estimates represent the maximum reasonable cost differential for comparative purposes (see tables 8 and 9,[56] and chart 1, Staff br. p. 187). However, as pointed out in PNPC's reply brief (p. 156), the Staff approved PNPC's original comparative cost estimates (Tr. 1521), and has never repudiated the validity of its earlier direct presentation. WPPSS at Nez Perce has gone from an initial estimate of $403,400,000 (WPPSS Exh. 19–A) to $307,500,000 (WPPSS Exh. 258) for the Harza arch dam and underground powerhouse—a figure within two percent of the original Ebasco estimate presented by PNPC (PNPC Exh. 16). The Staff Comparison II figures include the lowest of the three Staff estimates for Nez Perce, but not the lowest Staff estimates for High Mountain Sheep and Lower Canyon. Consequently, these Staff figures are most adverse to the High Mountain Sheep plan. It is appropriate to compare the least expensive Staff estimate for the Nez Perce plan with its least expensive

---

[54] (Staff br. p. 169.)

Cubic yards	Nez Perce plan—Nez Perce	High Mountain Sheep plan		Total	Nez Perce; HMS L.C.
		High Mt. Sheep	Lower Canyon		
Dam concrete	2,552,000	2,050,000	1,834,000	3,884,000	0.66
Dam excavation	485,000	300,000	820,000	1,120,000	.43

[55] *Construction Cost:* Difference between High Mountain Sheep plan and Nez Perce plan (without Whitebird and fish facilities):

PNPC	$2,575,000	
WPPSS	93,036,000	
(Mid-point)	47,806,000	
FPC (Comp. II)	43,316,000	(Lower Canyon with 800,000 kw)
FPC (Comp. II)	49,616,000	(Lower Canyon with 910,000 kw)

[56] Staff tables 8 (Sheet 1) and 9 are attached as Appendix D and E.

estimate for High Mountain Sheep. If the lowest Staff estimate for the High Mountain Sheep plan ($406,933,000) is chosen, the differential adverse to High Mountain Sheep is reduced from $49,616,000 to $13,460,000,[87] (Table 8, Staff br. 187). This latter figure is adopted as the *minimum* reasonable cost differential for comparative purposes.

The Staff used annual values stipulated by the parties in Part J of applicants' Joint Statement for annual power benefits, flood control benefits, and annual operation and maintenance costs. These were calculated using the same cost of money, amortization, interest replacement, and insurance rate. The Staff used a 4½ percent cost of money, although PNPC argues that a rate of 2½ percent should be used since this is the basis employed by the federal government in determining the economic feasibility of water resource projects. The use of a 4½ percent rather than a 2½ percent cost of money adds between $700,000 and $800,000 annually to the cost of the High Mountain Sheep project as estimated in the Staff's Comparison II figures. PNPC protests that a 2½ percent rate was used by the Staff in the earlier Mountain Sheep-Pleasant Valley proceeding where the lower rate was to the disadvantage of PNPC (PNPC reply br. p. 166). Nevertheless, the use of a 4½ percent cost of money for comparative purposes is more realistic, in terms of the actual market cost of money, and consequently superior for a true economic comparison. No one is proposing federal development.

The differences in annual costs[88] between the two plans, as might be expected, vary consistently with the differences in capital cost estimates. Using Staff Comparison II (see Table 9, Appendix E) the High Mountain Sheep plan is superior to the Nez Perce plan in the initial or most important period. The Nez Perce plan is superior to the High Mountain Sheep plan in the subsequent periods (Part I, Joint Statement).

Using the High Mountain Sheep plan estimates originally presented by the Staff in its direct case (FPC Exhs. 49–52) with a construction cost differential of $13,460,000 in favor of the Nez Perce plan; the annual cost differential is reduced to approximately $937,000.[89] On these cost assumptions, the High Mountain Sheep plan is superior to the Nez Perce plan at all stages of development except the final period when all common reach developments are in with Crevice Storage (Appendix E).

In evaluating the significance of these cost estimates it must be emphasized that there are hundreds of differences in detail in the many different designs in the record, and that a minor change in any detail of design, foundation lines, or location, may produce a major change in costs. Thus, if geological conditions

---

[87] $406,933,000 less $393,473,000=$13,460,000.

[88] Annual cost:

	Difference between High Mountain Sheep Plan and Nez Perce Plan Using O&M and A&G determined by each party	Using Stipulated O&M and A&G
PNPC	$283,000	$805,000
WPPSS	6,376,000	5,653,000
Mid-point	3,330,000	3,229,000
FPC (Comp. II, Lower Canyon with 800,000 kw)	2,947,000	3,007,000
FPC (Comp. II, Lower Canyon with 910,000 kw)	3,454,000	3,345,000

[89] $\frac{13,460\ (3454)}{49,616} = 937,013$

preclude underground powerhouses at Nez Perce, costs would increase from $391,080,000 to $463,000,000, the original estimate. The difference in details, however, between the engineering of the two plans does not affect substantially the operation of the several projects in the alternative plans or the annual power benefits agreed to in the applicants' Joint Statements, Parts I and J. All the designs are preliminary and were prepared for administrative proceedings and not as construction designs. Neither of the proposed projects in the license applications has been finally designed. Certainly, the projects in the comparative plans, for which no license application is pending, have been studied in only the most preliminary manner. Consequently, these capital cost estimates are not precise and are subject to considerable variation in costs between the preliminary designs provided for the purpose of FPC license applications and final construction designs (Tr. 2059–60 and 3140–48).

The inevitable differences in estimating techniques[60] render any construction cost estimate for comparative purposes contingent, variable, and tentative within at least a 10 percent range,[61] or roughly forty million dollars on the basis of the total cost of the two plans. The range in variation of construction cost estimates (without fish facilities) for High Mountain Sheep is about 20 percent for Nez Perce, and about 33 percent for the Lower Canyon project. Confining ourselves to Staff estimates, the cost of the High Mountain Sheep plan ranges from $406,933,000 to $443,089,000; the Nez Perce plan from $393,473,000 to $433,514,000. Consequently, the total construction costs of the rival plans are quite close for purposes of a general economic comparison under Section 10(a) of the Act. Moreover, it should be emphasized that the geological conditions at Nez Perce may not permit the construction of underground powerhouses and an orifice spillway as presently estimated and designed ($391,080,000). If these conditions require a return to WPPSS' original design, total costs could rise as high as $463,000,000, the amount to be raised by revenue bonds in WPPSS' original finance plan (WPPSS Exhs. 77, 161, Rev.)

Applicability of Section 10(h) of the Act

WPPSS argues (br. pp. 321–336) that PNPC is ineligible for a license because it is a combination in restraint of trade—a monopoly, prohibited by Section 10(h) of the Act.[62] WPPSS alleges that "the four dominant utilities [PNPC's sponsor companies] in the Northwest have combined to gain exclusive control of the last important source of hydroelectric power in the Northwest and to deny access to such power to all other users critically dependent upon that source to help meet their potential needs." WPPSS also asserts that licensing PNPC will violate the provisions of the Sherman Act by providing PNPC and "its four member companies an unlimited opportunity to join together and fix prices for power." (WPPSS br. pp. 326, 327.)

---

[60] "The estimating technique of the cost estimator, of course, influences the range in estimates in all instances." (Staff br. p. 173.) For example, Harza allows a flat 15 percent for contingencies on *all* projects. Ebasco allowed 14.2 percent (N.P.) 14.5 percent (L.C.) and 10.8 percent (HMS) on the theory that the unknowns are less at High Mountain Sheep (PNPC br. p. 247).

[61] The differences in the three Staff estimates of capital costs between High Mountain Sheep and Lower Canyon vs. Nez Perce range from 1.8 percent ($4,095,000) to 13.8 percent ($29,734,000). See Table I, PNPC br. p. 16, Sheet 2 of 2.

[62] Section 10(h) provides in pertinent part: "That combinations, agreements, arrangements, or understandings, express or implied, to limit the output of electrical energy to restrain trade, or to fix, maintain, or increase prices for electrical energy or service are hereby prohibited."

WPPSS cities *U.S.* v. *Terminal Railroad Association,* 224 U.S. 383 (1912), the Associated Press case, 326 U.S. 1, and related decisions under the Antitrust laws for the undeniable proposition that a combination or conspiracy to obtain exclusive control of a vital service, facility or commodity violates the Sherman Act.

The difficulty here is that the facts in the instant proceeding bear no discernible relationship to the facts in the classic monopoly cases cited by WPPSS. WPPSS states that the peak loads served by these companies as forecast for 1970-71 will be 5,894,000 kw as against its estimate of 2,669,400 kw for the 38 WPPSS participating utilities (br. p. 325). PNPC is seeking a license under the Federal Power Act to meet the concededly urgent needs of its member companies for additional generation to serve their own customers. There is no evidence whatsoever that PNPC or its member companies are seeking to obtain exclusive control over hydroelectric power generation in the Pacific Northwest generally or in the stretch of the Middle Snake involved in this proceeding. Many electric companies operate on an integrated basis, producing and transmitting most, sometimes all, of the power they distribute at retail. The 1960 annual report of the Bonneville Power Administration indicates that 59.2 percent of the energy generated by the major utilities of the region was provided by federal agencies, that 35.7 percent of this energy went to publicly owned utilities, 35.5 percent to industries and federal agencies, and only 18.8 percent to privately owned utilities. The power generated by the PNPC member companies for the period covered by the report was as follows: Montana Power Company 5.7 percent, Washington Water Power Company 5.5 percent, Pacific Power and Light 4.9 percent, and Portland General Electric Company 2.8 percent. The report further indicates that the member companies are substantial purchasers of excess capacity from the non-federal public utilities. (See Table 2, p. 11.)

The Staff points out that the issuance of a license by the Commission for either of the two projects applied for automatically excludes any conflicting project[63] (Staff br. p. 217). However, it should be noted that the grant to PNPC of a license for the High Mountain Sheep project does not exclude WPPSS, or any other applicant, from access to the power resources of the Middle Snake. Lower Canyon, an essential component of the High Mountain Sheep plan, remains open for development by any qualified applicant who can meet the requirements of the Federal Power Act. And the Board of Directors of WPPSS have authorized the filing of an application to construct Lower Canyon upon the completion of High Mountain Sheep (WPPSS' motion for leave to file amendment, April 24, 1961).

Moreover, as pointed out by both PNPC and the Staff, Section 10(h) of the Act deals with conditions to be imposed upon the grant of a license and not with prequalifications for the issuance of a license. Its legislative history indicates it was designed to protect the public against the misuse of an FPC license by authorizing Commission sanctions for anti-trust violations (Senate Committee Report No. 180, 66 Cong. 1st Sess. p. 4 (1919)).

WPPSS' price-fixing contention is equally fallacious. If licensed, PNPC would be subject to Part II of the Federal Power Act which regulates rates and charges to protect consumers against excessive prices.[64]

Similar contentions of monopoly were made in the prior proceeding on Project No. 2173, and the evidence therein reviewed in considerable detail by the

---

[63] Citing *Ashbacker Radio Corp.* v. *F.C.C.,* 326 U.S. 327, 332.

[64] "A major purpose of the whole Act is to protect power consumers against excessive prices." *Pennsylvania Water Power Co.* v. *F.P.C.,* 343 U.S. 414, 428 (1952).

Presiding Examiner (pp. 67-74). He concluded that there was no basis for the allegations.[65]

There is no evidence in this proceeding of an illegal combination to restrain trade, excessive price-fixing, or an intent by PNPC to use High Mountain Sheep for such purposes. The record clearly shows the urgent need of the sponsor companies for low cost hydro-generation to avoid the necessity for higher cost thermal power. The purpose of PNPC's license application is to expand, not limit, the output of electrical energy. The cooperation of PNPC's sponsor companies is required because the size of the project, and its capital requirements, justify a joint undertaking in which several companies share the costs and risks involved.

In short, PNPC is seeking to do no more than WPPSS-to obtain a license to construct the proposed project as provided by the Federal Power Act.

Permits, Priority and Preference

(a) *PNPC's Preliminary Permit*

On April 8, 1955, a preliminary permit was issued to PNPC under Section 4(f) of the Act, for a period of three years, effective as of April 1, 1955, "for the sole purpose of maintaining priority of application for a license for Project No. 2173" (14 FPC 644). PNPC's application for High Mountain Sheep Project No. 2243 was filed on March 31, 1958, prior to the expiration of the permit, and states that it was filed pursuant to the preliminary permit.

PNPC claims priority for its High Mountain Sheep application by virtue of the permit under Section 5 of the Act. WPPSS and the Staff assert that the priority granted by the permit is limited to a specific project for a specified site and terminated when the license for Project No. 2173 was denied by the Commission on January 20, 1958.[66] (Pacific Northwest Power Company (19 FPC 127, 353).) I find no basis for this contention. If, as I believe, the PNPC permit was not terminated by the Commission's denial of Project No. 2173, PNPC's current application is entitled to priority under Section 5 of the Act even as against a preference claimant under Section 7.[67]

Section 5 authorizes the issuance of preliminary permits:

> * * * for the sole purpose of maintaining priority of application for a license under the terms of this Act for such period or periods, not exceeding a total of three years, as in the discretion of the Commission may be

---

[65] (Initial Decision p. 74.) [unreported]

Upon consideration of all of the evidence on this subject in this record it is concluded that there is no basis for the inference either that (1) Ebasco Services exercises any control over the policies of the four organizing companies or that (2) the agreement between the four organizing companies each to supply one-fourth of the equity financing for the proposed project and each to purchase and pay for, at cost, one-fourth of the entire output thereof now constitutes ,or will hereafter constitute a combination, agreement, arrangement or understanding express or implied, to limit the output of electrical energy to restrain trade, or to fix, maintain or increase prices for electrical energy or service within the meaning of Section 10(h) of the Act.

[66] See *In the Matter of Warrior River Electric Cooperative Assn.*, 11 FPC 693 (p. 694) "The investigations, explorations, studies, and financial arrangements to be made by the holder of a preliminary permit enable the permittee to consider and determine the definite form and character of the project it may desire to propose in an application for license."

[67] See text of Section 7(a) quoted below and hearings before the Committee on Water Power of the House of Representatives, 65th Cong., 2d Sess. ((1918), p. 55) in which Congressman Merrill stated in part: "It is hardly a reasonable situation for a municipality to wait until the private individual or corporation has gone in and spent $100,000 or $200,000 and then come in and push them out."

> necessary for making examinations and surveys, for preparing maps, plans, specifications, and estimates, and for making financial arrangements.

WPPSS claims [and the Staff agrees] that it is a municipality under Section 3(7) of the Act and that, as such, its application is entitled to "preference" over PNPC under Section 7(a) of the Act which provides that the Commission:

> In issuing preliminary permits hereunder or licenses where no preliminary permit has been issued and in issuing licenses to new licensees under section 15 hereof the Commission shall give preference to applications therefor by States and municipalities, provided the plans for the same are deemed by the Commission equally well adapted, or shall within a reasonable time to be fixed by the Commission be made equally well adapted, to conserve and utilize in the public interest the water resources of the region; and as between other applicants, the Commission may give preference to the applicant the plans of which it finds and determines are best adapted to develop, conserve, and utilize in the public interest the water resources of the region, if it be satisfied as to the ability of the applicant to carry out such plans.

PNPC denies that WPPSS is a "municipality" as defined in the Act, and argues that, even if it is, it may not assert such preference "because of laches, and because of failure to follow the Rules of the Commission provided for filing of applications" (PNPC br. p. 320).

PNPC's claim of priority for its High Mountain Sheep application turns on the scope of the preliminary permit and the effect of the Commission's denial of PNPC's application for Project No. 2173. The text of the statutory provisions dealing with permits, and the few available administrative interpretations, suggest that the scope of a preliminary permit is not confined to "a specific project for a specified site" but extends to any development in the particular stretch of the river covered by the application which the Commission finds, after investigation,* * * "will be best adapted to a comprehensive plan" under Section 10(a) of the Act.

PNPC's application to the Federal Power Commission includes the resolution of its Board authorizing its officers "to apply * * * for a Preliminary Permit * * * to make studies, surveys, and investigations of the feasibility of hydroelectric power developments *in the vicinity of the* Mountain Sheep and Pleasant Valley Hydroelectric sites on the Snake River, in the States of Idaho and Oregon, for the purpose of enabling the company to secure the data and perform the acts required by law for *filing an Application or Applications* for the issuance of a license or licenses;" (emphasis supplied.) See Exhibit B of the application on file with the Commission.

The permit is issued to encourage the permit holder to make the advance engineering, geological, and economic studies necessary in determining the best site and project design for developing the reach of the river covered by the permit. As stated by the Commission in a recent "Order Denying Application For Preliminary Permit," issued April 2, 1962: (*Georgia Power Company*, Project No. 2303)

> The purpose of a preliminary permit is to grant the permittee priority for filing an application for a license, but this priority is not available merely for the asking. *It is granted in a situation where the feasibility of a project in a particular stretch of a river has not as yet been demonstrated. It gives the permittee a priority over other non-Federal parties in order to encourage the investigations of projects which otherwise might never be investigated or built.* In the instant case, the engineering and economic studies for developing the reach of the Flint River for which the

> Applicant seeks a permit have just been completed by the District and Division Engineers who recommend that these three projects be constructed by the United States as the first phase of the comprehensive plan described in the report. The studies which a preliminary permit are designed to encourage have thus already been made at public expense and should therefore be available on an equal basis to any party which may wish to develop these water resources in the event Federal development is not authorized. Applicant like all other potential developers has access to these studies and may of course file an application for a license without a prior preliminary permit. We conclude Applicant has not demonstrated a justification for a proposed preliminary permit. [Emphasis supplied.]

Sections 4(f), 5, 7(a), and 10(a) provide in substance that if a permittee makes the necessary investigation to determine which project is best adapted to a comprehensive plan for development of the "particular stretch of a river", any application for a license by the permit holder will have priority, provided it is filed before the permit has expired, or been terminated, and covers the project which the Commission ultimately determines is best adapted for the development of the particular reach of the river. Of course, "There is no assurance that in issuing a preliminary permit the Commission will ever issue a license for a particular project covered by the permit." *In the Matter of Linoma Power Co.*, 8 FPC 999. But obviously, neither the Commission, nor an applicant for a preliminary permit, nor permittee, is required to guess at their peril, before the completion of the studies and investigations which project ultimately will be best adapted within the meaning of Section 10(a) of the Act for licensing. Nor does the statute impose this hazard.

The protection of the permit is not confined to the licensing of the specific project at the specific site described in the application for the permit. The description in the application (in the vicinity of the Mountain Sheep and Pleasant Valley sites) is merely to identify the stretch of the river within which the feasibility of a project for licensing will be investigated and the project or projects to be initially investigated.[68] The protection of the permit extends to any project which has been investigated by the permittee within the sites and areas of that reach[69] for which a timely license application has been filed and which the Commission finally determines to license.

The Staff agrees that "the permit has for its purpose the protection of time and funds invested by a prospective applicant for a license in establishing the best site and project design to be included in an application for license provided such application is filed by the permittee within the period of the permit" (Staff br. p. 222). Nevertheless, continues the Staff brief, "This * * * does not relieve the permittee of the responsibility of so designing its project that it will be best adapted to a comprehensive plan of development, nor of the consequences of a denial of the application for license on its own merits should such application be filed within the period of the permit.

If the Commission licenses High Mountain Sheep, as recommended by the Staff, the permittee here (PNPC) will have met its responsibility of designing and filing a timely application for the licensed project. And it will have made "a total expenditure approaching $5,000,000"[70] in reliance on the preliminary permit and the invitation of the Commission in its decision denying a license for Mountain Sheep and Pleasant Valley, Project No. 2173.

---

[68] High Mountain Sheep is located at river mile 189.2; Low Mountain Sheep at river mile 192.6.

[69] "* * * The Nez Perce and High Mountain Sheep sites are alternate locations for a hydroelectric project which will develop a common reach of the Snake River in Oregon and Idaho." *In the Matter of the Application of WPPSS,* etc. No. 33275, Superior Court of the State of Washington, p. 2. (February 13, 1962)

In the earlier proceeding, Project No. 2173, PNPC was the sole applicant seeking a license for Mountain Sheep-Pleasant Valley. The Staff recommended, both before the Examiner[71] and the Commission[72] that PNPC file an application for a license to build Nez Perce. Implicit in this invitation was the assumption that any new application, if filed before the expiration or cancellation of the preliminary permit, would not result in the loss of PNPC's statutory priority. Certainly the Staff was not seeking to entrap PNPC or to deprive it of its priority under the permit. The Commission, in its decision denying the application for Project No. 2173, agreed with the Staff and invited, without requiring, PNPC to file an application for Nez Perce (19 FPC 127, 135, 353).

The Commission did not terminate or cancel the permit as it was authorized to do under the Order issuing the permit. Article 3 of "Terms and Conditions of Preliminary Permit (16 FPC 1303) provides in pertinent part: (p. 1304)

> The priority granted under the permit will be lost if the permittee fails to fulfill the requirements of the permit, if the permit is cancelled by order of the Commission, or if in course of consideration by the Commission of said application for license, the permittee shall not on or before the date of expiration of the permit, or such later date as may be fixed by the Commission: [A, B, C, D].

Article 8 provides that the permit may be canceled by order of the Commission upon failure of the permittee in good faith to begin or diligently to prosecute the investigations, examinations, and surveys contemplated under the permit "or for any other good cause shown after notice and opportunity for hearing". This authority has been exercised on numerous occasions.[73]

Article 8 is based on Section 5 of the Act which provides that a permittee's priority of application for a license continues for the stated term, not exceeding three years, and may be "canceled by order of the Commission upon failure of permittees to comply with the conditions thereof or for other good cause shown after notice and opportunity for hearing." It is not contended that PNPC's permit was canceled. The Staff does contend that "A preliminary permit grants only one priority and that priority attaches" * * * or merges with the application in the prior proceeding which terminated in denial (Staff br. p. 222). The statutory priority, however, is not a ticket good for one ride. It extends its protection during the entire period of the preliminary permit and covers any timely filed application. The opinion of the Chief Counsel dated March 5, 1923, cited by the Staff (p. 222) holds only that the Act extends the protection of the priority under the permit *beyond* the three years where an application for license has been timely filed and is pending.[74] Neither the Act nor the Regulations (Sec. 480–486) limit permittees to one application or one priority absent cancellation by the Commission as provided in Article 3 or 8 of "Terms and Conditions of Preliminary Permit" (16 FPC 1303), or failure to file a timely license application in conformity with Commission rules. The common law doctrine of merger has no application to the scope or duration of a preliminary permit under the Federal Power Act. I conclude, therefore, that PNPC's High Mountain Sheep application is entitled to priority by virtue of the preliminary permit issued on April 8, 1955.

---

[70] PNPC reply br. p. 109.

[71] (Initial Decision, p. 83.) "This Examiner is sympathetic toward the Staff's suggestion that the applicant review its application to request a license for the Nez Perce Project."

[72] (Exceptions p. 2.) " * * * Applicant should construct Nez Perce if it is to construct any project in the Nez Perce stretch of the River."

[73] Most recently (April 16, 1962) in WPPSS Project No. 2257, where the Commission issued an order denying application for extension of Preliminary Permit on the ground generally of inadequate study and investigation of the proposed project.

[74] The issue posed to the Chief Counsel by the Executive Secretary was whether the priority expired with the expiration of the permit. The Chief Counsel ruled in substance that it continued so long as a properly filed application for license was pending. (Third Annual Report of the Federal Power Commission (p. 222–223).)

(b) *WPPSS Status under Section 7(a) of the Act*

Section 7(a) provides in substance that, where no preliminary permit has been issued, preference be given to municipalities in the issuance of licenses provided the plans are equally well adapted to developing the resource in the public interest, or can be made so within a reasonable time. WPPSS asserts that, as a municipality, it is entitled to preferential treatment "to construct whichever project the Commission decides to license for the development of the river reach involved by the filing of its Nez Perce application" (WPPSS br. p. 304). The scope of the statutory preference, where applicable, under Section 7(a) is as broad as the scope of a preliminary permit under Section 4(f) of the Act, and covers any license for the river reach involved provided the other requirements of the Act and the Regulations are satisfied.

WPPSS filed a timely license application urging that Nez Perce, rather than High Mountain Sheep, was best adapted to a comprehensive plan of development for this reach of the river. It still maintains this position. However, on September 12, 1961, after the close of the hearing WPPSS moved to amend its application to include a High Mountain Sheep Project, the plans, designs, and cost estimates for which were presented as part of its rebuttal attack on PNPC's High Mountain Sheep Project at the same site, while still maintaining the superiority of Nez Perce. WPPSS claims, in short, that it is entitled to a license, as a matter of statutory preference for "whatever project the Commission deems best in accordance with Section 10(a)" (WPPSS br. p. 311).

The Staff, although rejecting Nez Perce in favor of High Mountain Sheep as "the most adaptable to a plan of comprehensive development of this stretch of the Snake River," agrees that "the effect of Section 7(a) requires the granting of WPPSS' motion to amend its application so as to include its plans for a High Mountain Sheep Development." (Staff br. p. 224)

PNPC argues that WPPSS is not a municipality and may not assert any statutory preference to either Nez Perce or High Mountain Sheep because of laches and failure to comply with Commission Rules for the filing of license applications.

Section 3(7) of the Act defines a municipality as a "city, county, * * * or other political subdivision *or agency* of a state competent * * * to carry on the business of developing, transmitting, utilizing or distributing power." WPPSS was created by virtue of a Washington statute which permits "any two or more cities as public utility districts * * * to form *an operating agency* * * *" and declares each "*such agency* * * * a *municipal corporation of the State of Washington* * * *" (RCW 43.52.360 (emp. supp.)). PNPC argues that since Nez Perce is outside of the State of Washington on the boundary line between Oregon and Idaho, it is not a "municipality" but a private corporation as to out of state activities.

WPPSS is a state agency authorized to carry on the business of developing and distributing power. As such, it is a municipality within the State of Washington under Section 3(7) of the Act. See *Washington Public Power Supply*

System, 23 FPC 109, 24 FPC 21. Nevertheless, its authority under State law to carry on proposed projects on the Snake River outside the State of Washington is in doubt, and remains unresolved. *In the Matter of the Application of Washington Public Power Supply System for an Order relating to Additional Projects*[75]. Judge Murray of The Superior Court of the State of Washington for Thurston County observed;[76]

> There is in my mind a very serious doubt as to the legal competency of the Supply System to carry on construction projects beyond the State of Washington, but I do not believe the question can be properly raised or determined before the Director in this proceeding or before the Court on this Appeal. [Opinion, p. 9.]

The problem is further complicated by doubts as to WPPSS' legal capacity to construct and operate hydroelectric facilities in Idaho and Oregon where the proposed projects are located. This is not to say that WPPSS must obtain a state permit or authorization before a federal license can be issued. *First Iowa Hydro-Electric Cooperative* v. *F.P.C.*, 328 U.S. 152 (1945) clearly holds that compliance with state law is not a condition precedent to a federal license. It does mean that in a comparative proceeding a claim of preference as a municipality under Section 7(a) should be supported by some affirmative proof[77] of WPPSS' authority and ability under the laws of Washington, Idaho, and Oregon to undertake and complete the project for which it seeks preference. WPPSS has submitted no evidence of its legal power to operate as a municipality outside Washington and in the States of Idaho and Oregon. In those states it will be treated as a foreign—not a municipal—corporation. (See briefs of Oregon and Idaho Public Utilities Commissions, Interveners). While the Commission still has power under the Act to license WPPSS, should it decide to do so, sound regulatory policy suggests that a claim of preference in a comparative proceeding requires an affirmative showing of why one applicant is to be preferred. Here WPPSS has studiously avoided giving the Oregon and Idaho[78] authorities an opportunity to express their views on its proposal or its power to operate where the project will be located. The relative abilities and capacities of the applicants to carry out their plans under local law is a relevant consideration in a comparative proceeding. In this area, WPPSS has failed to support adequately its entitlement to preference over PNPC.

[75] An appeal from an order of the Director of Conservation authorizing WPPSS to construct Nez Perce or High Mountain Sheep if licensed by the Commission.

[76] See also *State ex rel. P.U.D. No. 1 of Skagit County* vs. *Wylie*, 28 Wash. 2d, 113, 182 P. 2d 706 (1947) and *Jewett* vs. *PUD No. 1 of Stevens County*, Wash. No. 13782 (April 1951) holding that a public utility district is not authorized to own and operate hydroelectric properties outside Washington State.

[77] The entire section [9b] is devoted to securing adequate information for the Commission as to pending applications for licenses. Where 9(a) calls for engineering and financial information, 9(b) calls for legal information." *First Iowa et al., supra* (p. 177).

[78] The brief of the Idaho Public Utilities Commission, Intervenor, concludes (p. 20): "* * * the admission of WPPSS that it does not intend to comply with the laws and regulations of the State of Idaho raises serious doubts as to the fitness, character and qualifications of WPPSS as a licensee. WPPSS does not possess the ability to perform the duties of a licensee of the Federal Power Commission and should be denied a license for any project to be constructed within the borders of the State of Idaho." The Oregon brief states: "It is argued by WPPSS that proof of these matters is not necessary, that compliance therewith has been superseded by Federal law and that in any event they can be resolved later. In a license proceeding by one party this may be a satisfactory procedure; however in a situation where the FPC is confronted by *competing applicants*, one of which endeavors to comply with State requirements and the other's ability to comply is doubtful, the 'duality of control' between 'cooperating agencies of government' requires in the public interest that the license be granted to the former. Failure to require and consider such compliance or absence of it would be indicative of arbitrary and capricious action on the part of the Commission."

Section 9(b) of the Act requiries the submission of "Satisfactory evidence that the applicant has complied with the requirement of the laws of the State or States within which the proposed project is to be located with respect to bed and banks and to the appropriation, diversion, and use of water for power purposes and with respect to the right to engage in the business of developing, transmitting, and distributing power, and in any other business necessary to effect the purposes of a license under this Act."

WPPSS' failure to submit such evidence in this proceeding is no bar to an FPC license as a matter of Commission power and jurisdiction. See *First Iowa*, cited *supra*. Nevertheless, due regard for local laws and sensibilities requiries the Commission, as a matter of its own policy, to consider information as to the comparative status of rival applicants in the areas involved. Moreover, Section 7(a) of the Act provides in substance that the Commission be satisfied as to the ability of the applicant to carry out its plans. The Commission has a legitimate interest in knowing which applicant is more likely to complete the proposed project on schedule without a long drawn-out contest with hostile local authorities before construction can commence. The experience in the *City of Takoma* case is instructive. Project No. 2016 covering the Mossyrock and Mayfield developments on the Cowlitz River in Washington was licensed in 1951 (10 FPC 432). The determined opposition of State agencies[79] delayed completion of Mayfield, the smaller project, and the construction of Mossyrock has not yet been started.

The Supreme Court has approved the Commission's view that delay is a relevant consideration in whether to recommend federal construction under Section 7(b) of the Act. It is equally relevant in whether to prefer one applicant over another under the public interest standard of Section 7(a) of the Act. (See *U.S. ex rel. Chapman* v. *F.P.C.*, 345 U.S. 153, 1953). PNPC has made a superior showing of its status under local laws and its ability to carry out its plans under such laws.

Nor do I agree that Section 7(a) requires the Commission to license WPPSS for whatever project the Commission deems best. The statutory preference does not come into play until and unless a proper application has been filed for a specific plan of development as well adapted as the plan of other applicants.[80] WPPSS filed for Nez Perce, PNPC for High Mountain Sheep. If, as recommended by Staff, High Mountain Sheep should be licensed, PNPC is the only applicant for this project unless, and until WPPSS' motion to amend its Nez

[80] Hearings before House Committee on Water Power, March 18 to May 15, 1918 (65th Cong., 2d sess.), fn. 4, at p. 816. In the debate in the Senate on S. 1419, a predecessor to the Federal Water Power Act of 1920, Mr. Doremus (Michigan), offered an amendment to Section 7: "That in issuing preliminary permits or licenses hereunder the Commission *shall* give preference to applications therefor by States and municipalities provided the plans for the same are deemed by the Commission *as well* adapted to conserve and utilize in the public interest the navigation and water resources of the region *as the plans of other applicants*; * * *." In explaining this amendment he said, at 56 Cong. Rec. 9804: "Mr. Chairman, section 7 as it is now written would place States and municipalities at a disadvantage in the event they desired to file applications under this bill. It would require them to show to the Commission that the plans they submitted were better plans than those submitted by private applicants. The effect would be to work a discrimination against States and municipalities that desire to compete with private applicants for the privileges extended under this act. *The sole purpose of this amendment is to place States, municipalities, and other political subdivisions upon an equality with private applicants.* Hence the amendment." (Emphasis supplied)

Perce application to include a High Mountain Sheep project, filed after the close of the hearing, is granted. For reasons detailed earlier, this motion should be denied.

The Staff reads Section 7(a) of the Act as requiring, as a matter of law, the granting of WPPSS' motion to amend its Nez Perce application so as to include its plans for a High Mountain Sheep development.

Section 7(a) does not require the Commission in a comparative hearing to afford a municipality, whose plan of development has been rejected as inferior, an opportunity to adopt the superior plan presented by a rival non-preference applicant as a matter of right. The preference is not absolute (see *City of Holyoke Gas and Electric Department*, 8 FPC 471 (1949). Such an interpretation would discourage, if not eliminate entirely, contrary to the objectives of the Federal Power Act, the investigation of prospective hydroelectric projects by private non-preference interests.[81] Section 7(a) permits modification of a plan properly submitted by a preference applicant so as to achieve equality; not its discard, in the event of rejection, in favor of a rival's mutually exclusive and inconsistent project merely because it is the one that will be licensed. The WPPSS and Staff proposal converts a preference where plans are equal,[82] into a permanent statutory priority available at any stage of the proceeding prior to licensing.

The Commission has held from the beginning that a preference applicant must defer to the holder of a temporary permit [Niagara Falls Power Co.] where there is a conflict of applications (*City of Lockport*, 1 FPC 7, 11 (1942)):

> The Commission clearly recognizes and is in accord with the purpose and intent of the statute to give preference to States and municipalities if and when there is a conflict of applications before any priority has attached, but is of the opinion that the city of Lockport has not, under the facts now before the Commission, initiated any right to the statutory preference and therefore the Commission is unable to entertain or consider such application at this time.

A contrary interpretation would stultify the basic objective of the Act—to encourage non federal development while safeguarding the public interest (President's Water Resources Policy Commission (Vol. 3, p. 273). Moreover, it is unfair to PNPC. The Staff, which favored the Nez Perce plan in the earlier proceeding, now agrees that High Mountain represents the superior plan. WPPSS, if licensed to build High Mountain Sheep, would be permitted to skim the cream off milk produced by PNPC's efforts. More importantly, however, is the damage to the public interest. The comparative hearing was a contest between two rival plans and their proponents. If a municipal loser can be licensed merely by offering to build its rival's successful plan, it would be foolhardy for private utilities to enter such a loaded proceeding in the first place. Their investigation of prospective development sites, as envisaged by the Federal Power Act, would cease. The public interest would be the ultimate loser.

Accordingly, I do not read Section 7(a) of the Act as requiring the Commission to grant WPPSS' motion to amend its Nez Perce application so as to authorize a license for High Mountain Sheep. The grant or denial of WPPSS' motion is a matter within the Commission's sound discretion and, for reasons discussed elsewhere, the motion is denied.

---

[81] See *Federal Power Commission* v. *Niagara Power Corporation*, 347 U.S. 239 (1954) "The Act was dedicated to 'encouraging private enterprise and the investment of private capital' in power projects on a basis consistent with the public interest," citing *Chapman* v. *F.P.C.*, 345 U.S. 153 (1953).

[82] "* * * States and municipalities are accorded a preference right to licenses *on even terms* over citizens * * *." See comments of Senator Jones, Chairman of the Senate Committee on Commerce discussing the proposed legislation, 59 Cong. Rec. 246 (1919) [Emphasis supplied.]

Federal Development

Section 7(b) of the Federal Power Act requires that both pending applications for license be denied if, in the Commission's judgment, Federal development should be undertaken. The record was closed on September 12, 1961, with no recommendation for Federal development in evidence. As noted in the Staff brief (p. 225) filed March 1, 1962:

> The record reveals an immediate need for the power which could be produced by the High Mountain Sheep Project and that this project is best adapted to a comprehensive plan for developing the Middle Snake River. The record also discloses that the two applicants have spent considerable sums to develop designs, and that both applicants have indicated a willingness to begin construction immediately upon receipt of a license. There is of course no reason why the High Mountain Sheep Project could not be constructed at this time by the United States itself in the event Congress authorizes such development. On the other hand there is no compelling reason for the Commission, under Section 7(b), to recommend to Congress construction of either project by the United States. Consequently the Staff does not suggest that the Commission recommend development by the United States. It is also to be noted that neither the Corps of Engineers nor the Department of the Interior have recommended such construction to the Commission in their reports on the applications.

Section 7(b) reads as follows:

> Whenever, in the judgment of the Commission, the development of any water resources for public purposes should be undertaken by the United States itself, the Commission shall not approve any application for any project affecting such development, but shall cause to be made such examinations, surveys, reports, plans, and estimates of the cost of the proposed development as it may find necessary, and shall submit its findings to Congress with such recommendations as it may find appropriate concerning such development."

The position of the Department of Interior was first expressed in a letter to the Federal Power Commission of November 21, 1960 (FPC Exh. 42) urging delay in licensing either Mountain Sheep or Nez Perce. This view was supplemented by letter of March 15, 1961, withdrawing permission for Department of Interior personnel, whose prepared testimony had been served on the parties and copied into the transcript, to appear as witnesses. The letter suggested a recess or suspension of the hearing then in progress for the duration of "accelerated fish studies" with a target date set at the end of 1964, and concluded:

> * * * We believe that potential alternative sources of new power make prudent such a delay in further consideration of projects for the Middle Snake.
>
> * * * * * * *
>
> For the reasons above stated, the Department of the Interior recommends that neither the proposed High Mountain Sheep Project nor the proposed Nez Perce Project be licensed at this time.

On June 28, 1962, the Secretary wrote to the Chairman modifying the prior position of the Department of Interior in part as follows:

> * * * we believe that the varied and predominantly Federal interests involved in the development of this area of the Snake River outweigh other

> considerations and indicate that the Commission should recommend to Congress that the Mountain Sheep Dam should be built by the United States.

The change was supported by the following arguments: (1) hydraulic and electrical coordination with other Columbia River Basin projects could be more effectively achieved if the High Mountain Sheep project is a part of the Federal system; (2) the Mountain Sheep project represents less hazard to the fishery resource than the Nez Perce project and fish facilities can be incorporated and modified in a Federal project with greater flexibility than in a non-Federal project; (3) storage releases for navigation requirements could be made under Federal ownership and operation with less effect on power supply; (4) Federal construction would result in a lower cost of power; (5) Federal ownership would allow more precise and intimate coordination control than any agreement with non-Federal entities; (6) questions involving adjustment, offset or payment to non-Federal licensees for operation would be avoided; (7) assurance of continued availability of Salmon River for fishery and recreational resource would be an important element toward over-all-balance in a truly comprehensive plan for utilization of the water resources.

On July 6, 1962, the Commission reopened the record so as to include the Secretary's letter of June 28th (Exh. 43-A) as a statement of his current position, and provided an opportunity for the parties to file supplemental briefs commenting on the current views of the Secretary. Supplemental briefs were filed by both applicants, Staff,[53] State of Washington Departments of Fisheries and Game, Oregon Public Utilities Commissioner, Washington State Department of Conservation, Columbia River Tuna Packers Association, Washington State Sportsmen's Council, Inc., Oregon Wildlife Federation, Fishermen's Cooperative Association, Inc., Northwest Fisheries Association, Alaska Fishermen's Union, Pacific Fish Conservation League and Makah Indian Tribe.

All oppose Federal development[54] on the ground generally that issuance of an FPC license for non-Federal development now will provide identical or greater public benefits without the indefinite delays attendant upon a denial of the pending applications and a belated recommendation for Federal development.

1. The Secretary's recommendation is, of course, entitled to careful consideration, but the primary responsibility remains with the Commission. The letter (FPC Exh. 43-A) is not evidence *per se* of the validity of the facts alleged therein in support of the Secretary's recommendation. The reasons given for denying both pending applications and recommending Federal development, and the facts cited in support thereof, must be evaluated in the light of the entire record, the briefs, the statute, and the Commission's prior policy in dealing with similar recommendations.

When is a recommendation for development by the United States under Section 7(b) justified? The plain meaning of Section 7(b), its interpretation by the Courts, and application by the Commission, clearly suggest the answer—when licensing non-Federal development will not effectuate or achieve the public benefits that would be made available by Federal development. These benefits cover optimum development of the resource and include power, flood control, fish, navigation, and recreation. This is the clear import of the decision in

---

[53] The Staff brief refers to two letters, not of record, one dated April 25, 1962, from the Secretary of the Army (App. D), the other dated April 11, 1962, from the Bureau of the Budget (App. E). WPPSS submitted a third letter dated March 14, 1962, from the Secretary of Interior to the Secretary of the Army. Official notice is taken of all three letters.

[54] The Columbia River Tuna Packers Association opposes any development.

National Hells Canyon Ass'n v. *F.P.C.*,[illegible] 237 F. 2d 777 (CADC), cert. den., 353 U.S. 924, where the Court of Appeals observed in pertinent part:

> In order to decide, as required by § 7(b), whether in its judgment, the development should be undertaken by the United States, the Commission compared the evidence as to the public purposes which would be achieved by the three-dam installation privately proposed, and by the suggested federal high dam advocated by the petitioners. It concluded that "the public purposes such as flood control, navigation and recreation could be effectuated to about the same extent under either plan of development." This left for consideration and comparison the production of power. (P. 780.)

The basic issue before the Commission was succinctly stated by Mr. Justice Frankfurter in the Roanoke Rapids case[illegible]—"whether a private applicant would adequately develop all the benefits that should be derived from the proposed site." (P. 164.)

The same standard is reflected in prior Commission actions. In *Power Authority of the State of New York*, 9 FPC 301, the Commisison concluded that the State's original application did not adequately provide for navigation and the distribution of the power benefits. Accordingly, it recommended Federal development.

> We are convinced that this matter should be referred to Congress. The construction of the St. Lawrence Seaway and Power Project and the development of the power potential of the International Rapids Section are vitally important to the economy and defense of the United States and of Canada.

After the defeat in Congress of bills to authorize Federal participation with Canada in the combined seaway and power development and the filing by the Applicant of an amended application to include facilities common to navigation and power, the Commission issued a license for the project (12 FPC 172). Similar action was taken by the Commission in *Fresno Irrigation District, et al.*, 8 FPC 351; *Virginia Electric & Power Company*, 10 FPC 4, *Idaho Power Company*, 14 FPC 55 and *Alabama Power Company*, 18 FPC 257. In all these cases the Commission indicated that it would not recommend Federal development if the full economic development of the stream could be accomplished and all public benefits effectuated by the grant of a license.

Congress itself appears to have followed a similar policy in suspending previously enacted authorization for Federal development where subsequent events indicated that public benefits would be adequately provided by the licensee. Thus, Federal construction of the Priest Rapids Dam on the Columbia, the Alabama-Coosa River development, and the Grand River Dam in the Arkansas River Basin, were suspended and non-Federal development licensed under the Federal Power Act (68 Stat. 573, 302, 450).

2. We now turn to the merits of the Secretary's basic contention that adequate public benefits will not be provided if a license is issued. The Secretary does not propose a different site or project. He agrees that High Mountain Sheep

---

[illegible] Where the Court sustained the Commission's grant of a license for non-Federal development against the contention that it should have recommended construction by the United States under Section 7(b).

[illegible] *United States, ex rel. Chapman* v. *F.P.C.*, 345 U.S. 153 (1953) where the Supreme Court rejected the position of the Secretary of the Interior that the Commission was required to recommend construction by the Federal Government and to deny VEPCO's license application because of Congressional approval of a comprehensive plan for development of the Roanoke River Basin.

should be built—"Taking all resources into account, * * * the High Mountain Sheep Dam on the Snake River represents the optimum development."

He argues, however, that, since all downstream Columbia River plants are Federally owned, maximum sustained public benefits will flow "with the least conflict between use if the project is a part of the Federal system." Coordination of an entire river basin under single ownership and operation is an appealing goal. The facts are, however, that numerous non-Federal projects are now operating in the Columbia River Basin and that coordination has been effected through the Northwest Power Pool and, more recently, the Coordination Agreement.[87] This Agreement goes far beyond the limited downstream coordination proposed by the Secretary. Its effectiveness is attested to by the Administrator of the Bonneville Power Administration:

> In brief, what the treaty requires is that all the generating facilities in the Pacific Northwest will be operated as though they were under a single ownership. The majority of these generating facilities are Federal, but a substantial number are non-Federal. What we do under this agreement is operate these facilities in unison, you might say, or in a coordinated way, to get the maximum production of power from them.
>
> In connection with this agreement the United States receives a payment of $1,100,000, representing the net benefits as negotiated which the non-Federal utilities receive from our Federal upstream storage. [Hearings, Subcommittee on Public Works Appropriations, House of Representatives, Part 3 (BPA) 87th Cong., 2d. Sess., p. 668.]

Moreover, as emphasized by the Staff, (br. p. 25-28) Federal ownership does not assure coordinated operation or eliminate the necessity for resolving conflicts between the different Federal Agencies involved in water resource activity. These include Army Engineers (navigation and flood control), Bureau of Reclamation (irrigation programs), Bureau of Indian Affairs, Fish and Wildlife Service, Bonneville Power Administration, and others. Coordination between these Federal Agencies is at least as difficult as coordination between Federal and non-Federal owners and operators. (Report of the President's Water Resource Policy Commission, Vol. 3, "Duplication and Conflict," p. 508, 9, 569 *et seq.*) As noted by WPPSS:

> * * * the Federal projects in the Columbia Basin are built and operated by several different agencies, under differing statutory authority and standards, pursuing different policies to different objectives—all with the result that there are inevitable and serious conflicts in operation and there is no agency which can finally resolve such conflicts below the office of the President of the United States (if the conflicts do not lie in the underlying statutes) or the Congress (if the conflicts stem from differences in statutory authority). [WPPSS Supp. br. p. 7.]

Further, the Federal Power Act provides an effective guarantor of cooperation by a licensee in the authority and practice of the Commission under Section 10 of the Act to require coordination with the Northwest Power Pool as a condition of the license (see Article 39, Wells Project No. 2149). The proposed order herein contains such a provision (See article 38).

Accordingly, I conclude that the public interest in the coordination of the High Mountain Sheep project with other projects in the Columbia River Basin will be as fully promoted and protected by the issuance of a license with appropriate conditions as by Federal development. All four organizing companies of PNPC are parties to the Coordination Agreement. High Mountain Sheep was "designed for operation and coordination with the Northwest Power Pool, and the transmission facilities that we build for this project will be designed for integration with the Northwest Power Pool network." (Tr. 146) Moreover, the existing Power Pool machinery provides for coordination, hydraulically and electrically, with the storage plants of the Federal system so as to provide for maximum prime energy in the system as a whole under periods of critical water flow. As stated by the Commission in *Idaho Power Company*, 14 FPC 55, 67.

---

[87] PNPC argues that "the principal obstacle to the execution of the Coordination Agreement in the pact was the reluctance of the managers of the Federal Power System to enter into such agreements." (Supp. br. p. 20.)

> The fact that in Section 7(b) Congress allows the Commission either to set the particular water resources aside for Federal development or to grant a license for development by a non-Federal entity is in itself an affirmative recognition by Congress that it is not in the public interest for the United States to undertake every water-power development that can be made or to reserve such water-power resources exclusively for Federal development merely because they happen to be subject to Federal jurisdiction or even because they happen to be included in a Federal agency's plans for Federal development.

The Secretary also contends that a Federal project will provide for effective fish passage with greater flexibility and ease than a Commission licensee. Both applicants have agreed to install such fishways as may be required and have submitted detailed plans, described earlier, of considerable ingenuity and imagination proposing the expenditure of many millions of dollars toward the solution of this problem. While the Department of Interior's letter of November 21, 1960 also stated that advice as to fishways would be forthcoming at a later date, no such advice has been received. The essential fact is, however, that the Commission will require the installation of any necessary fishways and such modifications as may be required in the future. There is no evidence to support the implication that somehow Federal construction and operation will provide superior fish passage over non-Federal development. As noted in the brief of the State of Washington Department of Fisheries and Game:

> A further recommendation is made that the High Mountain Sheep Project should be constructed by the Federal Government rather than any other agency because of the relative ease with which facilities for effective fish passage could be incorporated into a Federal project in comparison with the difficulties that would be encountered in a project constructed and operated by a non-federal entity. As fisheries agencies and Intervenors in the fisheries interests, any question as to which of a number of applicants should be licensed to construct a project would normally be beyond the scope of our interest.
>
> On the other hand, where it is suggested that the interests of the fisheries resource will be best served by issuing a license to one rather than another entity we are concerned that, by silence, our concurrence in this statement would be implied. Because of this possibility it is desirable that we state to the Commission that *the experience of the State of Washington Departments of Fisheries and Game in obtaining fish passage at any particular project does not indicate any basis for the conclusion that better fish passage will result at a project because it is Federally constructed.* As to the facilities to be provided in the event the project is constructed by other than the Federal Government, it is obvious that the Federal Power Commission will designate the fish passage facilities to be provided and, if desirable, could condition the license upon future modifications where necessary. Further, it has been the practice for the Commission to consider the recommendations

> of the State agencies and the Department of Interior in providing fish facilities. *We are therefore unable to conclude, on the basis of experience or otherwise, that construction of the High Mountain Sheep Project by the Federal Government will result in more efficient facilities* as we presume that the Federal Power Commission will act to protect the fisheries in the event the project is not Federally constructed. [Emphasis supplied.]

Similarly, there is no basis in this record for the suggestion that the public interest in navigation and flood control at High Mountain Sheep would be served better by Federal development. Jurisdiction over navigation and flood control is vested in the Corps of Engineers, not the Department of Interior. The Chief of Engineers has officially advised the Commission that "the scope of the project and purposes served as proposed by the applicant [PNPC] would be substantially the same as those which I proposed. * * * It is my view that the project should be operated for flood control as recommended in my proposed report as a part of comprehensive basin development." (FPC Exh. 37.) The project as proposed by the applicants meets the needs of flood control and navigation as defined by the Corps of Engineers to the same extent as if constructed by the Federal government. Specific provisions designed to insure compliance with these requirements will be provided in the proposed license.

The Secretary also contends that Federal construction will result in lower power costs. Presumably, the Secretary is referring to the delivered cost of power rather than the cost of construction. Theoretically, the project and the delivered cost of power should be the same whoever builds the dam. This is in fact the position of WPPSS. (Supp. br. p. 25) A Federal agency, however, can obtain money cheaper and is free from taxation. Offsetting these factors in the escalation in costs incident to delays in construction and vicissitudes of annual Congressional action or inaction. The applicants are ready to build on licensing. The Federal government must first begin the long process of time required for engineering, Congressional consideration and approval under circumstances conducive to extended delays.

More importantly, however, the Commission and the Courts have specifically rejected this argument. The Commission stated: (*Idaho Power Co.* 14 FPC 59)

> There is no provision in Section 7(b) or in any other section in the Act which leads us to believe that Congress intended that we recommend Federal development for the sole purpose of making power available at costs lower than would be possible if the same water resources were developed by a private entity under a license. Needless to say if the supplying of power at the lower costs resulting from Federal development should be considered as a decisive factor, there would be few cases involving major power projects where private development could be licensed under the Act because of the substantial difference in annual cost of investment money in favor of Federal over private financing and because of the much higher annual cost of taxes paid under private development as compared with the freedom from taxes under Federal development or, in some few instances, the minor annual payments by some Federal projects in lieu of State taxes.

The Court of Appeals concurred pointing out that the alleged lower cost of power from a federally constructed dam is

> * * * due to the Government's superior credit and its freedom from taxation. If this were the criterion under § 7(b), federal development would invariably be preferable and the Commission's authority to issue licenses to private applicants could never be exercised without first recommending the proposals for federal construction and waiting to see whether Congress would authorize the work. This would seem contrary to legislative

> intent, as § 7(b) requires the Commission to recommend federal development only when "in the judgment of the Commission" the work should be undertaken by the United States itself. The italicized phrase is read out of the statute if the Commission must recommend every development for federal construction simply because the United States has better credit than any private applicant and is free from taxation. [*National Hells Canyon Ass'n* v. *F.P.C.*, 237 F. 2d 777, 781.]

Finally, the Secretary argues that Federal construction will avoid the problem of adjustment, offset, or payment due to a non-Federal licensee. The Commission has taken substantial steps to solve the upstream-downstream benefits problem. In its order of July 12, 1962, licensing the Wells Project, No. 2149, on the Columbia River, the Commission stated in pertinent part: "However, in view of Section 10(f) of the Act, the sharing of such benefits [of coordinated operations] would not, of course, include any allowance for benefits which may be realized at Federal projects from upstream storage." The Commission has authority to require the full coordination and operation of licensed projects with other systems.

It is concluded, therefore, that construction and operation of the High Mountain Sheep Project under license by the Commission will effectuate comprehensive development in the public interest on a comparable basis with Federal development. There is no evidence in this record that Federal development will provide greater flood control, power benefits, fish passage, navigation or recreation; and there is substantial evidence to the contrary.

3. Moreover, in any realistic comparison of Federal with non-Federal construction, the factor of delay must be evaluated. As noted with approval by the Court of Appeals in *National Hells Canyon Ass'n* v. *Federal Power Commission*, *supra*, p. 781 (where it quoted from the Supreme Court's opinion in *U.S. ex rel., Chapman* v. *F.P.C.*, 345 U.S. 153, 169)

> Another consideration influenced the decision of the Commission: the little likelihood that federal development would be authorized in the foreseeable future. "Particularly relevant in this regard", said the Supreme Court in the Roanoke Rapids case, "is the estimate that public development at this site would not in the normal course be undertaken for many years."

PNPS is ready to build High Mountain Sheep now. It has expended close to $5,000,000, since issuance of a preliminary permit in 1955, on the investigation and engineering leading to its present detailed plans for the High Mountain Sheep project. At no time during this period, in which the Commission has been actively processing the various license applications covering this reach of the river, has the Department of Interior requested authorization to build High Mountain Sheep. It still has not done so. While its latest letter of June 28, 1962, requests that the Commission recommend Federal development to the Congress, the Secretary has not done so. So far as the record discloses, he has not asked the Bureau of the Budget for such authorization, nor has he requested Congressional authorization or approval of a High Mountain Sheep project to be built by the Bureau of Reclamation.

The letter from the Bureau of the Budget to the Secretary of the Army, dated April 11, 1962 (Supp. Staff br., App. E) states in part:

> The Secretary of the Interior expresses the view that authorization of four projects should be deferred pending the results of specific detailed studies by the Departments of the Interior and the Army, and that, at appropriate times, Flathead Lake Outlet Improvement and Penny Cliffs should be

> recommended for construction by the Corps of Engineers, and High Mountain Sheep (or any alternate) and Garden Valley Division should be recommended for construction by the Bureau of Reclamation.
>
> * * * * * * *
>
> You are also advised that no commitment can be made at this time as to when any estimate of appropriation would be submitted for the recommended projects, if authorized by the Congress, since this would be governed by the President's budgetary objectives as determined by the then prevailing fiscal situation.

In summary, the Secretary is asking the Commission to recommend Federal construction of a project, the details of which have not been engineered or described by the Department of the Interior, and which it has not recommended for construction now to the Administration or to the Congress. Moreover, the Secretary's latest letter of June 28, 1962, proposing Federal development does not indicate any present intention to press forward for early construction or development.[88] Rather, it is consistent with the objective common to all the prior letters—to reserve this reach of the Middle Snake for future development "at an appropriate time, for construction by the Bureau of Reclamation" (See letter from the Secretary of the Army to the Speaker of the House dated April 25, 1962, App. D). In these circumstances, and in view of the united opposition to Federal development, as evidenced by the briefs filed herein, of local interests in the Pacific Northwest both private and public, it would appear that there is far less likelihood that Federal development would be authorized by the Congress for High Mountain Sheep in the foreseeable future than there was in the Roanoke Rapids or the Hells Canyon cases.

By order dated September 28, 1962, WPPSS' Petition to Reopen the Record, filed July 13, 1962, was referred to the Presiding Examiner for disposition. The petition is denied. The proffered evidence consists primarily of statements made by subordinate Interior Department officials and purports to show that the Secretary's letter of July 26, 1962, does not really represent the Department's position on "the true facts of the progress of the fish-passage research program." (WPPSS pet., p. 3.)

The Secretary's letter was received to show his change of position and not as evidence of the success or failure of the Department of Interior's fish research program. WPPSS, along with all other parties, has been afforded ample opportunity to reply to the reasons given by the Secretary for his change of position. Its supplemental brief covers 47 pages. The Department of Interior's fish research program is not in issue here and no useful purpose would be served, nor would it be appropriate, to engage in a premature evaluation of a program which has not been completed, reported, or evaluated by the Department primarily responsible.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced, and the briefs filed, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) The Snake River is a navigable river to and above the upper limits of the reservoir of either the High Mountain Sheep or the Nez Perce Projects

---

[88] The Staff brief notes that the letter of June 28, 1962, "does not indicate that any legislation has been proposed for authorizing Federal construction * * * or that any such legislation will be sponsored [or] that an appropriation for such construction will be sought." (P. 15.)

(*In re Idaho Power Company*, Project No. 1971, Opinion No. 283). The respective project works will be located on lands of the United States, and the reservoirs will inundate lands of the United States (PNPC Application for License, Exhibits F and K, WPPSS Application for License, Exhibit F).

(2) Pacific Northwest Power Company is a private corporation organized under the laws of the State of Oregon as a wholly-owned subsidiary of four sponsoring companies, namely, the Montana Power Company, Pacific Power & Light Company, Portland General Electric Company, and the Washington Water Power Company.

(3) Washington Public Power Supply System is a municipal corporation organized and operating under and by virtue of the laws of the State of Washington, for the purpose of acquiring, constructing, and operating electrical generating and transmission facilities. It is comprised of 16 public utility districts of the State of Washington, 14 of which are presently participating in financial support for the Nez Perce license application, as are approximately 24 other public utility districts, municipalities, and cooperatives in the Pacific Northwest.

(4) Pacific Northwest Power Company, on March 31, 1958, filed an application under the Federal Power Act for the proposed High Mountain Sheep project (No. 2243), also referred to as the Middle Snake River project, to be located at river mile 189.2 on the Snake River just above the confluence of that river and the Salmon River.

(5) Washington Public Power Supply System, on March 15, 1960, filed an application under the Federal Power Act for the proposed Nez Perce project (No. 2273) to be located at river mile 186.2 on the Snake River just below the confluence of that river and the Salmon River.

(6) Public notice of these proceedings has been given as required by the Act.

(7) On July 24, 1961, WPPSS filed a motion for leave to amend its Nez Perce application to conform to evidence submitted during the course of the hearing including its revisions of designs and specifications. This motion is granted.

(8) On September 12, 1961, WPPSS filed a further motion for leave to amend its Nez Perce license application to include, as an alternative proposal to the Nez Perce project in the event the Commission should decide against licensing the Nez Perce project, the High Mountain Sheep project as designed by WPPSS. This motion is denied.

(9) The High Mountain Sheep project proposed by PNPC includes an arch dam creating a reservoir about 58 miles long with its normal water surface at elevation 1510, providing a gross storage capacity of 3,600,000 acre-feet, of which 2,250,000 acre-feet is usable, and an initial powerhouse installation of 5 turbines, each of 285,000 horsepower at 550-foot head, totaling 1,425,000 horsepower and 5 generators, each of 175,000 kilowatts rating at 0.95 power factor, totaling 875,000 kilowatts.

(10) The High Mountain Sheep project proposed by WPPSS is located on the Snake River at the same site proposed by PNPC a mile upstream from its confluence with the Salmon River and would include an arch dam creating a reservoir about 58 miles long with its normal water surface of elevation 1510, providing a gross storage capacity of 3,600,000 acre-feet, of which 2,250,000 acre-feet is usable, and an initial powerhouse installation of 6 turbines, each of 290,000 horsepower at 550-foot head, totaling 1,740,000 horsepower and 6 generators, each of 200,000 kilowatts rating at 0.95 power factor, totaling 1,200,000 kilowatts.

(11) The Nez Perce project proposed by WPPSS is located on the Snake River about 2.5 miles below its confluence with the Salmon River and would include an arch dam, creating a reservoir about 61 miles long up the Snake River and 36 miles up the Salmon River with its normal water surface of

elevation 1510, providing a gross storage capacity of 6,600,000 acre-feet, of which 4,700,000 acre-feet would be usable, and an initial underground powerhouse installation of 10 turbines, each of 290,000 horsepower at 570-foot head, totaling 2,900,000 horsepower and 10 generators, each of 200,000 kilowatts at 0.95 power factor, totaling 2,000,000 kilowatts.

(12) A comprehensive plan of development of the Columbia River and tributaries has been prepared by the Corps of Engineers, Department of the Army for flood control, navigation, irrigation, power development and other purposes, in report entitled "Water Resources Development, Columbia River Basin, U.S. Army Engineer Division, North Pacific," dated June 1958, as modified in report of Board of Engineers for Rivers and Harbors, dated June 5, 1959, and letter report of the Chief of Engineers, dated March 31, 1961.

(13) The applications for licenses as amended and supplemented by exhibits and testimony are sufficiently complete for an adequate understanding of the projects proposed.

(14) Either the High Mountain Sheep or the Nez Perce project, whichever may be constructed, would be located in or along a navigable water of the United States and would otherwise affect the interests of interstate or foreign commerce.

(15) Project layouts and structural designs for the High Mountain Sheep projects as presented by PNPC and WPPSS and for the Nez Perce project as presented by WPPSS show that either project can be operated satisfactorily for flood control.

(16) The estimated cost of construction, including interest during construction, of the High Mountain Sheep project as proposed by PNPC in the amount of $190,652,000 is reasonable.

(17) Operation of either project at reservoir elevation 1510 may result in a backwater effect on the Low Hells Canyon development of Project No. 1971 licensed to Idaho Power Company.

(18) After adjustment for possible backwater effect on the Low Hells Canyon development, the gross at-site energy generation by the High Mountain Sheep project proposed by PNPC and WPPSS is 5.20 and 5.72 billion kilowatt-hours of average annual energy, respectively.

(19) The dependable capacity of the Nez Perce project is estimated to be 1,867,000 kilowatts.

(20) The dependable capacity of the High Mountain Sheep project proposed by PNPC and WPPSS is estimated to be 930,000 and 1,218,000 kilowatts, respectively.

(21) The at-site power value of the power output of the Middle Snake River projects for use in determining value of power benefits for the comparative plans is $11.77 per kilowatt-year and 2.9 mills per kilowatt-hour.

(22) The power value at load center of the power output of the Nez Perce project proposed by WPPSS is estimated to be $17.77 per kilowatt-year and 2.37 mills per kilowatt-hour.

(23) The power value at load center of the power output of the High Mountain Sheep project proposed by PNPC is estimated to be $25.91 per kilowatt-year and 3.8 mills per kilowatt-hour.

(24) The High Mountain Sheep project proposed for construction by either PNPC or WPPSS, and the Nez Perce project proposed by WPPSS are economically feasible.

(25) New steam-electric power stations as sources of power supply alternative to the proposed hydroelectric projects would not be as economical for PNPC or WPPSS.

(26) The project structures proposed by PNPC and WPPSS for the High Mountain Sheep project would be safe and stable subject to further consideration and approval of finalized plans as hereinafter provided.

(27) The final design of the High Mountain Sheep arch dam should be verified by an acceptable analysis (such as the trial load method) and reviewed by the use of structural models.

(28) Hydraulic model tests will be necessary for the High Mountain Sheep spillway in order to determine its final design.

(29) There is substantial doubt in the record as to whether the left abutment at the Nez Perce site will safely support the thrust of the proposed arch dam. Further foundation exploration and study of site geology would be required to determine whether or not a safe arch dam can be constructed and to determine the extent of excavation and foundation grouting required.

(30) If we assume for comparative purposes that an arch dam can be constructed at the Nez Perce site, it is reasonable to assume that a safe arch dam can be constructed at the mile 3.7 Lower Canyon Dam site. However, more extensive geological exploration will be necessary to support any license application for a thin arch dam at the Lower Canyon site. The Lower Canyon mile 0.5 dam site is adequate to support the proposed rockfill dam.

(31) At a Prehearing Conference held in Washington, D.C., in May 1960, the parties stipulated that the respective alternative projects should be analyzed within what was termed the "common reach," that is the area of the river common to both alternative developments above and below which development projects on the river would be common to both alternative developments. The common reach was defined in this stipulation as extending from the tailwater of the China Gardens project at Snake River mile 172.5, elevation 845, to the normal pool elevation of the Hells Canyon project on the Snake River, elevation 1683 feet m.s.l., and to the normal pool elevation of the future Freedom project on the Salmon River, elevation 1,780 feet m.s.l.

(32) Within the common reach, the resources would be developed under the alternative Plans of Development by the following projects: the High Mountain Sheep Plan of Development would comprise the China Gardens project, High Mountain Sheep project, and Lower Canyon project; the Nez Perce Plan of Development would comprise the China Gardens project, the Nez Perce project, and the Whitebird project, the latter at Salmon River mile 58.8 or 59.8.

(33) Designs and cost estimates for all projects in the common reach are presented by PNPC, WPPSS, and the Staff in their respective direct cases. In addition, WPPSS presented completely revised designs and cost estimates for all projects involved in the respective alternative plans at the rebuttal stage of the proceeding, evidence which was excluded initially by the Examiner but was admitted upon ruling by the Commission on September 12, 1961. The Staff also presented, at the rebuttal stage of the proceeding, additional designs and cost estimates for the several projects of the alternative plans in two additional series.

(34) Differences exist in the elevations assigned to China Gardens project by the two Applicants and the Staff. The location and elevation of both High Mountain Sheep and Nez Perce projects are identical in the presentations of both Applicants and the Staff. The Lower Canyon project by PNPC and the Staff presentations is located at Salmon River mile 3.7 and is an arch dam at that location; Lower Canyon project in the WPPSS presentation is located at Salmon River mile 0.5 and is a rock-fill dam. Lower Canyon pool elevation as presented by PNPC and by WPPSS in its revised direct case is at reservoir elevation 1,595 feet m.s.l. The Staff pool elevation in its first presentation is at 1,595 feet m.s.l.,

and in its second presentation it is at 1,588 feet m.s.l. There are differences in the pool elevation and location of the Whitebird project.

(35) The variations in locations, heights and installations noted above do not have a significant effect on the potentials of the alternative Plans of Developments. The Applicants herein have agreed between themselves on a common statement of power potentials and annual power benefits resulting from the alternative Plans of Development under several stated conditions. The statement of annual power benefits is common to all of the variations noted above. The power potentials and annual power benefits are reasonable and are adopted herein.

(36) The Nez Perce development of the Nez Perce Plan would provide 5,015,000 acre-feet of usable storage for flood control, whereas the High Mountain Sheep and Lower Canyon developments of the High Mountain Sheep Plan would provide 5,515,000 acre-feet.

(37) The Nez Perce Plan and the High Mountain Sheep Plan will provide about the same navigation benefits.

(38) Either Plan would provide substantial recreational benefits.

(39) Initially, the High Mountain Sheep Plan of Development would provide 1,767,000 kw of nominal prime energy, 1,307,000 kw of average energy generation and 2,239,000 kw of plant peak capability. At the same point of time, the Nez Perce Plan would provide 1,590,000 kw of nominal prime energy, 1,233,000 kw of average energy generation and 2,092,000 kw of plant peak capability.

Thus, initially, the High Mountain Sheep Plan would have an excess over the Nez Perce Plan of 177,000 kw of nominal prime energy 74,000 kw of average energy generation, and 147,000 kw of plant peaking capability (Applicants' Joint Statement, Part I, Table 2, Sheet 1). The annual power benefits of the Nez Perce Plan would amount to $53,463,000 annually under initial conditions, and of the High Mountain Sheep Plan $57,436,000 annually, so that the power potential of the High Mountain Sheep Plan would have a greater value, initially, than the Nez Perce Plan of $3,973,000 annually.

(40) At approximately 1985, and prior to the construction of Crevice storage, the High Mountain Sheep Plan would have 1,124,000 kw of nominal prime energy, 1,220,000 of average energy generation and 1,679,000 of plant peak capability. At the same period, the Nez Perce Plan would have 1,039,000 kw of nominal prime energy, 1,156,000 kw of average energy generation and 1,540,000 of plant peak capability. At this period, the High Mountain Sheep Plan power potential would exceed the Nez Perce Plan power potential by 85,000 kw of nominal prime energy, 64,000 kw of average energy generation and 139,000 kw of plant peak capability (Applicants' Joint Statement, Part I, Table 5, Sheet 1). The power benefits of the High Mountain Sheep Plan will have an average value at this period of $49,644,000 and the power benefits of the Nez Perce Plan would have an average value of $47,004,000. Thus, the High Mountain Sheep Plan's benefits would have a monetary value exceeding the Nez Perce Plan's benefits of $2,640,000 annually.

(41) In the final period, assuming the construction of the Whitebird project and Crevice storage, the High Mountain Sheep Plan would have a potential of 1,326,000 kw of nominal prime energy, 1,388,000 of average energy generation and 3,556,000 kw of plant peak capability. The Nez Perce Plan for the same period would have 1,302,000 kw of nominal prime energy, 1,386,000 kw of average energy generation and 3,545,000 of plant peak capability. In this case, the excess of the High Mountain Sheep Plan over the Nez Perce Plan would amount to 24,000 kw of nominal prime energy, 2,000 kw of average energy generation and 11,000 kw of plant peak capability (Applicants' Joint Statement, Part I, Table 4).

The Nez Perce Plan would have an average annual value of $61,112,000 and the High Mountain Sheep Plan would have an average annual value of $61,526,000, or an excess for the High Mountain Sheep Plan at this period of $414,000. Accordingly, when final and complete development of all the hydroelectric resources of the Columbia River Basin is achieved, the High Mountain Sheep Plan would have a continuous and permanent excess of value over the Nez Perce Plan of approximately one-half million dollars a year.

(42) The annual flood control benefits of the High Mountain Sheep Plan of Development, without Canadian storage, in the initial period, are $5,340,000 annually, and those of the Nez Perce Plan of Development are $5,300,000 annually. In 1985, again without Canadian storage, they are respectively $6,560,000 annually and $6,500,000 annually. Thus, initially, the High Mountain Sheep Plan has a monetary advantage over the Nez Perce Plan in flood control benefits of $40,000 annually, and by 1985 of $60,000 annually. After the achievement of Canadian storage, the values of the respective plans drop—the High Mountain Sheep Plan being $610,000 annually and the Nez Perce Plan being $560,000 annually. However, the differential between the Plans remains substantially the same, namely, $50,000 annually. Under any circumstances, the High Mountain Sheep Plan will provide greater flood control benefits than the Nez Perce Plan by approximately $50,000 annually.

(43) In addition to the Nez Perce and High Mountain Sheep developments being economically feasible, Lower Canyon and both China Gardens developments are economically feasible.

(44) PNPC and WPPSS agree on the value of power benefits and annual operation and maintenance costs for the two alternative comparative plans; they do not agree on the construction costs of the several developments comprising the alternate plans.

(45) The cost estimates of the several developments comprising the two alternative plans is influenced by the technique of the cost estimator, site locations, geologic analysis, selection of dam type, foundation excavation assumptions, length and location of spillways, powerhouse location and design, major items of equipment and other structural features.

The range in variation of construction costs (without fish facilities) of the High Mountain Sheep development as presented by the several parties is about 20 percent, of the Nez Perce development about 20 percent, and of the Lower Canyon development about 33 percent.

(46) The effect of locating the Lower Canyon development at mile 0.5 with a rock-fill dam instead of at mile 3.7 with an arch dam is to increase the cost of the High Mountain Sheep Plan by about $48,900,000.

(47) PNPC estimated that its High Mountain Sheep Plan (without fish facilities) would cost $2,575,000 more than its Nez Perce Plan (without Whitebird and fish facilities) (Table 8); WPPSS estimated that its High Mountain Sheep Plan (without fish facilities) would cost $93,036,000 more than its Nez Perce Plan (without Whitebird and fish facilities). The difference is $90,461,000. A large portion of this difference (approximately $48,900,000) is attributable to WPPSS's adoption of the Lower Canyon development at mile 0.5 and PNPC's adoption of that development at mile 3.7.

(48) The Staff estimates that its High Mountain Sheep Plan (Comparison II, without fish facilities) would cost $49,616,000 more than its Nez Perce Plan (without Whitebird and Fish facilities). However, this comparison does not use the lowest Staff estimate for the High Mountain Sheep Plan, although it does include the lowest of the three Staff estimates for Nez Perce. If the lower Staff estimate for the High Mountain Sheep Plan is used, the differential adverse

to High Mountain Sheep is reduced to $13,460,000 ($406,933,000 less $393,473,000). Using Staff estimates, the estimated cost of the High Mountain Sheep Plan ranges between $406,933,000 and $443,089,000. The estimated cost of the Nez Perce Plan ranges between $393,473,000 and $433,514,000. These estimates are reasonable for comparative purposes.

(49) PNPC will sell the entire output of the project to the four organizing companies of PNPC—Portland General Electric Company, Pacific Power & Light Company, The Montana Power Company, and The Washington Water Power Company. These companies have executed firm commitments to purchase the entire output of the project, paying an annual cost which would equal all annual charges, including financing charges of PNPC, associated with the project. The four organizing companies will have a deficiency of their assured resources as against their estimated load as of the earliest date that High Mountain Sheep project can be expected to be in service that will equal or exceed the firm capabilities of the High Mountain Sheep project. Consequently, PNPC has demonstrated a need and a market for the output of the High Mountain Sheep project.

(50) WPPSS has failed to establish a need or a market for the output of either Nez Perce or High Mountain Sheep. Its participating public agencies have an assured source of power from their own facilities or from the Bonneville Power Administration until at least 1970. Moreover, the power available to these public agencies from Nez Perce or High Mountain Sheep will be more expensive than Bonneville power.

(51) WPPSS has no binding agreement with any utility to take any part of the Nez Perce power or High Mountain Sheep output.

(52) The power purchase contracts with its four organizing companies will assure to PNPC the payment of all assumed costs, including interest and amortization charges and earnings on the stock. The securities of PNPC will be readily marketable at prices equivalent to good grade utility securities. PNPC has the ability to finance the construction of the High Mountain Sheep project.

(53) WPPSS has failed to prove that it has the ability now to finance the construction of any project that might be licensed to it in this proceeding.

(54) If Canadian storage becomes available prior to High Mountain Sheep power, it will not affect the four sponsor companies' (PNPC) need for additional generating facilities.

(55) The transmission lines proposed by the Pacific Northwest Power Company would be adequate to transmit the output of the High Mountain Sheep project to the load centers of the four sponsor companies. The transmission lines proposed by the Washington Public Power Supply System would be adequate to transmit the output of the Nez Perce project to the B.P.A. grid.

(56) The Department of Agriculture has reported that the High Mountain Sheep project would have significant effects upon management and utilization of the resources of the Wallowa, Nez Perce and Payette National Forests, and has recommended several special conditions for the protection and utilization of the Wallowa, Nez Perce and Payette National Forests.

(57) The Department of the Interior has recommended a special condition to assure the feasibility of upstream irrigation developments, and reports that advice as to fishways will be submitted at a later date.

(58) The Chief of Engineers has recommended special conditions for the operation of the project for flood control, a special condition providing for a working agreement between the Licensee and the Corps of Engineers for the operating procedure needed in carrying out the flood control functions of the High Mountain Sheep project, and special conditions in the interest of navigation.

(59) The Department of Interior has requested that the Commission recommend to Congress that the Mountain Sheep Dam should be built by the United States.

(60) The installed horsepower capacity for the High Mountain Sheep project hereinafter authorized is 1,167,000 horsepower for the purpose of computing the administrative annual charge.

(61) The major portion of fish migrating up the Snake River past the Nez Perce site continue their migration up the Salmon River, and are predominantly spring and summer chinook. Fish migrating up the Snake River above the confluence of that river and the Salmon River are predominantly fall chinook, and represent a minor portion of the total fish migrating past the Nez Perce site.

(62) Fish migrating up the Snake River past the confluence of that river and the Imnaha River are now seriously jeopardized by an existing complex of dams immediately above the High Mountain Sheep Reservoir. The available evidence indicates that the attempt to maintain fish passage past the Brownlee and Oxbow Dams has not been successful.

(63) Significant numbers of fall chinook have been successfully reared in artificial spawning areas. There is no indication that the spring and summer chinook, which are the predominant fish migrating up the Salmon River, have been successfully reared in artificial spawning areas. Because of the size of the fall chinook run, the possibility exists that the run of these fish might be maintained with the aid of some form of transportation upstream and artificial spawning areas.

(64) PNPC's proposal to provide a separate entrance at the High Mountain Sheep project utilizing water only from the Imnaha River has a sound biological basis for anticipating that it will function to pass Imnaha upstream migrants around the reservoir to the Imnaha River.

(65) There is substantial evidence in the record that long and deep reservoirs present a biologic fish passage problem separate and distinct from that of designing fish facilities at high dams and that, with the knowledge now available, the Nez Perce project and the Lower Canyon project cannot now be built without constituting a major hazard to migrating fish, particularly the spring and summer chinook and steelhead in the Salmon River, and without risking substantial loss and possible destruction to the anadromous fish passing the site. However, because of a less complex reservoir condition, there is a greater likelihood of success at Lower Canyon than there would be at Nez Perce.

(66) The High Mountain Sheep project does not add substantially to the existing problems of maintaining the run of the main Snake River anadromous run which presently pass the Hells Canyon site, and, because of the special situation in the Imnaha River, there is reason to suppose that the High Mountain Sheep project can be built now without substantial harm to the fishery resources in that river.

(67) Using Staff construction (Comparison II) the High Mountain Sheep Plan has greater annual power benefits than the Nez Perce Plan for the initial period without Whitebird and Freedom, but the Nez Perce Plan has greater net annual power benefits than the High Mountain Sheep Plan for subsequent periods of development. Using the lower High Mountain Sheep Plan construction costs originally presented by the Staff, the High Mountain Sheep plan is superior to the Nez Perce plan at all stages of development except the final period when all common reach developments are in with Crevice storage.

(68) The High Mountain Sheep Plan of development is the comprehensive plan of development for this reach of the river under the standards established by Section 10(a) of the Act. It provides for greater power production than does the Nez Perce Plan of development, greater flood control benefits; and it better

provides for the preservation and maintenance of existing anadromous fish runs than does the Nez Perce plan of development. It provides greater flexibility in terms of the timing of its component projects and in the provision of alternatives to meet any new developments in fish passage facilities and techniques that may be developed in the future. The High Mountain Sheep project is the project best adapted to such a plan of development.

(69) PNPC has a statutory priority for its application for the High Mountain Sheep project (Project No. 2243) by virtue of a preliminary permit issued by the Commission on April 8, 1955.

(70) WPPSS has failed to establish that it has complied with State laws concerning its right to do business within the States of Oregon and Idaho, or to own or possess property within such States, or to carry on a utility operation within such States, or to have or acquire water rights within such States, or to construct the proposed projects within the States of Oregon and Idaho.

(71) Section 7(a) of the Federal Power Act does not entitle WPPSS as a matter of law to a reasonable time to adapt its conflicting Nez Perce Plan and project application to the High Mountain Sheep Plan and project application; and on the record made in this proceeding, permission to amend its Nez Perce application so as to seek a license for the High Mountain Sheep project should be denied.

(72) The Application for License for the Middle Snake River project No. 2243 by Pacific Northwest Power Company is granted, subject to the terms and conditions hereinafter set forth.

ORDER

Wherefore, *it is ordered*, subject to review by the Commission on appeal, or upon its own motion, as provided in the Commission's Rules of Practice and Procedure that:

(A) This license is issued to Pacific Northwest Power Company (hereinafter referred to as Licensee) under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of the first day of the month in which acknowledgment of acceptance thereof is filed with the Commission by Pacific Northwest Power Company for the construction, operation and maintenance of Project No. 2243, to be known as the High Mountain Sheep project, on the Snake River and its tributaries, Idaho and Oregon, affecting navigable waters of the United States and the interest of interstate or foreign commerce and lands of the United States within and outside of Wallowa, Nez Perce and Payette National Forests, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(i) The proposed project consists of: All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the applicant or by the United States; the general location of such project area being shown and described by certain exhibits which formed part of the application for license, or amendment thereof and which are designated and described as follows:

Exhibit	FPC No.	Showing
J..	2243	General map of project area.

(ii) All project works consisting of a concrete arch dam approximately 670 feet high, creating a reservoir extending about 58 miles upstream to Hells Canyon tailwater (Project No. 1971) on the Snake River and about 10 miles upstream on the Imnaha River with normal water surface area of about 17,300 acres and gross storage capacity of 3,600,000 acre-feet at normal water surface elevation 1510, of which 2,250,000 acre-feet would be usable with a drawdown of 173 feet; a chute-type radial-gate controlled spillway; low level intakes; two outdoor type powerhouses, one on each side of the river immediately downstream of the dam, having an initial installation of five units with each turbine rated 285,000 horsepower at 550-foot head and each generator rated 175,000 kw (184,000 kva at 0.95 power factor); three on the (left bank) Oregon side and two units on the (right bank) Idaho side, with provisions in the plans for the additional five similar units, two on the left bank and three on the right bank; and appurtenant electrical and mechanical facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by other exhibits which also formed a part of the application for license as amended and which are designated and described as follows:

Exhibit	FPC No.	Showing
L Sheet 30, amended and revised	2243	General plan.
L Sheet 31, amended and revised	2243	Profile and section.
L Sheet 32, amended	2243	Powerhouse Plans.
L Sheet 33, amended and revised	2243	Powerhouse cross-sections.
L Sheet 34, amended and revised	2243	Intake and Spillway sections.
L Sheet 35, amended and revised	2243	Arch dam.

M: Amended "General Description and Specifications of Equipment" regarding High Mountain Sheep project in two sheets.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful, in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(B) This license is also subject to the terms and conditions set forth in Form L-6, December 15, 1953 (16 FPC 1121) entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Navigable Waters and Lands of the United States" which terms and conditions designated as Articles 1 through 27, are attached hereto and made a part hereof, except for Articles 15, 16, 17, 23 and 24 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall commence construction of the High Mountain Sheep project within one year of the effective date of this license, shall thereafter in good faith and with due diligence prosecute such construction; and shall complete the project and place it in operation within six years from the effective date of this license.

Article 29. The Licensee shall submit, in accordance with the Commission's rules and regulations, revised Exhibit L drawings for the project structures. These drawings shall be accompanied by detailed information as to the Licensee's exploration program and excavation plan for the dam, proposed foundation treatment, the design of the arch dam and other major hydraulic structures.

The Licensee shall not begin construction of the project works until the Commission approves the exhibit, the proposed program, plans, and designs.

Article 30. The final design of the arch dam shall be verified by an acceptable method of analysis (such as the trial load method) and reviewed by the use of structural models.

Article 31. The final design of the spillway shall be based on hydraulic model tests.

Article 32. The Licensee shall, within one year following the completion of the construction of the project file with the Commission revised Exhibit F and K showing final project boundary prepared in accordance with the Commission's rules and regulations.

Article 34. The Commission reserves the right to determine at a later date what transmission facilities shall be included in this license as part of the project works.

Article 35. The Licensee shall consult with the Forest Service in determination of the centerline location of transmission lines on or affecting national forest lands and shall secure concurrence of the Forest Service to the specific location of those lines occupying lands administered by the Forest Service.

Article 36. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 37. The Licensee shall not make any claim under the authority of this license against the United States or any water users' organization claiming through the United States for any damage resulting from any future depletion in the flow of the waters of the Snake River and its tributaries for the irrigation of lands and other beneficial consumptive uses.

Article 38. The Licensee shall operate the project and its system in complete coordination with the Northwest Power Pool, shall construct and install, subject to the appropriate approval and consent of the Commission, such transmission facilities as may be required for such operation.

Article 39. The Licensee shall make available to the Idaho State College, upon further order of the Commission at the request of the Idaho State College, reasonable sums of money not to exceed $7,500 for the purpose of undertaking an archeological survey and salvage excavations prior to construction and flooding.

Article 40. The Licensee shall, in order to secure maximum recreational benefits, make every reasonable effort to maintain the water surface of the High Mountain Sheep reservoir at the highest level practicable from June 15 to September 15, of each year, as is consistent with the primary purposes of the reservoir to provide pondage for Licensee's daily, weekly, monthly or seasonal power requirements; requirements of downstream releases; and flood control.

Article 41. The Licensee shall cooperate with the Forest Service in the study and preparation of a recreation public use plan.

Article 42. The road or roads constructed, owned or controlled by the Licensee for the project developments, shall be made available without charge to the Forest Service, its timber operators, permittees, and other users, for the orderly administration, development, and protection of the national forests involved, and for operations necessary and incident to project development, provided that such use may be limited by reasonable safety and traffic control requirements. In appropriate circumstances and as agreed to by the Forest Service, the Licensee may require payment of the user to cover a fair share of the road maintenance costs.

Article 43. The Licensee shall, prior to impounding water, clear all lands in the bottom and margins of the reservoir between a plane five feet below ultimate low water elevation (El. 1337) of the reservoir and the plan at normal pool elevation of the reservoir, and shall cut all brush and trees below the lower plane so that none protrude above elevation 1332. The Licensee shall clear and keep clear to an adequate width lands of the United States along open conduits; and shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margin of the reservoir which may die due to operation of the reservoir shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Article 44. In the interest of flood control downstream from the project the Licensee shall operate the project in accordance with an agreement to be entered into by the Licensee and the United States Corps of Engineers for the purpose of determining detailed operating procedures for use during flood periods, in accordance with the following principles:

a. The total live storage space of about 2,250,000 acre-feet between elevation 1337 and elevation 1510 mean sea level will be made available for flood control use if and as required.

b. The reservoir level will be no higher than elevation 1475 by 1 March each year to provide about 600,000 acre-feet of storage space for flood control use at that time each year. Additional storage space will be made available between 1 March and the beginning of the flood period to insure the availability on 1 May of the total capacity needed for flood control as estimated by the Corps of Engineers.

c. The space made available as set forth above will be retained until capture of flood flows is requested by the Corps of Engineers, subject to involuntary storage as may be required due to excess of inflows over outlet capacity, or until refilling is authorized by the Corps of Engineers. In the event of involuntary storage during flood control operations, full storage capability will be regained as soon as possible.

d. During the flood storage period controlled outflows will be as warranted by the flood control requirements as determined by the Corps of Engineers with due regard to the requirements for the optimum multiple purpose operation of the project. When the Columbia River discharge at The Dalles is 600,000 c.f.s. or higher, the daily outflow may be reduced to 10,000 acre-feet, except that during years of severe flood conditions, the daily outflow may be reduced to as low as 4,000 acre-feet; below 600,000 c.f.s. discharge at The Dalles, the daily outflow will be determined with due consideration given to all purposes of the project.

e. A discharge capacity of 65,000 c.f.s. at minimum pool elevation 1382 is to be provided by the Licensee. This discharge capacity is based on the gated outlet capacity plus one half of the ultimate turbine hydraulic capacity.

The agreement will be subject to review from time to time as requested by the Licensee or the Corps of Engineers.

Article 45. In the interest of navigation the project shall be operated in accordance with the following requirements:

a. Minimum flow of not less than 13,000 c.f.s. will be maintained at Lime Point, Idaho, during annual storage refill season when determined to be required by the Corps of Engineers in the interest of navigation. Flows of up to 16,500 c.f.s. may be required at other times when determined by the Corps of Engineers to be necessary in the interest of navigation.

b. River fluctuations in the reach between Lewiston and Lime Point resulting from project operation shall not exceed a rate of one and a half feet per hour on the rising stage, and one foot per hour on the falling stage unless otherwise approved by the Corps of Engineers.

Article 46. The Licensee shall construct, maintain and operate such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wild-life resources, provided that such modifications shall be reasonably consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion or upon recommendation of the Secretary of the Interior, the Oregon State Game Commission, the Fish Commission of Oregon or the Idaho Department of Fish and Game after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act: *Provided further*, That subsequent to approval of the final design drawings prior to commencement of construction no modifications of project structures in the interest of fish and wildlife resources which involve a change in the location, height or main structure of a dam, or the addition of or changes in outlets at or through a dam, or a major change in generating units, or a rearrangement or relocation of a powerhouse, or major changes in a spillway structure shall be required.

Article 47. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish handling facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 48. The Licensee shall prior to beginning of operation of the Low Hells Canyon development of Project No. 1971, enter into an agreement with the Idaho Power Company, Licensee for Project No. 1971, to compensate that Company for backwater effect on the Low Hells Canyon development of Project No. 1971 constructed in accordance with plans approved by the Commission, resulting from the operation of the High Mountain Sheep project with maximum normal pool at elevation 1510 feet at the High Mountain Sheep dam. In the event no satisfactory agreement is concluded by such time, then upon the application of the Idaho Power Company, the Commission shall fix and determine the compensation to be made by Licensee for such encroachment after notice and opportunity for hearing.

Article 49. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of its upstream and downstream fish passage and handling facilities with those for Project No. 1971 of Idaho Power Company, as the Commission may direct upon recommendation of the Secretary of the Interior, the Oregon State Game Commission, the Fish Commission of Oregon, or the Idaho Department of Fish and Game.

Article 50. The Licensee shall pay to the United States the following annual charges:

(a) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part II of the Commission's regulations. The authorized installed capacity for such purposes is 1,167,000 horsepower.

(b) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands exclusive of those used for transmission-line purposes an amount to be fixed hereafter by the Commission; and

(c) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands for transmission-line purposes an amount to be fixed hereafter by the Commission.

(C) The exhibits described in paragraph (i) above are approved as part of the license for the project.

(D) The Licensee shall within one year from the effective date of the license, file with the Commission a plan of financing for Commission approval, and the Commission reserves the right to require such additional information, or such modifications in the proposed plan, as it may deem necessary before taking final action on the plan of financing. Licensee shall not commence construction prior to Commission approval of a plan for financing the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

(F) The application of the Washington Public Power Supply System for license for Project No. 2273 is hereby denied.

William C. Levy,
Presiding Examiner.

APPENDIX A

Chronological List of Written Pleadings, Filings, Orders and Ruling in the Proceeding on Project Nos. 2243 and 2273, From March 31, 1958

Date	Name	Item
March 31, 1958	PNPC	Application for License (High Mountain Sheep—Project No. 2243).
April, 18 1958	National Hells Canyon Association, Inc. and Northwest Public Power Association.	Petition for Leave to Intervene—Project No. 2243 (Granted by Commission's order of March 3, 1960)—Motion to Dismiss Application—Project No. 2243.
June 27, 1958	PNPC	Motion to Dismiss National Hells Canyon Association, Inc. and Northwest Public Power Association Petition to intervene and Motion to Dismiss of April 18, 1958—Petition for Declaratory Order.
July 23, 1958	National Hells Canyon Association, Inc. and Northwest Public Power Association.	Answer in Opposition to Petition for Declaratory Order.
September 28, 1958	PNPC	Notice of Withdrawal of Petition for Declaratory Order.
September 29, 1959	PNPC	Amendment of Motion to Dismiss filed June 27, 1958.
October 26, 1959	Federal Power Commission	Notice of Application for License for Project No. 2243.
November 23, 1959	Idaho Fish and Game Commission and Idaho Fish and Game Department.	Petition to Intervene in Project No. 2243 (Intervention Granted by Commission Order of March 3, 1960).
December 1, 1959	Public Utility Commissioner of Oregon.	Notice of Intervention filed.
December 2, 1959	Columbia River Salmon & Tuna Packers Association.	Petition to Intervene in Project No. 2243 (Intervention Granted by Commission Order of March 3, 1960).
December 2, 1959	Oregon State Water Resources Board.	Petition to Intervene in Project No. 2243 (Granted by Commission's Order of March 3, 1960).
December 3, 1959	Public Utility Commissioner of Idaho.	Notice of Intervention filed.
December 3, 1959	National Hells Canyon Association, Inc. and Northwest Public Power Association.	Amendment to Petition to Intervene filed April 18, 1958—Amendment to motion to Dismiss Application for Project No. 2243.

APPENDIX A—continued

Date	Name	Item
December 4, 1959	Oregon State Game Commission and Fish Commission of Oregon.	Petition to Intervene in Project No. 2243 (Granted by Commission's Order of March 3, 1960).
December 14, 1959	State of Washington Fisheries Department and State of Washington Game Department.	Petition to Intervene in Project No. 2243 (Granted by Commission's Order of March 3, 1960).
December 28, 1959	PNPC	Answer to Amend Motion to Dismiss Application—Memorandum in Support on Answer to Amended Motion to Dismiss.
January 4, 1960	National Hells Canyon Association, Inc. and Northwest Public Power Association.	Response to PNPC Answer to Amended Motion to Dismiss and Memorandum in Support.
January 6, 1960	PNPC	Answer to Amended Petition to Intervene by National Hells Canyon Association, Inc. and Northwest Public Power Association.
February 1, 1960	Federal Power Commission	Order Fixing Hearing on Project No. 2243 for March 21, 1960.
March 15, 1960	WPPSS	Application for License for Project No. 2273 Motion for consolidation of proceedings on Project Nos. 2243 and 2273.
March 15, 1960	Federal Power Commission	Notice Postponing Hearing until April 4, 1960.
March 23, 1960	Federal Power Commission	Notice of Application for License for Project No. 2273.
March 28, 1960	PNPC	Answer to Motion for Consolidation Motion to Strike Portion of Motion for Consolidation.
March 30, 1960	Federal Power Commission	Order Consolidation Proceedings, Prescribing Procedure and Fixing Hearing for July 18, 1960.
April 18, 1960	Public Utility Commissioner of Oregon.	Notice of Intervention filed.
May 2, 1960	Oregon State Game Commission and the Fish Commission of Oregon.	Petition to Intervene in Project No. 2273 (Granted by Commission Order of May 20, 1960).
May 4, 1960	WPPSS	Motion for Extension of Time.
May 4, 1960	Columbia River Salmon & Tuna Packers Association.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 5, 1960	Fisherman's Cooperative Association, Inc.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 6, 1960	Pacific Northwest Power Company.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 6, 1960	State of Washington Fisheries Department and State of Washington Game Department.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 6, 1960	Northwest Fisheries Association.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 9, 1960	PNPC	Answer to WPPSS Motion for Extension of Time.
May 9, 1960	FPC Staff	Answer to WPPSS Motion for Extension of Time.
May 9, 1960	Makah Indian Tribe	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 9, 1960	Washington State Sportsmen's Council, Inc.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 9, 1960	Oregon Wildlife Federation	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 9, 1960	Idaho Wildlife Federation	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 9, 1960	Association of Pacific Fisheries and Puget Sound Salmon Canners, Inc.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 9, 1960	Idaho Fish and Game Commission.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 10, 1960	WPPSS	Answer to Opposition to Petition to Intervene by PNPC.
May 10, 1960	Pacific Fish Conservation League, Inc.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 11, 1960	Alaska Fisherman's Union	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 11, 1960	Oregon State Water Resources Board.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 12, 1960	Presiding Examiner	Notice Fixing Date of Prehearing Conference and Extending Time for Filing Until After Conference.

APPENDIX A—continued

Date	Name	Item
May 16, 1960	Department of Fish and Game of the State of Alaska.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of May 20, 1960).
May 19, 1960	Presiding Examiner	Notice of Prehearing Conference Results and Fixing Date of Hearing for October 17, 1960.
May 26, 1960	Presiding Examiner	Notice of Further Prehearing Conference on Fisheries.
June 13, 1960	Chinook and Cowlitz Indian Nations.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of July 13, 1960).
July 6, 1960	WPPSS	Petition to Intervene in Project No. 2243 (Granted by Commission's Order of October 7, 1960).
July 6, 1960	National Hells Canyon Association, Inc. and Northwest Public Power Association.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of August 16, 1960).
July 12, 1960	PNPC	Answer to Petition to Intervene by National Hells Canyon Association, Inc. and Northwest Public Power Association.
July 13, 1960	Presiding Examiner	Report of Prehearing Conference.
July 15, 1960	Confederated Bands and Tribes of the Yakima Indian Nation.	Petition to Intervene in Project No. 2273 (Granted by Commission's Order of August 16, 1960).
July 23, 1960	WPPSS	Letter requesting PNPC to be directed to use only Docket No. 2243 and not 2173/2243.
August 3, 1960	WPPSS	Motion for Extension of Time.
August 8, 1960	PNPC	Reply to Motion for Extension of Time.
August 8, 1960	FPC Staff	Reply to Motion for Extension of Time.
August 10, 1960	Presiding Examiner	Ruling on Motion for Extension of Time to September 9, 1960 for Applicants filing of Direct Testimony.
August 10, 1960	Presiding Examiner	Ruling on WPPSS Request of July 23, 1960 affirmatively.
August 19, 1960	Oregon State Game Commission and Fish Commission of Oregon.	Motion for Extension of Time to October 7, 1960 for filing Intervener's Direct Testimony.
August 20, 1960	State of Washington Fisheries Department and State of Washington Game Department.	Motion for Extension of Time to October 7, 1960.
August 22, 1960	WPPSS	Amendment to Application for License for Project No. 2273.
August 25, 1960	Department of Conservation, State of Washington.	Petition to Intervene in Project Nos. 2243 and 2273 (Granted by Commission's Order of September 16, 1960).
August 26, 1960	PNPC	Reply to Motions for Extension of Time.
September 1, 1960	Oregon State Grange and Washington State Grange.	Petition to Intervene in Project Nos. 2243 and 2273 (Granted by Commission's Order of September 16, 1960).
September 2, 1960	Presiding Examiner	Ruling Granting Extension of Time for filing Staff and Intervener's Direct Testimony to October 7, 1960, and setting Hearing for November 4, 1960.
September 6, 1960	Idaho Fish and Game Commission, Washington State Sportsmen's Council, Inc., Pacific Fish Conservation League, Inc., Fishermen's Cooperative Association, Inc., Northwest Fisheries Association, Alaska Fishermen's Union and Makah Indian Tribe.	Join in Petition for Extension of Time for Filing of Intervener's Direct Testimony to October 7, 1960.
September 14, 1960	PNPC	Answer in Opposition to Petition of Oregon State Grange and Washington State Grange.
September 20, 1960	Presiding Examiner	Order Postponing Prehearing Conference to October 31, 1960.
September 21, 1960	Oregon State Grange and Washington State Grange.	Reply to PNPC Answer.
September 27, 1960	State of Oregon	Statement of Official Position of State of Oregon Filed.
September 28, 1960	Presiding Examiner	Examiner's Notice Prescribing Agenda.
October 3, 1960	National Hells Canyon Association, Inc. and Northwest Public Power Association.	Motions to Vacate Orders of Intervention.
October 12, 1960	PNPC	Answer to Motion by National Hells Canyon Association, Inc. and Northwest Public Power Association.
October 17, 1960	Federal Power Commission	Order vacating Order of March 3, 1960 Granting Intervention by National Hells Canyon Association, Inc. and Northwest Public Power Association.
October 18, 1960	Presiding Examiner	Notice to File motions to Strike Exhibits by October 31, 1960.

APPENDIX A—continued

Date	Name	Item
October 20, 1960	WPPSS	Notice of and Application for taking of depositions of FPC Staff members. Application for Issuance of Subpoenas for Appearance of FPC Staff members.
October 25, 1960	FPC Staff	Reply to Applications for Depositions and Subpoenas.
October 26, 1960	Presiding Examiner	Ruling Denying Application for Depositions and Subpoenas.
October 27, 1960	WPPSS	Motion for Continuance of Hearing to January 9, 1961.
October 31, 1960	Chinook and Cowlitz Indian Nations.	Motion to set date for Examination of Witnesses.
November 1, 1960	Presiding Examiner	Report on Prehearing Conference.
November 2, 1960	FPC Staff	Reply in Opposition to WPPSS Motion of October 27, 1960 for Continuance.
November 3, 1960	WPPSS	Appeal from Presiding Examiner's Ruling Denying Application for Depositions and Subpoenas. Answer in Opposition to Chinook and Cowlitz Indian Nations for Fixing of Date for Examination of Witnesses.
November 3, 1960	WPPSS	Application for Issuance of Subpoena of PNPC records.
November 2, 1960	PNPC	Reply in Opposition to WPPSS Motion of October 27, 1960 for Continuance.
November 4, 1960	Presiding Examiner	Denial of WPPSS Motion for Continuance (See Tr. 125, Part 1 of Volume I of Transcript).
November 4, 1960	WPPSS	Motion on record for reconsideration of denial of Motion for Continuance (See Tr. 125-140 for Motion and Replies of Parties to Motion).
November 4, 1960	Presiding Examiner	Ruling Denying Motion for Reconsideration of Motion for Continuance (See Tr. 140, Part 1 of Volume I).
November 4, 1960	WPPSS	Motion for week's (Stay) Continuance (See Tr. 140, Part 1 of Volume I).
November 4, 1960	Presiding Examiner	Ruling Denying Motion for Week's (Stay) Continuance.
November 7, 1960	WPPSS	Appeal from Presiding Examiner's Ruling Denying Motion for Continuance and Motion to Stay.
November 7, 1960	WPPSS	Motion Requesting the Commission to Stay Resumption of Hearing on Nov. 7, 1960.
November 7, 1960	Federal Power Commission	Order Denying Motion for Stay.
November 9, 1960	FPC Staff	Memorandum in Opposition to WPPSS Appeal of Examiner's Ruling of October 26, 1960.
November 15, 1960	PNPC	Answer to WPPSS Appeal of Examiner's Rulings of November 4, 1960.
November 22, 1960	FPC Staff	Memorandum in Opposition to WPPSS Appeal of Examiner's Rulings of November 4, 1960.
November 22, 1960	WPPSS	Motion for Leave to File Response to PNPC Answer to Appeal.
November 25, 1960	Federal Power Commission	Order Sustaining Presiding Examiner's Rulings Appealed by WPPSS on Applications for Depositions and Subpoenas.
November 25, 1960	Federal Power Commission	Order Sustaining Presiding Examiner's Rulings Appealed by WPPS on Motion for Stay and Continuance.
December 1, 1960	Columbia River Salmon Tuna Packers Association.	Motion to change Place of Hearing to Portland, Oregon.
December 2, 1960	Presiding Examiner	Amended Schedule of Witnesses Superseding Schedule Issued November 1, 1960.
December 13, 1960	Department of Conservation. State of Washington.	Application for Authorization for Taking Deposition of R. Wayne Lincoln.
December 16, 1960	Public Utility Commissioner of Idaho.	Request for Change of Scheduled Appearance of Witness.
December 19, 1960	WPPSS	Reply in Opposition to Interveners' Motion for Change in Place of Hearing.
December 23, 1960	Presiding Examiner	Notice of Authorization of Taking of Deposition of R. Wayne Lincoln.
December 27, 1960	Washington State Sportsmen's Council, Inc.	Petition for Amending of Schedule of Witness.
December 27, 1960	Washington State Sportsmen's Council, Inc., Pacific Fish Conservation League, Inc., Fishermen's Cooperative Association, Inc., Northwest Fisheries Association, Alaska Fishermen's Union, Makah Indian Tribe, Oregon Wildlife Federation, Idaho Wildlife Federation.	Join in Motion of December 1, 1960 for Change in Place of Hearing.
December 28, 1960	Chinook and Cowlitz Nations of Indians.	Join in Motion of December 1, 1960 for Change in Place of Hearing.
January 4, 1961	WPPSS	Reply in Opposition to Motion Schedule of Witnesses.

APPENDIX A—continued

Date	Name	Item
January 4, 1961	WPPSS	Petition for Declaratory Order Regarding Fishways.
January 9, 1961	State of Washington Fisheries Department and State of Washington Game Department.	Join in Motion for Change in Place of Hearing.
January 16, 1961	Idaho Fish and Game Commission.	Join in Motion for Change in Place of Hearing.
January 17, 1961	PNPC	Reply to Petition January 4, 1961 for Declaratory Order.
January 31, 1961	Presiding Examiner	Ruling Changing Place of Hearing to Portland, Oregon on March 31, 1961.
February 6, 1961	WPPSS	Supplement to Petition and Motion for Declaratory Order.
February 6, 1961	WPPSS	Appeal from Presiding Examiner's Denial of Motion of WPPSS to Strike Fishery Testimony. (Note the original motion was filed October 17, 1960, as part of the motions to strike as provided for by the Commission's Order of March 30, 1960. The Presiding Examiner's Denial of the original motion appears at Tr. 118 through 123, Volume I, part 1 of the transcript).
February 10, 1961	WPPSS	Application for Issuance of Subpoenas
February 13, 1961	Presiding Examiner	Report on Application for Subpoenas.
February 14, 1961	WPPSS	Supplement to Application for Subpoenas.
February 23, 1961	Federal Power Commission	Order Sustaining Presiding Examiner's Ruling of February 9, 1961, Denying Application for Subpoenas (For ruling made in the course of the hearing see Tr. 7211, Volume 46 of the transcript).
February 23, 1961	Presiding Examiner	Notice Requiring Filing of Rebuttal Testimony by April 5, 1961.
March 7, 1961	Federal Power Commission	Order Sustaining Presiding Examiner's Ruling Denying Motion to Strike Fishery Testimony.
March 30, 1961	WPPSS	Motion for Continuance to June 12, 1961.
April 3, 1961	PNPC	Reply to Motion for Continuance. Motion to Dismiss WPPSS Motion for Continuance.
April 10, 1961	WPPSS	Supplementary Motion for Continuance.
April 14, 1961	Federal Power Commission	Order Referring WPPSS Motions for Continuance to Presiding Examiner.
April 18, 1961	Presiding Examiner	Ruling Denying WPPSS Motion for Continuance and Extending Time for Filing of Rebuttal Testimony to April 21, 1961.
April 24, 1961	WPPSS	Motion for Leave to File Amendment to Application for Project No. 2273 to include a project at High Mountain Sheep site.
April 25, 1961	FPC Staff	Reply in Opposition to WPPSS Motion for Leave to Amend its Application to Include Project at High Mountain Sheep site.
April 26, 1961	PNPC	Motion to dispense with rebuttal testimony (See Tr. 9800-9802, Volume 66).
May 1, 1961	WPPSS	Motion for Leave to File Reply to Staff Answer to WPPSS Motion to Amend Application for License. Reply in Opposition to Motion of PNPC of April 26, 1961.
May 2, 1961	Presiding Examiner	Ruling Denying WPPSS Motion to Amend Application and Denying PNPC Motion to Dispense with Rebuttal Testimony, and Recessing Hearing Until June 12, 1961 at which Time Hearing to Proceed According to Agreement of Parties Set Forth at Tr. 9823, Volume 66.
May 12, 1961	WPPSS	Objections to Presiding Examiner's Ruling of May 2, 1961.
May 19, 1961	Federal Power Commission	Order Approving Examiner's Continuance of Hearing for more than 30 days and Sustaining Denial of Motion of Leave to File Amended Application.
June 20, 1961	WPPSS	Petition for Rehearing of Commission's Order of May 19, 1961, Denying Motion for Leave to File Amended Application.
June 29, 1961	PNPC	Answer in Opposition to WPPSS Petition for Rehearing.
July 20, 1961	Federal Power Commission	Order Denying Motion for Reconsideration.
July 21, 1961	FPC Staff	Motion for Reversal of Ruling of Presiding Examiner Denying Motion of Staff Counsel made on the Record July 21, 1961 at Tr. 13781, Volume 94, that certain evidence offered in rebuttal and excluded be admitted.
July 24, 1961	PNPC	Reply to Staff Motion for reversal of Presiding Examiner's ruling on testimony offered in rebuttal.
July 24, 1961	WPPSS	Motion Appealing Presiding Examiner's Ruling on Motion of Staff Counsel.

APPENDIX A—continued

Date	Name	Item
July 24, 1961	WPPSS	Motion to Amend License Application and for Order Declaring License Amended.
July 25, 1961	Federal Power Commission	Order on Motions Appealing Ruling of Presiding Examiner on Testimony offered in rebuttal, setting aside Presiding Examiner's Ruling.
July 26, 1961	Presiding Examiner	Ruling Reopening Proceedings and Setting September 12, 1961 as date for admitting previously excluded testimony as rebuttal.
August 7, 1961	PNPC	Petition for Reconsideration of Commission's Order of July 25, 1961, setting aside Presiding Examiner's Ruling.
August 25, 1961	Federal Power Commission	Order Denying PNPC Petition for Reconsideration
September 12, 1961	WPPSS	Motion to Strike portions of testimony and related exhibits by witness for PNPC from record.
September 12, 1961	WPPSS	Motion to Amend License Application to conform to exhibits and testimony of record pertaining to designs and cost estimates of High Mountain Sheep Project.
October 5, 1961	WPPSS	Memorandum in support of motion of Staff Counsel to Strike certain testimony made at hearing.
November 13, 1961	WPPSS	Motion for Extension of Time to 1/15/62 for filing applicants' briefs and for similar 30 days extension of filing all other briefs.
November 15, 1961	WPPSS	Motion to Rule on Motion of Staff Counsel to strike certain testimony made at hearing.
November 21, 1961	Presiding Examiner	Ruling issued Extending Time for Filing Briefs.
November 30, 1961	Presiding Examiner	Ruling Striking Testimony of Witnesses Perry and Pressey at hearing, pursuant to motion filed 11/15/61.
January 4, 1962	WPPSS	Motion for Leave to Substitute Complete Copy of order of Director of Conservation, State of Washington, dated 7/7/61, for incomplete copy thereof appended to motion filed 9/12/61, together with substitute copy of said order.
January 15, 1962	WPPSS	Initial brief, together with introductory material, joint exhibit and Joint Statement.
January 15, 1962		Applicant's brief, together with suggested findings of fact and supplement to brief.
January 15, 1962	PNPC, WPPSS, Staff Counsel	Motion to reopen record and admit additional evidence.
January 15, 1962	PNPC, WPPSS	Motion to Reopen Record and admit additional evidence.
January 29, 1962	WPPSS, PNPC, Staff Counsel	Motion to Reopen Record and admit additional evidence.
March 1, 1962	State of Washington Department of Conservation.	Brief.
March 1, 1962	Idaho Wildlife Federation	Brief.
March 1, 1962	Fishing and Game Agencies for States of Idaho, Oregon and Washington.	Consolidated brief.
March 1, 1962	Staff Counsel	Brief.
March 2, 1962	Chinook & Cowlitz Nations	Telegram requesting extension of time of 40 days in which to file briefs and findings.
March 2, 1962	Oregon Public Utilities Commission.	Initial Brief.
March 2, 1962	Washington State Sportmen's Council, Inc.; Oregon Wildlife Federation; Fishermen's Cooperative Association, Inc.; Northwest Fisheries Association; Alaska Fishermen's Union; Pacific Fish Conservation League; Makah Indian Tribe.	Consolidated brief.
March 2, 1962	Columbia River Salmon & Tuna Packers Association.	Brief.
March 5, 1962	Idaho Public Utilities Commission.	Brief.
April 2, 1962	PNPC	Reply brief.
April 2, 1962	WPPSS	Reply brief.
April 11, 1962	PNPC	Motion to Strike certain material from initial brief of WPPSS filed 1/15/62.
April 23, 1962	WPPSS	Answer to Motion filed 4/11/62.
June 11, 1962 (as amended June 15, 1962).	PNPC	To strike the Reply Brief of WPPSS
June 19, 1962	PNPC	Amendment to Motion to Strike
June 28, 1962	Secretary of Interior	Supplemental Report.
June 28, 1962	WPPSS	Answer to Motion filed 6/11/62

APPENDIX A—continued

Date	Name	Item
July 6, 1962		Order opening record for purpose of including letter of Secretary of Interior filed 6/28/62 as statement of his position, and within 20 days from date of issuance hereof parties may file supplemental brief with respect to said letter (Exh. 43-A).
July 6, 1962		Copy of letter of Secretary of Interior filed 6/28/62 sent to parties of record.
July 13, 1962	WPPSS	Petition to Reopen Record to Include Additional Documents.
July 18, 1962		Staff Counsel's answer to petition to reopen record.
July 23, 1962	Columbia River Salmon & Tuna Packers Association.	Supplemental brief.
July 24, 1962	PNPC	Answer to Petition to Reopen Record.
July 26, 1962	Staff Counsel	Supplemental brief.
July 26, 1962	State of Washington, Department of Fisheries and Department of Game.	Supplemental brief.
July 26, 1962	WPPSS	Supplemental brief.
July 27, 1962	PNPC	Supplemental brief.
July 27, 1962	Washington State Sportsmen's Council, Inc. *et al.*	Supplemental brief.
July 27, 1962	State of Washington, Department of Conservation.	Supplemental brief.
July 30, 1962	Oregon Public Utility Commissioner.	Supplemental brief.
August 2, 1962		Notice Extending Time to July 30, 1962 for filing briefs.
August 31, 1962	WPPSS	Amendement to Petition to Reopen Record filed July 13, 1962 to Request Stay of Issuance of Decision.
September 11, 1962		Staff Counsel's Reply to Amendment.
September 28, 1962		Commission's Referral of Motion to Reopen Record to Presiding Examiner.

BLUE RIDGE GAS COMPANY, DOCKET NO. G-14422

ORDER AMENDING ORDER ISSUED FEBRUARY 1, 1960

(Issued February 6, 1964)

On October 16, 1963, Blue Ridge Gas Company (Applicant) filed an application to amend the Commission's order issued February 1, 1960, in Docket No. G-14422, 23 FPC 245, by deleting therefrom the maximum daily volume limitation of 2.041 Mcf on deliveries of natural gas to Applicant by Atlantic Seaboard Corporation (Atlantic), all as more fully set forth in the application to amend on file with the Commission.

The order of February 1, 1960, modified, and adopted as modified, the decision of the presiding examiner wherein Atlantic was directed, pursuant to Section 7(a) of the Natural Gas Act, to establish physical connection of its transportation facilities with the proposed facilities of Applicant and to sell and deliver to Applicant its natural gas requirements, not to exceed a maximum daily volume of 2,041 Mcf. Applicant requests herein that said volumetric limitation be removed.

Applicant states that said limitation prevents the full and orderly development of its business and places Applicant in a less advantageous position from that enjoyed by other customers of Atlantic who are not bound by such limitations. Further, it appears that Applicant has need to increase its maximum daily volume as a result of increased number of customers and increased natural gas requirements for its present and future customers.

On October 28, 1963, Atlantic advised by letter that it had no objection to the grant of the relief requested by Applicant.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 25, 1963 (28 F.R. 14282). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 1, 1960, in Docket No. G-14422 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 1, 1960, in Docket No. G-14422 be and the same is hereby amended by deleting therefrom the maximum daily volume limitation of 2,041 Mcf on the sale and delivery of natural gas to Applicant by Atlantic Seaboard Corporation, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LYNCHBURG GAS COMPANY v. UNITED FUEL GAS COMPANY, DOCKET NO. G-12862

ORDER TERMINATING PROCEEDING

(Issued February 6, 1964)

On July 9, 1957, Lynchburg Gas Company filed a complaint against United Fuel Gas Company, contending the terms of availability of the latter's SG-1 (Surplus Gas) rate schedule to be unduly preferential. Lynchburg at that time purchased its entire supply of gas from Atlantic Seaboard Corporation, which in turn was almost entirely supplied by United Fuel. The SG-1 schedule was designed to enable United Fuel to dispose of a quantity of gas labelled as "surplus" to two affiliates, Ohio Fuel Gas Company and Manufacturers Light & Heat Company, which were then purchasing at approximately 100% load factor under Seaboard's contract-demand rate schedule. The SG-1 Rate Schedule was, by its terms, limited to the period of June 14, 1957, to October 31, 1957. Seaboard filed an answer to the complaint, denying that the terms of availability of the rate schedule were discriminatory, and Lynchburg filed a reply. No further proceedings were had upon the complaint.

On November 20, 1957, United Fuel filed a Notice of Cancellation of Rate Schedule SG-1 and also a request for leave to withdraw a related certificate application in Docket No. G-12791. The grounds stated in this "Notice" were that the SG-1 schedule had been intended to be applicable only to a period ending on October 31, 1957 and that that date had already passed. During the period from June 14–October 31, 1957, United Fuel sold Manufacturers a total of 2,104,395 Mcf (at 14.73 psia) and sold Ohio Fuel a total of 850,036 Mcf. The price, as specified in the SG-1 tariff, was 27¢ per Mcf.

On December 20, 1957, the Commission, by letter order, accepted the SG-1 Rate Schedule for filing as of June 14, 1957, and accepted the Notice of Cancellation, effective as of October 31, 1957. The Commission also permitted United Fuel to withdraw the certificate application in Docket No. G-12791. Since October 1957, United Fuel has not maintained a "surplus gas" rate schedule; accordingly, there can be no present controversy over the terms of availability of such a schedule. In addition, Lynchburg has not, at any time since 1957, requested the Commission to grant it any form of relief with respect to the approximate five-month period when United Fuel did sell gas under the SG-1 schedule. Nor does it appear that there is any such relief to which Lynchburg or other direct or indirect customer of United Fuel might now be entitled. It follows then that the proceeding instituted upon Lynchburg's complaint has become moot, and the proceeding should be terminated.

The Commission orders:

The proceedings in Docket No. G-12862 are hereby terminated because of mootness and the complaint of Lynchburg Gas Company therein is dismissed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TOWN OF MAURY CITY, TENNESSEE, DOCKET NO. CP63-321

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 6, 1964)

On November 27, 1963, the Town of Maury City, Tennessee (Applicant) filed a new application amending one filed on May 23, 1963, in Docket No. CP63-321, pursuant to Section 7(a) of the Natural Gas Act for an order directing Texas Gas Transmission Corporation (Texas Gas) to establish physical connection of its facilities with those which Applicant proposes to construct, and to sell and deliver to Applicant its daily and annual requirements for distribution and resale in the community, as more fully described in the application on file with the Commission.

The application states that there is no gas being distributed and sold in the Town of Maury City. Applicant proposes to construct and operate a distribution system in the said community and to distribute and sell natural gas therein for domestic and commercial consumption.

Applicant will construct a lateral line approximately 9 miles to the transmission pipeline of Texas Gas together with regulating facilities at the point of connection.

On December 12, 1963, Texas Gas filed with the Commission an Answer to Applicant's request wherein it is stated that it has no objection to the rendition of the services requested, but not to exceed 371 Mcf per day at a base pressure of 14.73 psia provided that a service agreement be agreed upon within 45 days after issuance of this order.

Due notice of the filing of the application and opportunity for hearing thereon have been given by publication in the Federal Register on January 15, 1964, (29 F.R. 369). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Texas Gas Transmission Corporation, a Delaware corporation, with its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by this Commission in its order of March 30, 1949, in Docket No. G-859 (8 FPC 228).

(2) Applicant is a municipality organized under the laws of the State of Tennessee and is legally authorized to construct and operate a gas distribution system within its borders.

(3) It is necessary and desirable in the public interest to direct Texas Gas Transmission Corporation to establish physical connection of its gas transmission facilities with the facilities to be constructed by the Applicant and to sell and deliver to Applicant up to 371 Mcf of natural gas per day at pressure of 14.73 psia, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Texas Gas, as proposed, within one year from the date on which this order issues and upon the filing with the Commission by Applicant of proof of adequate financing within 30 days of the date on which this order issues.

(5) The requirement that Texas Gas serve Applicant, as proposed, will not place any undue burden upon Texas Gas nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Texas Gas Transmission Corporation be and hereby is directed to establish physical connection of its transmission facilities with the proposed facilities to be constructed by Applicant as hereinbefore described and to sell and deliver up to 371 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Texas Gas shall report in writing to the Commission the date of commencement of service to Applicant.

(C) This order is hereby conditioned upon Applicant being prepared to receive natural gas from Texas Gas, as proposed, within one year from the date on which this order issues and upon the filing with the Commission by Applicant of proof of adequate financing within 30 days of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER DENYING APPLICATION FOR REHEARING AND STAY

(Issued February 7, 1964)

Washington Public Power Supply System, intervenor in this investigatory proceeding, filed on January 10, 1964, a petition for rehearing and stay of the order issued December 11, 1963, 30 FPC 1471.

The Commission, on December 11, 1963, issued an interim order which amended and supplemented prior interim orders prescribing fish facilities for Project No. 1971 and which directed the Presiding Examiner to proceed further in this investigatory proceeding instituted by the order issued March 22, 1963, with respect to Project No. 1971 of Idaho Power Company on the Snake River in Idaho and Oregon.

The order issued December 11, 1963, amended and supplemented prior orders pursuant to Article 35 of the license for the project and substantially as requested and recommended in a stipulation entered into by the licensee for Project No. 1971 and all interested State and Federal fishery agencies.

Intervenor objects to amending and supplementing prior orders prescribing fish facilities at this time. We are of the view that the delay proposed by Intervenor is unjustified.

A full discussion of the points raised in Intervenor's petition is unnecessary. Suffice it to say that all Federal and State agencies primarily interested in the fishery resources agreed that prompt implementation of the provisions of the order is necessary and that delay is undesirable. We, too, have gone into this matter thoroughly and have come to the same conclusion.

It is recognized that all problems and controversies in respect to this resource are not resolved; for this reason we have declined, in issuing our order of December 11, 1963, to terminate the investigatory proceeding and have reserved the right to make further modifications. To delay all action, for perhaps many months, pending the final outcome of that investigation and related studies, is unwarranted.

The Commission finds:

The assignments of error and grounds for rehearing and stay set forth in the application filed by Washington Public Power Supply System on January 10, 1964, for rehearing and stay of the Commission's order issued on December

11, 1963, present no facts or principles of law which were not considered by the Commission when it issued its aforesaid order, or which having now been considered warrant any change in or modification of the said order.

The Commission orders:

Washington Public Power Supply System's application filed on January 10, 1964, for rehearing and stay of the Commission's order issued on December 11, 1963, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MATT CAREY AND JULIAN A. KNIGHT, PROJECT NO. 961

ORDER ACCEPTING SURRENDER OF LICENSE (TRANSMISSION LINE)

(Issued February 7, 1964)

Application was filed on November 4, 1963 by Mrs. Helen Carey, apparent successor in interest to the above-named licensees of record for the project, for surrender of the license for transmission line Project No. 961 affecting lands of the United States within the Beaverhead (formerly Madison) National Forest in Madison County, State of Montana.

The U.S. Forest Service has reported that all works covered by the license have been removed and the lands of the United States involved have been left in a condition satisfactory to the Service.

Annual charges under the license have been paid through the calendar year 1958.

The Commission finds:

Acceptance of surrender of the license for transmission line Project No. 961 is appropriate.

The Commission orders:

Surrender of the license for transmission line Project No. 961 is hereby accepted, effective as of December 31, 1958.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ST. MICHAELS UTILITIES COMMISSION, AND COMMISSIONERS OF ST. MICHAELS, MARYLAND v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E-7114; STOCKTON LIGHT AND POWER COMPANY (OF MARYLAND), AND STOCKTON LIGHT AND POWER COMPANY (OF VIRGINIA) v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E-7117; DELAWARE POWER & LIGHT COMPANY, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF VIRGINIA, DOCKET NO. E-7137

ORDER ALLOWING RATE SCHEDULE TO TAKE EFFECT AND AMENDING ORDER INSTITUTING INVESTIGATION AND PROVIDING FOR HEARING

(Issued February 7, 1964)

This Commission by order issued November 18, 1963, instituted an investigation of all rate schedules of Delaware Power & Light Company (Delaware

Power) subject to the jurisdiction of this Commission and ordered a hearing in the above-entitled proceeding as to their lawfulness. That hearing is currently in progress.

Delaware Power on January 10, 1964, tendered for filing pursuant to Section 205 of the Federal Power Act a rate schedule, tentatively designated in the files of the Commission as Delaware Power's Rate Schedule FPC No. 32, and requested that the proposed schedule be permitted to take effect as of January 10, 1964. Other rate schedules of Delaware Power for service to the City of Dover are currently under investigation in the Commission's current rate proceeding.

The proffered rate schedule embodies a contract under the terms of which Delaware Power agrees to provide the City of Dover, Delaware (Dover) with wholesale electric service up to 16,500 KW in the event of an emergency. In requesting the proposed effective date, Delaware Power stated that it has been informed by Dover that one of Dover's generating units needs extensive overhaul and that during the overhaul period the proposed emergency service would provide necessary back-up reserve for Dover's other generating sources.

From the foregoing circumstances, it appears that the requirements for the filing and posting of the proffered rate schedule not less than 30 days prior to the proposed effective date thereof may be waived without undue prejudice to the interests of those who might be affected under the provisions of the Federal Power Act, that the proffered rate schedule should be permitted to take effect as of January 10, 1964, and that the proffered rate schedule should be included among those rate schedules of Delaware Power currently under investigation, all in the manner hereinafter provided.

The Commission finds:

(1) Good cause has been shown that the 30 day notice period provided in Section 205 of the Federal Power Act and § 35.3 of the Commission's Regulations thereunder be waived with respect to Delaware Power's Rate Schedule FPC No. 32 and such rate schedule be allowed to take effect as of January 10, 1964.

(2) It is appropriate for purposes of the Federal Power Act, particularly Sections 205 and 206 thereof, that the Commission's order issued November 18, 1963, in the above-entitled proceeding be amended to include in the list of rate schedules set forth on page 3 thereof and in paragraph (A) on page 5 thereof, Delaware Power's Rate Schedule FPC No. 32.

The Commission orders:

(A) The rate schedule as described above is hereby designated as Delaware Power's Rate Schedule FPC No. 32. The 30 day notice period provided in Section 205 of the Federal Power Act and in § 35.3 of the Commission's Regulations under the Federal Power Act is hereby waived with respect to Delaware Power's Rate Schedule FPC No. 32 and it is hereby allowed to take effect as of January 10, 1964.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedule in question insofar as its effective date is concerned.

(C) Nothing contained in this order shall be construed as a waiver in any other respect of the requirements of Section 205 of the Federal Power Act or of the Commission's Regulations under the Act; nor shall it be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such rate or service provided for in the above-designated rate schedule; nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate.

(D) The Commission's order issued November 18, 1963 in the above-entitled proceeding is hereby amended to include in the list of rate schedules on page 3 and in paragraph (A) thereof Delaware Power's Rate Schedule FPC No. 32.

(E) This order is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding now pending, or hereafter instituted, by or against Delaware Power.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. G-14853; HUMBLE GAS TRANSMISSION COMPANY, DOCKET NO. G-15208

ORDER AMENDING ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 10, 1964)

On October 1, 1963, Arkansas Louisiana Gas Company (Arkansas Louisiana) in Docket No. G-14853 and on October 21, 1963, Humble Gas Transmission Company (Humble) in Docket No. G-15208 filed applications to amend the Commission's order issued December 8, 1958, 20 FPC 791, in said Dockets by authorizing the continuance of the sale of gas until December 18, 1968, by Arkansas Louisiana to Humble pursuant to a new agreement, dated August 30, 1963, between the two companies, all as more fully set forth in the respective applications to amend.

The order of December 8, 1958, authorized Arkansas Louisiana to construct and operate certain facilities and to sell and deliver at the tail gate of Arkansas Louisiana's Munce Compressor Station, Ouachita Parish, Louisiana, natural gas to Humble (formerly Olin Gas Transmission Corporation). Said order also authorized Humble to operate any facilities, subject to the jurisdiction of the Commission, necessary for such sale.

By letter of May 17, 1963, Humble exercised its right to terminate the contract between the two parties at the end of five years. Accordingly, Arkansas Louisiana filed in Docket No. CP63-331 its application to abandon the sale covered thereby.[1] Subsequently, Arkansas Louisiana and Humble entered into the new agreement to continue the sale at the same price (18.2293 cents per Mcf) and at the same delivery point. Said agreement also provides that Arkansas Louisiana may deliver such volumes from time to time as it may have available for sale and as Humble may wish to buy.

On October 1, 1963, Arkansas Louisiana tendered for filing the August 30, 1963, agreement as its First Revised Sheet Nos. 180, 181, 182, 183, 184 and 185 to its FPC Gas Tariff, Original Volume No. 2, covering the herein proposed continued sale of gas to Humble.

Due notice of the filing of the applications to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 10, 1964 (29 F.R. 270). No protest or petition to intervene has been filed in this proceeding.

---

[1] Arkansas Louisiana's subject application to amend in Docket No. G-14853 also withdraws its abandonment application in Docket No. CP63-331.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and public convenience and necessity require that the Commission's order issued December 8, 1958, in Docket Nos. G–14853 and G–15208 be amended as hereinafter ordered.

(2) The public convenience and necessity require that the revised tariff filings of Arkansas Louisiana, hereinabove described, be accepted for filing to become effective on the date this order issues.

The Commission orders:

(A) The Commission's order issued December 8, 1958, in Docket Nos. G–14853 and G–15208 be and the same is hereby amended by authorizing the continuance of the sale of gas until December 18, 1968, by Arkansas Louisiana to Humble pursuant to a new agreement, dated August 30, 1963, between Arkansas Louisiana and Humble, all as hereinbefore described and as set forth in the respective applications to amend.

(B) Arkansas Louisiana's First Revised Sheet Nos. 180, 181, 182, 183, 184 and 185 to its FPC Gas Tariff, Original Volume No. 2, are hereby accepted for filing to become effective on the date this order issues.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP64–65

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 10, 1964)

On September 16, 1963, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP64–65 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon by sale to Cities Service Gas Company (Cities Service)[1] all of Applicant's gathering facilities in the Armour Webb Gas Field, Grant County, Oklahoma, all as more fully set forth in the application.

Cities Service has agreed to deliver to Applicant, free of charge, Applicant's fractional interest of 15.42 percent of the 6,000,000 Mcf of the estimated remaining gas reserves in the said field. Applicant states that Cities Service will deliver over a ten year period all of the remaining gas reserves of 6,000,000 Mcf at 14.65 psia at interconnections of Applicant's and Cities Service's systems near Lyons and Hutchinson, Kansas, or, at any other point mutually agreed upon, at the rate of 11.5 cents per Mcf for the balance of 84.58 percent of the remaining gas reserves controlled by Cities Service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support thereof, and upon consideration of the record,

---

[1] In Docket No. CP63–188 (Phase II), Cities Service was authorized by the Commission's order issued December 30, 1963, 30 FPC 1612, to develop and operate the Armour Webb Field as an underground storage field.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described, is permitted by the public convenience and necessity and an order permitting and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Arkansas Louisiana Gas Company of the facilities hereinbefore described, as more fully described in the application, be and the same are hereby granted.

(B) Applicant shall advise the Commission in writing of the date of abandonment within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–112

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 10, 1964)

On November 15, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP64–112 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 23.6 miles of 30-inch looping sections at three locations to provide increased service to existing customers. The respective sections are to be located as follows: 7.7 miles north of Beaver, Oklahoma; 6.4 miles north of Bushton, Kansas and 9.5 miles north of Oakland, Iowa. Applicants saleable system capacity is to be increased by 20,031 Mcf of gas per day.

The estimated total cost of the proposed facilities is $2,624,000, to be financed from cash on hand, reserve accruals and retained earnings.

Applicant states that it has approximately 12.7 trillion cubic feet of gas reserves as of January 1, 1963. Based on present withdrawals, including this project, the reserve life index of the system is 20.1 years and are adequate to enable it to meet the peak day requirements of its system through the year 1973.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXACO INC., ET AL., DOCKET NO. G-17613, ET AL.; HASSIE HUNT TRUST ESTATE, DOCKET NO. RI64-296; WM. HERBERT HUNT TRUST ESTATE, DOCKET NO. RI64-297; AREA RATE PROCEEDING, DOCKET NO. AR61-2

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued February 10, 1964)

On December 19, 1963, Hassie Hunt Trust and Wm. Herbert Hunt Trust Estate (Hunt) filed a motion for reconsideration[1] of the Commission's order issued

---

[1] Hunt termed the motion as an application for rehearing and reconsideration. An application for rehearing of an interlocutory order such as here involved may not properly be filed. [Section 1.30(e) of the Rules of Practice and Procedure (18 CFR 1.30(e))]. The instant tender has been considered as a motion for reconsideration pursuant to Section 1.12 of the Commission's Rules of Practice and Procedure.

November 19, 1963 in Texaco Inc., *et al.*, Docket No. G–17613, *et al.*, insofar as that order initiated proceedings in Docket Nos. RI64–296 and RI64–297 for the limited purpose of determining the contractual basis, if any, for Hunt's 23.55¢ rates for the period subsequent to April 1, 1963.[2] The order also provided that in the event it is determined that the Hunt rates are no longer contractually authorized, it should also be determined what are the proper contractual rates and as of what date the 23.55¢ rates ceased to be effective.

In support of the motion, Hunt states, *inter alia*, (1) the Commission has no authority under the Natural Gas Act to institute a proceeding concerning the contractual basis for existing effective rates not under suspension; (2) sufficient notice has not been given to permit adequate time for presentation of their case because of doubt as to who has the burden of proof; and (3) the Commission has no right to order refunds for the period subsequent to April 1, 1963, but prior to a Commission order setting just and reasonable rates for the instant sales, citing *Mississippi Power and Light Company* v. *Memphis Natural Gas Company*, 162 F. 2d 388 (1947), cert. denied 332 U.S. 770.

In *United Gas Pipe Line* v. *Mobile Gas* (1956), 350 U.S. 332, as modified by *United Gas Pipe Line* v. *Memphis Light, Gas and Water* (1958), 358 U.S. 103, the Supreme Court held that the Commission must reject any filing for a rate increase which is inconsistent with or not authorized by the basic contract between the parties. As a collorary thereof, we have the power as well as the duty under the Natural Gas Act to refuse to permit continued collection of any rate in excess of the contractually authorized rate. We need not decide at the present time what, if any, refund obligation Hunt would have under the Natural Gas Act in the event it is determined that the contractually authorized rates for Hunt's sales were below the rates actually charged and collected for a period of time prior to our decision. This issue should be disposed of, if relevant, in connection with the hearing in this case. In any event irrespective of our authority to order refunds, it would appear that the purchasers would be entitled to seek restitution on the contract if it is determined that as of some date Hunt ceased to have contracted authority to charge the higher rate, and the fact that the higher rate had been on file with the Commission would not be determinative. See *Kansas-Nebraska Natural Gas Co.* v. *Pan American Petroleum Co.* 297 F. 2d 561 (C.A. 8) certiorari denied, 370 U.S. 937. Without passing on the question of whether the court in such a private action could itself determine the contested issue of whether Hunt had retained contractual authority for its rate, or that this would be a matter for the primary jurisdiction of our agency, it is clear that it would be appropriate for us to make an initial determination of this issue.

As to any claimed lack of notice in this matter, we note that the November 19 order provides for a prehearing conference on January 28, 1964, prior to the initiation of hearings herein. Hunt therefore would have had ample time in which to prepare its case. In any event the hearing herein has been indefinitely postponed by notice from the Secretary issued January 17, 1964.

The Commission finds:

The motion for reconsideration filed by Hunt on December 19, 1963, in the above-designated proceedings, sets forth no new facts or legal considerations which were not fully considered prior to the issuance of the November 19 order, or which now having been considered, warrant modification of said order.

---

[2] The favored nation increased rates of 23.55¢ per Mcf under Hassie Hunt Trust Estate FPC Gas Rate Schedule No. 3 and Wm. Herbert Hunt Trust Estate FPC Gas Rate Schedule No. 5, which were allegedly triggered by Pan American's 23.55¢ rate as more fully explained in the November 19 order, were not suspended within the period allowed under Section 4(e) of the Act due to administrative error.

The Commission orders:

The motion for reconsideration filed by Hunt on December 19, 1963, in the above-designated proceedings is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ORDER REOPENING PROCEEDINGS FOR FURTHER CONSIDERATION

(Issued February 10, 1964)

By order issued herein on July 24, 1963, [lead docket AR61–2, 30 FPC 402] we denied motions by The United Gas Improvement Company (UGI) and others, to reject, cancel and dismiss certain favored-nation increased rate filings allegedly triggered by sales from Pan American Petroleum Corporation (Pan American) to Transcontinental Gas Pipe Line Corporation (Transco) under its FPC Gas Rate Schedule No. 242, among others. By order of November 19, 1963, 30 FPC 1316, we denied rehearing of our order of July 24, 1963.[2] We held in that order that the producers had the right under the favored-nation provisions in their contracts to file for increased rates of 23.55¢ per Mcf at least during the period prior to April 1, 1963, in light of the Pan American settlement proposal involving sales under its FPC Gas Rate Schedule No. 242 in Docket No. G–16946.[3] The proposal, which was approved by an order also issued November 19, 1963, provided for a 20.625¢ per Mcf settlement rate effective as of April 1, 1963, with no refunds required for the period prior thereto.

---

[1] Orders were issued in Docket Nos. G–17613 and G–17925 approving settlements, which, if they become final, will dispose of the issues discussed herein insofar as they relate to these dockets.

[2] In our November 19 order we also denied similar motions by UGI, which had not yet been filed when the July 24 order was issued, with respect to favored-nation rate increases involved in Docket Nos. G–17923 and G–17526. Thereafter by order issued January 3, 1964, UGI's applications for rehearing in these dockets were also denied, 31 FPC 15.

[3] With respect to the contractual basis for the favored-nation increased rates for the period subsequent to March 31, 1963, the above-entitled proceedings were set for hearing to the extent that they involved this question.

Since the issuance of our November 19 order, objections have been filed to the Pan American settlement which require us to vacate our order approving the settlements insofar as it relates to Pan American's sale under its Rate Schedule No. 242. Pan American's unconditioned temporary certificate at a rate of 23.55¢ in Docket No. G–16946 is thus still in effect. Additionally, the decision in *P.S.C. of New York* v. *F.P.C.*, Case No. 17582, CADC, 329 F. 2d 242 (1964); cert. denied 377 U.S. 963 (1964) will require consideration of refund requirements on issuance of a permanent certificate for the Pan American sale. In view thereof, the Pan American 23.55¢ initial rate at least at the present time cannot be considered as necessarily constituting a contractual basis for collecting higher prices under the contracts in issue for the period prior to April 1, 1963, because of the possibility of a refund under the above court decision. We therefore conclude that we should reconsider our holding here and delay determination of this matter until such time as the certificate proceeding involving Pan American's sale is disposed of.

The Commission orders:

For the reasons set forth above, the above-entitled proceedings are reopened for the purpose of further consideration of UGI's motions insofar as they relate to the contractual basis for the 23.55¢ per Mcf favored-nation increased rates for the period prior to April 1, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXAS GAS EXPLORATION CORPORATION, DOCKET NO. CI60–76

FINDINGS AND ORDER AFTER STATUTORY HEARING, CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL, AND ACCEPTING FPC GAS RATE SCHEDULE FOR FILING.

(Issued February 10, 1964)

On January 20, 1960, Texas Gas Exploration Corporation (Applicant) filed in Docket No. CI60–76 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas in interstate commerce for resale for ultimate public consumption to Texas Gas Transmission Corporation from acreage in the Chacahoula Field, Lafourche Parish, Louisiana, all as more fully set forth in the application.

On October 8, 1963, as supplemented on November 26, 1963, Applicant submitted an offer of settlement and motion for approval thereof similiar to those proposals submitted and approved with respect to the applications for certificates consolidated with *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.* Applicant proposes a reduction in initial contract price from 21.75¢ to 20.625¢ per Mcf at 15.025 psia including tax reimbursement, a moratorium on future rate changes through March 31, 1968, an extension of make-up provisions for prepaid gas to the life of the contract[1], a condition that the settlement rate is subject to prospective adjustment dependent upon the final determination in Docket No. AR61-2, and an understanding that the settlement rate determines only the payments which may legally be made under the contract[2] and can not estop the Commission from considering the appropriate cost to be attributed to the instant sale if Texas Gas Transmission Corporation's purchased-gas costs are in issue in proceedings instituted pursuant to Sections 4(e) or 5(a) of the Natural Gas Act[1].

---

[1] These two provisions differ from those submitted and approved with respect to the applications consolidated with Docket No. G–13221, *et al.*, due to the affiliation between Applicant and the gas purchaser.

No answers to Applicant's motion and offer have been received.

We find this proposal, generally, to be in the public interest and shall approve it subject to the following reservations and conditions.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken during the moratorium period but paid for and not taken, and our approval is conditioned upon such interpretation. Thus, prepayments, if any, shall be made during the moratorium period at a rate no higher than the rate in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Docket No. AR61-2 seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in the instant case which will control our conclusions in Docket No. AR61-2. The settlement proposal also provides that adjustments in price growing out of Docket No. AR61-2 should go into effect upon conclusion of judicial review of our final order therein. We can not now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding, and our approval of the settlement will be so conditioned.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on February 6, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits attached thereto and the offer of settlement, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Exploration Corporation, is a "natural-gas company" within the meaning of the Natural Gas Act and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

---

[1] See footnote p. 403.

[2] Applicant's FPC Gas Rate Schedule No. 4.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should amend its related rate schedule as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Texas Gas Exploration Corporation, upon the conditions set forth herein, authorizing the sale of natural gas in interstate commerce for resale for ultimate public consumption, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the application and settlement proposal herein.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(C) The certificate granted in paragraph (A) above is granted upon the express condition that Applicant comply fully with the terms of this order and the settlement proposal, which settlement is expressely approved under the conditions of this order.

(D) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved, except as specifically provided by the settlement proposal. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificate.

(E) The settlement rate herein approved shall be construed only to determine the payments which may legally be made under the contract and shall not estop the Commission from considering the appropriate cost to be attributed to the instant sale if the purchased-gas costs of Texas Gas Transmission Corporation are in issue in any proceeding instituted pursuant to Section 4(e) or 5(a) of the Natural Gas Act.

(F) Applicant shall amend its related rate schedule to reflect the settlement rate and to provide an extension of make-up provisions for prepaid gas to the life of the contract.

(G) Upon compliance with all of the terms of this order and the settlement proposal, the related rate schedule shall be accepted for filing, effective on the date of initial delivery, and designated as Texas Gas Exploration Corporation FPC Gas Rate Schedule No. 4.

(H) The certificate issued herein shall be void and of no effect unless accepted in writing by Applicant within thirty days from the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TILLAMOOK PEOPLE'S UTILITY DISTRICT, PROJECT NO. 2274

ORDER ACCEPTING SURRENDER OF PRELIMINARY PERMIT

(Issued February 10, 1964)

Application was filed on November 20, 1963 by Tillamook People's Utility District, of Tillamook, Oregon, for surrender of its preliminary permit for proposed hydroelectric Project No. 2274, to be located on Trask River in the County of Tillamook, Oregon, affecting Oregon and California revested lands and other lands of the United States.

The preliminary permit was issued to the permittee by Commission order issued February 17, 1961 for a period of 24 months, effective as of February 1, 1961. The permit was extended a period of one year by Commission order issued April 24, 1963.

In its application for surrender, the permittee advised the Commission that the permittee's Board of Directors had accepted the recommendations of its consulting engineers who had reported that the permittee should defer construction of the proposed project for a period of from five to ten years, since it appeared from studies made at the site that the proposed project at present is not economically feasible.

The Commission finds:

Acceptance of surrender of the preliminary permit for proposed Project No. 2274 is appropriate.

The Commission orders:

Surrender of the preliminary permit for proposed Project No. 2274 is hereby accepted, effective as of November 20, 1963.

OPINION NO. 419

UNITED GAS PIPE LINE COMPANY v. COASTAL STATES GAS PRODUCING COMPANY, ET AL., DOCKET NO. CP64-75, ET AL.

OPINION AND ORDER DISMISSING COMPLAINT IN PART

(Issued February 10, 1964)

Syllabus

1. Commission *holds* it has no jurisdiction over gas sales in Austin, Texas area by producer's subsidiary. PP. 408, 409.
2. Since provisions of Section 1(c) of the Act are available to a separate corporate entity which is part of overall gas system extending over many states, determination here [*supra*] would not be changed by classifying producer as pipeline and treating its subsidiaries as an entity. P. 409.
3. In proceedings to invoke Sections 14 and 20 of the Natural Gas Act, Commission *dismisses* complaint, in part, and *defers* action on remaining elements thereof

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

By the Commission:

United Gas Pipe Line Company (United) on September 27, 1963, filed a "Formal Complaint" and request for other relief directed against certain actions which it alleges are being and have been taken by Coastal States Gas Producing Company (Coastal) and its affiliated companies.[1]

The gist of United's complaint is that it is an interstate pipeline company, subject to the jurisdiction of this Commission and has been and is selling natural gas service to Southern Union Gas Company (Southern Union) for service in Austin, Texas, and to direct industrial customers in the Austin area. While these sales by United have always been treated as non-jurisdictional and United does not suggest that this classification is erroneous, it alleges that the intent of Coastal is to usurp the Austin market and that this would have an adverse effect upon other jurisdictional customers obtaining their gas from United.

Southern Union distributes gas which it presently purchases from United in Austin; the contract under which it sells this gas expires on April 1, 1967. It has contracted with Coastal for the purchase of further supplies of gas, with sales to commence at the termination of the United contract. The City of Austin also has entered into a contract with Coastal for a long-term gas supply for its electric generating system.[2] The several contracts were assigned by Coastal to its affiliate, Lo-Vaca Gathering Company (Lo-Vaca).

The basis for United's claim that the Coastal-Lo-Vaca sales in the Austin area are jurisdictional is as follows. Alamo, a Coastal affiliate which is a gas distributor in the San Antonio area, purchases gas from Rio Grande Valley Gas Company (Rio Grande) (which is not affiliated with Coastal) in Southern Texas, which gas is by contract, transported by South Texas and Lo-Vaca to Alamo for sale in San Antonio, Texas. In addition, Lo-Vaca purchases gas from Coastal which gas Coastal either produces or purchases from producers in southern Texas counties; this gas is transported by South Texas to a point near Freer, Webb County, Texas, for delivery to Lo-Vaca. Lo-Vaca transports some of this gas to Alamo; remaining portions are available for delivery by Lo-Vaca at various points on its system, including Austin. Lo-Vaca also obtains supplies of gas at other points along its system. None of the gas actually delivered to Lo-Vaca will cross state lines.[3]

South Texas, an interstate pipeline under our rules, obtains gas at various points in South Texas which it transports beyond the Freer take-off point to Transcontinental Gas Pipe Line Corporation (Transco) for delivery across state lines. In fact, the entire capacity of the South Texas line at and beyond Freer is dedicated to the sale it has made to Transco, and its line is available for transporting gas for the account of Coastal and Alamo to Lo-Vaca's line only to the extent that Transco does not choose to avail itself of all the gas dedicated to it. It is apparent that the gas delivered by Coastal and other producers to South Texas for transportation to Lo-Vaca at the Freer take-off point will be commingled in the South Texas lines with gas which will be transported across state lines by Transco, and will in fact get into the Transco lines. At the same time it is clear that some of the gas delivered by South Texas to Lo-Vaca will actually come from production sold to South Texas for resale to Transco.

---

[1] United specifically complains about the activities of Coastal and other affiliated or subsidiary companies. Ben Bolt Gathering Company, Lo-Vaca Gathering Company (Lo-Vaca), South Texas Natural Gas Gathering Company (South Texas), Texas Southeastern Gas Company, and Alamo Gas Supply Company (Alamo) are all wholly owned subsidiaries of Coastal.

[2] Another purchaser, the Lower Colorado River Authority, also has contracted with Coastal for the supply of gas to its power plants.

[3] Check valves prevent the back-flow of this gas and Lo-Vaca does not deliver the gas to any company which transports the gas across state lines nor does Lo-Vaca, itself, transport gas across state lines.

United alleges that Coastal, now classified by the Commission as an independent producer, should be classified as a pipeline, that the Coastal companies should be treated as a single entity, and that the sales of gas by Lo-Vaca are jurisdictional. It requests that the Commission order Lo-Vaca to cease unauthorized construction of facilities, to cease taking steps to render unauthorized service at Austin and to Southern Union, and that a full investigation of Coastal be undertaken.

A motion to dismiss the complaint was filed by Coastal, *et al.* on December 2, 1963. An answer to the motion was filed by United on December 9, 1963[4]

We have carefully examined the aforementioned complaint, the motion to dismiss, and the answers thereto. The facts detailed above present involved questions concerning our jurisdiction over certain aspects of the proposed transactions, specifically whether the Coastal and Rio Grande sales to Lo-Vaca and Alamo, and South Texas' transportation of this gas is subject to the certification jurisdiction of this Commission under Section 7 of the Natural Gas Act. The determination of these jurisdictional questions depend in large part upon the ultimate decisions of the courts and the Commission in certain pending matters, and could not finally be resolved at this time. For the reasons set forth below, however, we are convinced that the questions raised by United as to our jurisdiction over the sales Lo-Vaca is making to Austin and Southern Union (as well as to the Lower Colorado River Authority) do not depend upon our resolution of these questions as to our jurisdiction over other facets of the overall plans of the several Coastal entities or upon the litigation before the Commission or in the courts which may be relevant to these other questions. We think under these circumstances that the public interest would not be served by deferring the statement of our views on this aspect of United's complaint. Since we have decided that we have and will have no jurisdiction over such sales, we shall dismiss the complaint in part, and defer action on the remaining questions.

The proposed sales by Lo-Vaca in the Austin Area fall into two categories: direct sales[5] and sales for resale.[6] We have no rate jurisdiction over direct sales under the Natural Gas Act. The proposed Lo-Vaca sale for resale to Southern Union is also not subject to our rate jurisdiction, even assuming it is a sale in interstate commerce. This is because the sale involves gas received by Lo-Vaca within Texas for ultimate consumption in Texas and a certificate of the Texas Railroad Commission has been filed with us in accordance with the provisions of Section 1(c) of the Act to the effect that the rates, services and facilities of Lo-Vaca involved in its sales of natural gas for resale in Texas are subject to its regulatory jurisdiction and it is exercising such jurisdiction.

We, of course, exercise certificate jurisdiction under Section 7(c) of the Natural Gas Act over natural gas companies which engage in interstate transportation activities even where the sales involved are not subject to our rate jurisdiction. Lo-Vaca, however, is not engaged in the interstate transportation of natural gas within the meaning of Section 7(c) of the Act: all the gas flowing in its lines originates in Texas and none flows into other states.[7]

---

[4] The City of Austin filed an answer on November 22, 1963.

[5] Sales to Austin and the Lower Colorado River Authority for use in their electric generating plants.

[6] The proposed sales to Southern Union.

[7] The situation is to be distinguished from the *Florida Parishes* case (*United Gas Pipe Line Company*, Docket No. CP62-161, Opinion No. 401, August 26, 1963, 30 FPC 560, order granting rehearing October 24, 1963, 30 FPC 1073), where most of the gas flowing in United's pipeline was destined for consumption in states beyond the Louisiana point of origin.

We have considered the question whether any of these determinations might be subject to revision if we were to determine that the Coastal and Rio Grande sales or South Texas' transportation of this gas were jurisdictional. We do not think they would. At most we might determine that either the sales or transportation was jurisdictional and should be denied as not required by public convenience and necessity. Lo-Vaca would then have the obligation of providing gas from other intrastate sources to make up for any Coastal and Rio Grande gas necessary to fulfill its obligations, but the Lo-Vaca sales to its customers in the vicinity of Austin would neither become jurisdictional nor be rendered impossible. A determination by us that the various Coastal companies should be treated as one entity for Commission purposes would not change the picture. It is well established that the provisions of Section 1(c) of the Act are available to a separate corporate entity which is part of an overall natural gas system extending over many states.

We shall, therefore, dismiss the United complaint insofar as it alleges that the activities of Lo-Vaca in selling gas to, and transporting gas for, customers in the Austin area are subject to our jurisdiction.

As indicated above, we shall defer action upon the other elements of United's complaint. Specifically until there has been a final resolution of the questions raised in *Lo-Vaca Gathering Company* v. *F.P.C.*, 323 F. 2d 190, petition for rehearing denied December 17, 1963 (CA5),[8] and in the *Florida Parishes* case, *supra*, we shall not attempt to pass upon the issues raised by the complaint as to our jurisdiction over the sales by Rio Grande to Alamo and Coastal to Lo-Vaca, or South Texas' transportation of such gas. We believe that pending such action we should not consider the request that we reclassify Coastal as a pipeline or consider all of the Coastal entities as one for Commission purposes.[9]

The Commission orders:

The motion of Coastal States Gas Producing Company, *et al.* to dismiss the complaint of United Gas Pipe Line Company is hereby granted insofar as it pertains to the question of Commission jurisdiction over Lo-Vaca Gathering Company in this matter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HOLYOKE WATER POWER COMPANY, PROJECT NO. 2004

ORDER CORRECTING LICENSE

(Issued February 11, 1964)

By letter dated December 3, 1963, Holyoke Water Power Company has requested the removal from its license for constructed Project No. 2004 of an ambiguity involving the actual horsepower capacity authorized in the license issued September 9, 1949 and made effective July 5, 1949.

---

[8] The mandate in this case was stayed by order of the circuit court on January 10, 1963, and the Commission intends to ask the Solicitor General to file a petition for a writ of certiorari on its behalf to bring the matter before the United States Supreme Court.

[9] United has also intervened in two Coastal applications to abandon sales to Trunkline Gas Company (Docket Nos. CI64–237 and CI64–269) and complains that the gas would be used to serve the Austin markets. We have made no decisions on whether the public interest would permit such abandonments, but will, in view of United's intervention, set these cases for hearing in the near future. It would appear, however, that the sales by Lo-Vaca to Austin are not dependent upon this gas, and the delivery of this gas to Lo-Vaca would not change our determination regarding our lack of jurisdiction over Lo-Vaca's sales.

The letter correctly points out that the annual charges prescribed in the license are based on an "authorized ultimate installed capacity (102,985 horsepower)" whereas elsewhere in the license the installed capacity authorized is 38,485 horsepower.

The Commission finds:

In the circumstances, clarification of the license is appropriate and desirable.

The Commission orders:

(A) The license issued to Holyoke Water Power Company for Project No. 2004 is hereby revised in the following respects, effective as of January 1, 1964:

PARAGRAPH I. Article 22 of the license for Project No. 2004 is hereby revised by changing line 6 thereof to read "horsepower on the authorized installed capacity (38,485)."

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

ORDER ALLOWING WITHDRAWAL

(Issued February 11, 1964)

By Commission order of October 23, 1963, the Public Service Commissions of Indiana, Michigan, Wyoming, Maryland and Georgia, and the Pennsylvania Public Utility Commission were permitted to intervene in the above-entitled proceeding. Thereafter, on November 4, 1963, staff filed and served its direct testimony and exhibits. Respondent, Indiana & Michigan Electric Company, and all intervenors were given until December 9, 1963, to file and serve their direct testimony and exhibits. Upon motion filed December 11, 1963, the Public Service Commission of Indiana was given an extension of time, until December 30, 1963, to file its direct case and exhibits.

On December 20, 1963, the Public Service Commission of Indiana filed a notice of withdrawal from these proceedings alleging, in part, that it had not been given adequate time to prepare its direct testimony and exhibits. Similar notices of withdrawal were filed by the Public Service Commissions of Maryland and Wyoming on January 21 and 30, 1964, respectively.

The Commission orders:

The Public Service Commissions of Wyoming, Maryland and Indiana are hereby permitted to withdraw from any further participation in these proceedings, without prejudice to their continued participation in this proceeding if they desire to do so.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EXPENDITURES FOR POLITICAL PURPOSES—AMENDMENT OF ACCOUNT 426, OTHER INCOME DEDUCTIONS, UNIFORM SYSTEM OF ACCOUNTS, AND REPORT FORMS PRESCRIBED FOR ELECTRIC UTILITIES AND LICENSEES AND NATURAL GAS COMPANIES—FPC FORMS NOS. 1 AND 2, DOCKET NO. R-226

ORDER NO. 276-A

AMENDMENT TO ORDER REVISING ACCOUNT 426, OTHER INCOME DEDUCTIONS, AND ANNUAL REPORT FORMS

(Issued February 11, 1964)*

By order issued December 18, 1963, we prescribed, among other things, new schedules entitled "Expenditures for Certain Civic, Political and Related Activities" to be included in the annual reports (FPC Forms Nos. 1 and 2) required to be filed by electric utilities, licensees, and natural gas companies. Inadvertently we failed to include therein the required related amendment of the regulations to provide for the new schedules.

The Commission orders:

(A) Amend §§ 141.1(d) and 260.1(c), Chapter I of Title 18 of the Code of Federal Regulations, by inserting, to immediately precede the line "Common Utility Plant" appearing in each, a line reading "Expenditures for Certain Civic, Political and Related Activities."

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. G-14562 AND RP64-4; CONTINENTAL OIL COMPANY, DOCKET NOS. G-13680 AND G-17649; SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. G-13827 AND G-17625; NEWMONT OIL COMPANY, DOCKET NOS. G-13948 AND G-17765

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND IMPOSING REPORTING REQUIREMENTS

(Issued February 11, 1964)

On December 4, 1963, Tennessee Gas Transmission Company (Tennessee) filed a petition to amend our order of January 2, 1963, which issued certificates of public convenience and necessity to the applicants in Docket Nos. G-14562, G-13680, G-13827 and G-13948.[1]

The settlement proposal conditionally approved by the order of January 2 provided, *inter alia*, that the price to be paid to producers Continental Oil Company, Socony Mobil Oil Company, Inc. and Newmont Oil Company (collectively as MCN) shall be 19¢ per Mcf;[2] but in addition, Tennessee shall pay 1.625¢ per Mcf to an escrow agent as tax reimbursement to provide for the contingency of the producing acreage (Block 46 Field, Vermilion Area and Block 64 Field, East Cameron Area, Offshore Louisiana) being finally adjudicated as lying within the taxing jurisdiction of the State of Louisiana. By order issued August 7, 1963, in *Socony Mobil Oil Company, Inc., et al.*, Docket No. G–17625, *et al.*, 30 FPC 452, we required Tennessee to make special reports to the Commission in Docket No. RP64–4 concerning the status of the escrow account. Tennessee states in its petition to amend that recent investigation disclosed that the Block 64 Field is not within the area which is the subject of dispute between the State of Louisiana and the United States and, further, that this acreage is approximately 18½ miles from the shoreline of Louisiana and is unquestionably all Federal owned lands. Tennessee's petition was accompanied by a letter agreement executed by Tennessee and MCN in which MCN agree with Tennessee's request provided that they be allowed to file prospectively during the moratorium period for the 1.625¢ per Mcf tax reimbursement should the acreage be determined to be subject to such tax. Tennessee therefore requests that the Commission amend the January 2 order to:

---

*Published in the Federal Register on February 15, 1964, (29 F.R. 2494).

[1] *Tennessee Gas Transmission Company*, 29 FPC 4.

[2] All volumes expressed at 15.025 psia.

(1) Eliminate the requirement that Tennessee place 1.625¢ per Mcf in escrow for each Mcf delivered from the Block 64 Field.

(2) Provide that MCN shall have the right during the moratorium on future price changes, as set forth in said order, to file prospectively for an increase in price to 20.625¢ per Mcf if the acreage in the Block 64 Field is judicially determined to be within the taxing jurisdiction of the State of Louisiana.

Tennessee states that the Block 46 Field is in the disputed area and does not propose that it be relieved of the escrow and reporting requirements of the January 2 order insofar as they relate to that field. On January 2, 1964, Tennessee filed a copy of the escrow agreement and report of amounts paid in relating to the December 21, 1962, order[3] but stated that an escrow arrangement had not been made as to the January 2, 1963 order because of the pendency of the instant petition.

We agree with Tennessee that the instant proposal is more in the public interest than the tying up of funds in an escrow account for an indefinite period. Since the producers have agreed to give up the security for future payment of back taxes which the escrow arrangement would have provided, we shall grant the petition of Tennessee. We shall also amend the order of August 7, 1963, as amended on November 12, 1963,[4] to relieve Tennessee of the related reporting requirement for the Block 64 Field escrow account. We shall also extend the time for filing the escrow agreement and initial report pertaining to the Block 46 Field.

The Commission finds:

It is appropriate in carrying out the provisions of the Natural Gas Act that the Commission's order of January 2, 1963, in *Tennessee Gas Transmission Company*, 29 FPC 4 and the Commission's order of August 7, 1963 in *Socony Mobil Oil Company, Inc., et al.*, Docket No. G–17625, *et al.*, as amended on November 12, 1963, be amended as ordered below.

The Commission orders:

(A) The Commission's order of January 2, 1963, in *Tennessee Gas Transmission Company*, 29 FPC 4 is hereby amended to delete therefrom the requirement that Tennessee put into an escrow account 1.625¢ per Mcf for each Mcf delivered from the Block 64 Field, East Cameron Area, Offshore Louisiana.

---

[3] *Continental Oil Company*, 28 FPC 1090. This report, filed in Docket No. RP64–4, was also required by the order of August 7, 1963, *supra*.

[4] This order relieved Tennessee of a similar escrow requirement pertaining to the Block 62 Field, East Cameron Area, Offshore Louisiana.

(B) The Commission's order of August 7, 1963, in Socony Mobil Oil Company, Inc., *et al.*, Docket No. G-17625, *et al.*, as amended on November 12, 1963, is hereby further amended to delete therefrom the requirement that Tennessee file reports with the Commission relating to an escrow account with respect to the Block 64 Field, East Cameron Area, Offshore Louisiana.

(C) Ordering paragraph (I) of the Commission's order referred to in paragraph (B), *supra*, is hereby further amended to provide that the date on or before which Tennessee shall make the initial filing required therein relating to the Block 46 Field is February 28, 1964.

(D) MCN shall have the right during the moratorium period on future price changes, as set forth in the settlement proposal conditionally approved by the Commission's order referred to in paragraph (A), *supra*, to file prospectively for increases in prices to 20.625¢ per Mcf for sales from the Block 64 Field when and if the Block 64 Field is judicially determined to be within the taxing jurisdiction of the State of Louisiana.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP64-8

ORDER GRANTING MOTION

(Issued February 13, 1964)

On October 14, 1963, the Commission issued an order instituting an investigation into the justness and reasonableness of certain changes in Midwestern Gas Transmission Company's CD-2 Rate Schedule and suspending the effectiveness of the changed rate schedule for one day. The changed rate schedule increased the monthly minimum bill of Michigan-Wisconsin Pipe Line Company (the only CD-2 purchaser) from 75% to 87½% of the contract quantity. Paragraph (G) of the Commission order of October 14, 1963 directed Midwestern to file and serve "the material required to be filed for a major rate increase under Section 154.63 of the Commission's regulations under the Natural Gas Act."

Pursuant to another provision of the Commission's order, a prehearing conference was held before the Presiding Examiner designated to act in this case. Midwestern there stated its view that, because of the recent completion of the record in Docket No. RP61-19 *et al.*, (Section 5(a) proceedings involving both the Northern and Southern systems of Midwestern), no purpose would be served by requiring its submittal in this proceeding of the detailed cost of service data listed in Section 154.63. Our staff expressed its willingness to stipulate that if Midwestern were to supply certain specific additional information, it would be possible to dispense with the filing of the complete cost of service data required by Section 154.63. No party objected to this stipulation. Midwestern has supplied the information called for by the staff and in addition has submitted a tabulation purporting to show that specific exhibits and portions of the transcript in Docket No. RP61-19 *et al.*, supply the substance of most of the Statements required by Section 154.63.

At a subsequent session of the prehearing conference the Presiding Examiner directed Midwestern within ten days to file a motion for relief from further compliance with the provisions of paragraph (G) of the Commission order of October 14, 1963. On January 15, 1964, Midwestern filed such a motion. No responses have been filed by any other party. Since the parties are agreed that the material in the record of Docket No. RP61-19 *et al.* supplies the necessary cost of service data to the extent relevant to this proceeding, no purpose would now be served by requiring Midwestern's filing of each of the Statements called for in Section 154.63.

The Commission finds:

The Commission order of October 14, 1963 in the above proceeding should be amended as hereafter provided.

The Commission orders:

The order of October 14, 1963 in the above proceeding is hereby amended by deleting paragraph (G) therefrom.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7129

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued February 14, 1964)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Washington, Wyoming, California, Montana, and Idaho, with its principal business office at Portland, Oregon, filed an application on September 30, 1963, for authority pursuant to Section 204 of the Federal Power Act, to issue unsecured Promissory Notes in the aggregate principal amount of $45,000,000 outstanding at any one time. The Notes will be executed and delivered under and pursuant to a Credit Agreement, dated as of October 1, 1963. Under the Credit Agreement, Applicant has the right to borrow from, repay to and reborrow from the banks, and the respective banks are obligated to lend to Applicant, from time to time during the period March 31, 1964 to September 30, 1965, sums not exceeding in aggregate principal amount at any one time outstanding the amount set forth below opposite the names of the respective banks.

Morgan Guaranty Trust Company of New York	$15,750,000
The Chase Manhattan Bank	10,935,000
The First National City Bank of New York	5,850,000
Mellon National Bank and Trust Company	3,375,000
Continental Illinois National Bank and Trust Company of Chicago	2,520,000
Manufacturers Hanover Trust Company	2,520,000
Wells Fargo Bank	2,520,000
Harris Trust and Savings Bank	1,530,000

The afore-mentioned Credit Agreement provides that the Notes to be issued thereunder shall be dated the date of the borrowings evidenced thereby, shall mature eleven months after their dates or on September 30, 1965, whichever shall be earlier, and shall bear interest at a rate per annum equivalent to the prime commercial rate of interest charged by Morgan Guaranty Trust Company of New York from time to time. The Credit Agreement further provides for the payment to the banks of a commitment fee computed at the rate of ¼ of 1% per annum on unborrowed balances.

Applicant states that the funds obtained from the proposed issuance of Promissory Notes, together with funds available to it from internal sources, will be used to finance temporarily its construction program, the expenditures for which are estimated to be approximately $47,000,000 for 1964 and $41,000,000 for 1965. The principal items of expenditures for those years are described as follows: $4,825,000 for completion of the third unit at the Dave Johnston Steam Plant in 1964; $250,000 in 1964 and $3,190,000 in 1965 for the completion of additional transportation and mining facilities at the Dave Johnston Steam Plant; $2,200,000 toward the construction of the first unit at the Cherokee, Wyoming steam plant 24 miles west of Rawlins (total cost estimated at $33,750,000); $200,000 in 1965 toward the construction of a coal mine for the Cherokee Steam Plant (total cost estimated at $3,640,000); $3,400,000 in 1964 for the completion of the 230/500 kv transmission line from Stephens Butte, California to Keno, Oregon; $1,900,000 in 1964 for completion of a 230 kv transmission line from Oregon Basin, Wyoming to Thermopolis, Wyoming (To be operated initially at 115 kv); $2,550,000 in 1964 for completion of a 230 kv transmission line from Kemmerer, Wyoming to Treasureton, Idaho; $815,000 in 1965 for a 230 kv transmission line from Sinclair, Wyoming to Cherokee Steam Plant (also to be operated initially at 115 kv); $935,000 in 1964 for a 230 kv transmission line from Medford, Oregon to Grant's Pass, Oregon; $910,000 in 1964 for a 115 kv transmission line from Bly, Oregon to Lakeview, Oregon; $5,660,000 in 1964 and $8,050,000 in 1965 for new substations and conversion and additions to existing substations; $17,880,000 in 1964 and $18,480,000 in 1965 for additional distribution facilities; $2,370,000 in 1964 and $2,400,000 in 1965 for additions to steam heating, water and telephone utility systems; and $4,770,000 in 1964 and $4,890,000 in 1965 for other plant facilities, surveys, and investigations.

The initial borrowings under the new Credit Agreement, beginning on March 31, 1964, will cover an amount sufficient to pay and discharge any notes outstanding as of March 31, 1964, if any, under an earlier Credit Agreement dated as of August 15, 1961 (Docket No. E-7011) as supplemented by the Letter Agreement dated as of August 14, 1962 (Docket No. E-7052).

The Applicant states that the proposed Notes will be retired through the sale of permanent securities, but that the timing and method of sale of such permanent securities are not presently determinable. Applicant states that it presently expects the permanent securities to be in the nature of long-term debt.

Written notice of the application has been given to the Public Utilities Commission of California, the Public Utilities Commission of Idaho, the Public Service Commission of Montana, the Utilities and Transportation Commission of Washington, the Public Service Commission of Wyoming, the Public Utility Commissioner of Oregon and to the Governors of each of those States. Notice has also been given by publication in the Federal Register on October 16, 1963 (28 F.R. 11087), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before October 25, 1963, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

On November 7, 1963, the Washington Utilities and Transportation Commission, on October 18, 1963 the Public Service Commission of Montana, and on October 17, 1963 the Idaho Public Utilities Commission approved the proposed issuance of Promissory Notes by Applicant in the manner and for the purposes described above. On October 29, 1963 the California Public Utilities Commission approved the proposed issuance of Notes with the following restrictions:

> No authorization is herein granted to applicant to finance the cost of transmission facilities which cross federal lands, unless and until applicant first shall have obtained the approval of the proper agency of the government of the United States. No part of the securities herein authorized shall be used to finance the 230 kv line from Klamath Falls, Oregon, south into California to interconnect with the system of the Pacific Gas and Electric Company (Keno, Oregon to Stephens Butte, California).

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued March 28, 1962, Pacific Power & Light Company, in Docket No. E-7025.

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $45,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $45,000,000 all as described above, will be in excess of 5% of the par value of the other securities of Applicant, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of Promissory Notes, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance by Applicant of Promissory Notes in the aggregate principal amount of $45,000,000, outstanding at any one time, including all notes heretofore authorized, upon the terms and conditions and for the purposes set forth in the application as amended, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant hereto, being not later than September 30, 1965.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NOS. 2287 AND 2288

ORDER MODIFYING ORDERS ON REHEARING

(Issued February 14, 1964)

By our order issued July 2, 1962, we granted the applications for rehearing filed by Public Service Company of New Hampshire (Applicant) of our orders of April 25, 1962 issuing licenses to Applicant for constructed Project Nos. 2287 and 2288 on the Androscoggin River in the State of New Hampshire. The applications for rehearing took exception solely to Article 20 of each license order which provides for possible future obligation of Applicant in regard to fish and wildlife resources. By our order issued July 2, 1962 we granted rehearing limited to the issues raised by the applications.

Upon consideration of the aforesaid applications and the allegations in support thereof, *the Commission finds:*

It will not be inconsistent with the public interest to modify our orders of April 25, 1962 in Project Nos. 2287 and 2288 as hereinafter provided.

The Commission orders:

(A) The orders issued April 25, 1962 in Project Nos. 2287 and 2288 are hereby modified by eliminating Article 20 of each license order and substituting in lieu thereof the following new Article 20:

Article 20. The Licensee shall, for the conservation and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(B) The aforementioned Commission orders issued April 25, 1962, as modified by this order, shall be accepted by the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WISCONSIN VALLEY IMPROVEMENT COMPANY, PROJECT NO. 2113

ORDER APPROVING PROJECT EXHIBITS AND FIXING ANNUAL CHARGES

(Issued February 17, 1964)*

On various dates between January 29, 1962 and April 17, 1963, Wisconsin Valley Improvement Company, licensee for Project No. 2113, filed for Commission approval 22 new project exhibits and by letter authorized Commission staff to revise 5 exhibits already approved as part of the license for the project which affects public lands of the United States and is situated on the Wisconsin River and headwater tributaries, Wisconsin. The staff revisions have been made.

---

*Modified on rehearing, July 9, 1964, 32 FPC 92.

Certain of the subject exhibits permit a Commission determination of United States lands now used for project purposes and an assessment of annual charges for such use.[1] Others of the subject exhibits show modifications, additions, replacements and repairs to existing project structures which permit more efficient project operations.

The license for the project was issued on May 28, 1959, for a period of 50 years, effective as of August 1, 1943.

The Commission finds:

(1) The following described exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit: J-2 (FPC No. 2113-54).

Exhibit: K-2 (FPC No. 2113-48), K-9 (FPC No. 2113-55), K-10 (FPC No. 2113-56).

Exhibit: L-2 (FPC No. 2113-49), L-3 (FPC No. 2113-50), L-4 (FPC No. 2113-51), L-10b (FPC No. 2113-52), L-11 (FPC No. 2113-65), L-14 (FPC No. 2113-57), L-15 (FPC No. 2113-58), L-16 (FPC No. 2113-59), L-17 (FPC No. 2113-60), L-18 (FPC No. 2113-61), L-19 (FPC No. 2113-62), L-20 (FPC No. 2113-66), L-24 (FPC No. 2113-63), L-24a (FPC No. 2113-64), L-26 (FPC No. 2113-46), L-27a (FPC No. 2113-47), L-28 (FPC No. 2113-53).

Exhibit M: (Revised 1962) "Gate Hoisting Equipment," consisting of two typewritten pages.

(2) The following described exhibits, now part of the license and which have been revised by the staff at the authorization of the licensee, should be reapproved as part of the license for the project.

Exhibit: K-7 (FPC No. 2113-36), K-15 (FPC No. 2113-13), K-16 (FPC No. 2113-14).

Exhibit: L-7 (FPC No. 2113-4), L-9 (FPC No. 2113-42).

(3) The following described exhibits, now part of the license and which have been superseded, should be eliminated from the license for the project:

Exhibit: L-4 (FPC No. 2113-37), L-10b (FPC No. 2113-44), L-11 (FPC No. 2113-39), L-20 (FPC No. 2113-35), L-24 (FPC No. 2113-18), L-26 (FPC No. 2113-20), L-28 (FPC No. 2113-22).

Exhibit M: Signed June 6, 1952.

(4) The annual charges under the license for recompensing the United States for the use, occupancy and enjoyment of its lands are reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2113.

(B) The exhibits described in finding (2) above are hereby reapproved as part of the license for the project.

(C) The exhibits described in finding (3) above are hereby eliminated from the license for the project.

---

[1] While certain land exhibits have received Commission approval, Article 32 of the license reserves to the Commission the right to determine at a later date annual charges for the use of Government lands.

(D) Subparagraphs (a) and (b) of finding (3) of the license for the project are hereby modified to read as follows:

(3) The project consists of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States: such project area and project boundary being more specifically shown and described in part by certain exhibits which formed part of the application for license and which are designated as follows:

Exhibit J–1: (FPC No. 2113–1) "General Map of Reservoir System," J–2: (FPC No. 2113–54) "Rainbow and Pickerel Reservoirs," J–3: (FPC No. 213–8) "Willow Reservoir," J–4: (FPC No. 2113–9) "Rice Reservoir," J–5: (FPC No. 2113–10) "Spirit Reservoir," J–6: (FPC No. 2113–11) "Eau Pleine Reservoir," K–1: (FPC No. 2113–12) "Vieux Desert Reservoir," K–2: (FPC No. 2113–48) revised, "Twin Lakes Reservoir," K–3: (FPC No. 2113–40) "Little Deerskin and Buckatahpon Reservoirs," K–4: (FPC No. 2113–30) "Long-on-Deerskin Dam," K–5: (FPC No. 2113–2) "Lower Nine Mile and Seven Mile Reservoirs," K–6: (FPC No. 2113–41) "Burnt Rollways Reservoir," K–7: (FPC No. 2113–36) revised, "Sugar Camp Reservoir," K–8: (FPC No. 2113–3) "Big and Little St. Germain Reservoirs," K–9: (FPC No. 2113–55) "Rainbow and Pickerel Reservoirs," K–10: (FPC No. 2113–56) "Pickerel Lake Dam," K–11: (FPC No. 2113–32) "North Pelican Dam," K–12: (FPC No. 2113–26) "South Pelican Reservoir," J–K–13: (FPC No. 2113–28) "Minocqua Reservoir," K–14: (FPC No. 2113–31) "Squirrel Lake Dam," K–15: (FPC 2113–13) revised, "Willow Reservoir," K–16: (FPC No. 2113–14) revised, "Rice Reservoir," K–17: (FPC No. 2113–15) "Spirit Reservoir," K–18: (FPC No. 2113–16) "Eau Pleine Reservoir."

(b) Principal project works comprising:

The following 21 controlled natural lakes and reservoirs located on the headwaters of the Wisconsin River; Lac Vieux Desert, Twin Lakes, Buckatahpon, Long-on-Deerskin, Little Deerskin, Seven Mile, Lower Nine Mile, Burnt Rollways, Sugar Camp, Little St. Germain, Big St. Germain, Pickerel Lake, Rainbow, North Pelican, South Pelican, Minocqua, Squirrel Lake, Willow, Rice, Spirit and Eau Pleine, with controlled outlet gates equipped with gate hoisting equipment at the mouth of each lake and reservoir.

The location, nature and character of the above structures being more specifically shown on and described in part by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L–1 (FPC No. 2113–17) "Plans and Cross Section of Vieux Desert Dam and Gate," L–2 (FPC No. 2113–49) "Plans and Cross Sections of Twin Lakes Dam and Gate," L–3 (FPC No. 2113–50) "Bridge and Reinforcing Details at Twin Lakes Dam," L–4 (FPC No. 2113–51) "Plans and Cross Sections of Buckatahpon Dam and Gate," L–5 (FPC No. 2113–33) "Long-on-Deerskin Dam," L–6 (FPC No. 2113–38) "Gate and Dam Plans Little Deerskin Dam," L–7 (FPC No. 2113–4) revised, "Plans and Cross Sections of Seven Mile Dam and Gate," L–8 (FPC No. 2113–5) "Plans and Cross-Section of Lower Nine Mile Dam and Gate," L–9 (FPC No. 2113–42) revised, "Plan and Cross Sections of Burnt Rollways Dam and Marine Railway," L–10a (FPC No. 2113–43) "Burnt Rollways Marine Railway and Gate Details," L–10b (FPC No. 2113–52) revised, "Plans of Burnt Rollways Boat Lift," L–11 (FPC No. 2113–65) "Plans and Cross Sections of Sugar Camp Dam and Gate," L–12 (FPC No. 2113–6) "Gate and Dam Plans of Little St. Germain Dam," L–13 (FPC No. 2113–7) "Gate and Dam Plans of Big

St. Germain Dam," L-14 (FPC No. 2113-57) "Plan and Cross Sections of Dam, & Details of Gate at Pickerel Lake," L-15 (FPC No. 2113-58) Plans and Cross Sections of Pickerel Canal Dam and Gate (Auxiliary Outlet)," L-16 (FPC No. 2113-59) "Plans and Cross-Sections of Gilmore Control Dam & Gate (Auxiliary Outlet)," L-17 (FPC No. 2113-60) "Plan and Cross Sections of Rainbow Dam," L-18 (FPC No. 2113-61) "Plans and Cross Sections of Dikes and Bridge at Rainbow Reservoir," L-19 (FPC No. 2113-62) "Details of Roll Gates and Deep Gates at Rainbow Dam," L-20 (FPC No. 2113-66) "Gate and Dam Plans of North Pelican Dam," L-21 (FPC No. 2113-27) "Gate and Dam Plans of Pelican Dam," L-22 (FPC No. 2113-29) "Gate and Dam Plans of Minocqua Dam," L-23 (FPC No. 2113-34) "Squirrel Lake Dam," L-24 (FPC No. 2113-63) revised, "Plan and Cross Section of Willow Dam," L-24a (FPC No. 2113-64) "Piling Diagram of Willow Dam," L-25 (FPC No. 2113-19) approved in part, "Details of Roll Gate and Deep Gates at Willow Dam," L-26 (FPC No. 2113-46) revised, "Plans and Cross Sections of Rice Dam," L-27 (FPC No. 2113-21) "Details of Tainter Gates of Rice Dam," L-27a (FPC No. 2113-47) "Details of Tainter Gate at Rice Dam," L-28 (FPC No. 2113-53) revised, "Plans and Cross Sections of Spirit Dam and Gates," L-29 (FPC No. 2113-23) "Plans and Cross Sections of Dikes at Spirit River Flowage," L-30 (FPC No. 2113-24) "Plan and Sections of Big Eau Pleine Dam," L-31 (FPC No. 2113-25) only insofar as it shows the "Gate Plans of Big Eau Pleine Dam," L-31a (FPC No. 2113-45) "Gate Plans and Cross Sections of the Big Eau Pleine Dam".

Exhibit M: (Revised 1962) "Gate Hoisting Equipment," consisting of two typewritten pages.

(E) Article 32 of the license for the project is hereby revised to read as follows:

Article 32. The Licensee shall pay to the United States the following annual charges, effective as of August 1, 1943:

(i) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands (101.30 acres) the sum of $243.12.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP64-93

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 18, 1964)

On October 16, 1963, as amended on October 31 and November 7, 1963, Alabama-Tennessee Natural Gas Company (Applicant) filed in Docket No. CP64-93 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the modification and operation of certain existing facilities and the sale and delivery of natural gas to Muscle Shoals Natural Gas Corporation (Muscle Shoals), an existing customer, for resale by the latter to the U.S. Army Muscle Shoals Phosphate

Development Works, Muscle Shoals, Alabama, all as more fully set forth in the application, as amended.

The existing facilities to be used for the proposed sale are approximately two miles of 3- and 4-inch pipeline and metering and regulating equipment authorized by the Commission's order of November 7, 1951, in Docket No. G–1774. Said facilities were used until July 1, 1957, for deliveries to a phosphate plant of the U.S. Army Corps in Muscle Shoals. Applicant proposes herein to modify the existing meter station at an estimated cost of $4,100, which cost will be financed from cash on hand.

Applicant proposes to sell to Muscle Shoals, under Applicant's FPC Gas Rate Schedules G–1 and I–1, up to 600 Mcf per day of additional firm and up to 600 Mcf per day of interruptible natural gas.

On November 21, 1963, Applicant was granted a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendments and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, Alabama-Tennessee Natural Gas Company, a Delaware corporation having its principal place of business in Florence, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 2, 1948, in Docket No. G–585 (7 FPC 257).

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Alabama-Tennessee Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as amended, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

BROWN COMPANY, PROJECT NO. 2300

ORDER MODIFYING ORDER ON REHEARING

(Issued February 18, 1964)

By our order issued September 7, 1962 we granted the application for rehearing filed by Brown Company (Applicant) of our order issued July 19, 1962 issuing a license to Applicant for constructed Project No. 2300 on the Androscoggin River in Shelburne, New Hampshire. The application for rehearing took exception solely to Article 20 of the license order which provides for possible future obligation of Applicant in regard to fish and wildlife resources. By our order issued September 7, 1962 we granted rehearing limited to the issues raised by the application.

Upon consideration of the aforesaid application and the allegations in support thereof, *the Commission finds:*

It will not be inconsistent with the public interest to modify our order of July 19, 1962 in Project No. 2300 as hereinafter provided.

The Commission orders:

(A) The order issued July 19, 1962 is hereby modified by eliminating Article 20 therefrom and substituting in lieu thereof the following new Article 20:

Article 20. The Licensee shall, for the conservation and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(B) The aforementioned Commission order issued July 19, 1962, as modified by this order, shall be accepted by the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-99

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 18, 1964)

On October 25, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-99 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation by Applicant of a mainline tap and meter station, the sale and delivery of natural gas to Washington Natural Gas Company (Washington Natural) and The Washington Water Power Company (Water Power) by means of such facilities and authorizing, as to Applicant's interest therein, certain other facilities to be constructed and operated by Water Power, all for the purpose of testing and evaluating an underground storage reservoir in the Jackson Prairie area near Chehalis, Lewis County, Washington, all as more fully set forth in the application.

The application shows that Applicant, Washington Natural and Water Power have jointly undertaken to test and evaluate the storage area. Further, the parties have agreed that Water Power shall operate the storage project during conduct of the testing activities and that each party shall share during said period, on a one-third undivided basis, all costs and obligations associated with the project, including costs in the amount of $403,000 heretofore expended on necessary activities preliminary to testing.

Applicant proposes to construct and operate the following facilities:

A mainline tap and a 4½-inch O.D. standard orifice-type, two-way meter station, together with necessary appurtenances, on Applicant's 26-inch O.D. mainline in Lewis County, Washington.

Applicant also seeks authorization, as to its interest therein, with respect to the following facilities to be constructed by Water Power:

(1) A 4½-inch O.D. pipeline, approximately 2.0 miles in length, together with necessary appurtenances, extending from the outlet of the meter station described above to the compressor station described in (2) below and thence to two test injection wells.

(2) A portable type compressor station, consisting of two 150 horsepower gas engine-driven reciprocating compressor units, together with necessary appurtenances.

Applicant states further that approximately 600,000 Mcf of natural gas is proposed to be injected for test purposes and that such quantity will be supplied by Applicant. Of the 600,000 Mcf, 200,000 Mcf will be sold and delivered for the account of Washington Natural and a like quantity for Water Power. The remaining 200,000 Mcf will be Applicant's share of the total quantity.

The total cost of testing, including the amount of $403,000 heretofore expended, is estimated at $965,400, which cost will be shared equally by all parties. Applicant will finance its share of the total estimated cost out of current working funds, supplemented, as necessary, by short-term bank loans.

On December 13, 1963, Applicant was granted a temporary certificate authorizing the subject proposals.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities to be constructed and operated by Applicant hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation

thereof and the transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The facilities to be constructed and operated by Water Power hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce and with respect to Applicant's interest therein are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the proposed transportation and sales of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) The certificate of public convenience and necessity hereinafter issued to Applicant should be made subject to the following conditions:

(a) The inventory of gas in the storage reservoir should not exceed 600,000 Mcf of natural gas (at 14.73 psia).

(b) Quarterly reports containing the following information should be submitted by Applicant to the Commission:

1. The volume of gas injected into the Skookumchuck formation.
2. The volume of gas present in the Skookumchuck formation.
3. The amount of leakage, if any, from the Skookumchuck formation.
4. The maximum daily injection volume experienced during the reporting interval.
5. The shut-in wellhead pressure for each well.
6. Subsea elevation of the water level in each well.
7. Location and extent of the gas bubble, or bubbles, plotted on a structure map of the storage reservoir.
8. A brief discussion of current operations.

(c) The certificate authorization hereinafter granted should terminate at 12:01 a.m., August 1, 1964.

(d) The certificate authorization hereinafter granted should be without prejudice to a determination by the Commission of its jurisdiction over the joint operations of Washington Natural Gas Company and The Washington Water Power Company in the event that operation of the reservoir as a storage field proves to be feasible and gas is injected, stored and delivered from the reservoir.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities; to sell and deliver natural gas; and, with respect to Applicant's interest therein, to share in the cost of the facilities to be constructed and operated by Water Power, all solely for the purpose of testing an underground reservoir, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable

Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized to be constructed by Applicant shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 3 months from the date on which this order issues.

(D) The certificate of public convenience and necessity issued to Applicant in paragraph (A) above is hereby made subject to the following conditions:

(a) The inventory of gas in the storage reservoir shall not exceed 600,000 Mcf of natural gas (at 14.73 psia).

(b) Quarterly reports containing the following information shall be submitted by Applicant to the Commission:

1. The volume of gas injected into the Skookumchuck formation.
2. The volume of gas present in the Skookumchuck formation.
3. The amount of leakage, if any, from the Skookumchuck formation.
4. The maximum daily injection volume experienced during the reporting interval.
5. The shut-in wellhead pressure for each well.
6. Subsea elevation of the water level in each well.
7. Location and extent of the gas bubble, or bubbles, plotted on a structure map of the storage reservoir.
8. A brief discussion of current operations.

(c) The certificate authorization granted in paragraph (A) above shall terminate at 12:01 a.m., August 1, 1964.

(d) The certificate authorization granted in paragraph (A) above is without prejudice to a determination by the Commission of its jurisdiction over the joint operations of Washington Natural Gas Company and The Washington Water Power Company in the event that operation of the reservoir as a storage field proves to be feasible and gas is injected, stored and delivered from the reservoir.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-134

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued February 18, 1964)

On December 9, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64-134 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act, for permission and approval to abandon certain facilities, and for a certificate of public convenience and necessity authorizing the Applicant to install and operate facilities for the purpose of effecting certain realignments of facilities utilized in it's Driver, Midkiff, TXL, Emma and Tunstill Compressor Stations for the acquisition of natural gas from several Permian Basin sources, all as more fully set forth in the application on file with the Commission.

Applicant proposes to (a) abandon by removal two (2) 2000 Hp gas-engine driven compressor units and appurtenances in the Driver Station and to relocate the same in its TXL Station, and one (1) 2000 Hp gas-engine driven compressor unit and appurtenances in it's Midkiff Station and to relocate the same in its Tunstill Station; (b) install one (1) 330 Hp compressor unit and turbo charging kit in the Tunstill Station; (c) make modifications in and additions to its TXL meter station and relocate the same on the suction side of the TXL Compressor Station; (d) make compressor cylinder modifications on the two (2) 153 HP compressor units in it's Emma Station; (e) install and operate additional gas dehydration facilities to provide an increase of 9000 Mcf per day in the inlet capacity of its Tunstill Dehydration Plant under Section 2.55(a) of the Commission's General Policy and Interpretations; and (f) increase the operating pressure of the pipeline utilized to transport gas from the South Andrews and Emma Fields to Shell Oil Company's TXL Plant.

Applicant states the proposed realignment of facilities is required due to changed operating conditions in the northern part of the Spraberry Field in Midland and Glasscock Counties, Texas, and the need for additional compressor capacity in the named stations.

The Commission by letter dated January 2, 1964, granted the Applicant temporary authorization to construct and operate one 333 Hp compressor unit and turbo charging kit in the Tunstill Station.

The estimated cost of the proposed facility rearrangements and additions is $1,318,500, which will be defrayed from current working funds, supplemented by short-term bank loans if necessary.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities proposed to be abandoned by removal, as hereinbefore described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

(4) The facilities proposed to be installed and operated, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the installation and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The installation and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application filed in this proceeding, are hereby granted to Applicant.

(B) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to install and operate the proposed facilities, as more fully described in the application filed in this proceeding, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP64-10

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 18, 1964)

On July 16, 1963, Lone Star Gas Company (Applicant) filed in Docket No. CP64-10 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and for permission and approval to abandon other facilities, as follows:

(1) To construct and operate approximately 30.4 miles of 6-inch natural gas transmission pipeline A-26 extending from a point on Applicant's existing 18-inch Line A near the City of Quanah in Hardeman County, Texas, northerly across the Red River to a point approximately 4 miles west of the Town of Eldorado in Jackson County, Oklahoma, and thence northwesterly to Applicant's existing city gate measuring station serving the Town of Hollis in Harmon County, Oklahoma;

(2) To construct and operate approximately 4.3 miles of 4-inch natural gas transmission pipeline A-26-1 extending from a point on proposed 6-inch line A-26 easterly to Applicant's existing city gate measuring station serving the Town of Eldorado in Jackson County, Oklahoma;

(3) To abandon by removal and salvage Line 71-30, consisting of approximately 10.64 miles of 4-inch pipeline together with two river crossings of 0.16 miles of 3-inch and 1.86 miles of 2-inch pipeline extending from Line A near the City of Quanah in Hardeman County, Texas, to the existing city gate measuring station serving the Town of Eldorado in Jackson County, Oklahoma;

(4) To abandon by removal and salvage approximately 5.39 miles of 6-inch Line 71-37 extending from Line 71 to the Dodson tap for Line 74-1 in Collingsworth County, Texas;

(5) To abandon the Shamrock No. 2 Compressor Station in the East Panhandle Field together with approximately 12.57 miles of 16-inch Line 71 extending from the outlet of said compressor station to the Samnorwood tap for Line 71–36, in Collingsworth County, Texas, the initial 1.68 miles of said 16-inch line to be sold and transferred to Warren Petroleum Corporation (Warren) for use as a gathering facility in the area and remaining 10.89 miles of said 16-inch line together with the Shamrock No. 2 Compressor Station to be removed and salvaged;

(6) To abandon the operation of that portion of Line 71 remaining north of the Dodson-Hollis tap for Line 71–37 in Collingsworth County, Texas, for the transportation of natural gas in interstate commerce, said facility to be thereafter supplied from Applicant's Line U with gas produced, transported, sold, and consumed entirely within the State of Texas;

all as more fully set forth in the application which is on file with the Commission and open to public inspection.

The proposed construction and abandonments constitute a realignment of facilities in order that Applicant may continue to render effective natural gas service to its existing markets in the Texas Panhandle and Western Oklahoma area, which realignment is made necessary by the fact that the supply of natural gas available to Applicant in the East Panhandle Field, Wheeler County, Texas, has declined to such an extent that the continuation of service therefrom is unwarranted. The abandonment of facilities as proposed will not result in the abandonment or diminution of natural gas service from Applicant's transmission pipeline system to any city, town or community, and will affect only 53 right-of-way customers who cannot thereafter be served. Applicant has arranged to dispose of its purchase contracts covering producing wells in the East Panhandle Field to Warren who will continue to purchase gas under such contracts, or under replacement contracts, resulting only in a substitution of purchasers and no abandonment of service with respect to such contracts and suppliers.

Applicant estimates the total cost of the proposed new natural gas pipeline transmission facilities at $459,900. The cost of removing the transmission facilities to be abandoned is estimated at $78,500, leaving a net salvage value in recoverable material of $188,610. All costs will be paid out of funds on hand.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G–442 (4 FPC 565).

(2) The facilities to be constructed as hereinbefore described, all as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The facilities to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are used in the trans-

portation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the abandonment thereof is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) The abandonment proposed by Applicant is permitted by the public convenience and necessity, and an order approving same should be issued as hereinafter ordered.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lone Star Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(C) Applicant shall advise the Commission of the date of the abandonment of the facilities within 10 days of the date thereof.

(D) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(E) The facilities authorized by paragraph (A) above shall be constructed and placed in actual operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE MANUFACTURERS LIGHT & HEAT COMPANY, NEW YORK STATE NATURAL GAS CORPORATION, AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP64-59

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 18, 1964)

On September 9, 1963, The Manufacturers Light & Heat Company, New York State Natural Gas Corporation, and Texas Eastern Transmission Corporation (Applicants), filed in Docket No. CP64-59 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the exchange of natural gas under the terms of an exchange agreement August 22, 1963, by and between New York Natural, Texas Eastern, and Manufacturers, including the redelivery thereof to New York Natural, by Texas Eastern, for the account of Manufacturers, and for the construction and operation of approximately 3.25 miles of 6-inch pipeline and appurtenant facilities by New York Natural in Mann Township, Bedford County, Pennsylvania, all as more fully set forth in the application on file with the Commission.

New York Natural and Manufacturers have entered into operating agreements providing for the joint development and operation of oil and gas leases in Bedford County, Pennsylvania, and will share equally the cost of constructing and operating the proposed pipeline (to be operated by New York Natural) at an estimated construction cost of $77,530, including appurtenant facilities needed at the Artemas Connection. These costs will be financed from funds on hand by both companies.

Under the proposed exchange agreement, which provides for the exchange on a gas-for-gas basis, gas will be delivered into Manufacturers Line No. 1804 at the Artemas Connection. Texas Eastern will deliver quantities of gas equivalent to New York Natural's share of the covered production at existing interconnections of Texas Eastern's pipelines with pipelines of New York Natural in Pennsylvania, and will deduct equivalent quantities of gas from its deliveries to Manufacturers at existing delivery points in Pennsylvania, to offset the quantities delivered to New York Natural for the account of Manufacturers.

The Commission granted Applicants a temporary certificate on October 11, 1963. The requested facilities have been installed, and were placed in operation on October 15, 1963.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, The Manufacturers Light & Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G-593, *et al.* (4 FPC 821).

(2) Applicant, New York State Natural Gas Corporation, a New York corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 27, 1942, in Docket No. G-312 (3 FPC 844).

(3) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G-1089 (8 FPC 228).

(4) The proposed exchange and delivery of natural gas between the Applicants, and the construction and operation of facilities for the transportation and sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the joint application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed exchange and delivery of natural gas, and the construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicants, are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the three Applicants in this proceeding, jointly, authorizing the exchange and delivery of natural gas as hereinbefore described, the construction of facilities by New York Natural and Manufacturers, and the operation thereof by New York Natural, as more fully described in the joint application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicants compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP64-90

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 18, 1964)

On October 10, 1963, as supplemented November 13, 1963, Transwestern Pipeline Company (Applicant) filed in Docket No. CP64-90 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a 660 horsepower compressor and station on its 8-inch Stratford lateral and 5.2 miles of 8-inch pipeline along the Stratford lateral line, all as more fully described in the application.

Applicant states that the proposed facilities are required to enable it to receive into its transmission system daily contract volumes of gas supply, as well as variable volumes received from sources that are subject to allowable limitations.

Applicant anticipates increased demands by its present customers during the winter season of 1963-64.

The total estimated cost of the proposed facilities is $369,000.

By letter dated December 16, 1963, Applicant was granted a temporary certificate to construct the proposed facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G–14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct and operate the proposed facilities, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64–142

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 18, 1964)

On December 19, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64–142 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove a meter and regulator station located in Jasper County, Texas, used to serve the sawmill of Sidney H. Dixon (Dixon).

Dixon has advised Applicant that termination of the service agreement between them is desired, effective as of January 1, 1964, because another source of fuel has been located. The facilities to be abandoned are utilized directly in connection with this single customer and will not be required for any other service.

The original cost of the facilities to be abandoned and removed was $728.43. After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant United Gas Pipe Line Company, of the facilities hereinbefore described, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of removal of said facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. G–2214

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 19, 1964)

On November 21, 1963, Cities Service Gas Company (Applicant) filed an application to amend further the Commission's order in Docket No. G–2214 issued September 25, 1953, as amended March 12, 1962, by authorizing Applicant to construct and operate certain facilities, replacing and reclaiming certain existing facilities, and to transport and deliver, on an interruptible basis, up to a maximum of 1,701,043 Mcf (at 14.73 psia) of natural gas annually to Farmers Chemical Company (Farmers)* in lieu of the presently authorized interruptible annual maximum volume of 338,154 Mcf (at 14.73 psia), all as more fully set forth in the application to amend.

---

*Formerly Missouri Farmers' Association, Inc.

The order of September 25, 1953, authorized Applicant to construct and operate certain facilities in Cherokee County, Kansas, and in Jasper County, Missouri, in order to sell and deliver natural gas, on an interruptible basis, to the Missouri Farmers' Association, Inc., now Farmers, to be utilized by Farmers at its fertilizer plant near Empire City, Kansas. Said order limited deliveries of natural gas to 182,077 Mcf annually (at 14.73 psia). The order of March 12, 1962, authorized an increase in deliveries to 338,154 Mcf annually (at 14.73 psia).

Applicant has been advised by Farmers that the latter again intends to expand its Empire City plant and, therefore, will need the requested increased deliveries of natural gas.

Specifically, Applicant proposes to construct and reclaim the following facilities in order to make the requested increased deliveries:

Replace approximately 2.07 miles of the present Farmers 3-inch pipeline with 6-inch pipeline beginning at a point of connection with Applicant's Galena 10-inch pipeline in Cherokee County, Kansas, and extending eastwardly to the terminus of the present 3-inch pipeline at a point in Jasper County, Missouri.

The estimated cost of the proposed facilities is $26,650. Said cost reflects the cost of removal and salvage credit for the facilities to be replaced and reclaimed. The estimated cost will be financed from treasury cash.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 21, 1964 (29 F.R. 509). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order in Docket No. G-2214 issued September 25, 1953, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order in Docket No. G-2214 issued September 25, 1953, as amended, be and the same is hereby further amended by authorizing Applicant to construct and operate the proposed facilities, replacing and reclaiming certain existing facilities, and to transport and deliver, on an interruptible basis, up to a maximum of 1,701,043 Mcf (at 14.73 psia) of natural gas annually to Farmers Chemical Company in lieu of the presently authorized interruptible annual maximum volume of 338,154 Mcf (at 14.73 psia), all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. RP64-1

ORDER DISMISSING INVESTIGATION AND TERMINATING PROCEEDING

(Issued February 19, 1964)

On the basis of the data available to the Commission in the Annual Form 2 Report filed by Colorado Interstate Gas Company (Colorado Interstate) for the year 1962, it appeared that Colorado Interstate's earnings for that year might be excessive. Therefore, by order of July 3, 1963, the Commission instituted an investigation to determine whether, with respect to any transportation or sale of natural gas, subject to the jurisdiction of the Commission, made or proposed to be made by Colorado Interstate, any of the rates, charges, or classifications demanded, observed, charged or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, might be unjust, unreasonable, unduly discriminatory, or preferential.

For the purpose of expediting that investigation, the order required Colorado Interstate to report cost and revenue data in conformity with Subsection (f) of Section 154.63 of the Commission's regulations under the Natural Gas Act (except statements N and P). Pursuant to the order of July 3, 1963, Colorado Interstate filed on September 3, 1963, such a report for the calendar year 1962, adjusted for changes in revenues and costs known, measurable with reasonable accuracy and effective prior to October 1, 1963.

An examination and analysis by the Commission of the submitted data reveals that, *inter alia*, Colorado Interstate as of April 30, 1963, experienced reduced revenues due to a loss of certain short-term sales to El Paso Natural Gas Company and Cities Service Gas Company. Since the bulk of the natural gas sold to these short-term customers came from Colorado Interstate's own low cost production, the concomitant decrease in the cost of service was relatively minor, and there resulted a major change in the company's earnings situation. The Commission has reevaluated Colorado-Interstate's past and present earnings and has determined that further investigation of its costs and revenues for the test year 1962 is not warranted. Accordingly this proceeding should be terminated.

This termination does not constitute approval by the Commission of the data or any principles underlying the data submitted by Colorado Interstate nor is this order to be construed by any party as a waiver of the Commission's authority under the Natural Gas Act to investigate at any time after the date of issuance of this order matters that may affect the reasonableness of Colorado Interstate's rate and return.

The Commission finds:

The investigation of Colorado Interstate Gas Company should be dismissed and the proceeding in Docket No. RP64–1 should be terminated.

The Commission orders:

The investigation of Colorado Interstate Gas Company is hereby dismissed and the proceeding in Docket No. RP64–1 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NEVADA POWER COMPANY, PROJECT NO. 2321

ORDER ISSUING LICENSE (MINOR)

(Issued February 19, 1964)

Application was filed on September 17, 1962 by Nevada Power Company, (Applicant) of Elko, Nevada, for a license under Section 4 (e) of the Federal Power Act (Act) for constructed minor Project No. 2321, known as the Lamoille Canyon Project, located on Lamoille Creek, a tributary of the Humboldt River, in Elko County, Nevada, and affecting lands of the United States within the Humboldt National Forest and other lands of the United States.

The existing hydroelectric plant, structures, and waterways, built in 1913, were for the most part rehabilitated in 1941 by the Elko-Lamoille Power Company which owned and operated the project until February 1960 when title was transferred to Applicant. The plant has been operating under a Final Power Permit issued by the Department of Agriculture to Applicant's predecessor on March 21, 1914. It appears that a 25-year license will be ample for this project which, as shown above, has been in operation for many years.

The Department of the Interior has reported that the project has no material effect on fish and wildlife resources and offered no objection to the granting of a license for the project.

The Department of Agriculture has stated that the terms and conditions usually included by the Commission in licenses for such projects would be adequate for the protection and utilization of the Humboldt National Forest and offered no objection to the granting of a license for the project.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Nevada, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(2) The project affects lands of the United States within the Humboldt National Forest and other lands of the United States.

(3) No conflicting application is before the Commission.

(4) The issuance of a license for the project as hereinafter provided will not interfere or be inconsistent with any reservation or with the purposes for which the Humboldt National Forest was created or acquired.

(5) The project does not affect a Government dam.

(6) The issuance of a license for the project will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(7) The installed capacity of the project is 200 horsepower, and the power generated by the project is used for public utility purposes in the City of Elko and surrounding areas.

(8) The amount of annual charges to be paid by the licensee for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy, and enjoyment of its lands is reasonable as hereinafter fixed and specified.

(9) Exhibit A: (FPC No. 2321-1) filed as part of the application and redesignated in paragraph (B) below as Exhibit K: (FPC No. 2321-1) conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(10) It will be in the public interest to waive the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(a); 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 18, except insofar as it relates to fishways; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Nevada Power Company (Licensee) of Elko, Nevada, under Sections 4(e) and 10(i) of the Act for a period of 25 years, effective as of January 1, 1964, for the continued operation and maintenance of Project No. 2321, located on lands of the United States within the Humboldt National Forest and other lands of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2321 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) A small rock fill diversion dam about 5 feet high and 14 feet long on Lamoille Creek about 6 miles upstream from the community of Lamoille; about 4.22 miles of 16 in. diameter steel pipe; a forebay reservoir formed by a hydraulic fill earth dam; 16 in. diameter steel penstock; Lamoille Canyon powerhouse containing a 200 kw hydroelectric unit and auxiliary equipment; and about 22.1 miles of transmission line extending from the powerhouse to Elko substation in the City of Elko.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located in the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project.

The lands and project works being more specifically shown and described by a certain exhibit forming part of the application for license and which has been redesignated and is described as follows:

Exhibit K: (FPC No. 2321-1) Map, signed by M. E. Lundberg, Vice President, dated September 7, 1962.

(C) This license is also subject to the terms and conditions set forth in Form L-7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486), which terms and conditions are attached hereto and made a part hereof and also subject to the following special conditions set forth herein as special articles:

Article 15: The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of recompensing the United States for the costs of administration of Part I of the Act, $13.00; and

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands, including those occupied for transmission line purposes, $21.00.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from the license.

(E) The redesignated exhibit described in paragraph (B) above is hereby approved as part of the license for the project.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXACO INC., ET AL., DOCKET NO. G-15546, ET AL.*

ORDER REQUIRING REFUNDS IN ADDITIONAL PROCEEDINGS ON REMAND, DENYING PETITIONS FOR MODIFICATION OF ORDER, AND REJECTING PETITION FOR LEAVE TO INTERVENE[1]

(Issued February 19, 1964)

The United States Court of Appeals for the District of Columbia on July 18, 1963, affirmed the Commission's order of March 5, 1962, 27 FPC 441, requiring producers to refund to certain of their pipeline customers tax reimbursement amounts collected from them with respect to the additional one cent per Mcf Louisiana gas gathering tax which was declared unconstitutional by the Louisiana Supreme Court. *Pan American Petroleum Corporation* v. *F.P.C.*, 322 F. 2d 999. The same court in a related decision issued the same day reversed the March 5 order insofar as refunds were not required to be made by the producers to Tennessee Gas Transmission Company (Tennessee). *Tennessee Gas Transmission Company* v. *F.P.C.*, 322 F. 2d 1006.

In our March 5 order we required producers to make refunds to those pipeline customers who had adequately protected their rights in these proceedings. See 27 FPC at 443–444. We did not, however, require the producers to make refunds to Southern Natural Gas Company (Southern), United Gas Pipe Line Company (United) and Tennessee, among others, because of their failure to protect their rights in these matters. See 27 FPC at 444. Tennessee and Southern both filed timely applications for rehearing of the March 5 order, which were denied by order issued April 26, 1962. 27 FPC 847. Thereafter, Tennessee petitioned for court review in certain specified proceedings (listed in Appendix A hereof) in which they were involved as a purchaser. Southern, however, did not file a petition for court review. United has never sought intervention in any of these cases either prior or subsequent to the March 5 order. Nor did United file an application for rehearing or a petition for court review of that order.

In the *Tennessee* case, *supra*, the court held that Tennessee had the right to seek judicial review of the March 5 order, and rejected the Commission's reason for denying refunds to Tennessee. The court said 322 F. 2d 1009:

> The Commission concedes that Tennessee would have been entitled to refunds if Tennessee had protested the Commission's order of May 29, 1961 and that the denial of refunds rested solely on the absence of such protest. As stated above, however, on August 30, 1961, the Commission, sua sponte, reopened the May 29 order in all the dockets before it. Assuming, without deciding, that Tennessee's right to refunds expired with its time for protesting the May 29 order, we think the effect of the Commission's action of August 30, 1961 was to revive the proceedings as to Tennessee and all other purchasers named in those dockets. It follows that the Commission's reason for denying refunds to Tennessee must fail.

---

*The proceedings involved here are listed in the appendices attached hereto. These proceedings represent only a portion of the approximately 400 proceedings disposed of by the March 5, 1962 order.

[1] This order does not provide for consolidation of the proceedings involved here, nor should it be so construed.

In light of the court remand, we shall provide for refunds to Tennessee in the proceedings listed in Appendix A.[3]

With respect to the above refunds, it may be that Tennessee will take the position that it is not presently under obligation to flow-through to its jurisdictional customers all or a part of their proportionate share of the amount of money it will receive from the producers. For the reasons set forth in our order in *Hunt Oil Co.*, Docket No. G-9065, *et al.*, issued July 16, 1963, 30 FPC 220, we shall condition this order to require the producers to retain (without interest obligation to them) the refunds due to Tennessee in a special account, and shall direct Tennessee to submit a report setting forth what it intends to do with the refunds if they are made to it, and, if it proposes not to pass them on to its jurisdictional customers why it believes it is entitled to retain these refunds.

Southern and United on August 20 and September 9, 1963, tendered petitions requesting the Commission to modify its March 5 order to provide for refunds to them in the proceedings listed in Appendices B and C, respectively. A number of producers have filed answers to these petitions. In support of their petitions Southern and United claim, *inter alia*, that the effect of the court decision in the Tennessee case was to nullify the March 5 order insofar as that denied refunds to any purchaser in any of these proceedings and to reopen these proceedings as to all purchasers who were denied refunds for further proceedings consistent with the Court's opinion. They particularly emphasize in this connection the following statement by the court, 322 F. 2d at 1009: "* * * We think the effect of the Commission's action of August 30, 1961 was to revive the proceedings as to Tennessee and all other purchasers named in those dockets."

In the alternative, Southern requests leave to intervene in the proceedings listed in Appendix B hereof.

Tennessee's petition for review of the March 5 order did not purport to be a "class action" for the benefit of all purchasers denied relief in the many proceedings involved in that order, but was specifically limited to those proceedings in which Tennessee had been denied relief. Nothing in the court's opinion indicates that it construed Tennessee's petition as a "class action". To the contrary, the court after carefully noting that Tennessee had fully preserved its rights after the Commission in its August 30, 1961 order resuscitated them, ruled that "the Commission's reason for denying refunds to Tennessee must fail", (322 F. 2d at 1009). It did not set aside or otherwise void the Commission's March 5 order generally but merely directed that the order be "(r)eversed and remanded for further proceedings consistent with this opinion." As Southern and United point out, the court indicated that the Commission's August 30, 1961 order revived the proceedings as to all purchasers named in the various dockets. The affect thereof is that as of August 30, 1961, Southern, United and Tennessee were considered to be in exactly the same position. This does not mean, as Southern and United suggest, that they were not subsequently required to protect their rights thereafter. Southern in failing to petition for review of the March 5 order following denial of its application for rehearing, and United by failing to file either an application for rehearing or a petition for review of that order have relinquished whatever rights they might otherwise have had herein had they followed the course of action pursued by Tennessee. Under Section 19 of the Natural Gas Act the March 5 order became final as to Southern and United.

---

[3] Tennessee in its initial court brief indicated that they were no longer pressing the petition for review with respect to Docket Nos. G-15555, G-15566, G-15663, G-15925 and G-16076 because they had received appropriate refunds from producers in these dockets. For this reason, these proceedings have been omitted from Appendix A.

Pan American Petroleum Corporation v. *F.P.C.* 322 F. 2d 999; *F.P.C.* v. *Colorado Interstate Gas Co.*, 348 U.S. 492, 498; *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149, 157. Accordingly, the petitions for modification of the March 5 order by Southern and United must be denied. For the same reason, Southern's alternative request for leave to intervene should be rejected as untimely.

The Commission finds:

(1) The increased rates reflected in the supplements filed in the proceedings listed in Appendix A with respect to sales of gas to Tennessee should be disallowed and refunds provided for as hereinafter ordered.

(2) The petitions filed by Southern and United for modification of the March 5, 1962 order should be denied, and Southern's petition for leave to intervene should be rejected.

The Commission orders:

(A) The increased rates reflected in the rate supplements applicable to sales to Tennessee in the proceedings listed in Appendix A are disallowed.

(B) Each respondent listed in Appendix A shall compute the refund to Tennessee of the amounts collected under the respective agreements and undertakings filed in compliance with the Commission's suspension orders in the proceedings herein, and shall report to the Commission in writing within 30 days from the date of issuance of this order the amount of such refund showing the basis for such determination.

(C) Each respondent listed in Appendix A shall retain the refund due to Tennessee, which it shall have computed in accordance with Paragraph (B) above, in a special account, with no interest obligation after the date of issuance of this order, pending Commission action and further order respecting such monies.

(D) The petitions filed by Southern and United for modification of the March 5, 1962 order are hereby denied, and Southern's petition for leave to intervene is hereby rejected.

WISCONSIN POWER & LIGHT COMPANY, PROJECT NO. 710

ORDER AMENDING LICENSE (MAJOR)

(Issued February 19, 1964)

Application was filed on September 11, 1963, by Wisconsin Power & Light Company, licensee for Project No. 710, for amendment of its license for the project located on Wolf River in the vicinity of Shawano, in Shawano County, Wisconsin.

The application seeks to eliminate from the license subparagraph B of Article 23 which prescribes annual charges ($1,500.00) for the use by the project works of tribal lands within the Menominee Indian Reservation.

The application for amendment was suggested by the Commission in view of the Secretary of the Interior's April 26, 1961 proclamation (26 F.R. 3726) terminating as of April 30, 1961 Federal trusteeship over the property of the Menominee Indians pursuant to Public Law 83–399, approved June 17, 1954 (68 Stat. 250).

Title to the Indian tribal lands within the former Menominee Indian Reservation was transferred to Menominee Enterprises, Inc. with whom the licensee entered into a lease, effective as of September 1, 1962, which provides, among other things, for the payment by the licensee to Menominee Enterprises, Inc. of $1,500 per annum. Annual charges under the license have been paid to the Commission for the use by the licensee of such former Indian Reservation lands to September 1, 1962.

The Commission finds:

It will be consistent with the public interest to amend the license as hereinafter provided.

The Commission orders:

(A) The license for Project No. 710 is hereby amended, effective as of September 1, 1962, by eliminating therefrom subparagraph B. of Article 23.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. G-15187

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 20, 1964)

On November 4, 1963, as amended on November 8, 1963, Arkansas Louisiana Gas Company (Applicant) filed an application to amend further the Commission's order in Docket No. G-15187 issued October 14, 1958, as amended, by authorizing Applicant to construct and operate 1.0 mile of 8-inch pipeline and appurtenant meter and regulator facilities in order to add a new delivery point and to sell to Mississippi River Fuel Corporation (Mississippi) in Union Parish, Louisiana, an additional daily maximum of 20,000 Mcf of natural gas, all as more fully set forth in the application to amend, as amended.

The order of October 14, 1958, as amended, authorized Applicant, among other things, to sell and deliver 35,000 Mcf of natural gas per day to Mississippi for resale from October 15 of each year through April 16 of the succeeding year for a five-year period ending April 16, 1963, and to sell and deliver 1,000 Mcf per day from April 16, 1963, until May 1, 1963. The Commission's order issued September 19, 1963, extended such authorization for one year. Said sales are made at the outlet of Applicant's Ruston Gasoline Plant, Lincoln Parish, Louisiana.

The application indicates that Mississippi has urgent need for more gas in the subject area and that Applicant at the proposed new delivery point will sell and deliver the herein proposed additional volumes of natural gas to Mississippi only when available and Mississippi will purchase natural gas only when needed, all during the period from October 15 to April 16, inclusive.

The application shows the total estimated cost of the proposed facilities to be $45,800.

Applicant and Mississippi have entered into an amendatory agreement, dated October 28, 1963, providing for the proposed additional service.[1]

---

[1] Said amendatory agreement provides that the herein proposed sale will continue until such sale is terminated by 30-day prior written notice by either party to the other or until the principal contract between the parties terminates or is terminated in accordance with the provisions thereof.

On December 13, 1963, Applicant was issued a temporary certificate authorizing the construction and operation of the proposed facilities and the proposed sale and delivery of natural gas at the new delivery point.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 21, 1964 (29 F.R. 509). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order in Docket No. G–15187 issued October 14, 1958, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order in Docket No. G–15187 issued October 14, 1958, as amended, be and the same is hereby further amended by authorizing Applicant to construct and operate 1.0 mile of 8-inch pipeline and appurtenant meter and regulator facilities in order to add a new delivery point and to sell to Mississippi River Fuel Corporation in Union Parish, Louisiana, an additional daily maximum of 20,000 Mcf of natural gas, as hereinbefore described and as set forth in the application to amend, as amended.

(B) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION OIL COMPANY OF CALIFORNIA AND RUTH I. PENTON AND D. N. PENTON, D.B.A. PENTON AND PENTON, DOCKET NO. G–19006;[1] RUTH I. PENTON AND D. N. PENTON, D.B.A. PENTON AND PENTON (SUCCESSOR TO UNION OIL COMPANY OF CALIFORNIA), DOCKET NO. CI64–476

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY, ADDING RESPONDENT IN AND REDESIGNATING RATE PROCEEDING, AND ACCEPTING SUCCESSOR'S AGREEMENT AND UNDERTAKING

(Issued February 20, 1964)

On October 18, 1963, Ruth I. Penton and D. N. Penton, d.b.a. Penton and Penton, (Applicants) filed in Docket No. CI64–476 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas in interstate commerce to United Gas Pipe Line Company for resale for ultimate public consumption from the Gordon Field, Beauregard Parish, Louisiana, all as more fully set forth in the application.

Applicants propose to sell natural gas from certain leases, as successors in interest to Union Oil Company of California, pursuant to a contract heretofore designated as Ruth I. Penton and D. N. Penton, d.b.a. Penton and Penton, FPC Gas Rate Schedule No. 2. The subject sale was initially authorized, among others, in Docket No. G–3711.

---

[1] Consolidated with Docket No. AR61–2, *et al.*

The effective rate under the predecessor's rate schedule, Union Oil Company of California FPC Gas Rate Schedule No. 30, is 20.25¢ per Mcf at 15.025 psia, inclusive of tax reimbursement, subject to refund in Docket No. G–19006. By an instrument filed November 14, 1963, styled as a Motion to Intervene, Penton and Penton request to be made parties respondent in the proceeding in Docket No. G–19006. Concurrently with the aforementioned motion, Penton and Penton filed an agreement and undertaking in said docket assuming liability to refund any portion of the increased rate found by the Commission not to be justified therein. The assignment of the producing properties to Penton and Penton is effective as of June 1, 1963.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the certificate application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application and exhibits thereto submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicants, Penton and Penton, will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and will, therefore, be a "natural-gas company" within the meaning of the Natural Gas Act upon commencement of the service under the authorization hereinafter granted.

(2) The sale of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sale of natural gas by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) Applicants should be added as respondents in the rate proceeding in Docket No. G–19006; said docket should be redesignated accordingly, and Applicants' agreement and undertaking should be accepted for filing.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued, upon the terms and conditions of this order, authorizing the sale by Applicants herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the application and exhibits in this proceeding.

(B) The certificate granted in paragraph (A) above is not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(C) The grant of the certificate issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the contract, particularly as to the cessation of service upon termination of said contract, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(D) Penton and Penton be and are hereby made parties respondent in the pending rate proceeding in Docket No. G–19006 insofar as said proceeding pertains to the sales made from the producing properties assigned to Penton and Penton by Union Oil Company of California, pursuant to Penton and Penton's FPC Gas Rate Schedule No. 2, effective as of June 1, 1963, and said proceeding is hereby redesignated accordingly.

(E) The agreement and undertaking submitted by Penton and Penton on November 14, 1963, in the proceeding in Docket No. G–19006, assuming the obligation to refund any portion of the increased rate collected by Penton and Penton found by the Commission in said proceeding not to be just and reasonable, insofar as the final determination in said proceeding is applicable to Penton and Penton, be and the same is hereby accepted for filing; and any such refunds shall bear interest at the rate of seven percent per annum.

(F) Penton and Penton shall comply with the refunding and reporting procedure required by the Natural Gas Act and Section 154.102 of the Regulations thereunder, and the agreements and undertakings assuming refund obligations in Docket No. G–19006 shall remain in full force and effect until discharged by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

ORDER GRANTING APPLICATION FOR RECONSIDERATION AND MODIFYING OPINION AND ORDER

(Issued February 24, 1964)*

On February 7, 1964, an application was filed by the above-listed producers for modification of ordering paragraph (D) of the Order accompanying Opinion No. 412–A, 31 FPC 181. The relevant factual background is as follows:

In Opinion No. 412, issued December 9, 1963, 30 FPC 1438, the Commission required applicants (1), in ordering paragraph (E), to file supplements within 30

---

*Reconsideration and stay denied by order issued April 17, 1964, 31 FPC 946. Affirmed on all substantive rulings, remanded on refund question, *sub nom. Continental Oil Co., et al. v. F.P.C.*, — F. 2d —, (CA5–1967).

days to their rate schedules reflecting the conditioned price as the initial price in lieu of the initial price provided in the contracts, and (2), in ordering paragraph (F), to refund to Natural Gas Pipeline Company of America a sum equal to the difference between the price charged to and collected from Natural and the respective conditioned initial price applied to all volumes paid for by Natural after November 2, 1961, with interest at 7 percent per annum until full refund has been made. On December 27, 1963, applicants requested that we either modify our findings and order or, in the alternative, grant a stay of paragraphs (E) and (F) until judicial review could be obtained. On January 24, 1964, we issued Opinion No. 412-A wherein we refused to modify our findings and order, but conditionally stayed the requirements of paragraphs (E) and (F) pending judicial review of Opinion No. 412 or until the Order otherwise becomes final, *e.g.*, expiration of the time limitation for the filing of such review.

Two conditions were attached to the stay. The first, in paragraph (C), requires applicants to deposit in a special account with a bank or trust company all sums received subsequent to December 9, 1963, in excess of the conditioned initial prices deemed necessary for the protection of the public interest and to hold such monies intact. The second condition, set forth in paragraph (D), provides that if our order in this proceeding is upheld on judicial review, applicants shall also refund, with interest at 7 percent, all excess amounts received after December 9, 1963, by virtue of the stay in the reduction in rate directed in paragraph (E) of the initial order.

Applicants contend that since they are required to deposit in a bank or trust company all excess charges collected after December 9, 1963, and are thus deprived of the use of this money and the opportunity of enjoying a return on an investment of such revenues, no interest should be required if and when the refund thereof becomes necessary. Our action in ordering the trust fund to be set up was based on a similar requirement in a November 5, 1963, order in *United Gas Pipe Line Company, et al.*, Docket No. CP60-36, *et al.*, which in turn was patterned after an order of the Court of Appeals for the Fifth Circuit[1] staying the effectiveness of our order in Opinion No. 398, *Placid Oil Company, et al.* On November 12, 1963, however, the court issued another order in that case involving other producers[2] which does not require the establishment of escrow accounts and allows the producers to retain beneficial use of the excess charges pending determination of the appeal by the court. Any refunds made thereafter are required by the court's order to include interest at 7 percent. In our opinion this latter method is to be preferred. Accordingly, we shall amend the proviso included in paragraph (C) of the order accompanying Opinion No. 412-A so as to permit the applicants to hold and utilize in their business activities all amounts collected after December 9, 1963, currently being charged in excess of the maximum rates prescribed in paragraphs (B) and (C) of the order accompanying Opinion No. 412, but shall require them to make any refunds with interest at 7 percent.

The temporary authorizations issued in the various dockets in this proceeding provided, and in the case of the severed dockets still provide, that no change from the 18 cents per Mcf price there specified could be made during their terms. This action was necessary since the alleged emergency conditions requiring the issuance of the temporary authorizations did not provide opportunity for engaging in the complex and time-consuming review needed to determine the potential effect that higher prices might have through the triggering of general price rises by means of favored nation clauses and price redeterminations. In our Opinion issuing permanent certificates to the applicants presently seeking revision of our order, we did not impair by appropriate condition their right to charge the full contract prices until such time as just and reasonable rates can be fixed for their sales. However, examination of existing prices in Texas Districts Nos. 2, 3 and 4 discloses that if we permit the applicants to file for the 20 cents per Mcf initial rate authorized under their contracts or for the first step periodic escalation to 22 cents per Mcf, which is contractually due between September 1, 1964 and February 1, 1965, depending on the date of initial delivery under each contract, there could be a substantial price impact on other gas purchase contracts in the area under price redetermination clauses.

---

[1] *Callery Properties, Inc., et al.*, v. *F.P.C.*, No. 20872, *et al.*, order issued October 17, 1963. [Commission reversed and case remanded August 14, 1964, 335 F. 2d 1004. Petitions for cert. pending.]

[2] *J. Ray McDermott & Co., Inc., et al.*, v. *F.P.C.*, No. 20967, *et al.* [Commission reversed and case remanded August 14, 1964, 335 F. 2d 1004. Petitions for cert. pending.]

In *Placid* and *United*, Opinions Nos. 398 and 399, we adopted the policy, for reasons adequately set forth therein, of imposing conditions in permanent certificates to prevent the collection of rates in excess of the level at which triggering of favored nation clauses will occur or which might serve as a basis for price redeterminations at a higher rate. The same policy is equally applicable with regard to the permanent certificates issued in this proceeding. Accordingly we shall at this time order a moratorium on all price increases in excess of 18 cents per Mcf for the sales in Districts Nos. 2 and 4 and 19 cents per Mcf for those in District No. 3, inclusive of tax reimbursement, pending our final decision in the recently initiated Docket No. AR64-2 area rate proceeding, which has as its purpose the fixing of just and reasonable rates on production in these Districts, or until January 1, 1968, whichever is earlier. Any rate increase filing by applicants to a level higher than the limits set forth above would have an adverse impact on the pricing structure in the areas involved.

We are aware that the Court of Appeals, in the orders referred to stayed the operation of the moratorium ordered by us in Opinion No. 398. Although we have followed the terms of those orders in this proceeding insofar as possible, we are unable, in view of the extensive repercussions which would flow from the very charging of rates higher than 18 cents in District Nos. 2 and 4 and 19 cents in District No. 3, even when collected subject to refund, to grant a stay of the moratorium herein ordered.

The Commission orders:

(A) The application for reconsideration of Opinion No. 412-A is granted.

(B) Ordering paragraph (C) of the order accompanying Opinion No. 412-A is amended to provide:

> (C) The completion of the acts and compliance with the requirements set forth in ordering paragraph (E) of the Order accompanying Opinion No. 412 are stayed pending judicial review of said Opinion or until the order otherwise becomes final, provided, however, that with respect to all amounts currently being charged in excess of the rates prescribed in paragraphs (B) and (C) of the Order accompanying Opinion No. 412 each applicant shall execute and file within 60 days an agreement and undertaking to comply with the refund requirement specified in paragraph (D) below.

(C) Ordering paragraph (E) of the Order accompanying Opinion No. 412-A is redesignated paragraph (F); a new ordering paragraph (E) is added to provide:

> (E) Each certificate issued in paragraph (A) of the Order accompanying Opinion No. 412 is further conditioned to provide for a moratorium on the filing of all price increases in excess of 18 cents per Mcf for the sales in District Nos. 2 and 4 (Docket Nos. G-19117, G-19118, G-19119, G-19123 and

G–19124) and 19 cents per Mcf for those in District No. 3 (G–19115, G–19116 and G–19125), inclusive of tax reimbursement pending the issuance of a final decision in the area rate proceeding in Docket No. AR64–2 or until January 1, 1968, whichever is earlier.

(D) In all other respects said Opinion No. 412–A and Order is confirmed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

IDAHO POWER COMPANY, DOCKET NO. E–7144

ORDER AUTHORIZING THE ISSUANCE OF PROMISSORY NOTES

(Issued February 24, 1964)

Idaho Power Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Idaho, Oregon and Nevada, with its principal business office at Boise, Idaho, filed an application on December 16, 1963 and an amendment thereto on February 3, 1964 for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of unsecured Promissory Notes in an aggregate principal amount not to exceed $20,000,000 at any one time outstanding. Each Note will be issued prior to December 31, 1964, and will mature not later than one year after its date of issue, the final maturity of all Notes being not later than December 31, 1965, and will bear interest at the rate applicable in New York City, at the time of each borrowing, to commercial bank loans of such form and character. As of the date of the application, that interest rate was 4½%.

By order issued December 10, 1962, the Commission authorized Applicant to issue up to $30,000,000, principal amount of short-term promissory notes, the authorization to expire on December 31, 1963. As of December 17, 1963, Applicant had outstanding $3,800,000, aggregate principal amount of promissory notes.

The request herein for authorization to issue Notes in the maximum principal amount of $20,000,000 will cover the issuance of New Notes and the issuance of any renewal Notes, including renewal Notes for the payment of any Notes presently outstanding under the above-described authorization in Docket No. E–7067.

During 1964, Applicant expects to undertake permanent financing arrangements, including the issuance of equity securities, probably during the fall of that year; the exact form, amount and times of issuance of such long-term corporate securities necessarily will depend upon future market and other conditions. However, should market or other conditions cause a delay in or postponement of the contemplated permanent or long-term financing, Applicant states that it may be necessary to issue short-term notes up to the amount requested in order to avoid delay and additional cost in the construction of essential service facilities.

The proposed issuance of Notes will enable Applicant to (1) issue renewal or replacement Notes on or before December 31, 1964 for those presently outstanding; and (2) carry forward Applicant's construction program for 1964 which is currently estimated at $19,813,000, described as follows: $5,032,000 for completion of roads and preliminary work at Applicant's Hell's Canyon dam project; $3,493,000 toward the construction of Brownlee-Boise 230 kv line (total cost estimated at $4,500,000); $5,624,000 for generation; $4,762,000 for transmission lines; $3,840,000 for substations; $4,119,000 for distribution lines; and $1,468,000 for general equipment.

None of the proposed Notes will be resold to the general public, and no finder's fee or other negotiation fee, commission or remuneration will be paid in connection therewith to any third person.

Written notice of the application has been given to the Idaho Public Utilities Commission, the Nevada Public Service Commission, the Oregon Public Utility Commissioner, and to the Governor of each of those States. Notice of the application was also given by publication in the Federal Register on December 28, 1963 (28 F.R. 14455), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest with the Federal Power Commission, Washington, D.C., 20426 on or before January 20, 1964. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Idaho Public Utilities Commission, by order dated January 17, 1964 authorized Applicant to issue up to an aggregate of $30,000,000 of Promissory Notes during the period ending December 31, 1964.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 7, 1957, *Idaho Power Company*, Docket No. E-6781 (18 FPC 603).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, all as described above, would constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a state, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance is therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a(a)(2) thereof.

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, is appropriate for and consistent with the proper performance by Applicant of service as a public utility and will not impair its ability to perform that service and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, outstanding at any one time, upon the terms and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the maturity of all Notes to be issued pursuant thereto being within one year of their respective dates of issue and the final maturity of all such Notes being not later than December 31, 1965.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-144

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 24, 1964)

On December 23, 1963, Southern Natural Gas Company (Applicant) filed in Docket No. CP64-144 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon in place 10.72 miles of 4.5-inch pipeline extending from Eloi Bay Field to Point Comfort Field, Chandeleur Sound Area Offshore, St. Bernard Parish, Louisiana, all as more fully described in the application.

Phillips Petroleum Company, the only gas producer delivering natural gas to Applicant from Point Comfort Field, has advised Applicant that the only well in this field (Comfort No. 1) has been plugged and abandoned because of depletion and that no further development of the field is planned. As a result of this depletion the pipeline above described will not be used or needed in the future.

The original cost of the facilities to be abandoned was approximately $244,000.

Applicant states that inasmuch as the cost of salvaging the said facility would be greater than its value, it is proposed to leave the same in place.

No cessation or interruption of service to customers will result from the subject abandonment.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 13, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and the abandonment thereof by Applicant is subject to the provisions of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Southern Natural Gas Company, of the facilities hereinbefore described be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AUSTRAL OIL COMPANY, INC., DOCKET NOS. G–19831 AND RI60–365

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued February 25, 1964)

On January 2, 1964, Austral Oil Company, Inc. (Austral) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Transmission Company (TGT) by Austral. The offer relates to sales made under Supplement Nos. 6 and 7 to Austral's FPC Gas Rate Schedule No. 4 in San Patricio County, Texas (Texas R.R. Com. District #4). Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and were made effective by Austral on April 1 and November 6, 1960.

Under the terms of the offer, Austral proposes to eliminate the favored-nation, price redetermination and the periodic escalation provisions from the rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Austral's annual revenues will be decreased about $5,340 from the presently effective rates. No protests or objections have been filed to the offer.

Austral, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $17,500, exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Austral's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Austral's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Austral on January 2, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

---

[1] Austral's FPC Gas Rate Schedule No. 4 is subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

The Commission orders:

(A) The order of settlement filed with the Commission by Austral January 2, 1964, is hereby approved in accordance with the provisions of this order.

(B) Austral shall file, within 30 days from the date of issuance of this order, notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and executed contractual amendment to its FPC Gas Rate Schedule No. 4 eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Austral shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, making account for proper charges, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases used for such determination, together with a release from TGT.

(D) Upon notification by the Secretary of the Commission that Austral has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Austral's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Austral, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DELANEY OIL COMPANY (OPERATOR), ET AL., DOCKET NOS. G-20556 AND RI60-458

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued February 25, 1964)

On January 6, 1964, Delaney Oil Company (Operator), *et al.* (Delaney) submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves proposed increased rates for sales of natural gas made to Tennessee Gas Tranmission Company (TGT) by Delaney. The offer relates to a sale made under Delaney's FPC Gas Rate Schedule No. 1 in Duval County, Texas (Texas R.R. Com. District #4). Each of the proposed increased rates were suspended by order of the Commission for the statutory period, and were made effective by Delaney on July 6 and December 7, 1960.

Under the terms of the offer, Delaney proposes to eliminate the favored-nation, price redetermination and the periodic escalation provisions from its rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Delaney's annual revenues will be decreased about $1,975 from the presently effective rates. No protests or objections have been filed to the offer.

Delaney, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $5,800, exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Delaney's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Delaney's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Delaney on January 6, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Delaney on January 6, 1964, is hereby approved in accordance with the provisions of this order.

(B) Delaney shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating the favored-nation, price redetermination, and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Delaney shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, making account for proper charges, with simple interest at 7 percent, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases for determination, together with a copy of a release from TGT with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Delaney has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceedings shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

---

[1] Delaney's FPC Gas Rate Schedule No. 1 is subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

(E) The acceptance by the Commission of Delaney's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Delaney, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP64-135

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 25, 1964)

On December 10, 1963, East Tennessee Natural Gas Company (Applicant) filed in Docket No. CP64-135 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an additional submerged pipeline crossing of the French Broad River-Douglas Reservoir, Jefferson and Cocke Counties, Tennessee, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 3,465 feet of single 6-inch line, together with necessary appurtenances. The proposed crossing is located on a lateral line serving Jefferson-Cocke County Utility District which Utility District is the sole supplier of natural gas to White Pine and Newport, Tennessee.

Applicant states that the existing crossing is in danger of being washed out because of bank scouring and erosion and that, should said crossing fail, natural gas service would be lost in White Pine and Newport. Applicant states further that the design of the proposed crossing will guard against future scouring or erosion of the banks.

The estimated cost of the proposed facilities is $149,800, which cost will be financed from general funds and/or from short term loans.

On January 2, 1964, Applicant was granted a temporary certificate authorizing the proposed project.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knoxville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 3, 1949, in Docket No. G-1065 (8 FPC 836).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, East Tennessee Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

RAVENCLIFFS DEVELOPMENT COMPANY, DOCKET NO. G-17312, RI60-341 AND RI62-67

ORDER REJECTING OFFER OF SETTLEMENT

(Issued February 25, 1964)

On September 9, 1963, Ravencliffs Development Company (Ravencliffs) filed an Offer of Settlement pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure. The offer relates to proposed increased rates involved in the above entitled proceedings ranging from 25¢ per Mcf to 26.5¢ per Mcf for gravity or uncompressed gas, and from 28¢ per Mcf to 29.5¢ per Mcf for compressed gas sold under its FPC Gas Rate Schedule No. 1 by Ravencliffs to United Fuel Gas Company in the Ravencliffs Field, Wyoming and Raleigh Counties, West Virginia.[1] The three successive proposed rate increases concerned herein were filed by Ravencliffs as Supplement Nos. 20, 21 and 22 under its FPC Gas Rate Schedule No. 1. Each was suspended by the Commission for the statutory period, and each was placed in effect, subject to refund, by Ravencliffs' motion at the expiration of the suspension period.

In its offer, Ravencliffs proposes a settlement rate of 26.5¢ per Mcf for all gas sold under its Rate Schedule No. 1, that it make no refunds of any monies collected subject to refund, and that it waive the right to file for any contractually authorized increases in rate until December 31, 1968.

---

[1] At the time the offer was filed, the purchaser was Amere Gas Utilities Co. However, United Fuel merged with Amere, and became the purchaser as of September 30, 1963.

Ravencliffs derived its proposed settlement rate of 26.5¢ per Mcf by considering gas produced from wells completed prior to June 7, 1954[2] as "old" gas to which the area increased rate ceiling was applied, and gas produced from wells completed subsequent to June 7, 1954 as "new" gas to which the initial rate ceiling was applied.

Ravencliffs received grandfather certificate authorization after the *Phillips* decision to continue the sale of natural gas under its FPC Gas Rate Schedule No. 1 at an initial rate of 15¢ per Mcf which was the effective rate under the contract comprising its rate schedule on June 7, 1954. That initial rate was applicable not only to all gas being sold under the contract on June 7, 1954, but also to all gas that might thereafter be sold from acreage then dedicated under the contract. The initial rate ceiling set forth in the policy statement issued on September 28, 1960 (24 FPC 818) did not purport to have any applicability to permanent certificates that had previously been granted.[3] It thus has no applicability to Ravencliffs' rates.

Ravencliffs' initial rate could only be changed in accordance with the rate changing procedures in Section 4 of the Act. To the extent that Ravencliffs filed for rate increases under Section 4 subsequent to the issuance of the policy statement the area increased rate ceiling set forth therein was considered applicable to the proposed rates and the proposed rates were suspended because they were in excess of the increased rate ceiling for pipeline quality gas. In approving settlements we have consistently adhered to the increased rate ceiling level as the proper level for settlement rates, except in special circumstances which are not involved here. No reason has been advanced by Ravencliffs that would justify our approval in this case of a settlement rate in excess of the increased rate ceiling. We must therefore reject Ravencliffs' offer.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to reject Ravencliffs' Offer of Settlement filed with the Commission on September 9, 1963.

The Commission orders:

The Offer of Settlement filed by Ravencliffs on September 9, 1963, in these proceedings, is hereby rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

H. R. SMITH (OPERATOR), ET AL., DOCKET NO. RI61-29

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, AND TERMINATING PROCEEDINGS

(Issued February 25, 1964)

On January 6, 1964, H. R. Smith (Operator), *et al.* (Smith), submitted an offer of settlement in these proceedings pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure. The offer involves a proposed increased rate for a sale of natural gas made to Tennessee Gas Transmission Company (TGT) by Smith. The offer relates to a sale made under Smith's FPC Gas Rate Schedule No. 8 in Nueces County, Texas (Texas R.R. Com. District #4). The proposed increased rate was suspended by order of the Commission for the statutory period, and was made effective by Smith on January 7, 1961.

---

[2] The date of issuance of the United States Supreme Court opinion in *Phillips Petroleum Co. v. Wisconsin*, 347 U.S. 672, affirming the Commission's jurisdiction over producers of natural gas.

[3] In general rate settlements, however, we have not approved settlement rates in excess of the applicable initial rate ceiling, even if permanently certificated.

Under the terms of the offer, Smith proposes to eliminate the favored-nation, and the periodic escalation provisions from its rate schedule and to establish a 15¢ per Mcf rate for the subject sale. Smith's annual revenues will be decreased about $920 from the presently effective rates. No protests or objections have been filed to the offer.

Smith, in its offer, proposes to refund all amounts collected, subject to refund, for sales of natural gas to TGT under the subject rate schedule in excess of the settlement rate.[1] The estimated total dollars to be refunded approximates $2,740 exclusive of interest.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Smith's offer of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases. Nor, may our action herein be construed as constituting approval of any future rate increase that may be filed under the subject rate schedule, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Smith's rate and rate schedule.

The Commission finds:

The proposed settlement of each of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Smith on January 6, 1964, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed with the Commission by Smith on January 6, 1964, is hereby approved in accordance with the provisions of this order.

(B) Smith shall file, within 30 days from the date of issuance of this order, a notice of change in rate providing for the 15¢ per Mcf rate specified in its offer of settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 8, eliminating the favored-nation and the periodic escalation provisions therefrom. The notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Smith shall refund to TGT to the date of issuance of this order the difference between the rates collected subject to refund under the rate schedule herein and the settlement rate, making account for proper charges, with simple interest at 7 percent, and shall report to the Commission, in writing, within 30 days from the date of issuance of this order, the amount of such refund, showing separately the amount of principal and interest, and the bases for determination, together with a copy of a release from TGT with respect to such refunds.

---

[1] Smith's FPC Rate Schedule No. 8 is subject to a dehydration charge by TGT, for which allowance must be made in computing the refund.

(D) Upon notification by the Secretary of the Commission that Smith has complied with the terms and conditions of the order, the rate and charge of 15¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the date of issuance of this order, the above designated proceeding shall be deemed terminated, and severed from the consolidated area rate proceeding (Texas Gulf Coast Area) in Docket No. AR64-2 without further order of the Commission.

(E) The acceptance by the Commission of Smith's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Smith, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64-132

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 25, 1964)

On December 6, 1963, supplemented on January 10, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64-132 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 30 feet of 4-inch pipeline, a positive meter and regulator station, heater and separator and appurtenant equipment to be located at approximately Milepost 6.07 on Applicant's 8-inch Allentown Field Line in Angelina County, Texas, all as more fully described in the application.

The proposed facilities will be used for the sale and delivery of natural gas from Applicant's system to the City of Alto, Texas, for resale and distribution through that City's proposed distribution system and to the community of Wells, Texas.

The estimated peak day and annual volumes for the third year are 524 Mcf and 39,650 Mcf respectively.

The total cost of the facilities proposed is $11,607, which cost will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942 in Docket No. G-232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction

of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-219

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 26, 1964)

On December 12, 1963, Northern Natural Gas Company (Northern) filed in Docket No. CP63-219, an application for temporary authorization and to amend an order of the Commission issued August 6, 1963, granting a certificate of public convenience and necessity authorizing, among other things, an increase in contract demand deliveries to the City of Sioux Center, Iowa. Northern seeks authorization to further increase contract demand deliveries from 920 Mcf to 955 Mcf daily, all as more fully set forth in the application to amend on file with the Commission. The additional 35 Mcf daily will be used by the City of Sioux Center to meet its system requirements during the present heating season. No additional facilities are required.

The Commission by letter of January 9, 1964 granted Applicant temporary authorization as requested on December 12, 1963.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 24, 1964 (29 F.R. 626). No protest or petition to intervene has been filed in the proceeding concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order, issued August 6, 1963, in Docket No. CP63–219 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued August 6, 1963, in Docket No. CP63–219 be and the same is hereby amended by authorizing Northern to further increase contract demand deliveries to the City of Sioux Center, Iowa, from 920 Mcf to 955 Mcf daily, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, COLUMBIA GULF TRANSMISSION COMPANY, UNITED FUEL GAS COMPANY, DOCKET NO. CP64–141

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 26, 1964)

On December 18, 1963, Tennessee Gas Transmission Company, Columbia Gulf Transmission Company and United Fuel Gas Company filed in Docket No. CP64–141 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of two emergency interconnections between the pipeline systems of Tennessee and Columbia Gulf for the emergency exchange of natural gas under the terms of an exchange letter agreement dated November 15, 1963, all as more fully set forth in the application on file with the Commission.

The interconnections will be utilized on an emergency basis only, on a gas-for-gas exchange basis, with deliveries or receipts by Columbia Gulf being for the account of United Fuel, its only customer, for which it provides a transportation service. The proposed emergency interconnections will be located at the point where Columbia Gulf's 30-inch main Line 200 crosses Tennessee's 30-inch discharge header No. 4 in Morehead, Rowan County, Kentucky, and at the point where Columbia Gulf's 30-inch main Line 100 crosses Tennessee's 30-inch Kinder-Portland Line 800–1 in La Salle Parish, Louisiana.

The estimated cost of the interconnections is $41,285 and will be defrayed from cash on hand by Columbia Gulf for the facilities in La Salle Parish, Louisiana, and by Tennessee for the facilities in Rowan County, Kentucky.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 20, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) Applicant, Columbia Gulf Transmission Company, a Delaware corporation, having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 5, 1958, in Docket No. G-15524 (20 FPC 681).

(3) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 9, 1958, in Docket No. G-13372 (20 FPC 347).

(4) The proposed emergency exchange of natural gas between the Applicants, and the construction and operation of the proposed facilities for the transportation and sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the joint application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed exchange and delivery of natural gas on an emergency basis, and the construction and operation of facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicants in this proceeding, jointly, authorizing the exchange and delivery of natural gas as hereinbefore described, and the construction and operation of facilities for the transportation and sale of natural gas in interstate commerce, as more fully described in the joint application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7145

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued February 27, 1964)

Northern States Power Company (Minnesota) ("NSP-MINN") filed an application on December 20, 1963 for an order, pursuant to Sections 203 and 204 of the Federal Power Act, authorizing NSP-MINN (1) to acquire the electric distribution system and other properties and assets of Deichen Power, Inc. (Deichen), and (2) to issue not to exceed 19,000 shares of its Common Stock in connection with such acquisition. NSP-MINN is a corporation organized under the laws of the State of Minnesota and doing business in the States of Minnesota, North Dakota and South Dakota, with its principal business office at Minneapolis, Minnesota. NSP-MINN owns and operates utility properties and furnishes electric service at retail in 423 communities and adjacent territories and electric energy at wholesale for resale to 31 additional communities and at wholesale to rural electric cooperative associations and other utility companies. Of the 454 communities so served, 401 (including Minneapolis and St. Paul) are located in Minnesota, 18 in North Dakota, and 35 in South Dakota. NSP-MINN also furnishes natural gas at retail, steam heating service and telephone service in some communities in its electric service area. NSP-MINN is the parent company of Northern States Power Company (Wisconsin).

Deichen furnishes electric service at retail to 1317 customers from its electric distribution system which it owns and operates in parts of Blue Earth, Rice, Steele, and Waseca Counties in the State of Minnesota. Included in the area served are 4 unincorporated communities, Clinton Falls, Meriden, Smiths Mill, and Warsaw, but no incorporated communities are served. Deichen's electric distribution system consists of approximately 283 pole miles of distribution lines, together with approximately 100 pole miles of branch lines and other related equipment and appurtenances. These lines consist of 11 miles, 7200 volt, 3 phase; 83 miles, 7200 volt, single phase; 187 miles, 4800 volt; and 2 miles, 4000 volt.

Deichen purchases all of its energy requirements from the City of Waseca, which in turn purchases all of its energy requirements from NSP-MINN.

Pursuant to the provisions of an agreement between NSP-MINN, Deichen, and Harold F. Deichen, the sole stockholder of Deichen Power, dated November 27, 1963, NSP-MINN proposes to acquire and Deichen Power proposes to sell all of the latter company's properties at a base value of $800,000, as adjusted, in consideration of the delivery by NSP-MINN of shares of its Common Stock at $35 per share equal to the adjusted base price.

The Agreement provides for the addition to the $800,000 base value of: (1) additions to electric plant from October 31, 1963, to the closing date, at book cost; (2) cash on hand and in banks; (3) accounts and notes receivable; (4) materials and supplies; (5) twenty shares of Common Stock of Waseca Industrial Development Corporation; and (6) prepaid insurance. The Agreement also provides for the subtraction from the $800,000 base value of: (1) accounts and wages payable; (2) notes and contracts payable; (3) accrued Federal and Minnesota State Income Taxes; (4) accrued taxes other than income taxes; (5) accrued interest; (6) customers' deposits; and (7) balance ($156,500 at October 31, 1963) of outstanding Collateral Trust Bonds, due 1964.

Applicant states that there is no affiliation between NSP-MINN and Deichen and that the consideration which would be paid by NSP-MINN to Deichen was arrived at by negotiations between officers of NSP-MINN and Harold F. Deichen, both as President of Deichen and as its sole stockholder. Consideration was given to geographical location of Deichen's electric distribution system in relation to properties of NSP-MINN which surround and intermingle with it, its present and potential earning power, the average use per customer, market value and dividend record of NSP-MINN's Common Stock, and the income tax effect to Harold F. Deichen as well as other factors.

According to the application, Deichen electric system can readily be integrated into the NSP-MINN system and operating efficiencies improved and economies effected.

According to the application, Deichen's records do not reflect original cost and accumulated provision for depreciation. NSP-MINN has made a determination of estimated original cost by the application of representative unit costs to a detailed field inventory of units of property and has made a determination of estimated accumulation for depreciation "on a straight-line basis predicated upon present attained average age, estimated average life, dispersion type and net salvage for each plant account."

On the basis of estimated original cost less estimated accumulated provisions for depreciation and the balances in the several other accounts as of October 31, 1963, NSP-MINN would have acquired the following assets and assumed the following liabilities as of October 31, 1963:

Assets and Other Debits	
Utility plant	$820, 975
Provision for depreciation	(232, 245)
Net plant	588, 730
Other property and investments	2, 000
Current and accrued assets	135, 156
Total assets and other debits	725, 886

Liabilities and Other Credits	
Debt	250, 500
Current and accrued liabilities	63, 910
Total liabilities and other credits	314, 410
Net assets	411, 476

NSP-MINN, as of October 31, 1963, would have acquired the above net assets for a consideration of $600,950 ($800,000 base value referred to hereinbefore, plus and minus certain adjustments), payable in NSP-MINN's Common Stock at $35 per share. NSP-MINN proposes to record the consideration by credits to the following accounts:

Account 201, Common Stock, 17,170 shares, $5 par	$85, 850
Account 207, Premium on Capital Stock, 17,170 shares, @ premium of $30 per share	515, 100
Total	600, 950

On the basis of the estimated original cost of plant and estimated accumulated provision for depreciation, the consideration of $600,950 will be $189,474 in excess of the net assets of $411,476, and therefore, an acquisition adjustment of $189,474 will be created on the books of NSP-MINN. NSP-MINN proposes to eliminate the entire amount of the acquisition adjustment by a debit to Unappropriated Earned Surplus. The final accounting when rehabilitation costs are considered may increase the acquisition adjustment to be absorbed by surplus. Proposed Journal entries for such final accounting are required to be filed with the Commission under provisions of the Uniform Systems of Accounts.

According to the Applicant, the facilities to be acquired will be integrated into NSP-MINN's system, its power source strengthened and its voltage uniformity improved which will substantially improve operating efficiency in the area. The improvement and rehabilitation of the Deichen system is urgent. The Deichen substation is now loaded nearly to its limit and further growth in load will require its rebuilding to greater capacity. The additional capital expenditure to achieve these improvements in service if made by Deichen would probably result in general rate increases. Applicant states that an application of the present electric rates of NSP-MINN to Deichen customers would result in decreases to some customers and increases to others; however, no change in the Deichen rates will be made for a year or two during which time the rates of NSP-MINN will be reduced. Applicant has announced new and lower rates for residential, commercial and farm customers to become effective in March, 1964. Applicant also states that additional rate reductions will be made if the proposed federal income tax revisions are enacted all of which will make the comparison between NSP-MINN rates and the Deichen rates more favorable when the NSP-MINN rates are eventually applied to the Deichen customers.

After the consummation of the proposed transaction, Deichen's contract with the City of Waseca for the purchase of electric energy at wholesale will be terminated. Applicant states it is presently negotiating with the City as to the necessary changes in the contract between the City and NSP-MINN after Applicant acquires Deichen's electric distribution system.

Written notice of the application has been given to the North Dakota Public Service Commission, the South Dakota Public Utilities Commission, and to the governors of each of those States. Notice of the application was also published in the Federal Register on January 3, 1964 (29 F.R. 58) stating that any person desiring to be heard or to make any protest with reference to said application should, on or before the 27th day of January, 1964 file petitions or protests with the Federal Power Commission, Washington, D.C., 20426. No petitions or protests have been received.

The Commission finds:

(1) NSP-MINN is a corporation, organized and operating under the laws of the State of Minnesota. It owns and operates facilities for the transmission and sale at wholesale of electric energy generated in the States of Minnesota, North Dakota, South Dakota, and Wisconsin, and consumed outside the State in which it is generated, all of which facilities are in addition to, and do not include facilities used for the generation of electric energy, facilities used in local distribution, or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter, and NSP-MINN is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, as described above NSP-MINN will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Commission, the electric facilities of Deichen, another person within the meaning of and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of Deichen's electric facilities by NSP-MINN, as described above upon the terms and conditions specified in the application

and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

(4) The proposed issuance and sale of Common Stock as hereinafter authorized will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of Deichen's facilities by NSP-MINN, all as described above are hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) The proposed issuance of a maximum of 19,000 shares of Common Stock by NSP-MINN for the purpose of acquiring the assets of Deichen upon the terms and conditions described above is hereby authorized subject to the provisions of this order.

(C) NSP-MINN shall record the transaction herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts prescribed for public utilities and licensees.

(D) NSP-MINN shall dispose of the electric plant acquisition adjustment resulting from the proposed transaction by a debit to account 216, Unappropriated Earned Surplus.

(E) This authorization shall expire unless the transactions herein authorized are consummated within 90 days from the date of issuance of this order.

(F) The foregoing authorization and approval is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission, and nothing in this order shall be construed as an acquiescense by this Commission in any estimate or determination of cost, depreciation or valuation of the property to be transferred, claimed or asserted as a result of this transaction.

(G) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

POWER AUTHORITY OF THE STATE OF NEW YORK, PROJECT NO. 2000

ORDER REJECTING APPLICATION FOR REHEARING

(Issued February 27, 1964)*

On February 13, 1964, Power Authority of the State of New York (the Authority) filed an application for rehearing of the Commission's Opinion No. 415 and accompanying order issued January 13, 1964, in the above-entitled matter, in which the Commission denied the Authority's applications for exemption from annual charges in accordance with Section 10(e) of the Federal Power Act for the period from July 17, 1958, through December 31, 1961, except for partial exemptions totaling $9,621.70.

---

*Amended by Order issued April 20, 1964, 31 FPC 962.

The application for rehearing presents no new argument or citation of authority beyond that which was presented, and carefully considered by the Commission, prior to the aforesaid order of January 13, 1964. Upon full reconsideration, we believe the aforesaid order was correct, and should be adhered to, for the reasons stated in Opinion No. 415.

The application for rehearing must also be rejected upon the ground that it was not timely filed. Section 313(a) of the Federal Power Act and Section 1.34(a) of this Commission's Rules of Practice and Procedure provide that an application for rehearing is to be filed within 30 days after the issuance of the original order. The Authority did not file its application until the 31st day. Since the 30-day period is the maximum period prescribed by the statute, this Commission has no power to grant any extension of time.

The Commission finds:

(1) No new facts or principles of law have been presented by the Applicant in its application for rehearing which either were not fully considered by the Commission prior to its order herein or, having been now considered, warrant further hearing, modification, or revocation of said order.

(2) The application for rehearing in the present proceeding was not filed within 30 days of the issuance of the order as to which rehearing is sought.

The Commission orders:

The Application for Rehearing filed herein by Power Authority of the State of New York be and the same hereby is rejected and denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

SOUTHERN NATURAL GAS COMPANY v. UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63-7

ORDER INSTITUTING PROCEEDING, DESIGNATING PRESIDING EXAMINER AND FIXING DATE FOR PREHEARING CONFERENCE

(Issued February 27, 1964)

On February 21, 1963, Southern Natural Gas Company (Southern) filed a formal complaint against United Gas Pipe Line Company (United) requesting that the Commission recognize Southern's right to reduce the effective billing demand and the charges thereunder for transportation of gas by United for Southern, under United's Rate Schedule T-3. Such transportation is from Carthage Field, Texas to Perryville, Louisiana, pursuant to a contract between the two parties executed on May 7, 1951.

United filed an answer to the complaint on March 19, 1963, and Southern filed a reply thereto on April 3, 1963. Neither party to the dispute requested a hearing.[1]

---

[1] However, United requested that all of its customers who would be adversely affected by a decision favorable to Southern be given an opportunity to participate in any hearing which might be ordered.

Article VIII of the contract provided that the billing demand should be determined by the maximum daily volume of gas which Southern elected to deliver to United for transportation during the 12 months period ending with the last day of the billing month, up to a maximum of 55,000 Mcf per day. Southern contends that this contract provision affords it the option of reducing its billing demand below 55,000 Mcf as quantities of gas available to Southern for transportation over United's facilities decline. Southern states that since April 18, 1962 it has tendered a maximum of 35,000 Mcf per day to United for transportation under the contract and hereafter expects to tender no more than that amount.

On the other hand, United contends that it intended to permanently dedicate and assign 55,460 Mcf (55,000 Mcf at 15.025 psia) of the transmission capacity of its line for the purpose of transporting the maximum daily quantity allegedly specified in the contract. Thus, the parties are in disagreement as to whether their transportation contract provides a billing demand which is subject to change (depending upon the amounts of gas Southern elects to tender to United for delivery) or provides a fixed billing demand.

United further contends that the billing demand of 55,460 Mcf fixed by its Rate Schedule T-3, filed as part of its conversion tariff in accordance with Section 154 of the Regulations Under the Natural Gas Act, is in accordance with the contract. On July 2, 1952, United filed its contract as a rate schedule[2] which became effective on July 23, 1952. On the following day, July 3, 1952, United filed all of its rate schedules (including Rate Schedule T-3), in tariff form, along with an accompanying statement complying with Section 154.85. That section requires that each contract filed as a rate schedule be supplemented by a statement specifying those provisions of the contract which remain in effect as a service agreement and those which are superseded by or in conflict with the tariff provisions. Article VIII was not listed as a retained provision of the contract in United's filing. The Commission suspended Rate Schedule T-3 and the accompanying statement until January 3, 1953, upon which date they became effective, subject to refund. The issues raised by such suspension were resolved in a settlement agreement, covering numerous other matters as well, which was approved by the Commission on November 2, 1954.[3] Southern was a party to this agreement. For the purpose of implementing the terms of the settlement, United filed a revised tariff (including a modified Rate Schedule T-3), which became effective on August 1, 1954. United contends that this modified schedule provides for a fixed billing demand of 55,460 Mcf, in accordance with the contract and that Southern has no right to reduce it. Southern disputes United's claim that the conversion tariff was in accordance with the contract and contends that this tariff unlawfully abrogated its contractual right to change the billing demand, in violation of the *Mobile* doctrine.[4]

United rejoins that in any event, Southern is now estopped from challenging the tariff provisions relating to billing demand because of its past acquiescence in the changes in Rate Schedule T-3 made by the tariff.[5] Southern denies that there is such an estoppel on the ground that it may properly raise any question which was not expressly decided in the settlement proceeding.

---

[2] Designated Rate Schedule 126-B.

[3] Opinion No. 277, Docket No. G-1142, *et al.*, 13 FPC 398.

[4] *United Gas Pipe Line Co.* v. *Mobile Gas Service Corporation*, 350 U.S. 332.

[5] There is some question as to whether United's tariff filed pursuant to the settlement agreement, effective August 1, 1954, provides the same billing demand as that contained in the conversion tariff, effective January 3, 1953.

Upon analysis of the pleadings, the Commission has concluded that Southern's complaint raises additional issues not specifically adduced by the parties. The most important of these issues is whether the provision relating to billing demand contained in United's Rate Schedule T-3, if determined to be fixed, is just and reasonable under the provisions of the Natural Gas Act. We do not believe therefore, that this case can be properly and adequately decided solely upon the basis of the formal pleadings and are instituting proceedings herein.

Nevertheless, it appears premature at this time to schedule an evidentiary hearing, since the issues here are primarily matters of law or regulatory policy and there should be few, if any, disputed questions of fact. Accordingly, we shall provide for the convening of a prehearing conference in order to afford the parties an opportunity to stipulate all relevant facts and permit the fixing of dates for the submission of briefs on the issues presented to the Examiner. Should this prove to be impossible the Presiding Examiner may, at his discretion, set a date for a trial-type hearing on the relevant, material and genuinely disputed matters not stipulated by the parties and issue such further procedural orders as may be appropriate.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act and the Regulations thereunder:

(1) That a proceeding be instituted as hereinafter ordered, for the purpose of resolving the following issues:

1. Whether the transportation contract between United and Southern provided a billing demand which was subject to change, depending upon the amounts of gas Southern elected to deliver to United up to 55,460 Mcf per day, or provided a fixed billing demand of 55,460 Mcf.

2. If it is determined that the contract provided a billing demand subject to change:

a. Whether United, in its conversion tariff, made a substantive change in the contract by providing a fixed billing demand and whether such a substantive change is within the intent and purpose of Section 154.85, and

b. Whether the tariff filed pursuant to the settlement changed the contract provision as to billing demand.

3. Whether United is free under the *Mobile* doctrine to seek a unilateral change in the transportation contract.

4. Whether Southern, by its past acquiescence and conduct with regard to the billing demand provision contained in United's Rate Schedule T-3, is now estopped from complaining of that provision.

5. If United's presently effective Rate Schedule T-3 specifies a fixed billing demand, whether that tariff provision is just and reasonable under the Natural Gas Act.

(2) That a prehearing conference be convened before a Presiding Examiner for the purpose of arriving at a stipulation of relevant and material facts, scheduling dates for the submission of briefs on the legal issues and considering such other matters as may be properly dealt with to aid in expediting the orderly conduct and disposition of the proceeding.

(3) That if all relevant and material facts are not stipulated the Presiding Examiner may, at his discretion, set a date for evidentiary hearing on the nonstipulated facts (including expert opinion thereon) and issue such further procedural orders as may be appropriate.

(4) That, following a stipulation of facts and/or an evidentiary hearing, if ordered, the parties submit briefs to the Presiding Examiner, and that he issue his decision on the matter in accordance with Section 1.30 of the Rules of Practice and Procedure.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4, 5, 15 and 16 thereof, the Commission's Rules of Practice and Procedure and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a proceeding be instituted under the procedures set forth above on the issues stated in paragraph (1) above.

(B) Presiding Examiner Ewing G. Simpson, or any other officer or officers of the Commission designated by the Chief Examiner for that purpose, shall preside at the prehearing conference and at any hearing which may be held on this matter, pursuant to the Rules of Practice and Procedure.

(C) Pursuant to the provisions of Section 1.18 of the Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner shall commence at 10:00 a.m. (EDT) on March 24, 1964, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for the purpose of effectuating the intent of the Commission, as set forth above.

(D) Petitions to intervene and notices of intervention may be filed with the Federal Power Commission, Washington, D.C., in accordance with the Commission's Rules of Practice and Procedure, Sections 1.18 and 1.37(f) [18 CFR 1.8 and 1.37(f)], on or before March 13, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, PROJECT NOS. 2344, 2345 AND 2349

ORDER PERMITTING WITHDRAWAL OF APPLICATIONS FOR LICENSES FOR MINOR PROJECTS

(Issued February 27, 1964)

On September 27, 1963, Wisconsin Power & Light Company, of Madison, Wisconsin, filed notices of withdrawal of applications for licenses for minor Project No. 2344 on Little Wolf River, Waupaca County, for minor Project No. 2345 on Yahara River, Rock County, and for minor Project No. 2349 on Rock River, Rock County—all within the State of Wisconsin. No lands of the United States are involved.

The projects have installed capacities of 320 kilowatts, 260 kilowatts and 320 kilowatts, respectively.

All of the projects are constructed and have served their economic usefulness. On or before May 27, 1963, Applicant discontinued the use of the project works for the generation of electric power and does not propose to again use the project works for power purpose. Applicant states that it is presently negotiating with units of local government with a view towards conveying ownership of the dam and real estate for recreational use and similar purposes.

The Commission finds:

In the circumstances recited above, permission to withdraw the subject applications will not be inconsistent with the public interest.

The Commission orders:

Wisconsin Power & Light Company is hereby permitted to withdraw its pending applications for licenses for minor Project Nos. 2344, 2345 and 2349.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

CENTRAL MAINE POWER COMPANY, PROJECT NOS. 2283 AND 2284

ORDER AMENDING LICENSES (MAJOR)

(Issued February 28, 1964)

Applications were filed on January 13, 1964, by Central Maine Power Company, licensee for Project Nos. 2283 and 2284, for amendment of Article 20 of the respective licenses for the projects which provides for possible future obligation of the licensee in respect to fish and wildlife resources.

Specifically, the licensee requests that Article 20 of each license be deleted and that there be substituted in the license in lieu thereof the language of Article 15 of Form L-3 (Revised November 1, 1963) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States." 30 FPC 1658

The Commission finds:

It will not be inconsistent with the public interest to amend our orders of July 5 and August 8, 1962, respectively, issuing licenses for Project Nos. 2283 and 2284 as hereinafter provided.

The Commission orders:

(A) The orders issued July 5 and August 8, 1962, in Project Nos. 2283 and 2284 are hereby amended by deleting Article 20 from each license order and substituting in lieu thereof the following new Article 20:

Article 20. The Licensee shall, for the conservation and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(B) This amendment in the manner set out above shall not operate to alter or amend the licenses in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the licenses.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of the amended licenses. In acknowledgment of the acceptance of the amended licenses, this order shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SACRAMENTO MUNICIPAL UTILITY DISTRICT, PROJECT NO. 2101

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued February 28, 1964)

Application was filed on June 10, 1963 and supplemented on August 1, 1963, by Sacramento Municipal Utility District, licensee for major Project No. 2101, for further amendment of its license for the project, which is under construction on tributaries of the American River in El Dorado County, California, affecting lands of the United States within Eldorado National Forest.

The application seeks to include in the license the proposed Robbs Peak Powerhouse with an installed capacity of 25,000 kilowatts in one generating unit on the shoreline of the completed Union Valley reservoir, and a penstock extending from the outlet portal of the completed Robbs Peak tunnel to the proposed powerhouse.

The Robbs Peak power plant is one of three power plants contemplated by Article 44 of the license for the project to develop the power potential between the Loon Lake and Union Valley reservoirs at such times as this Commission may direct, if such plants are economically sound and in the public interest. In this connection, the application points out that inasmuch as only 2,500 feet of penstock and a powerhouse are required to develop the approximately 400 feet of head between Robbs Peak dam and Union Valley reservoir, the resultant capacity developed is relatively inexpensive.

According to staff studies, the average annual gross generation of Robbs Creek power plant will be about 50 million kilowatt hours (about 48 million kwh at load center) at 23 percent average load factor on the plant, and the estimated annual costs of Robbs Creek penstock and powerhouse, together with those of a transmission line to be proposed by the licensee for future Commission approval, are considered reasonable at $366,000, as are the estimated annual benefits of $656,000.

No specific time was requested in the application for commencement or completion of construction of the Robbs Creek facilities covered in the application. However, it would appear that August 1, 1964 for commencement, and August 1, 1966 for completion, are consistent with the stated need for the capacity of Robbs Peak powerhouse on the licensee's system in the summer of 1965.

The Department of the Interior, in reporting on the application, recommended for inclusion in the license, a special condition in the interests of fish and wildlife or their habitat.

The Department of Agriculture, in reporting on the application, recommended for inclusion in the license, a special condition in the interests of the Department.

The California Department of Water Resources has reported that the Robbs Peak power plant (penstock and powerhouse) are not in conflict with any projects planned or under consideration by that Department and, therefore, it has no objection to the application.

The Commission finds:

(1) The license, further amended as hereinafter provided, will not interfere or be inconsistent with the purposes for which Eldorado National Forest was created or acquired, and construction of the proposed additional project works as hereinafter ordered is economically sound and is in the public interest.

(2) Public notice of the filing of the application has been given. No protests were received.

(3) The authorized installed horsepower capacity of the project under this amendment is increased to 545,000 horsepower, and the increased annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based on such capacity, as hereinafter provided, is reasonable.

(4) The exhibits designated and described in PARAGRAPH I and PARAGRAPH II below conform to the Commission's rules and regulations and should be approved as part of the license for the project to the extent therein indicated.

The Commission orders:

(A) The exhibits designated and described in PARAGRAPH I and PARAGRAPH II below are hereby approved as part of the license for Project No. 2101 to the extent therein indicated.

(B) The license for Project No. 2101 is hereby further amended, effective as of December 1, 1963, as follows:

Paragraph I. Paragraph (2)(a) of the license is further amended by adding thereto the following described exhibit:

Exhibit K-24 (FPC No. 2101-175) entitled "Robbs Peak Penstock & Powerhouse, Proposed Project Boundary" insofar as it shows the plan and location of the penstock and powerhouse.

Paragraph II. Paragraph (2)(b) of the license is further amended by redesignating subparagraph 10 thereof as 11, and inserting the following new subparagraph 10:

10. Robbs Creek Powerhouse located on the shore of Union Valley Reservoir and containing one generating unit of 25,000-kw capacity, served by a single penstock originating at the outlet portal of Robbs Creek Tunnel; and by adding thereto the following described exhibits:

Exhibit	FPC No.	Entitled
L-106	2101-176	"Robbs Peak Powerhouse, General Arrangement, Plans—Generator Turbine, & Valve Floors,"
L-107	2101-177	"Robbs Peak Powerhouse, General Arrangement, Section Thru Unit,"
L-111	2101-181	"Profile, Gerle Creek Dam to Robbs Peak Powerhouse," and
M-4		filed June 10, 1963, and consisting of one typewritten page entitled "Robbs Peak Power Plant, General Description of Equipment," except insofar as it specifies 4.6 miles of 60-kv transmission line.

Paragraph III. Article 25 of the license is further modified by adding thereto the following subparagraph (e):

(e) Commence construction of Robbs Peak Power Plant, which includes Robbs Peak Powerhouse and Penstock, within 7 years of the effective date of this license and shall thereafter in good faith and with due diligence prosecute such construction; and shall complete such construction within 9 years of the effective date of the license.

Paragraph IV. Article 27 of the license is further amended to read as follows:

Article 27. The Licensee shall, within one year from the date of completion of the project works in White Rock Division, in the Robbs Peak Powerhouse and Penstock, and in each stage of Stages I, II and III of the project, file with the Commission Exhibits F and K in accordance with the rules and regulations of the Commission.

Paragraph V. Article 46(a) of the license is further amended by substituting "(545,000 horsepower)" for "(512,000 horsepower)".

Paragraph VI. The license is further amended by adding thereto the following articles:

Article 57. The Licensee shall, during the construction and operation of the project, prevent the unnecessary entry into any affected waters of fines, gravel wash water, concrete effluent, oil, or any other substances which may be injurious to fish and wildlife or their habitat.

Article 58. The Licensee shall fill in the temporary diversion channel in the SW¼NE¼ of Section 11, T. 12 N., R. 14 E., Mount Diablo Meridian, utilizing tunnel rock from the adjacent disposal area and material from the penstock excavation, and shall restore both the channel area and the adjacent disposal area to a condition where they will forest naturally from nearby seed trees or by planting with tree seedlings.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

MINNESOTA POWER & LIGHT COMPANY, DOCKET NO. E-7095

ORDER GRANTING REHEARING FOR FURTHER CONSIDERATION

(Issued March 2, 1964)

The Minnesota Power & Light Company (Applicant) on January 29, 1964 filed an application for rehearing upon the declaratory order issued December 30, 1963, 30 FPC 1618 requiring it to apply for a license on its Little Falls project on the Mississippi River in Morrison County in the State of Minnesota.

Applicant contends that the Congressional Act of July 3, 1886 (24 Stat. 123), exempts it under Section 23(a) of the Federal Power Act (16 USC 816) from having to take a license under Section 23(b) (16 USC 817).

The Commission finds:

It is appropriate and in the public interest in administering the Federal Power Act that the Minnesota Power & Light Company's application for rehearing on the order issued December 30, 1963, be granted as hereinafter provided.

The Commission orders:

(A) The Minnesota Power & Light Company's application filed on January 29, 1964, for rehearing of the order issued December 30, 1963, is hereby granted for the purpose of providing additional time for further consideration of the issues raised by the application.

(B) The aforesaid order issued on December 30, 1963, is stayed until further order of the Commission.

E. E. FOGELSON, DOCKET NO. G-19013; JAMES G. BROWN & ASSOCIATES, OPERATOR, ET AL., CI60-750; YUCCA PETROLEUM CORPORATION, CI60-768; JAMES G. BROWN & ASSOCIATES, OPERATOR, ET AL., CI60-770; MONSANTO CHEMICAL COMPANY, CI61-94; ARMOUR PROPERTIES, CI61-102; MARATHON OIL COMPANY (PLYMOUTH), CI61-169; CREE DRILLING CO., INC., CI61-193; WESTERN OIL FIELDS, INC., OPERATOR, ET AL., CI61-273; ANCHOR OIL COMPANY, CI61-292; CONTINENTAL OIL COMPANY, CI61-375; PAN AMERICAN PETROLEUM CORP., CI61-438; IRVIN PRODUCING CO., CI61-579; STUBBLEFIELD BROTHERS, CI61-605; CAROLINE HUNT SANDS & LLOYD B. SANDS, CI61-643; CRICKET OIL CO., ET AL., CI61-650; UNION OIL COMPANY OF CALIFORNIA, CI61-715; HAMILTON BROTHERS, LTD., CI61-849; CHAMPLIN OIL & REFINING CO., CI61-888; PETRO-ASSOCIATES, INC. (OPERATOR), ET AL., CI61-936; D. D. FELDMAN, CI61-1452; FOREE DRILLING CO., OPERATOR, ET AL., CI61-1726; SCHAFER OIL CORP., CI61-1774; CARL M. ARCHER, CI61-1782; DAN E. ORDER GRANTING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, SEVERING AND CONSOLIDATING PROCEEDINGS

(Issued March 4, 1964) *

Syllabus

1. Commission is unable to issue permanent certificates to certain producers absent showing that facilities needed by pipeline to receive gas are permanently certificated. P. 477.

---

*Initial decision appears on p. 479.

2. Commission *issues* permanent certificates of public convenience and necessity to remaining producer applicants in proceeding arising under Section 7 of the Natural Gas Act. P. 479.

Joseph C. Johnson for Continental Oil Company.

Clifford D. Stone, Jr., J. P. Hammond, Norton Standeven, Harry Landt, William J. Grove and *Carroll Gilliam* for Pan American Petroleum Corporation.

Richard F. Generelly, Robert W. Henderson and *Thomas G. Grouch* for Caroline Hunt Sands and Lloyd B. Sands.

George D. Horning, Jr., and *George Bond* for Union Oil Company of California.

James W. McCartney for Transwestern Pipe Line Company.

John E. Holtzinger, Jr. and *John P. Egan* for Southern California Gas Company.

David Lichtenstein for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

These proceedings involve applications by a number of producers under Section 7 of the Natural Gas Act to sell gas to Transwestern Pipeline Company from acreage in the panhandle areas of Texas and Oklahoma. The presiding examiner granted all the applications conditioning them at 17 cents per Mcf at 14.65 psia. There is no issue as to the price, but an issue arises over whether certain of the applications should be granted in the absence of permanent authority to Transwestern for the necessary facilities to receive the gas. The only exceptions filed were those of the staff.

Each of the applicants here was granted a temporary certificate.[1] The only objection to the grant of permanent certificate was made by Transwestern. It contended that some of the wells involved in these consolidated proceedings have been connected to its system by facilities temporarily authorized in Docket Nos. G-20464, CP62-160 and CP61-168 and some of the wells have not been connected at all, and therefore the certificates issued the producers should be conditioned upon it obtaining permanent authorization to install and operate the facilities connecting wells involved in these proceedings. The staff argues that certificates should not be issued to Marathon Oil Company in Docket No. CI61-169 and Continental Oil Company in Docket No. CI61-375 because these two dockets are properly associated with Transwestern's expansion, Docket No. G-20464, rather than with Transwestern's original construction Docket No. G-14871, and were inadvertently consolidated with the instant proceeding. The staff also contends that the examiner bypasses the entire problem of whether Transwestern has permanent, temporary or any authorization to construct the facilities required to pick up the gas involved in the respective producer dockets.

Except for the seven dockets to which Transwestern takes objection (Nos. CI61-169, CI61-193, CI61-375, CI61-438, CI61-715, CI61-936, CI61-1774) there is no dispute that Transwestern has received permanent authorization to receive the gas in Docket No. G-14871, and we find that the public convenience and necessity requires that permanent certificates be issued. With respect to these seven dockets, however, the record does not show that the facilities needed by Transwestern to receive the gas are all permanently certificated. For deliveries of gas in Docket Nos. CI61-169, CI61-193, CI61-375, CI61-438 and CI61-715 Transwestern either has no facilities or may have facilities under temporary authorization in Docket Nos. G-20464 and CP62-160. For deliveries of gas in

---

[1] The temporary certificates provided that the price should not exceed 17 cents per mcf or such higher price that might be found to be required by the public convenience and necessity in the supplemental proceeding involving Opinion No. 328 (*Transwestern Pipeline Co.*, 22 FPC 391). No higher price was in fact permitted by the Commission (28 FPC 109).

Docket Nos. CI61-936 and CI61-1774 Transwestern may have facilities under temporary authorization in Docket No. CP61-168. While a budget-type permanent certificate has been issued in the latter docket on February 28, 1961, Transwestern later sought to amend the certificate to include further facilities, and such an amended certificate has not been issued. The present record does not show whether the facilities necessary to receive the gas in Docket Nos. CI61-936 and CI61-1774 are covered by the permanent certificate. Under these circumstances we are unable to issue permanent certificates to the producers in these seven dockets at this time although temporary certificates will remain outstanding. The fact that the gas will flow into Transwestern's facilities permanently certificated in Docket No. G-14871 is immaterial, for the connecting facilities are not shown to be so. To grant permanent certificates to the producers now would be prejudging the proceedings in Transwestern's Docket Nos. G-20464, CP61-16 and CP62-160, even if we conditioned the certificates as proposed by Transwestern. Since the issuance of certificates in these seven dockets cannot be granted until permanent certificates are granted in G-20464, CP61-168, CP62-160, which are consolidated, we shall order the seven dockets severed from the present proceeding and consolidated with the proceedings in Docket No. G-20464, *et al.*

The Commission further finds:

(1) Each applicant in the dockets to which this decision relates is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each applicant except those listed in (6) below is able and willing properly to do the acts and perform the services proposed, and to conform to the requirements of the Natural Gas Act and the requirements of the rules and regulations of the Commission under that Act.

(4) The proposed sales, except those involved in the dockets listed in (6), together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The public convenience and necessity require that the total initial price shall not in any instance exceed 17 cents per Mcf at 14.65 psia, from the date of issuance of the certificate until such price may be lawfully changed in the manner and to the extent provided by the Natural Gas Act.

(6) Marathon Oil Company (Plymouth) in Docket No. CI61-169, Cree Drilling Co. in Docket No. CI61-193, Continental Oil Company in Docket No. CI61-375, Pan American Petroleum Corp. in Docket No. CI61-438, Union Oil Company of California in Docket No. CI61-715, Petroleum Associates, Inc. *et al.* in Docket No. CI61-936, and Schafer Oil Corp. in Docket No. CI61-1774 are not shown to be able and willing properly to do the acts and perform the service proposed and their proposed sales are not shown to be required by the public convenience and necessity.

(7) The docket numbers listed in (6) above should be severed from the present proceedings and consolidated with the proceedings in Docket No. G-20464, *et al.*

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to each applicant in the dockets in which this decision is entitled, except those listed in (6) above, subject to the terms and conditions of this order, but otherwise in accordance with the respective applications.

(B) The certificates are hereby conditioned to prohibit any total initial price, including all reimbursements and charges, in excess of 17 cents per Mcf at 14.65 psia, from the date of issuance of the certificate until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customers involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificates.

(D) The proceedings in Marathon Oil Company (Plymouth) Docket No. CI61-169, Cree Drilling Co. Docket No. CI61-193, Continental Oil Company Docket No. CI61-375, Pan American Petroleum Corp. Docket No. CI61-438, Union Oil Company of California Docket No. CI61-715, Petroleum Associates, Inc. *et al.* Docket No. CI61-936, and Schafer Oil Corp. Docket No. CI61-1774 are hereby severed from the present proceedings and consolidated with those in Docket No. G-20464, *et al.*

INITIAL DECISION

OF THE PRESIDING EXAMINER ON ISSUANCE OF CERTIFICATES

(Issued December 19, 1963)

FRIBOURG, *Presiding Examiner:* This proceeding concerns applications by various producers to sell gas to Transwestern Pipeline Company from acreage in the panhandle areas of Texas and Oklahoma. In each case the producer has received a temporary certificate. The applications were filed subsequent to August 10, 1959, the date of Commission Opinion No. 328, 22 FPC 391, but before July 11, 1962, the date of the Commission's final order in the reopened proceedings, Docket No. G-14871, *et al.*, 28 FPC 109.

By order issued August 10, 1959 in *Transwestern Pipeline Company*, Docket No. G-14871, *et al.*, the original proceedings, the Commission certificated sales to Transwestern but conditioned certain of the proposed initial rates. Thereafter the proceedings in those dockets were reopened to give producer applicants an opportunity to justify higher proposed initial prices. On July 11, 1962, the Commission reaffirmed the conditioned price levels found to be necessary and required by the public convenience and necessity in paragraphs (D) and (E) of its original order of August 10, 1959, 22 FPC 391, 404.

The present applicants had applied for permanent certificates prior to July 11, 1962 and each was granted temporary authorization to sell at 17 cents until a higher price is approved by the Commission under the particular rate schedule applicable to that producer. With exceptions hereinafter noted, the facilities necessary for these sales are among the facilities which the Commission has already found, in Docket No. G–14871, to be subject to its jurisdiction and subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act. 28 FPC 109, at p. 112, finding (3).

There is no issue here as to price. None of the producers requests a price in excess of the 17-cent level at which temporary authorization has been granted them. Those who appeared at the hearing expressed willingness to accept certificates at 17 cents. The others did not make or attempt to make any showing to the effect that the 17-cent price is unsatisfactory. Their contracts call for 17 cents or such higher price "as may be approved by the Commission in the supplemental proceedings" or, in some cases, 17 cents or such higher price as the Commission may approve in "a certificate proceeding of the Commission covering seller's application to sell gas to buyer (Transwestern) as provided for herein." The principal purpose of this proceeding was to give them an opportunity to justify a higher price. In the absence of any price evidence, consent to a 17-cent price is, in these circumstances, presumed.

It is usual, in an uncontested proceeding, for a motion to be made that the application, and any exhibits thereto, be received in evidence. None was made with respect to any of the applications herein, except that Pan American Petroleum Corporation's counsel, who also submitted a helpful brief, did so with respect to that company's docket, No. CI61–438. His motion was granted. The examiner takes official notice of each of the other applications and the exhibits thereto annexed.

The only objection to the grant of permanent certificates comes from Transwestern. It would have the certificates issued only on the condition that it be given permanent authorization to operate the facilities connecting the respective wells to its pipeline system. Transwestern has connected to its system wells in fields where it was authorized to construct other facilities but where it has not obtained authorization for certain of the individual connections here involved.

Transwestern's objections apply to seven of the dockets in this proceeding, Nos. CI61–169, CI61–193, CI61–375, CI61–438, CI61–715, CI61–936 and CI61–1774. As to the other dockets, there is no dispute that Transwestern has received permanent authorization, in Docket No. G–14871, to serve the respective wells, nor is there, in any of those other dockets, any dispute in any other respect.

As to two of the seven disputed dockets, the staff admits that the gas would flow into facilities for which Transwestern has no permanent authorization. Those are Docket Nos. CI61–375 (Continental Oil Co.), and CI61–169 (Marathon Oil Co.). As is shown by the Notice of Applications and Date of Hearing dated September 13, 1963, the entire scope of the present proceeding was intended to relate to wells connected with facilities for which permanent authorization had been issued. It is evident, as the staff asserts, that Docket Nos. CI61–375 and CI61–169 were included in the present proceeding as the result of inadvertence.

The other five disputed dockets all concern sales to Transwestern through facilities other than or in addition to those permanently authorized in Docket No. G–14871. Some of these were temporarily or permanently authorized in Docket Nos. G–20464, CP62–160 or CP61–168, the two latter being dockets in which budget-type applications of Transwestern were granted. Transwestern connected field facilities under both of these budget authorizations. The legality of some of these connections is in issue, but not in the present proceedings. All of the gas with which Docket Nos. CI61–193, CI61–438, CI61–715, CI61–936 and

CI61-1774 are concerned flows from the field facilities into facilities permanently authorized in Docket No. G-14871.

Transwestern states that its position in favor of conditioning the producers' certificates arises from its unwillingness to assume that permanent certification of its facilities in Docket No. G-20464 and in the budget-type proceedings, CP61-168 and CP62-160, is not required. This is the only reason it gives. It states in its reply brief that if the examiner finds that the CP61-168 and CP62-160 facilities have been permanently authorized, the condition it requests is inappropriate. The examiner makes no finding in this regard.

Transwestern appears to believe that to impose the condition it asks for on the certificates in the disputed producer dockets here will affect its position in the proceedings relating to the legality of certain of the field connections it has established. If it is correct in that belief, the instant proceeding is not the place to impose a condition which could prejudice a decision there. If it is not correct, no reason appears for the condition.

In the examiner's view it is not correct. The gas is now flowing into facilities permanently authorized in Docket No. G-14871. The field connections through which it flows are legal or illegal, and their status in that regard will not be changed if the producers are granted permanent certificates. Thus Transwestern, which otherwise supports the instant applications, has shown no convincing reason for the condition it wishes imposed. It is true that if Transwestern is denied permanent authority to establish any of the facilities needed it will be legally unable to pick up some or all of the gas, but that is equally true whether the producers operate under their present temporary authorizations or under unconditioned permanent certificates or under permanent certificates conditioned as Transwestern desires. The entire question of whether Transwestern's field facilities have been permanently or temporarily authorized, so vigorously disputed by the parties, is outside the area necessary to the decision in this proceeding. The Commission is under no duty to condition producer certificates upon its issuance of pipeline certificates for the operation of the facilities to which the wells will be connected. Indeed, there is no requirement that such facilities be within the Commission's certificating authority at all, see *Medina Gathering Corporation*, Opinion 397, July 16, 1963, 30 FPC 227, or, as Continental Oil Company points out in its briefs, that the facilities even be in existence.

In *The California Company*, Docket No. G-16680, the Commission permanently certificated a large sale for future delivery from the Lake St. John field in Louisiana although the pipeline, Southern Natural Gas Co., had no facilities built to receive it. 22 FPC 211, 239. It did so in the expectation that Southern would apply for a certificate at an appropriate time but the Commission did not, and probably could not legally, commit itself in advance to issue a certificate whenever the pipeline's application might be made. The producer there was granted a permanent certificate to sell gas at a time when the pipeline buyer had neither the authority, the obligation or the physical capacity to take it. It seems plain that the issuance of a permanent certificate to sell gas is independent of the issuance of a certificate to the buyer for the construction of facilities through which the gas can flow. There is no reason to tie the two together in the present case.

Transwestern does not argue that its contractual relations with the producers would in any way be affected by the proposed condition, and there is no reason to suppose that it would not candidly so have argued were that the case. In any event, it makes no claim that anything in the record indicates any such effect. In the absence of a showing on this record, or even a claim, of any adverse effect, it is at least questionable whether a denial of its proposal would enable Transwestern to qualify as a "party aggrieved" within the meaning of the Natural Gas Act.

As to the two dockets, Nos. CI61-375 (Continental Oil Co.) and CI61-169 (Marathon Oil Co.), which the staff admits were included in this proceeding as the result of staff inadvertence, there has been no objection on the merits to the issuance of permanent certificates, save for Transwestern's demand for the same condition that it urges in the five dockets previously discussed. In the Marathon case, the facilities to take the gas have been temporarily authorized in Docket No. G-20464. In Continental's case there are no facilities going to the well. However, the well could be connected with the Transwestern line permanently certificated in Docket No. G-14871. The record shows, and it is not disputed, that the public convenience and necessity require authorization of the sales in both dockets.

At one point Continental moved that its docket be severed from the others and a permanent certificate issued at once with a 17-cent price condition. Staff did not oppose the severance, nor did any other party. Neither was there any objection to an immediate grant of a permanent certificate so conditioned, though staff appeared to favor the severance without the grant, solely because the docket should not have been included in the notice of hearing. But as Continental cogently points out, neither the Act nor the Regulations nor the Rules of Practice and Procedure contains any bar to the issuance.

In these circumstances there is reason to overlook the inadvertence which led to the consolidation of the Continental and Marathon dockets into this proceeding. The staff does not show any harm, or even suggest any inconvenience, that might arise from the issuance of the certificates at this time. Administrative convenience is often a perfectly valid factor for an agency to consider in deciding whether or not to act. Administrative symmetry rarely is. These producers, who have concededly made all the showing they need make, should not be required to make it all over again in some other proceeding merely because it would include dockets more like their own.

Staff counsel submitted a letter to the examiner under date of December 10, 1963 calling attention to alleged misstatements in Transwestern's reply brief, and presenting some additional argument. The content of the letter does not form any portion of the basis for this decision and in the examiner's view, does not bring forth any new material on the real issues. For that reason the examiner has chosen to promulgate this decision without awaiting the possible receipt of any documents in which other counsel may fight the battle of the supplemental memorandum.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record and briefs filed in these proceedings, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) Each applicant in the dockets to which this decision relates is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Each applicant is able and willing properly to do the acts and perform the services proposed, and to conform to the requirements of the Natural Gas Act and the requirements, rules and regulations of the Commission under that Act.

(3) The sale of natural gas as proposed by each applicant is required by the public convenience and necessity and a certificate should issue to each of them upon the terms and conditions which the public convenience and necessity require.

(4) The public convenience and necessity require that the total initial price shall not in any instance exceed 17 cents per Mcf at 14.65 psia, from the date of issuance of the certificate until such price may be lawfully changed in the manner and to the extent provided by the Natural Gas Act.

(5) Intervenor Transwestern Pipeline Company, which proposes that the certificates should be further conditioned upon Transwestern obtaining permanent certificates to construct and operate facilities to connect the wells covered by the respective producer certificates, has not shown that such a condition is or will be required by the public convenience and necessity.

ORDER

WHEREFORE, *it is ordered*, that:

(A) A certificate of public convenience and necessity is hereby issued to each applicant in the dockets in which this decision is entitled, subject to the terms and conditions of this order, but otherwise in accordance with the respective applications.

(B) The certificates are hereby conditioned to prohibit any total initial price, including all reimbursements and charges, in excess of 17 cents per Mcf at 14.65 psia, from the date of issuance of the certificate until such price may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The certificates issued herein are not transferable. The grant of the certificates shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceeding or objection relating to the operation of any provisions in the gas contracts here involved.

ARTHUR H. FRIBOURG,
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

THE NARRAGANSETT ELECTRIC COMPANY AND NEW ENGLAND POWER COMPANY, DOCKET NO. E-7153

ORDER PROVIDING FOR HEARING AND FOR SUSPENSION AND INVESTIGATION OF RATE SCHEDULES

(Issued March 4, 1964)

New England Power Service Co. (Service Company) filed on February 3, 1964, on behalf of Narragansett Electric Company (Narragansett), incorporated under a law of the State of Rhode Island, as a supplementary rate schedule, an agreement which amends an existing transmission agreement between Narragansett and its corporate affiliate the New England Power Company (Nepco). The agreement was filed pursuant to Section 205 of the Federal Power Act with the request that it be given an effective date of January 1, 1964. The proffered filing has been tentatively designated in the Commission's files as Supplement No. 3 to the Narragansett Electric Company's Rate Schedule FPC No. 19.

Narragansett, Nepco and Service Company are subsidiaries of the New England Electric System. Narragansett is engaged in the generation, purchase, transmission and sale of electric energy in the State of Rhode Island. Nepco is engaged in the generation, purchase, transmission and sale of electricity in the States of Massachusetts, New Hampshire and Vermont.

The present rate schedule provides for Narragansett's transmission of electricity over its facilities for Nepco. Narragansett, pursuant to the present schedule, wheels power and energy over its system for certain customers of Nepco other than Narragansett. For this service Nepco pays a flat monthly fee of $25,134 or $301,608 annually.

Prior to 1960, Narragansett sold excess firm power to Nepco under Naragansett Rate Schedule FPC No. 18. During 1960 and under changed operating conditions, Nepco through its Rate Schedule FPC No. 106, incorporating its W-3 rate, undertook to supply Narragansett on a capacity deficiency basis. Nepco's FPC No. 106 is identical to Narragansett's FPC No. 18, Supplement No. 1 and incorporates by reference definitions in Narragansett's FPC No. 18 as initially filed.

Under the proposed Narragansett rate for wheeling services, in addition to the wheeling service described above, recognition is given to the use of Narragansett's transmission facilities in transmitting to Narragansett's subtransmission system the primary power purchased by Narragansett from Nepco at the Massachusetts-Rhode Island border. Nepco asserts that such delivery by Nepco is required to comply with its standard delivery policy under its W-3 rate and would place Narragansett on a uniform basis with its other W-3 customers. The proposed rate schedule provides for a flat monthly charge for both types of service of $59,333 or $711,996 annually, an increase of 136% over the present rate schedule.

In support of the proposed increase the Service Company filed cost data indicating annual costs of the Narragansett transmission facilities used by both companies at 15.56% of gross investment. The annual costs are allocated in the study to Narragansett and Nepco in proportion to their respective uses, as estimated by the Service Company. Calculations supporting these estimated uses are based upon load flows in the inter-connected Narragansett-Nepco system under assumed system conditions and upon estimated primary deliveries to Narragansett at the time of Narragansett's hour of yearly peak demand.

The proposed changes in Narragansett's currently filed rate schedules have not been shown to be justified; may result in excessive rates or charges; may place an undue burden upon ultimate consumers; and may be unjust, unreasonable, unduly discriminatory or preferential, or otherwise unlawful within the meaning of the Federal Power Act. Unless suspended by order of the Commission, the proposed supplemental rate schedules will become effective March 5, 1964, pursuant to the provisions of the Federal Power Act and the Commission's Regulations thereunder.

As shown above, the proposed increase includes a charge for services related to the services performed by Nepco under its Rate Schedule FPC No. 106. Under the circumstances it appears appropriate that there be instituted an investigation of Nepco Rate Schedule No. 106 as supplemented as it may have a bearing on the determination of fair and reasonable charges for the use of each party's facilities by the other party. Insofar as the definitions of Narragansett's Rate Schedule No. 18 as supplemented are incorporated in Nepco Rate Schedule No. 106 as supplemented, and are applied to services performed thereunder, it is appropriate that Narragansett's Rate Schedule No.18 as supplemented be included in such investigation.

The Commission finds:

In view of the foregoing, it is necessary and appropriate for the purposes of the Federal Power Act that the Commission, pursuant to the authority of that Act, and particularly Section 205 thereof, enter upon a hearing concerning the lawfulness of Narragansett's Rate Schedule FPC No. 19 as proposed to be changed by Supplement No. 3 thereto and that the operation of such proposed supplemental rate schedule be suspended and the use thereof deferred as hereinafter provided. Review and analysis of pertinent data available to the Commission indicates that Narragansett's Rate Schedule No. 19 as supplemented, Nepco's Rate Schedule No. 106 and Narragansett's FPC No. 18 as supplemented, insofar as it applies to service under Nepco's FPC No. 106, may result in excessive rates or charges or may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable and unlawful within the meaning of the Federal Power Act. Additional factual data necessary for a resolution of those questions must be obtained. Accordingly, it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206 and 309 thereof, that the Commission staff conduct an investigation and that a hearing be held as hereinafter provided.

The Commission orders:

(A) A public hearing be held concerning the lawfulness of Narragansett's Rate Schedule No. 19 as proposed to be changed by supplement No. 3 thereto, the lawfulness of Nepco's Rate Schedule FPC No. 106 as supplemented, and the lawfulness of Narragansett's present Rate schedule No. 19 as supplemented and No. 18 to the extent it applies to service under Nepco's FPC No. 106, at a time and place and in the manner all to be fixed by Notice of the Secretary.

(B) Pending such hearing and decision thereon, the operation of Supplement No. 3 to Narragansett's Rate Schedule FPC No. 19 hereby is suspended and the use thereof deferred until August 5, 1964. On that date the proposed supplemental rate schedule shall take effect in the manner prescribed by the Act, subject to further order of the Commission.

(C) During the period of suspension, Narragansett's Rate Schedule FPC No. 19 and Supplements No. 1 and 2 thereto, now on file with the Commission, shall remain and continue in effect.

(D) Narragansett (or Service Company) shall file, within 45 days from the date of issuance hereof, six copies of a cost of service study upon which it proposes to justify the filed increase in charges. Such study shall include a narrative sufficient to explain the derivation thereof and detailed references to any back up material relied on in the study.

(E) The foregoing showing shall not preclude or limit any additional showing by Narragansett, Nepco, or others and shall be without prejudice to future action taken by the Commission or its staff, or to any future position Narragansett, Nepco, or others may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(F) Interested State Commissions may participate in this proceedings as provided by Sections 1.8 and 1.37(f) of the Commission's Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)].

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

CENTRAL MAINE POWER COMPANY, PROJECT NO. 2322

ORDER ISSUING LICENSE (MAJOR)

(Issued March 5, 1964)

Application was filed on September 27, 1963, by Central Maine Power Company (Applicant) of Augusta, Maine, for a license under the Federal Power Act (Act) for constructed Project No. 2322, known as the Shawmut Project, located on the Kennebec River in Kennebec and Somerset Counties, Maine, in the vicinity of Shawmut.

According to the application, power has been developed at the subject project site for over 125 years. The first mill of record was built about 1835. Thereafter, the site passed through a series of owners, involving the construction of a grist mill, several sawmills and wood pulp mills. In 1912, a wood pulp manufacturer, Shawmut Manufacturing Co., started redevelopment of the site with the construction of a new dam a short distance downstream from the old dam incorporating the headworks of the old dam, increasing the head from 12 to 19 feet. The new plant, placed in service in March 1913, included an initial hydroelectric installation of three 750 kilowatt generators, each connected to a 1200 horsepower turbine, and a fourth turbine mechanically connected to a pulp grinding machine. In 1915, a fourth 750 kilowatt generator replaced the pulp grinder. A fifth generating unit of 750 kilowatts was installed in 1918 and a sixth unit of 900 kilowatts was installed in 1921. These hydroelectric facilities were transferred to Applicant in 1924.

Applicant requests a 50-year license effective from the date of its issuance. In its order issued May 21, 1954 in Docket No. E-6456, the Commission found the Kennebec River to be a navigable water of the United States. In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 and Order issuing license to Public Service Company of New Hampshire for Project No. 2288 (27 FPC 830), the license herein granted shall have an effective date of June 1, 1954 and a termination date of December 31, 1993.

The Secretary of the Army and the U.S. Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned, and the plans were approved pursuant to Section 4(e) of the Act.

The Department of the Interior recommended for inclusion in any license issued for the project certain conditions in the interest of fish and wildlife resources.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of the license.

(3) Public notice of the application has been given as required by the Act. No protests have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(6) The step-up transformers mentioned in paragraph (B) below, which were included in the application for license, are part of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 6,200 horsepower, and the energy generated by the project is fed into Applicant's electric utility system for distribution and sale for public utility purposes.

(8) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(9) The exhibits described and designated in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Central Maine Power Company, of Augusta, Maine, under Section 4(e) of the Federal Power Act (Act) for a period effective June 1, 1954 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2322 on the Kennebec River, Maine and affecting navigable waters of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2322 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: Sheet 1 (FPC No. 2322-1) General Map, Flowage, Dam & Power Plant Areas;

Exhibit K: Sheets 1 to 5 incl. (FPC Nos. 2322-3 to -7, inclusive) Detail Map, Reservoir.

(ii) Project works consisting of:

A fixed crest concrete gravity type overflow section about 1,135 feet in length including a 25 foot gated log sluice, with 4 foot flashboards; headworks section; concrete retaining walls and short earthen dike; a reservoir of about 1,310 acres in area at normal full pool elevation 112.0 (USGS), extending upstream about 12 miles; a forebay; a powerhouse containing six, 1,200 horsepower turbines connected to five 750-kilowatt generators and one 900-kilowatt generator; step-up transformers; a gate and future intake section at the downstream end of the forebay, and adjacent to the powerhouse; and appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2322-8) Dam, Plan-Elevation-Sections
Sheet 2 (FPC No. 2322-9) Forebay, Plan-Sections
Sheet 3 (FPC No. 2322-10) Powerhouse, Plan-Sections

Exhibit M: Six typewritten pages, "General Description and Specifications of Equipment and Appurtenances", filed in the Commission September 27, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised November 1, 1963), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", (30 FPC 1658) which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof; are subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall, from the effective date of this license, pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity, plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration. The authorized installed capacity for such purpose is 6,200 horsepower.

Article 29. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, shall be included in this license.

Article 30. Whenever the licensee is directly benefited by the construction work of another licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of the license for the project.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64–82

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 5, 1964)

On October 1, 1963, as amended on January 2, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP64–82 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction or relocation during the calendar year 1964 and the operation of certain miscellaneous natural gas transmission facilities as hereinafter described and as more fully described in the application.

Applicant states that it may become necessary or desirable to move, relocate, alter or reconstruct existing facilities, or to construct and operate substitute facilities for existing facilities, in order to accommodate the desires or activities of others, including federal, state and local authorities, landowners and direct industrial and resale customers. For the most part, such changes will be made in response to requests from others. The cost of relocating or altering Applicant's facilities in such instances will usually be borne entirely or partly by the party desiring the change and will not ordinarily involve any increase or decrease in the designed capacity of the particular facilities being altered or replaced nor any essential change in the character of Applicant's service to any of its customers.

Applicant states further that it will not undertake more than fifteen (15) projects of the type referred to in said application during the calendar year 1964. No single project is to exceed a cost of $40,000, nor will the total cost of all such projects exceed a maximum of $300,000, which amounts may be reduced or offset entirely by reimbursement from others.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 27, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction or relocation and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 90 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) actual final costs, (b) description of the project or projects, (c) location of facilities constructed or relocated, and (d) reason for such work to be performed.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction or relocation during the calendar year 1964, and the total expenditures for facilities so constructed or relocated thereunder should be limited to a maximum of $300,000, with no single project to exceed a cost of $40,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct or relocate during the calendar year 1964 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate said facilities as may be necessary in the related transportation of natural gas.

(B) Applicant shall submit within 90 days after the expiration of the authorization granted by paragraph (A) above a statement showing by projects: (a) actual final costs, (b) description of the project or projects, (c) location of facilities constructed or relocated, and (d) reason for such work to be performed.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted by paragraph (A) above is hereby limited to construction or relocation during the calendar year 1964, and the total expenditures for facilities constructed or relocated thereunder are hereby limited to a maximum of $300,000, with no single project to exceed a cost of $40,000.

(E) The authorization granted hereby shall not be construed as authorizing applicant to construct facilities to deliver natural gas to any new customer or to increase deliveries to any existing customer.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64-138

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 5, 1964)

On December 18, 1963, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP64-138 an application pursuant to Section 7(c) of the Natural Gas

Act for a certificate of public convenience and necessity authorising the construction and operation of certain facilities in Texas County, Oklahoma, in order to continue the exchange deliveries of natural gas with Panhandle Eastern Pipe Line Company (Panhandle) pursuant to Applicant's FPC Gas Rate Schedule X-19, all as more fully set forth in the application.

Applicant states that it has been unable to deliver exchange gas to Panhandle because of a permanent increase in pressure in Panhandle's line in Texas County, Oklahoma. Thus, Applicant proposes herein to construct and operate a skid-mounted 453 horsepower package compressor unit in order to effect continued deliveries.

Applicant has been delivering to Panhandle a quantity of gas equal to that quantity delivered by Phillips Petroleum Company to Cabot Corporation for Applicant's account. Upon the expiration of the subject exchange arrangement at 12:01 a.m., January 1, 1965, Applicant proposes to install permanently the subject compressor unit in its Panhandle Field gathering system.

The estimated cost of the proposed facilities is $82,000, which cost will be financed from current working funds on hand.

On December 23, 1963, Applicant was granted a temporary certificate authorizing the construction and operation of the proposed facilities.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 27, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the described facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should terminate at 12:01 a.m., January 1, 1965.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate the subject facilities, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above shall terminate at 12:01 a.m., January 1, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-136

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SUPERSEDING SERVICE AGREEMENT

(Issued March 5, 1964)

On December 11, 1963, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-136, an application pursuant to Section 7(c) of the Natural Gas Act, for a certificate of public convenience and necessity authorizing the sale and delivery of an additional Daily Contract Quantity of 2500 Mcf of natural gas to Interstate Power Company (Interstate), and existing customer, increasing the total Daily Contract Quantity to 22,734 Mcf, all as more fully set forth in the application on file with the Commission.

The Applicant states Interstate requires the additional volume of gas for the Hawkeye Chemical Company, an industrial customer, which will use the additional quantity of gas as raw material in the manufacture of agricultural fertilizers. Applicant further states it has unallocated system capacity sufficient to supply the additional volume, and that no additional facilities will be required.

A proposed superseding service agreement dated November 29, 1963, has been filed concurrently with the application reflecting the proposed increase in contract demand to Interstate. The proposed service agreement calls for the additional sale to be made at the present rates under Applicant's Rate Schedule CD-1.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 27, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Interstate Power Company, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(6) The public convenience and necessity requires that the superseding service agreement with Interstate Power Company dated November 29, 1963, be accepted for filing to become effective concurrently herewith; and Applicant's request for an effective date of December 1, 1963, be denied.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Interstate Power Company, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (c) (4) and (e) of Section 157.20 of such Regulations.

(C) Natural's superseding service agreement with Interstate Power Company dated November 29, 1963, is hereby accepted for filing to become effective concurrently herewith.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

YADKIN, INC., PROJECT NO. 2197

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL COST, INITIAL ACCRUED DEPRECIATION AND PROJECT NET INVESTMENT; AND CHANGES IN PROJECT COST AND ACCRUED DEPRECIATION AND PRESCRIBING ACCOUNTING THEREFOR

(Issued March 5, 1964)

Yadkin, Inc., Licensee for Project No. 2197,[1] filed its initial cost statement on February 6, 1959 pursuant to Section 4.20 of the Commission's Regulations under the Federal Power Act, claiming as of the effective date of the license, May 1, 1958, (1) an actual legitimate original cost for the existing Yadkin Narrows, Yadkin Falls, and High Rock Developments the sum of $18,571,553[2] and (2) applicable project accrued depreciation in the credit amount of $10,908,338 resulting in a claimed project net investment of $7,663,215.

The Commission's staff completed a field examination of the books and records of Licensee and other data for the purpose of ascertaining: (1) the initial actual legitimate original project cost, the initial project accrued depreciation and the net investment of Licensee in the project as of May 1, 1958, the effective date of the license; (2) the changes in project plant accounts and accrued depreciation during the period from May 1, 1958 through June 30, 1961; and (3) the resulting actual legitimate original project cost and project accrued depreciation as of June 30, 1961.

---

[1] The project is located on the Yadkin River in the vicinity of Badin, North Carolina, in Stanly, Montgomery, Davidson and Rowan Counties. It consists of four developments, three of which were in existence at the effective date of the license. The fourth was constructed thereafter. The three developments in existence at the effective date of the license are known as Narrows, placed in operation in 1917, Falls Development placed in operation in 1919, High Rock placed in operation in 1927; and related transmission, communication and other facilities. The fourth development, Tuckertown, was not constructed at the effective date of the license.

[2] Article 14 of the license provides that the Commission shall determine the actual legitimate original cost of the project and accrued depreciation applicable thereto as of the effective date of the license, the difference being the net investment of Licensee in the project as of that date. Those provisions also provide for the determination of changes in the actual legitimate original cost of project and related depreciation thereafter.

Following that examination, an agreement, subject to Commission approval, was reached between the staff and representatives of Licensee with respect to certain reclassifications and other adjustments to claimed and recorded costs and project depreciation, and the accounting disposition thereof, as follows: (a) gross reclassifications of $1,684,090 within recorded project plant accounts, $66,632 of which, were incorporated in the filed claimed cost; (b) adjustment in the credit amount of $1,198,838 to claimed project cost, $482,767 of which, is required to reconcile claimed cost to recorded cost, resulting in a net credit adjustment of $716,071 to recorded project cost thereby conforming claimed and recorded costs, respectively, to staff recommended cost as of May 1, 1958, and the accounting disposition thereof; (c) the exclusion of $82,800 from claimed accrued depreciation thereby conforming claimed accrued depreciation to recorded project depreciation and staff recommended project depreciation as of May 1, 1958; (d) net reclassifications of $34,291 within project cost of net additions for the period from May 1, 1958 through June 30, 1961; (e) net debit adjustments in the amount of $473,413 to recorded project cost changes for the period from May 1, 1958 through June 30, 1961, and the accounting disposition thereof; and (f) adjustment in the credit amount of $615 to recorded project accrued depreciation for the period from May 1, 1958 through June 30, 1961, other than the accounting disposition of amounts involved in staff adjustments to project plant accounts.

The proposed Staff reclassifications and other adjustments to claimed plant cost are summarized below:

Number	Description		Amounts
	Reclassification of claimed cost to recommended cost as of May 1, 1958		
1	Production plant land from Narrows to Falls	$100	
2	High Rock land from production to transmission	60	
3	Relocation costs—High Rock	1, 278, 305	
4	Powerhouse substructure cost—Falls and High Rock	338, 993	
	Reclassification of books to claimed cost		
5	General plant to developments	66, 632	
	Adjustment of claimed cost to recommended cost as of May 1, 1958		
6	Nonproject land transferred		$(605, 512)
7	Transfer of Tuckertown land costs		(62, 661)
8	Elimination of transmission plant land costs		(14, 106)
9	Spare parts capitalized in error		(33, 792)
10	Construction work in progress		(127, 925)
11	Electric plant acquisition adjustments		(354, 842)
	Total adjustment to claimed cost		$(1, 198, 838)

	Net additions through June 30, 1961		Amount
	Reclassifications		
12	Reclassification of net recorded additions to general plant	$34, 291	
	Adjustments		
13	Transfers of nonproject land—Yadkin Narrows		$(5, 867)
14	Sales and transfer of nonproject land—High Rock		11, 517
15	Reversal of transfer of nonproject lands		666, 115
16	Additional land value—Yadkin Narrows		1
17	Spare parts capitalized in error		(1, 441)
18	Nonproject plant costs eliminated		(196, 912)
	Total adjustments to net additions		473, 413

The accounting necessary for the correction of Licensee's recorded project cost and accrued depreciation as well as the accounting disposition of staff adjustments as of June 30, 1961, are to be accomplished by the following composite journal entry:

Account			As of May 1, 1958	Changes May 1, 1958–June 30, 1961	Net as of June 30, 1961
No.		Title			
Old	New				
		(1)			
100.1	(101)	Electric plant in service project No. 2197	$(716,071.00)	$473,413.00	$(242,658.00)
100.4	(105)	Electric plant held for future use	62,661.00	(1.00)	62,660.00
100.5	(114)	Electric plant acquisition adjustments	11,818.00		11,818.00
110	(121)	Nonutility property	640,754.00	192,703.00	833,457.00
126.2	(146)	Accounts receivable from associated companies, Aluminum Co. of America		(666,115.00)	(666,115.00)
250.1	(108)	Accumulated provision for depreciation, project No. 2197, production plant:			
		Narrows	10,310.00	3,131.00	13,441.00
		Falls	5,332.00	1,990.00	7,322.00
		High Rock	13,150.00	840.00	13,990.00
		Transmission	838.00	169,662.00 (77.00)	170,423.00
		General		11,760.00 (538.00)	11,222.00
253	(122)	Accumulated provision for depreciation and amortization of nonutility property	(28,852.00)	(187,323.00)	(216,175.00)
401	(434)	Miscellaneous credits to surplus		615.00	615.00

( ) Denote credits.

The Licensee by letter dated December 1, 1961, concurred in the staff recommendations for the adjustment of the recorded project plant cost and accrued depreciation as well as in the accounting disposition thereof as set forth above.

The Chairman of the State of North Carolina Utilities Commission by letter dated May 29, 1961 in response to this Commission's invitation for that Commission's representatives to participate in the examination of Licensee's books and records, replied that, that Commission does not exercise jurisdiction over the Licensee.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments, accounting dispositions and the resulting project costs and depreciation and the North Carolina Utilities Commission by its letter dated May 29, 1961, advising that that Commission does not exercise jurisdiction over Licensee, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act and therefore should be approved and directed as hereinafter provided.

(3) The actual legitimate original cost of the constructed plants of Project No. 2197 as of May 1, 1958, the effective date of the license, is $17,372,715.00 classified by developments and by primary accounts as shown in column (6) of Schedule I of the appendix to this order, sheets 2, 3 and 4.

(4) The accumulated provision for depreciation applicable to in-service project properties of the constructed plants as of May 1, 1958, the effective date of the license, is $10,795,848.00, classified by developments and by functional groups as shown in Column (5) of Schedule II of the appendix to this order.

(5) The net investment of the Licensee in the project as of May 1, 1958, is $6,576,867.00.

(6) As of June 30, 1961, (1) the project actual legitimate original cost is the debit amount of $17,314,923.00 classified by developments and by primary plant

accounts as shown in column (11) of Schedule I; Sheets 2, 3 and 4; and (2) the project accrued depreciation applicable to in-service project and properties in the credit amount of $11,793,973.00 classified by developments and functions as shown in Schedule II of the appendices to this order.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22, and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting dispositions, as proposed by staff and agreed to by the Licensee are hereby approved and directed to be made the Licensee.

(C) Licensee, to the extent that it has not already done so, shall:

(a) Establish and maintain control and detailed project plant accounts showing the amounts of $17,372,715.00 and $17,314,923.00 as the actual legitimate original cost of the project as of May 1, 1958, and June 30, 1961, respectively, classified by developments and primary plant accounts as set forth in Schedule I of the appendices to this order.

(b) Establish a project accrued depreciation account in the amount of $10,795,848.00 as of May 1, 1958 and $11,793,973.00 as of June 30, 1961 classified by developments and functions as shown in Schedule II of the appendices to this order.

(D) Licensee shall within 90 days from the date of issuance of this order file three certified copies of its journal entries and FPC Form No. 7 showing compliance with this order.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. G–16842, ET AL.

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 6, 1964)

On December 5, 1963, Tennessee Gas Transmission Company (Applicant) filed an application to amend the Commission's opinion and order issued September 19, 1963, in Docket No. G–16842, *et al.*, 30 FPC 759, by authorizing the reallocation of volumes of natural gas to be sold and delivered to Connecticut Gas Company (Connecticut) by Applicant, all as more fully set forth in the application to amend.

The opinion and order of September 19, 1963, (specifically with reference to Docket No. CP60–94 therein) authorized Applicant, among other things, to sell and deliver a total volume of 19,900 Mcf of natural gas to Connecticut under four separate gas sales contracts, each relating to a separate service area. By the Commission's order issued May 16, 1963, in Docket No. CP63–247 Applicant was authorized to increase further its deliveries to Connecticut to a total volume of 20,374 Mcf or an increase of 474 Mcf.

Applicant proposes herein to reallocate, as follows, the volumes of natural gas delivered to Connecticut for each of the four service areas involved:

Service area	Authorized at docket No. CP60–94	Proposed reallocation		CP63–247 authorized increase	Total
		Increase (decrease)	Total		
Derby Shelton	12,083	(533)	11,550		11,550
Norwalk	2,670	320	2,990	230	3,220
Wallingford	3,836	247	4,083	244	4,327
Winsted	1,311	(34)	1,277		1,277
Total	19,900		19,900	474	20,374

(All volumes Mcf at 14.73 psia.)

Applicant states that the proposed reallocations will permit Applicant and Connecticut to meet their peak-day requirements through the 1964–65 winter heating season in the most economical manner.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on February 4, 1964 (29 F.R. 1705). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's opinion and order issued September 19, 1963, in Docket No. G–16842, *et al.*, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's opinion and order issued September 19, 1963, in Docket No. G–16842, *et al.*, be and the same is hereby amended by authorizing the reallocation of volumes of natural gas to be sold and delivered to Connecticut by

Applicant in accordance with the table hereinabove set forth, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said opinion and order shall remain in full force and effect.

OPINION NO. 414–A

UNION PRODUCING COMPANY, DOCKET NOS. G–13811, G–13820, G–14114, G–14352, G–14553, G–16725, G–17589, G–17606; UNION PRODUCING COMPANY (OPERATOR), ET AL., G–18354

OPINION AND ORDER CLARIFYING OPINION 414 AND DENYING REHEARING AND MOTIONS

(Issued March 6, 1964)[1]

Syllabus

1. **It is well settled that particular elements of a pipeline's costs may be determined in a proceeding separate from over-all pipeline rate proceeding. P. 504.**
2. **Where affiliated producer sells to pipeline the certificated rate for such sales cannot be binding in determining pipeline's gas purchase costs in rate proceeding. P. 504.**
3. **In remanded proceeding on Union, issue to be determined is cost which pipeline should properly include in its cost of service for purchases from producer-affiliate. P. 504.**
4. **Just and reasonable rates for Union's sales to non-affiliated purchasers will be determined in appropriate area rate proceeding. P. 504.**
5. **Fact that cost determination has been made for off-system sales controls question of refunds for sales to non-affiliates consolidated herewith- -failure to justify specific rates at issue in cost-of-service type proceeding requires disallowance of such rates—*i.e.* H. L. Hunt. P. 504.**
6. **Commission *clarifies* prior opinion; *denies* application for rehearing and motions for stay and interim order. P. 505.**

Commissioner O'Connor *dissenting*.

Commissioner Ross *concurring generally*.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

SWIDLER, *Chairman:*

Applications for rehearing of our Opinion No. 414, issued January 9, 1964, 31 FPC 41, in the above captioned proceeding were filed by Union Producing Company (Union) on February 5, 1964, and jointly by the Memphis Light, Gas and Water Division and Mississippi Valley Gas Company (Memphis) on February 10, 1964. Memphis also filed a motion for interim order and other relief which would immediately require reduction of all of Union's rates. On February 11, 1964, Union filed a motion for stay of our orders accompanying Opinion No. 414.

In its application for rehearing Union continues to urge that it should be regulated entirely as an independent producer and that certain of the principles to be applied to its cost were improperly determined. On these matters Union has raised no arguments with respect to the facts or the law which were not fully considered by us in our Opinion No. 414 and there is no reason for modification of the opinion as to these matters.

***[Ed. Note: Union's Petition to Review filed in CA5 (#21339) was withdrawn on February 2, 1965, following settlement order—See 31 FPC 1506]**

Union has raised questions as to how, if it is to be regulated as an affiliate, such regulation should be conducted. Union points out that it has been included in area rate proceedings for most of its sales but that our orders in proceedings involving other pipeline affiliates indicate that the proper costs for Union's sales to United Gas Pipe Line (United) should be determined in a pipeline rate case. Union is correct in its contention that under our present policy for regulating sales by pipeline producers or affiliates its rates for sales to United are relevant primarily in a pipeline rate proceeding, but it is not correct in arguing that this element of United's cost cannot be determined in a proceeding separate from the pipeline rate proceeding. It is well settled that particular elements of a pipeline's costs may be determined in a proceeding separate from the overall pipeline rate proceeding. (See *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145.) We should, however, clarify the issue which is to be determined in the remanded proceeding.

Union's sales fall into two categories. As to its sales to United we have consistently held that where an affiliated producer is selling to a pipeline the certificated rate for such sales cannot be binding on the Commission in determining gas purchase costs in the pipeline's rate proceedings. Thus, in the remanded proceeding on Union the issue to be determined is the cost which United should properly include in its cost of service in Docket No. RP63-1 for purchases from Union.

Union's rates for sales to non-affiliated purchasers have been, or will be, consolidated into the appropriate area rate proceedings and the just and reasonable rates for those sales will be determined in such proceedings. This is the same treatment of rates for off-system sales which is being used for other producers affiliated with pipelines.[1]

With respect to Union's telegraphic motion for a stay of our orders in Opinion No. 414, it is apparently based on its contentions (a) that certain of the rates involved in this proceeding were determined for Union in United's settlement proceeding in 1961, and (b) that for off-system sales the area rates should be controlling. As to the first point, in issuing Opinion No. 414 we were aware that certain of the dockets involved locked-in periods covered by the settlement and that the matter of refunds to United would to some extent be a mere book transaction between affiliates. However, since a cost determination for the past period has been made in which Union did not justify these past rates it is appropriate that such refunds be made and that United's costs (in Docket No. RP63-1) be reduced immediately by the amounts not found justified in the open dockets in this proceeding. Of course, provision will also be made in RP63-1 for a further reduction in United's rates if the remanded proceedings indicate overpayments to Union on the basis of a current test year.

As to the second point, the fact that a cost determination has been made for these specific sales also controls the question or refunds for the sales to non-affiliates which were consolidated in this proceeding. Although Union's non-affiliated rates will be fixed prospectively in area proceedings and suspension dockets not included in this proceeding will be similarly determined, failure to justify specific rates which are in issue in a cost of service type proceeding requires the disallowance of such rates, see *H. L. Hunt*, 28 FPC 897.

The application and motion of Memphis require denial because they are based on the contention that the 1958 test year should be applied to all of Union's

---

[1] We are not finally determining here whether Union, or any other pipeline or pipeline affiliate should secure the same rate for its off-system sales as would accrue to independent producers for comparable gas. To the extent that there is any question as to this matter it could properly be raised for consideration in the area proceedings. Nor are we suggesting that we would agree to the automatic certification of off-system sales by pipelines or their affiliates where the gas reserves lie adjacent or close to their pipeline facilities.

4(e) proceedings without any further adjustment in the depreciation and depletion allowance or the rate of return. This contention overlooks the fact that our holding that even with additional allowances Union could not justify the increases, was limited to the increases involved in these dockets alone. Such a finding was not made and could not be made on this record for all of Union's increases. In the remanded proceeding all of Union's sales to United will be in issue. Any further relief to which Memphis is entitled will come through an adjustment to United's rates after the remanded proceeding rather than through a change in the contractual filings of Union for sales to United which thus far have not been determined in this proceeding.

The Commission orders:

(A) Except as discussed above, the applications for rehearing filed in this proceeding present no issues of fact or law which were not fully considered by the Commission, or which upon now being considered require any change or modification of Opinion No. 414, and the applications are hereby denied.

(B) The Motion for Interim Order and Other Relief filed by Memphis is hereby denied.

(C) The Motion for Stay filed by Union is hereby denied.

Commissioner O'Connor *dissents* to the denial of Union's application for the reasons stated in his dissenting statement in Opinion 414.

Commissioner Ross *concurs* generally with exception of that portion of the decision relating to the application and motion of Memphis. He *concurs* in the result but does not join in that portion of the opinion.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP63–230

ORDER AMENDING ORDER ISSUED NOVEMBER 12, 1963

(Issued March 9, 1964)

On December 11, 1963, Michigan Wisconsin Pipe Line Company (Applicant) filed an application to amend the Commission's order issued November 12, 1963, 30 FPC 1239, in Docket No. CP63–230 (Phase I) by authorizing Applicant to deliver to Iowa Electric Light and Power Company (Iowa Electric) a maximum daily quantity of 6,315 Mcf of natural gas under Applicant's FPC Gas Rate Schedule ACQ–1 in lieu of the presently authorized maximum daily quantity of 6,000 Mcf under Applicants' FPC Gas Rate Schedule SGS–1, all as more fully set forth in the application to amend.

The order of November 12, 1963, affirmed the examiner's decision and issued a conditioned certificate wherein Applicant was authorized, among other things, to increase its system capacity so as to enable it to deliver additional maximum daily quantities of natural gas to existing customers.

Applicant states that during the contract year ending August 31, 1963, Iowa Electric's purchases were in excess of 102 per cent of 6,000 Mcf; accordingly, pursuant to the provisions of Section 8 of the General Terms and Conditions of Applicant's FPC Gas Tariff a new service agreement was executed providing for a maximum daily quantity of 6,315 Mcf under Applicant's FPC Gas Rate Schedule ACQ–1. Applicant states further that this increase was not reflected in its original application in this proceeding since Iowa Electric then estimated that its requirements could be adequately met by deliveries under the SGS–1 Rate

Schedule. Therefore, Applicant requests that the order of November 12, 1963, be amended to authorize the delivery of the additional 315 Mcf in maximum daily quantity.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on January 29, 1964 (29 F.R. 1489). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued November 12, 1963, in Docket No. CP63-230 (Phase I) be amended as hereinafter ordered.

(2) The authorization hereinafter granted should be conditioned upon no additional facilities being required by Applicant to render the subject increased service and upon Applicant filing with the Commission a new revised service agreement executed in accordance with the Commission's Regulations reflecting the subject increased service.

The Commission orders:

(A) The Commission's order issued November 12, 1963, in Docket No. CP63-230 (Phase I) be and the same is hereby amended by authorizing Applicant to deliver to Iowa Electric a maximum daily quantity of 6,315 Mcf of natural gas under Applicant's FPC Gas Rate Schedule ACQ-1 in lieu of the presently authorized maximum daily quantity of 6,000 Mcf under Applicant's FPC Gas Rate Schedule SGS-1, all as hereinbefore described and as set forth in the application to amend.

(B) The authorization granted in paragraph (A) above is hereby conditioned upon no additional facilities being required by Applicant to render the subject increased service and upon Applicant filing with the Commission a new revised service agreement executed in accordance with the Commission's Regulations reflecting the subject increase in maximum daily quantity to 6,315 Mcf under Applicant's FPC Gas Rate Schedule ACQ-1.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

TRUNKLINE GAS COMPANY v. THE SUPERIOR OIL COMPANY, DOCKET NO. RI64-273; THE SUPERIOR OIL COMPANY (OPERATOR), ET AL., DOCKET NOS. G-18168,[1] G-20435,[1] AND G-20577[2]

DECLARATORY ORDER REQUIRING PAYMENT OF LEGALLY EFFECTIVE RATES

(Issued March 9, 1964)

On October 25, 1963, as supplemented on November 5, 1963, Trunkline Gas Company (Trunkline) filed a petition for a declaratory order, pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure, in Docket No. RI64-273 requesting the Commission to determine that the favored-nation clauses upon which The Superior Oil Company (Superior) has relied in filing the proposed increased rates involved in Docket Nos. G-18168, G-20435 and G-20577 are contrary to the public interest and do not provide sufficient justification for these rates. Trunkline further requests that pending determination of the just and reasonable rates for the instant sales by Superior, it be permitted to pay Superior on the basis of the applicable increased rate ceilings set forth in our Statement of General Policy No. 61–1. Superior filed answers thereto on November 1, 1963, and December 5, 1963, respectively.

---

[1] Consolidated with the area rate proceeding in Docket No. AR64-2, *et al.*, by order issued November 27, 1963.

[2] Consolidated with the area rate proceeding in Docket No. AR61-2, *et al.*, by order issued May 10, 1961, 25 FPC 942.

The dispute between Superior and Trunkline arises under Superior's FPC Gas Rate Schedule No. 1, involving the jurisdictional sale of natural gas by Superior to Trunkline from the Lake Creek, Pinehurst, and Altair Fields, in Montgomery and Colorado Counties, Texas (Texas Railroad Commission District No. 3), and under Superior's FPC Gas Rate Schedule No. 3, involving the jurisdictional sale of natural gas to Trunkline from the Lakeside, Grand Lake, and Pecan Lake Fields, Cameron Parish, Louisiana (South Louisiana).

The initial rate under Superior's FPC Gas Rate Schedule No. 1 was 8.49758¢ per Mcf at 14.65 psia. Superior tendered a notice of change to a favored-nation proposed increased rate of 15.0¢ per Mcf at 14.65 psia, designated as Supplement No. 12 to Superior's FPC Gas Rate Schedule No. 1, which became effective subject to refund on September 9, 1959, in Docket No. G–18168. Subsequently, Superior tendered a further favored-nation proposed increased rate of 20.0¢ per Mcf at 14.65 psia. The proposed increased rate, designated as Supplement No. 13 to Superior's FPC Gas Rate Schedule No. 1, was suspended and thereafter became effective subject to refund on May 24, 1960, in Docket No. G–20435.

On December 3, 1959, Superior tendered a notice of change in its FPC Rate Schedule No. 3. The favored-nation proposed increased rate, from 11.26176¢ per Mcf at 15.025 psia, to 24.05¢ per Mcf at 15.025 psia, designated as Supplement No. 19 to Superior's FPC Gas Rate Schedule No. 3, was suspended and thereafter became effective subject to refund on June 9, 1960, in Docket No. G–20577.

In support of its petition, Trunkline contends that favored-nation provisions are contrary to the public interest, and are an artifical reason for Superior's rate increases, constituting insufficient justification for the increased rates involved here. Trunkline also asserts that there was a lack of arm's-length bargaining with respect to the contracts with Superior, claiming that there was affiliation between the two parties at the time of execution of the contracts. Trunkline further states that Superior has collected large sums subject to refund over the periods the increased rates have been in effect. In order to reduce the amounts collected, effective with the payment to Superior for gas delivered in September 1963, Trunkline states it has computed its payments to Superior at 15.5¢ per Mcf at 15.025 psia under Superior's FPC Gas Rate Schedule No. 3 and at 14.0¢ per Mcf at 14.65 psia under Superior's FPC Gas Rate Schedule No. 1.

In the *Pure Oil* case, Opinion No. 341, 25 FPC 383, affirmed 299 F. 2d 370 (7th Circuit, 1962), we rejected the contention that favored-nation clauses should be stricken from rate schedules on file with the Commission.[8] The Supreme Court in *Wisconsin* v. *F.P.C.* 373 U.S. 294, rejected a similar argument by California with respect to spiral escalations. The Court stated (373 U.S. at 304):

> Further, we see no merit in California's contention. It is true that the Commission has announced prospectively that it would not accept for filing contracts containing such clauses,[12] but it would have been quite a different matter for the Commission to have declared that past rate increases were ineffective simply because they were based on spiral provisions. The effect of a contract clause of this type, of course, is only to permit the producer to resort to the filing provisions of § 4(d) of the Act. If the increase is challenged, the producer must still establish its lawfulness wholly apart from the

---

[8] *Cf.* Opinion No. 382 issued March 15, 1963, 29 FPC 498, *Shell Oil Company, et al.* See also *Texaco Inc., et al.,* Docket No. G–17613, *et al.,* order issued November 19, 1963, 30 FPC 1316.

> terms of the contract. Thus we have sustained the right of a seller to file an increase under a contract which, in effect, authorized him to do so at any time. *United Gas Pipe Line Co.* v. *Memphis Light, Gas and Water Division*, 358 U.S. 103. The spiral clauses here are far more limited in scope depending as they do on the occurrence of external events. [Footnote omitted.]

Trunkline's allegation of lack of arm's-length bargaining appears to be founded on its contention that Superior at the time of execution of the contracts had the option to buy future issues of Trunkline stock. Trunkline also claims that some 10 months after the execution of the contracts Superior owned approximately 20 percent of Trunkline but no where does it allege that Superior in fact owned any stock at the time of the contractual transactions. The difficulty with this argument, aside from the question whether the lack of arm's-length bargaining alone would prevent Superior from collecting its contract price, is that at the time the original sales contract was negotiated, containing not only the two party favored-nation clause here in issue, but a third party favored-nation clause as well,[4] Superior had no option nor any other affiliation or basis for such claim with Trunkline. It is true that it appears that Superior was able to extract such an option as the consideration for extending the contract when the Commission failed to grant a certificate within the period originally prescribed, but there is no showing or even claim that this option had anything to do with the fact that the renewed contract contained the same favored-nation clauses as before. Taking official notice of the fact that such clauses were a common feature of gas sales contracts at the time and by no means limited to special situations in which intercompany relationships were involved, we must conclude that there has been no showing of any affiliation which could cause us to reach a different result.

In view of the foregoing, we must deny the relief requested in Trunkline's petition. There is also no justification for Trunkline's action of computing payment for gas purchased from Superior under the subject rate schedule on the basis of a lower rate than is presently on file with this Commission and in effect subject to refund. *Hope Natural Gas Company* v. *F.P.C.*, 134 F. 2d 287, reversed on other grounds, 320 U.S. 591. We shall therefore also order Trunkline to discontinue this practice at once and to recompute any previous improper payments.

The Commission orders:

(A) The relief requested in the petition for a declaratory order filed by Trunkline on October 25, 1963, as supplemented on November 15, 1963, is denied.

(B) Trunkline shall, effective as of the date of issuance of this order, make payments for gas purchased from Superior under the subject rate schedules computed on the basis of the rates in effect, subject to refund, in Docket Nos. G–20435 and G–20577, unless or until such increased rates are changed in accordance with the provisions of the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Trunkline shall recompute any previous payments it has made to Superior which were computed on the basis of lower rates than those described in paragraph (B) above, and shall make any additional payments to Superior that may be required based on such recomputation.

(D) Within 45 days from the date of issuance of this order, Trunkline shall report to the Commission in writing the details of its calculation resulting in any payments which may be required pursuant to paragraph (C) above, together with a copy of a release from Superior with respect to such payments.

---

[4] This third party favored-nation clause was eliminated by mutual consent of Superior and Trunkline during the subsequent period of alleged affiliation.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

DORN & MILLER COMPANY

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 10, 1964)

On February 10, 1964, Dorn & Miller Company (Dorn) filed an application for rehearing of the Commission's letter-order issued January 14, 1964, rejecting the Notice of Producer Rate Change tendered by Dorn on December 16, 1963, for a proposed rate increase under its FPC Gas Rate Schedule No. 2 from 19.5¢ per Mcf to 21.4¢ per Mcf for gas presently being sold by Dorn, pursuant to conditioned temporary authorization issued in Docket No. CI62–897, to Transcontinental Gas Pipe Line Corporation from the Vermilion Area Block 129 Field, offshore Louisiana.

The basis for the rejection was that the proposed increase was not in conformity with the express condition in the temporary authorization that the 19.5¢ rate shall remain in effect until changed by further Commission order in the certificate proceedings in Docket No. CI62–897.

Dorn relies upon the fact that a similar condition has been held to be invalid by the Fifth Circuit Court of Appeals, *Hunt* v. *F.P.C.*, 306 F. 2d 334. However the Supreme Court has granted certiorari on appeal by the Commission from this decision (*F.P.C.* v. *Hunt*, No. 273, October Term 1963) and, pending such review, the decision of the circuit court is not controlling as a precedent, even with respect to new applications. *A fortiori* we cannot give effect to it here where (unlike *Hunt* which in accepting the temporary expressly reserved the right to seek review and did so after denial of a petition for rehearing) Dorn accepted the temporary authorization as tendered and allowed the Commission's letter-order granting the temporary to become final.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application of Dorn present no new facts or principles of law which were not considered by the Commission when it issued its letter-order of January 14, 1964, or which having now been considered warrant any change or modification of said order.

The Commission orders:

The application for rehearing filed by Dorn on February 10, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Harold C. Woodward, and David S. Black.

CITY OF SEATTLE, WASHINGTON, PROJECT NO. 2144

ORDER APPROVING EXHIBIT L DRAWINGS

(Issued March 10, 1964)

On October 29, 1963, the City of Seattle, Washington, licensee for Project No. 2144, known as the Boundary Project, filed for Commission approval Exhibit L Drawings showing the final design of the project structures. The drawings were submitted pursuant to Articles 38 and 41 of the license for the project.

In a detailed Commission staff study of a computer-analysis of the stresses in the Boundary Arch Dam and of laboratory and rock tests at the project site conducted by consultants to the licensee, the staff concludes that the Boundary Arch Dam, spillways, and sluiceways are safe and adequate.

The Chief of Engineers, Department of the Army, has advised that the project structures affecting navigation are satisfactory and that the tracings showing such structures have been approved in accordance with the provisions of Section 4(e) of the Federal Power Act insofar as the interests of navigation are concerned.

The Commission finds:

The following described Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L-B sheet	FPC No. 2144-	Entitled
2	-61	Arch Dam—General arrangement.
11	-62	Electrical one line diagram.
20	-66	Arch Dam—Plan.
21	-67	Arch Dam—Downstream elevation.
22	-68	Arch Dam—Vertical sections.
23	-69	Arch Dam—Section through sluices.
24	-70	Spillways—Left abutment—General arrangement.
25	-71	Spillway—Right abutment—General arrangement.

The Commission orders:

The Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2144.

OPINION NO. 420

TURLOCK IRRIGATION DISTRICT AND MODESTO IRRIGATION DISTRICT, PROJECT NO. 2299

OPINION AND ORDER ISSUING LICENSE

(Issued March 10, 1964)*

Syllabus

1. **Subject to conditions for fish water releases and other conditions set forth in license, Commission *finds* applicant's proposed project best adapted to comprehensive plan for development of Tuolumne river. P. 515.**
2. **Commission *rejects* applicant's contention that no fish water releases should be required in license. P. 515.**
3. **Prescribed fish water releases will maintain fishery for 20-year period without depriving applicants or San Francisco of water needed to meet essential irrigation and municipal requirements. P. 515.**
4. **20-year limitation on fish water releases found justified by circumstances of this case. P. 519.**
5. **20-year limitation should provide parties sufficient opportunity to study and work out alternative solution to fish problem before water situation becomes critical. P. 520.**
6. **Motion to reopen proceedings to require additional evidence and make San Francisco a party is denied. P. 521.**
7. **Commission *issues* major license under Section 4(e) of the Federal Power Act. P. 524.**

***Initial decision appears on p. 535. Modified; rehearing denied by order issued May 6, 1964, 31 FPC 1128. Affirmed, 345 F. 2d 917 (CA9–1965); cert. denied 382 U.S. 941 (1965).**

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

O'CONNOR, *Commissioner:*

This case involves a joint application by Turlock Irrigation District (Turlock) and Modesto Irrigation District (Modesto) for a license for a multipurpose project on the Tuolumne River in California to be known as New Don Pedro. The project will affect lands of the United States, and is subject to the licensing provisions of Part I of the Federal Power Act.

The applicants are two of the largest irrigation districts in California, serving irrigation water and electric power to customers in the vicinity of Turlock and Modesto in California's San Joaquin Valley. New Don Pedro will provide additional irrigation storage and hydroelectric power for the applicants. It will provide additional flood control storage desired by the Corps of Engineers. It will also provide municipal water benefits for the City and County of San Francisco, which will purchase exchange storage in the New Don Pedro reservoir for the purpose of releasing to the applicants at New Don Pedro the irrigation water required under the Raker Act (38 Stat. 245, 1913),[1] and thereby permitting it to increase its diversions of water for municipal purposes from its Hetch Hetchy and other reservoirs located upstream on the Tuolumne in the High Sierra county.[2] In addition to these primary benefits, New Don Pedro's reservoir will provide extensive recreational benefits. The project will be constructed by the applicants, who will own, operate and maintain it; however, its initial cost will be shared with San Francisco and the United States, based on the storage benefits indicated above.[3]

---

[1] The Raker Act gave San Francisco rights of way in Yosemite National Park and Stanislaus National Forest for the purpose of constructing its Hetch Hetchy municipal water supply system. A condition of the authorization so granted was a specified release of water to the applicants for irrigation purposes. Section 29 of the Federal Power Act makes the provisions of the Raker Act immune to modification or repeal by reason of any language in the Federal Power Act.

[2] San Francisco furnishes water for domestic and urban use in San Francisco County and portions of San Mateo, Santa Clara and Alameda Counties, a major portion of which is obtained from the upper Tuolumne River watershed. The consumption of water by San Francisco was at the rate of 178 mgd (million gallons per day) or about 199,000 acre feet for the fiscal year 1961–1962. San Francisco anticipates that it will require diversions of 210 mgd by 1968, 295 by 1985, and 400 mgd by 2015, and that it will ultimately require a maximum diversion of 471 mgd (528,000 acre feet per year) from the Tuolumne River watershed.

[3] New Don Pedro will provide 2,030,000 acre feet of gross storage, of which 340,000 acre feet will be available for flood control, 811,000 acre feet will be for irrigation, and 570,000 acre feet will be for San Francisco's Raker Act releases to the applicants. Total cost of the project is estimated to be $92,415,850. The applicants' share of this cost is approximately $49,234,060. San Francisco's is approximately $43,181,790. The applicants and San Francisco will be reimbursed, however, for the flood control storage to the extent of approximately $14,200,000 to be contributed by the Federal Government. In non-flood seasons this flood control storage will be available to the applicants and San Francisco for conservation storage on an equal sharing basis.

New Don Pedro will be located about one and one-half miles downstream from the applicants' existing Don Pedro dam and power house. The existing facilities, which were constructed in 1923, will be flooded out by the new project.[4] Four miles below the existing project are the La Grange dam and reservoir, which were completed in 1894. The La Grange dam is used by the applicants to divert water into their respective irrigation systems. The reservoir has no significant storage, although under certain conditions it offers some pondage. Turlock owns a powerhouse at La Grange which utilizes water in excess of its needs for irrigation purposes. That portion of the water used for power generation is discharged back into the natural streambed below La Grange dam. The applicants will continue to operate these facilities after construction of New Don Pedro.

The basic question presented in this case is whether the Commission should condition its license to Turlock and Modesto to require specified releases of water from New Don Pedro for the protection of the fall run of King salmon which spawn in the Tuolumne below La Grange dam. The State of California, through its Department of Fish and Game (California), intervened at the outset of the proceeding to request such a condition for protecting the existing salmon fishery. Formal hearing was postponed while the applicants and California sought to work out a settlement with respect to the release of fish water. A tentative agreement was reached, but the California Fish and Game Commission (an independent California agency) declined to ratify the agreed-upon settlement. Thereafter, the case was set for formal hearing. Upon petitions to intervene, filed out of time, the Secretary of the Interior, Tuolumne County, and Banta Carbona Irrigation District were granted limited intervention for the purpose of making an opening statement, cross-examining witnesses, and filing briefs and exceptions. The Secretary requests releases of water for the protection of fish similar to California's but with summer flows somewhat greater than those requested by California.

The applicants contend that New Don Pedro, without fish water releases, will provide a definite improvement over fish conditions in the Tuolumne as they are under existing Don Pedro. They contend that a license condition requiring the fish water releases requested by California or the Secretary would impair and infringe their vested rights to water for irrigation which are protected by Section 27 of the Power Act.[5] They further contend that the requested releases would reduce the dependable power capacity of the project to zero after 1985, when San Francisco's upstream diversions will exceed 295 mgd (million gallons per day), thus making the project economically unfeasible as a power project.

The Commission's staff takes the position that the license should be conditioned to require California's recommended releases, with some modification, for a period of 20 years, during which continuing studies of the fish problem would be made by the applicants in cooperation with the fish interests, and after which minimum releases would be made as prescribed by the Commission upon re-examination of the question.

Both California and staff construe Section 27 as imposing no restriction on the Commission's authority to condition the license to require minimum water releases for fish preservation. They contend that the vested rights protected are not those of applicants for licenses under the Act, but the rights of others whose interests might be affected by the issuance of a license. They argue that if the necessary water releases required to make the project best adapted to a comprehensive plan as contemplated by Section 10(a) should result in interference with the applicants' vested water rights under state law, the applicants are at liberty to accept the license as so conditioned or to reject it.

---

[4] Some of these facilities were placed under a minor part license (Project No. 1086) in 1930 when higher spillway gates were installed and some Federal lands were affected for the first time.

[5] "Sec. 27. That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein."

The examiner issued his decision on June 4, 1963. He recommends the issuance of a license subject to conditions which are generally favorable to the applicants. His conclusions, however, reflect neither acceptance nor rejection of the positions taken by the several parties to the proceeding.

In capsule, the examiner concludes that Section 27 of the Act preserves the irrigation and municipal water rights of the applicants and of San Francisco under state law to the extent that those rights have vested by use. Thus, he finds that the Commission cannot impose conditions under Section 10(a) which would result in diversions of water by the applicants and San Francisco less than those possible with their existing facilities or which would burden or impair their rights to such diversions. On the other hand, to the extent that the new project will permit diversions in excess of those presently possible, he finds that the Commission may impose such conditions in the license as it deems necessary to make the project best adapted to a comprehensive plan. Because the proposed fish water releases would, in his judgment, have the effect, *inter alia*, of reducing the irrigation supply available to the applicants in critical years below that available from the existing Don Pedro project, a result which he says is clearly within the ban of Section 27, he finds it unnecessary to pass upon the fish contentions of California and makes no findings with respect to the river conditions required to preserve the fall salmon run. However, he would impose a condition requiring the applicants to maintain a minimum stream flow based on the additional waters to become available to them and to San Francisco as a result of the construction of New Don Pedro, thus maintaining stream flow to the extent possible to assist in preserving the fish runs; but he finds that he is unable to make a computation of the waters available on the basis of the present record. He therefore includes Article 30 in his recommended license requiring applicants to maintain minimum stream flows as may be prescribed hereafter by the Commission upon its own motion or the recommendation of the Secretary or California, after notice and opportunity for hearing and upon a finding that such minimum flows are available, are necessary and desirable, and are consistent with the provisions of the Act.

In addition to the foregoing findings with respect to fish water releases, the examiner makes several findings of special note. First of all, he would require the applicants and San Francisco to construct, pay for, and maintain facilities for fishing, hunting, camping, picnicking, bathing, boat-launching, etc. This requirement is set out in his Article 38, which also requires the applicants to cause a master plan for recreational use of the reservoir to be prepared in cooperation with interested Federal, State, and local agencies, and which requires this plan to be submitted to the Commission for approval before construction of the project can commence. His Article 39 further provides that the applicants must "acquire such additional lands as will be necessary for recreation, fish and wildlife purposes."

The examiner notes that San Francisco is not a joint applicant, or even a party to the proceeding, and states that this in no way hampers the exercise of the Commission's jurisdiction.[6] He finds that sufficient control over San Francisco's plans can be exercised by requiring the applicants and the city to file an agreement relating to the allocation of project costs for the Commission's approval prior to commencing construction of the project. This provision is set forth in his Article 41.

---

[6] In August of 1960, San Francisco inquired of the Commission whether it should join in the application for New Don Pedro. The Commission, by the Secretary, advised San Francisco that it was not necessary for it to join in the application.

Exceptions to the examiner's decision have been filed by the applicants, by California, by staff, and by the Secretary of the Interior. Replies to the exceptions have been filed by the applicants and by staff. In addition, the Secretary has filed a motion for institution of an investigation to determine the benefits which San Francisco will derive from this project and for an order directing San Francisco to show cause why it should not file a declaration of intention or file an application for joinder in the pending application before the Commission in this proceeding.

The applicants' exceptions reiterate their position that under Section 27 and the Raker Act the Commission may not curtail their rights to water for irrigation purposes or San Francisco's rights to water for municipal purposes in order to provide water for fish. They argue that the Raker Act contemplates the diversion of up to 400 mgd (million gallons per day) by San Francisco and not merely 210 mgd as found by the examiner. To the extent that the examiner's Article 30 can be construed as permitting an impairment of the project dependable supply for irrigation or the diversion of water for municipal purposes, the examiner, they argue, is in error. Such a construction of Article 30, they say, would veto the project. They also take exception to the unlimited scope of the examiner's recreation requirements and to the conditions which would require approval of their recreation plan before commencing construction of the project and the acquisition by them of additional lands for such purposes.

California, staff, and the Secretary take exception to the examiner's failure to make a finding on the releases required to preserve the fish runs in the Tuolumne River. This, they argue, was the primary purpose of the hearing, and the record is adequate to permit such a finding. Article 30, they contend, merely ducks the issue. These parties find no limitation in the provisions of the Power Act or the Raker Act upon the Commission's authority to require the necessary fish water releases as a condition of the license for New Don Pedro. They contend that the project cannot be found to be best adapted to a comprehensive plan for development of the river under Section 10(a) without a condition for fish water releases.

California and the Secretary also question the examiner's finding of economic feasibility in the absence of evidence of the benefits flowing to San Francisco. They contend that the contract between the applicants and San Francisco should be in evidence if a proper determination of costs and benefits is to be made. They further argue that San Francisco's upstream reservoirs will be operated in conjunction with the New Don Pedro facilities of the applicants and that San Francisco should be a party to the license application. Both request a reopening of the proceeding, although only the Secretary has filed a motion which would have that effect.

Staff and the Secretary take exception to the examiner's requirement that San Francisco contribute to recreational facilities in connection with the project since San Francisco is not a party to the proceeding or an applicant for license. The Secretary would remedy this error by making San Francisco a party. Staff would require the full burden to be borne by the applicants, Turlock and Modesto.

Oral argument of the exceptions to the examiner's decision was held before the Commission on December 5, 1963.

Upon review of the record presented at the hearing, the parties' briefs, the examiner's decision, the exceptions thereto, and the oral argument before the Commission, it is our judgment that a license should be issued to Turlock and Modesto upon the conditions for fish water releases recommended by staff.[7] Subject to these conditions and such other conditions as are hereinafter set forth in the license, we find the applicants' proposed New Don Pedro project to be best adapted to a comprehensive plan for the development of the river as required by Section 10(a) of the Act.

In concluding that releases for fish should be required as a condition of the license, we do not seriously question the applicants' contention that even without such a condition the salmon runs would be preserved longer with New Don Pedro than with existing Don Pedro. On the basis of the record, we would expect that New Don Pedro could be operated without adverse effect on the salmon runs until after 1985, when San Francisco's upstream diversions reach 295 mgd; whereas without New Don Pedro it appears that the fish would be seriously affected, if not destroyed, after 1968, when San Francisco's diversions reach 210 mgd. This evidence, however, does not substantiate the applicants' contention that no fish water releases should be required in the New Don Pedro license. In our judgment such releases are required as hereinafter prescribed if the project is to be found to be best adapted to a comprehensive plan for development of the waterway, since only by making the releases a condition of the license can we be sure that the project will be operated so as to utilize the available water in the best interest of all parties and provide the best plan for comprehensive development for all public uses.

Assuming the hydrologic cycle of the past 39 years as a generally representative pattern for the future, and assuming the operation of the project so as to maximize the availability of water for fish requirements, it is our judgment that the prescribed releases will maintain the fishery for at least a 20-year period without depriving the applicants or San Francisco of the water needed to meet their essential irrigation and municipal requirements.[8] The license therefore prescribes such releases for a 20-year period. We are not now, however, prescribing releases beyond the first 20 years of project operation, since it is our intention that the parties be encouraged to cooperate in continuing studies of the fish problem and to coordinate their efforts in seeking a mutually satisfactory solution for the future. Further releases will therefore be determined only after further hearing to consider the results of the parties' own efforts to solve the problem. As will be seen below, the need for some modification of the releases after San Francisco's diversions reach 295 mgd, and the possibility that the parties can find an economical and feasible solution to the problem through the use of alternative sources of water or artificial propagation facilities justify a re-examination of the release requirements by the Commission at the end of the first 20 years of operation.

---

[7] In oral argument, California and the Secretary indicated that staff's recommendations would be generally acceptable to them as a basis for disposing of the fish problem.

[8] The examiner erred in finding that after six years of project operation under California's requested releases the dependable minimum irrigation yield from New Don Pedro would be less than that obtainable from the existing project. Examination of the record reveals that the applicants have diverted water for irrigation purposes at an annual average of about 845,000 acre feet for the 39-year period, varying from a minimum of 570,544 acre feet in 1961 to a maximum of 1,027,136 acre feet in 1956. Examination of the record further indicates that with the fishery releases hereinafter provided the applicants' average irrigation yield will be 1,088,000 acre feet with upstream diversions of 210 mgd, decreasing to 1,051,000 acre feet with upstream diversions of 295 mgd after 1985. The examiner also erred in finding that the Raker Act limits San Francisco's upstream diversions to no more than 210 mgd. Our review of the Raker Act and its legislative history reveals no such limitation.

No question has been raised with respect to the engineering soundness of the applicants' New Don Pedro project. Nor is there any doubt that the applicants' electric systems will be able to absorb the entire output of the project by the time of its completion. The record also shows that the project is financially feasible. With respect to the financing, both applicants have paid off all outstanding indebtedness. They have been authorized by the California Districts Securities Commission and by the people of the Districts to issue general obligation bonds in the amount of $34,000,000 for Turlock and $18,500,000 for Modesto. There is evidence that these bonds can be sold at not more than 4.25 percent interest, and can be paid off in 35 years commencing in 1966 at an annual cost of $1,885,000 for Turlock and $1,025,000 for Modesto. To pay its share of the cost of New Don Pedro, San Francisco has obtained authorization for the issuance of bonds in the total amount of $115,000,000, of which approximately $45,000,000 is earmarked for New Don Pedro. We are requiring as a condition of the license herein issued that the applicants file with the Commission for its approval prior to the commencement of construction their agreement with San Francisco setting forth the final formula for allocating the cost contribution to be made by San Francisco and other details of the exchange storage arrangement. As for the economic feasibility of the project, there would be no question in the absence of fish water releases. The license as conditioned, however, assures the economic feasibility of the project. The impact of such releases on economic feasibility is discussed later in this opinion.

The bulk of the evidence of record in this proceeding concerns fish and the flows in the river required to preserve them. The fall salmon spawn in the reach of the river extending about 20 miles below La Grange. The record shows the fish runs in the river by actual count for the years 1940, 1941, 1942, 1944, and 1946, and by estimate for the years 1947 through 1961. The average run of salmon for these years was 40,000, the largest run being 130,000 in 1944, and the smallest run being 500 in 1961. The recommendations for fish water releases made by California are based on maintaining an average run of 40,000 salmon. California's evidence shows that in order to maintain this average, spawning grounds must be provided for up to 80,000 adult fish each year, of which about 40 percent will be females. It further shows that 31 percent of the females are expected to be on the spawning beds during the peak of the spawning season, and that as much as 200 square feet of spawning gravel may be required for each female. By relating the gravel required for the spawning females to the flow of the river necessary to cover the gravel to the proper depth for spawning, California has calculated the flows set forth in its recommended release schedules, making suitable allowance for differing conditions in the natural flow of the river.

Our analysis of the record shows California's studies to be reasonable, although somewhat conservative. For example, California's estimates of the number of adult fish to be accommodated and the amount of gravel required for each female are higher than the comparable estimates of the applicants' experts. Also, its studies do not take into account accretions in the river due to the return flow of irrigation water. Under these circumstances, we find it appropriate to adopt the release schedules recommended by California, but with the modification in their use suggested by staff and discussed below. This modification, as will be seen, results in a greater incidence of California's dry-year schedule and a consequent over-all reduction in the releases to be required.

California's recommended schedules of releases are as follows:

Period	Schedule A (normal year)		Schedule B (dry year)	
	Cfs	Acre-feet*	Cfs	Acre-feet*
Preseason flushing flow	2,500	4,960		
October 1–15	200	5,950	50	1,490
October 16–31	250	7,930	200	6,350
November	385	22,900	200	11,900
December 1–15	385	11,450	200	5,950
December 16–31	280	8,880	135	4,280
January	280	17,210	135	8,300
February	280	15,550	135	7,500
March	350	21,520	200	12,300
April	100	5,950	85	5,060
May–September	3	910	3	910
Total acre-feet		123,210		64,040

*One cfs day equals 1.983 acre-feet.

These are the normal and dry-year releases recommended by staff. They are also similar to those recommended by the Secretary of the Interior, except that the Secretary would require releases during the summer months of 85 cfs in normal years and 50 cfs in dry years. The 3 cfs for normal and dry years shown in California's schedules is about the leakage through La Grange dam at the present time.

The criteria formulated by California for the use of Schedule A and Schedule B are based on the computed natural inflow of the Tuolumne River at La Grange dam. Whenever the flow equals or exceeds 1,000,000 acre feet in the preceding water year, ending September 30, Schedule A would apply. When the flow is less than 1,000,000 acre feet, Schedule B would apply. Proportionately reduced releases would apply in years of unusually low flows below 750,000 acre feet. By utilizing the computed natural flow of the river at La Grange, California would require normal-year releases regardless of the upstream diversions made by San Francisco. Thus, even though the water available at New Don Pedro would be reduced by San Francisco's increasing diversions, and even though there is no assured correlation between the natural flow of the river as computed without any diversions and the amount of water actually flowing into New Don Pedro, California would require releases for fish to be based on the computed natural flow. Staff, on the other hand, recommends the use of criteria which would be based on the flow available to the applicants. Thus, under staff's criteria, Schedule A would apply when the inflow into New Don Pedro reservoir equals or exceeds 1,000,000 acre feet, and Schedule B would apply when the inflow into the reservoir is less than 1,000,000 acre feet. Under Staff's criteria, Schedule B would, apply in about one year out of four, based on discharges recorded over the past 65 years. Under California's criteria. Schedule B would apply in about one year in ten. For the reasons indicated here and above, we adopt staff's modification of California's proposal.

California has recommended that provision be made for modification of the monthly stream flow schedules within the limits of the total quantities of water involved. These modifications would be made upon California's request when found to be desirable for optimum fishery producton and permissible without infringing upon prior project commitments. Recognizing California's desire to provide for modifications of the monthly flows from time to time, and acknowledging the wisdom of such flexibility in the license, staff would eliminate an itemization of monthly flows under Schedules A and B in the license. Instead, staff would have us prescribe only the total quantity of water to be released during the water year, leaving the monthly flows for optimum fishery production to be determined by California in cooperation with the applicants. We agree that the flexibility to modify the river flows within the limits of the total quantities prescribed is a desirable feature of the license, and we do not see the necessity of requiring Commission approval of such modifications where California and the applicants agree to the changes to be made. However, in order to provide for the orderly release of fish waters in the absence of agreement between the parties on the monthly flows to be released in any year, we shall include the itemized schedules in the license, subject to such modifications as may be agreed upon with respect to scheduling the total quantities of water to be released.

There was conflicting testimony as to what fluctuations in the flow of the river below La Grange dam would be safe for the spawning and incubating fish and be permissible in the operation of the project. California's recommendations are based on an allowance of fluctuations above the base flows provided in the schedules for the spawning period of no more than 0.2 feet in the depth of the river. Where project conditions would require flows during the spawning period higher than those recommended in the release schedules, California would limit the fluctuations to no more than 0.2 feet above or below such higher flows. California would also limit the reductions in flow from the spawning period to the incubation period to no more than 0.4 feet in the depth of the river.

The applicants, on the other hand, offered evidence to show that the fluctuation limitations recommended by California would be unduly severe, if not impossible to maintain. One of the applicants' witnesses testified that the proposed limitations would have an adverse impact on the peaking capability of the project, and would reduce the average useful capability by as much as 20,000 kilowatts during the period November 1 to December 15 under certain anticipated conditions. Another expert testified that peaking generation would occur during periods of four to six hours, and that for such short periods a rise of 1.5 feet in the stream level would not cause major harm to the spawning population. He also testified that a safe level of downward fluctuation during spawning would be 0.3 feet in a day, and that under base flows of 450 to 500 cfs the fluctuations could be as much as 0.5 feet. He would limit downward fluctuation during incubation to 0.3 feet. There is no need for a limit on upward fluctuations during incubation.

In our judgment the limitation of 0.2 feet recommended by California is too severe. There should be a more flexible arrangement for fluctuations to allow for peak generation of power and for normal variations in river flows resulting from the operation of the project, provided the base flows established under Schedules A and B for the spawning period are maintained. We think that staff's recommendation of a daily upward fluctuation of 10 inches with a further allowance of up to 18 inches for periods not exceeding two hours per day is reasonable, as is its recommendation of not more than a 4-inch reduction in river height from the spawning period to the incubation period. These recommendations are incorporated in the license as hereinafter set forth.

Two other conditions urged by California concern the temperature of the water to be released from New Don Pedro and the removal of willow growth and other vegetation in the spawning area. California would have us require the construction and operation of the project so as to maintain water temperatures below 56 degrees at La Grange bridge from October through March. However, the record does not convince us that such a rigid requirement is necessary.

The evidence as to the effect of water temperatures over 56 degrees is conflicting and inconclusive. At the same time, there is evidence to show that the applicant's project has been designed to release water from the reservoir at levels which will provide suitable water temperatures for fish, and that in fact the water released through power generation will closely approach the temperature conditions sought by California. In any event, the record is clear that water temperatures with New Don Pedro will be more favorable to the fish runs than those possible with existing Don Pedro. We think that California and the applicants can cooperate to see that waters of suitable temperature for successful salmon spawning are provided, and the license so requires.

Similarly, with respect to the encroachment of willow growth and other vegetation on the spawning areas, the evidence of record is not sufficiently conclusive to justify the license condition requested by California.

As noted before, staff recommends that the fish releases required by the license be prescribed only for the first 20 years of the project operation, and that minimum flows to be maintained thereafter be determined only after further hearing, either upon the Commission's own motion or upon the recommendation of California or the Secretary of the Interior. In our opinion the 20-year limitation on the releases of water for fish is justified by the circumstances of this case. It is a reasonable limitation which is both appropriate and necessary to serve the best interests and legitimate needs of all of the parties, and of the public as well. There are basically three reasons for this conclusion. First, it appears that some modification of the prescribed releases from New Don Pedro will be necessary at the end of 20 years if the economic feasibility of the project for power is to be preserved. Second, there are a number of factors bearing on the need for fish releases in the future which cannot now be properly evaluated and which should be considered before requiring the applicant to make releases from New Don Pedro beyond the 20-year period. Third, it appears that there will be sufficient water available in the Tuolumne River for 20 years to meet the essential requirements of all interests. We shall consider these reasons in order.

The record shows that shortly after San Francisco's upstream diversions exceed 295 mgd which should occur in 1985, the dependable capacity of the New Don Pedro project will drop to zero if the applicants are required to continue the fish releases as requested by California. This we cannot allow. As suggested by staff, the parties can utilize the 20-year period to cooperate in continuing studies to determine the most economic and feasible manner for maintaining the salmon fishery. It will serve the best interests of California to seek alternative solutions in such cooperative studies, since it will be necessary for the Commission to modify the fish release conditions at the end of the 20-year period to whatever extent may be required to assure the economic feasibility of the applicants' project and to preserve its dependable capacity.

It is expected that the dependable capacity of the project will be 73,000 kilowatts in 1985, which is the capacity of the plant at minimum pool. Staff studied the economic feasibility of the project on the assumption that a plan could be worked out which would enable the project to retain a dependable capacity of 73,000 kilowatts. This study shows that on the basis of a cost of money of 4.5 percent, which is conservative, there would be an annual deficit over the entire license period of $51,000. If, however, lower interest rates are obtained, as is likely,[9] this small deficit would be wiped out, since a reduction of only 0.5 percent in the interest rates would result in a reduction of $190,000 in annual project costs. Moreover, any such small deficit would be more than counter-balanced by the economic value of the augmented irrigation drafts to be realized from New Don Pedro.

---

[9] The applicants estimated their costs using an interest rate of 4.25 percent.

Apart from the vagaries of the weather, which could always affect the available supply of water as well as the needs of the various interests involved, there are a number of factors which over the next 20 years might have a bearing on the necessity for continuing fish releases from New Don Pedro. For example, there is testimony with respect to other reclamation propects being developed for California which might well provide alternative sources of water for the purpose of preserving the fish runs in the Tuolumne. This testimony reveals that the East Side Canal, projected as an extension of the Folsom South Canal under the Auburn-Folsom Project, would cross the Tuolumne River near La Grange. Although this canal is only in the planning stage, and may be 10 to 15 years in the future, it represents one of several possibilities for alternative sources of water which could become available for the Tuolumne fishery from California's developing water program and the Central Valley Project. Another possibility for a solution of the fish problem in the Tuolumne lies in the development of other techniques for preserving the fish runs. Thus, through further study, it might be found that the fish run can effectively be preserved by the use of spawning channels designed to use less water than is now thought necessary for maintaining the runs in the natural river gravels. It might also be found that the use of a fish hatchery would provide the most economical and feasible solution. Other factors which dictate the wisdom of a new look at the problem in 20 years are the possibility that the fishery might be destroyed by changes in the flow of the river downstream from La Grange by natural or other causes wholly beyond the applicants' control; and also the possibility that the applicants' irrigation requirements might be reduced due to increased urbanization and industrialization, or by the development of more efficient methods of utilizing the water available for irrigation purposes.

The applicants put into evidence a reservoir operation study covering a 39-year period based on the historical flows of the Tuolumne and showing operations under conditions of diversions by San Francisco of 210 mgd, 295 mgd and 400 mgd. If the water which this study shows to be available or permissible for uses other than irrigation is applied to meet the fish releases herein required, either through current use or through storage for use in subsequent years, the applicants could operate the project as outlined in the study without limitation of their planned irrigation uses for a period of at least 20 years, i.e., until after San Francisco commences the diversion of 295 mgd. Thus the 20-year limitation on the schedule of releases required by the license should provide the parties with sufficient opportunity to study and work out alternative solutions to the fish problem before the water situation becomes critical. At the same time, the 20-year limitation assures the applicants that no releases beyond that time will be required without further hearing to consider the need therefor and the legal and operational consequences resulting therefrom.[10]

---

[10] Inasmuch as the license herein issued does not presently require fish releases which interfere with the water rights of the applicants or San Francisco under state law, or which are expected to interfere with such rights during the first 20 years of operation, it is not necessary at this time, and it may never be necessary in this case, to pass upon the legal question of the Commission's authority under the Power Act to require releases which would interfere with vested state water rights. We note, however, the recent decision of the Court of Appeals for the Ninth Circuit construing Section 27 insofar as it relates to the Commission's authority to impose navigational conditions under Section 11, and upholding a Commission determination that Section 27 is not a limitation on the Commission's exercise of the authority vested in it by Section 11. *Portland General Electric Co.* v. *F.P.C.*, decided February 7, 1964, 328 F. 2d 165.

As we have pointed out, both California and the Secretary of the Interior question whether New Don Pedro can be found to be economically feasible in the absence of evidence showing the benefits flowing to San Francisco. They contend that the contract between the applicants and San Francisco should be in evidence to determine the proper relationship of costs to benefits. They would have us reopen the proceeding, although only the Secretary has filed a motion to that effect; and the Secretary would have us make San Francisco a party.

The history of the efforts of the applicants and San Francisco to develop the resources of the Tuolumne River on a coordinated basis is clear from the record, as is the basic understanding reached by these parties in contracts executed in 1940 and 1949, even though these contracts are not part of the record. San Francisco is contracting with the applicants for 570,000 acre feet of storage at New Don Pedro, plus one-half of the 340,000 acre feet of flood storage capacity when not needed for flood control. In consideration of its right to this storage, San Francisco has agreed to contribute to the cost of New Don Pedro the equivalent of what it would cost to build a reservoir at that site to a capacity of 1,200,000 acre feet. Thus, San Francisco will pay for sufficient storage (1) to replace for the applicants the 290,000 acre feet of storage which will be destroyed at existing Don Pedro, (2) to provide the 340,000 acre feet of flood control storage agreed to with the Corps of Engineers, and (3) to provide the 570,000 acre feet of storage required for its own use. As noted above, it is expected that San Francisco's share of the cost of the project on this basis will be about $43,181,790.[11] Apart from the land, the applicants will have to provide only the power facilities and the incremental storage in the amount of 830,000 acre feet, of which 811,000 acre feet will be usable for irrigation.

It appears that New Don Pedro reservoir is the most economical source of additional storage to meet San Francisco's increasing municipal water needs. San Francisco here is buying water storage. It is not buying power, nor will it share in the power benefits of New Don Pedro. It is to pay for this storage on a cost basis, and we find no justification for seeking additional evidence on this question.

We likewise find no justification for seeking additional evidence of the upstream power benefits which San Francisco might realize through the construction of New Don Pedro, and which California and the Secretary contend should be considered in determining San Francisco's proper share of the project cost. No reasonable cause has been shown for believing that any substantial upstream benefits will be realized. It appears that the same amount of water will flow through San Francisco's upstream facilities regardless of the construction of New Don Pedro, and that its power head will remain unchanged. The only possible difference in its operations would be in the scheduling of its releases, which in turn might have some slight effect on its dependable capacity and energy output. This, however, does not alter our judgment that San Francisco's share of the cost of New Don Pedro is properly based on the cost of its storage, which will be finally determined in accordance with its contract with the applicants.

At the outset of this proceeding, we advised San Francisco that it was not necessary for it to join in the license application for New Don Pedro.[12] We do not deem it necessary or appropriate at this time to reopen the proceedings to make San Francisco a party or to require additional evidence of the costs and benefits relating to its interest in the project. It is our expectation, however, that San Francisco will cooperate with the applicants and California in their efforts to find a solution to the fish problem on the Tuolumne, and that it will be a party to any further hearing before the Commission to determine the minimum fish release requirements at the end of the 20-year period. Moreover, as a condition of the license herein issued, we shall require the applicants to file their final contract with San Francisco relating to the allocation of the total cost of the project and San Francisco's acquisition of storage space in the reservoir. Construction of the project will not be permitted to commence until this agreement has been approved by the Commission.

---

[11] See footnote 3, above. This cost will be reduced by the Federal Government's contribution of approximately $14,200,000 for flood control storage.

[12] See footnote 6, p. 513.

The Commission further finds:

(1) Turlock Irrigation District and Modesto Irrigation District, irrigation districts organized under California law, filed a joint application on May 9, 1961, as later amended on March 30, 1962 and May 18, 1962, for license under the Federal Power Act to construct, operate and maintain a hydroelectric project known as the New Don Pedro project, located on the Tuolumne River at river mile 54.5.

(2) The applicants are municipalities as defined in Section 3(7) of the Federal Power Act.

(3) Public notice was given of the instant application. No conflicting application is before the Commission.

(4) A public hearing was held on the application in San Francisco, California, commencing on October 16, 1962, and concluding on October 26, 1962.

(5) Construction, operation and maintenance of the proposed Project No. 2299 would affect public lands of the United States. Consequently, under the provisions of Section 23(b) of the Federal Power Act, the applicants may not construct, operate or maintain the proposed works upon those lands of the United States until they shall have received a license under the provisions of the Federal Power Act.

(6) The exhibits filed by the applicants pertaining to the New Don Pedro project conform with the Commission's rules and regulations and should be approved as part of the license, but there shall be filed, as hereinafter provided, Exhibits F and K showing and describing the project boundary and project lands.

(7) The New Don Pedro project as outlined in the applicants' plans conforms to sound engineering practice and will be safe and adequate.

(8) The New Don Pedro project, constructed, operated and maintained as hereinafter ordered and conditioned, will not affect any Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(9) The Tuolumne River has a large annual variation in flow, ranging from 600,000 acre feet to 3,200,000 acre feet over the 39-year representative hydrologic cycle, namely 1923-1961, and storage is essential in order to provide dependable supplies for irrigation and domestic use, permitting the carryover of waters from wet years to dry years.

(10) The New Don Pedro project will provide storage to conserve water for irrigation and domestic supplies, and will provide for the generation of hydroelectric power, for flood control, and for recreation and other public benefits.

(11) The New Don Pedro project, as herein authorized, is best adapted to a comprehensive plan for the improvement and utilization of water power development and other beneficial public uses, including recreational purposes.

(12) The construction cost estimated by the applicants for the New Don Pedro project is reasonable.

(13) Pursuant to principles laid down in a 1949 agreement between the applicants and the City and County of San Francisco, it is anticipated that the

aforesaid parties will enter into a binding agreement fixing San Francisco's contribution to the overall cost of the New Don Pedro project. Under the 1949 agreement, San Francisco agreed to pay the actual cost of constructing the New Don Pedro project to a reservoir capacity of 1,200,000 acre feet, excluding the cost of land and generating facilities.

(14) Construction of the New Don Pedro project should not commence until the applicants and San Francisco enter into a new agreement, which shall be filed with and approved by the Commission, allocating the total costs between the parties and obligating San Francisco to pay its share of those expenditures. Such agreement should entitle San Francisco to a maximum of 740,000 acre feet of storage in the New Don Pedro reservoir consisting of 570,000 acre feet of municipal exchange storage and 50 percent of the 340,000 acre feet off-season flood control space.

(15) The existing Don Pedro project, under minor part license to the applicants as Project No. 1086 and located at river mile 56.0, will be submerged by the New Don Pedro project.

(16) The proposed New Don Pedro project will utilize the head and stream flow of the Tuolumne River to the maximum extent for power purposes.

(17) The New Don Pedro project will have an installed capacity of 130,440 kilowatts and an estimated average annual output of 527,000,000 kilowatt hours, with a peaking capability of 150,000 kilowatts.

(18) The combined loads of joint applicants' electric systems will be sufficient to absorb the entire output of the proposed project by the date of its completion.

(19) The at-market power value of the New Don Pedro project is estimated at $19.55 per kilowatt year for capacity plus 4.06 mills per kilowatt hour for energy.

(20) The financial feasibility of the New Don Pedro project has been established.

(21) The installed horsepower capacity of the New Don Pedro project for the purpose of computing annual charges is 174,000 horsepower.

(22) It is desirable to reserve for future Commission determination the question of what lands of the United States are affected by the New Don Pedro project and the amount of annual charges to be fixed for the use thereof.

(23) The amount of annual charges to be paid under the license for the New Don Pedro project for the purpose of reimbursing the United States for the cost of administration of Part I of the Federal Power Act is reasonable.

(24) It is appropriate for the Commission to reserve the right hereafter to determine the transmission facilities to be included in the license.

(25) The New Don Pedro project, as proposed to be operated by the applicants, is economically feasible as a power plant; and its economic feasibility will not be destroyed by the fish releases herein prescribed as a condition of the license. Moreover, the economic feasibility of the project will be enhanced by the additional amounts of irrigation water which New Don Pedro will make available to the applicants.

(26) Major upstream and downstream migration and spawning activity of King salmon takes place in the stretch of the Tuolumne River from La Grange bridge at river mile 50.5 to Hickman bridge at river mile 31.7 during the months of October through April.

(27) The applicants' planned operation of the New Don Pedro project does not provide for any minimum flow in the natural streambed below La Grange dam in a critical year. Therefore, conditions should be prescribed to assure the maintenance of the fishery resources of the Tuolumne River downstream from La Grange dam.

(28) It is reasonable and proper that the applicants be required for the first 20 years of project operation to release into the natural stream-bed below La Grange dam the amounts of water set forth in California's Schedules A and B. However, in determining which schedule shall apply the applicants should select the proper schedule on the basis of the actual inflow into New Don Pedro reservoir during the water year immediately preceding October 1 of each year.

(29) The Office of the Chief of Engineers has reported that the Army has no objection to the issuance of a license to the applicants provided they and the representatives of the Secretary of the Army can reach a suitable agreement to satisfy the needs of flood control under the Flood Control Act of 1944. That report also states that no special terms and conditions in the interest of navigation are needed in the license.

(30) The issuance of a license for the New Don Pedro project will not interfere or be inconsistent with the purposes of any reservations or withdrawals of public land.

(31) The applicants as public agencies of the State of California have submitted satisfactory evidence of compliance with requirements of all applicable state laws insofar as necessary to effect the purposes of a license for the New Don Pedro project.

(32) The motion of the Secretary of the Interior, filed herein on July 23, 1963, for institution of investigation and issuance of order to show cause should be denied.

The Commission orders:

(A) This license is issued to the Turlock Irrigation District and the Modesto Irrigation District (hereinafter referred to as the Licensees) under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of the first day of the month in which the acknowledgment of acceptance thereof is filed with the Commission by Turlock Irrigation District and Modesto Irrigation District, for the construction, operation and maintenance of major Project No. 2299, to be known as the New Don Pedro project, on the Tuolumne River and its tributaries, located upon public lands of the United States, subject to the terms and conditions of the Flood Control Act of 1944 (58 Stat. 887) and the Federal Power Act which are incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Federal Power Act: *Provided*, however, that the Licensees shall surrender their license for Project No. 1086 upon completion of the New Don Pedro project.

(i) The proposed project consists of:

All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined and/or interest in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicants or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed a part of the application for license and which are designated and described as follows:

Exhibit J; sheet	FPC No. 2299	Title, New Don Pedro Project
1............	4	General Map—Project location.
2............	5	General Map—Reservoir area.
3............	53	Reservoir capacity and area curves—Profile.

(ii) An earth and rock-fill dam 580 feet high with impervious center core and pervious shells at river mile 54.5 on the Tuolumne River; a spillway on the right abutment comprised of a gate-controlled section and an ungated broad-crested weir section discharge into Gasburg Creek; a reservoir extending 22 miles up the Tuolumne River having a gross storage capacity of 2,030,000 acre feet and an area of 12,960 acre feet at elevation 830 feet; low level intake discharging through Howell-Bunger valves; a power tunnel 2800 feet long through the left abutment and a penstock extending to a powerhouse located across the river adjacent to the toe of the dam; a powerhouse containing three 69,000-horsepower turbines operating under a rated head of 425 feet connected to three 43,480-kilowatt generators, making a total of 130,440 kilowatts; a switchyard; transmission lines extending to Turlock and Modesto, California; and appurtenant hydraulic, mechanical, and electrical facilities and miscellaneous project works—the location, nature, and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L; sheet	FPC No. 2299	Title New Don Pedro Project
2	38	General project layout.
3	39	Rock-fill dam.
4	40	Diversion tunnel.
5	41	Outlet works—Inlet works.
6	55	Power tunnel.
7	43	Spillway.
8	44	Powerhouse—Service area and longitudinal section.
9	45	Powerhouse—Generator floor and transverse section.
10	46	Powerhouse—Turbine and valve floors.
11	47	Powerhouse main single line diagram.
12	48	Switchyard main single line diagram.
13	49	Switchyard layout.

Exhibit M "General Description of Equipment" in 3 sheets revised Mar. 12, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use of possession of which is necessary or appropriate in the maintenance or operation of the project.

(B) This license is also subject to the terms and conditions set forth in Form L–2, February 1, 1964, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Lands of the United States," [*infra.*, p. 528] which terms and conditions designated as Articles 1 through 33 are attached hereto and made a part hereof, except for Articles 6, 7, 12 and the last sentence of Article 27 thereof, and subject to the following special conditions set forth herein as additional-articles:

Article 34. The Licensees shall commence construction of the project works within one year of the effective date of this license, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete construction of such project works within four years from the effective date of this license.

Article 35. The Licensees shall within one year from the date of completion of the project, file with the Commission revised Exhibits F and K to define the final project boundary including transmission line rights-of-way in accordance with the rules and regulations of the Commission.

Article 36. The Licensees shall, prior to impounding water, dispose of all temporary structures, unused timber, brush, refuse, or other inflammable material resulting from the clearing of the land or from the construction and maintenance of the project works, and shall clear all lands in the reservoir area up to normal water level; except that all lands in the reservoir area shall be cleared according to a plan to be prescribed by the Commission upon the recommendation of the California Department of Fish and Game and the United States Fish and Wildlife Service. The clearing of the lands and the disposal of the material shall be done with due diligence by the Licensees and to the satisfaction of the authorized representative of the Commission.

Article 37. For the first 20 years of project operation, the Licensees shall maintain minimum stream flows in the Tuolumne River at La Grange bridge (river mile 50.5) for fish purposes in accordance with the schedules set forth below or with such monthly schedules as may, with the approval of the Licensees, be prescribed by the California Department of Fish and Game; *Provided*, that the total volume under Schedule A shall not exceed 123,210 acre feet per water year and the total volume under Schedule B shall not exceed 64,040 acre feet per water year.

Period	Schedule A (normal year)		Schedule B (dry year)	
	Cfs	Acre-feet*	Cfs	Acre-feet*
Preseason flushing flow	2,500	4,960		
October 1-15	200	5,950	50	1,490
October 16-31	250	7,930	200	6,350
November	385	22,900	200	11,900
December 1-15	385	11,450	200	5,950
December 16-31	280	8,880	135	4,280
January	280	17,210	135	8,300
February	280	15,550	135	7,500
March	350	21,520	200	12,300
April	100	5,950	85	5,060
May-September	3	910	3	910
Total acre-feet		123,210		64,040

*Cfs day equals 1.983 acre-feet.

The schedule to apply shall be governed by the water year immediately preceding October 1 of each year. Flows under Schedule A shall apply when the inflow into New Don Pedro reservoir equals or exceeds 1,000,000 acre feet. Schedule B shall apply in like manner if the inflow is less than 1,000,000 acre feet; *Provided*, that in a water year when the inflow is less than 750,000 acre feet, the amount of water provided under Schedule B shall be reduced by a percentage of the total acre feet equivalent to the percentage reduction in the gravity diversion at La Grange by the Licensees. For this purpose, the diversion shall be defined as 900,000 acre feet to Licensees.

After the first 20 years of project operation, the Licensees shall maintain minimum stream flows in the Toulumne River at La Grange bridge as may be prescribed hereafter by the Federal Power Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the California Department of Fish and Game, after notice and opportunity for hearing and upon a finding based on substantial evidence that such minimum flows are available and are necessary and desirable and consistent with the provisions of the Act.

Article 38. (a) Flows below La Grange bridge may be altered by the Licensees at any time in connection with the operation of the project for flood control purposes or other emergencies provided that in the 45-day period of November 5 to December 20 (or such other 45-day period between October 15 through December 31 as may be specified on two weeks prior notice by the California Department of Fish and Game), if such flood control or other operations are required, flows shall be increased to 4,500 cfs within 24 hours and shall be reduced as soon as possible after flood control criteria are met.

(b) Subject to the provisions of paragraph (a), so long as fluctuations do not result in reduction of flows below those in the applicable schedule prescribed in Article 28, or such higher minimum daily base flows as may be established in the 45-day period described in paragraph (a) above, fluctuations may be made at any time; *Provided:*

(1) Fluctuations shall be controlled as closely as possible during such 45-day period so as not to cause a daily increase of river height in excess of 10 inches; *Provided, however*, for a period not to exceed two hours per day, the increase may exceed 10 inches but not more than a total of 18 inches.

(2) From the end of such 45-day period until March 31 reduction in river height shall not exceed 4 inches below the average height established in the 45-day period, excluding heights reached as a consequence of the daily fluctuation in excess of 4 inches provided in paragraph (b)(1) and those resulting under paragraph (a).

Article 39. The Licensees in cooperation with the California Department of Fish and Game shall make necessary studies aimed at assuring continuation and maintenance of the fishery of the Toulumne River in the most economical and feasible manner. Such studies shall be completed prior to the end of the 20-year period for which minimum stream flows have been provided in Article 28.

Article 40. In the event water temperatures during the critical months of the spawning season are too high for successful salmon spawning, the Licensees and the California Department of Fish and Game shall confer to determine whether project operations may be adjusted to assist in correcting the situation. If no agreement can be reached, the Commission, upon request and after notice and opportunity for hearing, may order such adjustment as it finds to be necessary and desirable, reasonably consistent with the primary purpose of the project.

Article 41. The Licensees shall, prior to the filling of New Don Pedro reservoir, provide for free passage of water through the existing Don Pedro dam either by opening the low-level outlets or breaching the dam near streambed.

Article 42. Gravels of the river channel downstream from La Grange dam shall not be disturbed during the construction of project facilities except in accordance with a plan developed by the Licensees after consultation with the California Department of Fish and Game and the United States Fish and Wildlife Service with a view toward maintaining the pre-project value of the gravels for salmon spawning. The Licensees shall take all reasonable measures to prevent silt, fines and other construction debris from being released into the Toulumne River.

Article 43. The Licensees shall, prior to commencement of construction of the New Don Pedro project works, enter into an agreement with the Secretary of the Army or his designated representative providing for the operation of the project for flood control in accordance with rules and regulations prescribed by the Secretary of the Army. A conformed copy of the agreement shall be filed with the Commission for its information and records prior to commencement of construction of the project works.

Article 44. The Commission expressly reserves the right to determine at a later date what transmission lines and appurtenant facilities, if any, shall be included in the license as part of the project works.

Article 45. The Licensees shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modification thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or interested State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project. The Licensees shall within one year from the date of issuance of the license, file with the Commission for approval their proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate, Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensees plan to provide.

Article 46. The Licensees shall acquire sufficient interest in lands of Sections 20 and 21, T. 2 S., R. 15 E., M.D.M., to provide parking and road access to National Land Reserve in Sections 19 and 20, T. 2 S., R. 15 E., M.D.M.

Article 47. The Licensees shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations as in effect from time to time. The authorized installed capacity for such purpose is 174,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, including those used for transmission line right-of-way, an amount to be determined hereafter by the Commission.

Article 48. The licensees shall, prior to commencement of construction of the New Don Pedro project, enter into an agreement with the City and County of San Francisco relating to the allocation of the total cost of the project and the acquisition of storage space in the reservoir. A conformed copy of the agreement shall be filed with the Commission for its approval prior to commencement of construction.

(C) The exhibits described in paragraph (A) above are approved as part of the license for the project.

(D) The motion for institution of investigation and issuance of order to show cause, filed July 23, 1963, by the Secretary of the Interior, is hereby denied.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensees and returned to the Commission within 60 days from the date of issuance of this order.

FORM L–2

(REVISED FEBRUARY 1, 1964)

TERMS AND CONDITIONS OF LICENSE FOR UNCONSTRUCTED MAJOR PROJECT AFFECTING LANDS OF THE UNITED STATES

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, specifications, and statements described and designated as exhibits and approved by the Commission in its order as a part of the license until such change shall have been approved by the Commission: Provided, however, that if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed changes which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. Said project works shall be constructed in substantial conformity with the approved exhibits referred to in Article 2 herein or as changed in accordance with the provisions of said article. Except when emergency shall require for the protection of navigation, life, health, or property, no substantial alteration or addition not in conformity with the approved plans shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct. Minor changes in the project works or divergence from such approved exhibits may be made if such changes will not result in decrease in efficiency, in material increase in cost, or in impairment of the general scheme of development; but any of such minor changes made without the prior approval of the Commission, which in its judgment have produced or will produce any of such results, shall be subject to such alteration as the Commission may direct. The Licensee shall comply with such rules and regulations of general or special applicability as the Commission may from time to time prescribe for the protection of life, health, or property.

Article 4. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of inspection for the project works or any such feature thereof has been approved by said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project land and project works in the performance of their official duties.

Article 5. The operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Commission may prescribe for the purposes hereinbefore mentioned.

Article 6. The actual legitimate original cost of the original project, and of any addition thereto or betterment thereof, shall be determined by the Commission in accordance with the Act and the Commission's rules and regulations thereunder.

Article 7. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 8. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 9. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 10. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 11. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under license.

Article 12. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 13. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 14. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 15. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 16. Upon the completion of the project, or at such other time as the Commission may direct, the Licensee shall submit to the Commission for approval revised maps, plans, specifications, and statements insofar as necessary to show any divergence from or variations in the project area and project boundary as finally located or in the project works as actually constructed when compared with the area and boundary shown and the works described in the license or in the maps, plans, specifications, and statements approved by the Commission, together with a statement in writing setting forth the reasons which in the opinion of the Licensee necessitated or justified variations in or divergence from the approved maps, plans, specifications, and statements. Such revised maps, plans, specifications, and statement shall, if and when approved by the Commission, be made a part of the license under the provisions of Article 2 hereof.

Article 17. In the construction and maintenance of the project, the location and standards of roads and trails, and other land uses, including the location and condition of quarries, borrow pits, spoil disposal areas, and sanitary facilities, shall be subject to the approval of the department or agency of the United States having supervision over the lands involved.

Article 18. In the construction and maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines, and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads. None of the provisions of this article is intended to relieve the Licensee from any responsibility or requirement which may be imposed by other lawful authority for avoiding or eliminating inductive interference.

Article 19. The Licensee shall make provision, or shall bear the reasonable cost, as determined by the agency of the United States affected, of making provision for avoiding inductive interference between any project transmission line or other project facility constructed, operated, or maintained under the license, and any radio installation, telephone line, or other communication facility installed or constructed before or after construction of such project transmission line or other project facility and owned, operated, or used by such agency of the United States in administering the lands under its jurisdiction.

Article 20. The Licensee shall clear such portions of transmission line rights-of-way across lands of the United States as are designated by the officer of the United States in charge of the lands; shall keep the areas so designated clear of new growth, all refuse, and inflammable material to the satisfaction of such officer; shall trim all branches of trees in contact with or liable to contact the transmission line; shall cut and remove all dead or leaning trees which might fall in contact with the transmission line; and shall take such other precautions against fire as may be required by such officer. No fires for the burning of waste material shall be set except with the prior written consent of the officer of the United States in charge of the lands as to time and place.

Article 21. Timber on lands of the United States cut, used, or destroyed in the construction and maintenance of the project works or in the clearing of said lands shall be paid for in accordance with the requirements of and at the current stumpage rates applicable to the sale of similar timber by the agency of the United States having jurisdiction over said lands; and all slash and debris resulting from the cutting or destruction of such timber shall be disposed of as the officer of such agency may direct.

Article 22. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon request of officers of the agency of the United States concerned, to prevent, make advanced preparations for suppression, and suppress fires on land occupied under the license.

Article 23. The Licensee shall interpose no objection to, and shall in no way prevent, the use of the agency of the United States having jurisdiction over the lands of the United States affected, or by persons or corporations occupying lands of the United States under permit, of water for fire suppression from any stream, conduit or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license, or to the use by said parties of water for sanitary and domestic purposes from any stream or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license.

Article 24. The Licensee shall be liable for injury to, or destruction of, any buildings, bridges, roads, trails, lands, or other property of the United States, occasioned by the construction, maintenance, or operation of the project works or of the works appurtenant or accessory thereto under the license. Arrangements to meet such liability, either by compensation for such injury or destruction, or by reconstruction or repair of damaged property, or otherwise, shall be made with the appropriate department or agency of the United States.

Article 25. The Licensee shall allow any agency of the United States, without charge, to construct or permit to be constructed on, through, and across the project lands, conduits, chutes, ditches, railroads, roads, trails, telephone and power lines, and other means of transportation and communication not inconsistent with the enjoyment of said lands by the Licensee for the purposes stated in the license. This article shall not be construed as conferring upon the Licensee any right of use, occupancy, or enjoyment of the lands of the United States other than for the construction, operation, and maintenance of the project as stated in the license.

Article 26. There is reserved to the appropriate department or agency of the United States, or of the State or county involved, the right to take over, maintain, and supervise the use of any project road as a public road after construction of the project works is completed.

Article 27. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary or useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: Provided, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new licensee under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume responsibility for payment and discharge, of all liens or incumbrances upon the project or project property created by the Licensee or created or incurred after the issuance of the license: Provided, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such project property than was necessary to acquire for its own purposes as Licensee.

Article 28. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determinations to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as the Commission may prescribe.

Article 29. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 30. Whenever the Licensee is directly benefited by the construction work of another Licensee, a permittee, or of the United States of a storage reservoir or other headwater improvement, the Licensee shall reimburse the owner of the headwater improvement for such part of the annual charges for interest, maintenance, and depreciation thereon as the Commission shall determine to be equitable, and shall pay to the United States the cost of making such determination as fixed by the Commission. For benefits provided by a storage reservoir or other headwater improvement of the United States the Licensee shall pay to the Commission the amounts for which it is billed from time to time for such headwater benefits and for the costs of making the determinations pursuant to the then current Commission Regulations under the Federal Power Act within 60 days from the date of rendition of a bill therefor and, upon failure to do so, shall thereafter be subject to the payment of the penalties specified in the then current Regulations. The Licensee shall have the right to pay such amounts under protest within the 60-day period and to reconsideration of the amounts billed or a hearing as provided by the then current Regulations under the Act.

Article 31. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines from lands of the United States and restore said lands to a condition satisfactory to agency having jurisdiction over the lands and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 32. The right of the Licensee and of its transferees and successors to use or occupy lands of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 33. **The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.**

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON APPLICATION FOR LICENSE

(Issued June 4, 1963)

HALL, *Presiding Examiner:* This case concerns the joint application filed by Modesto Irrigation District and Turlock Irrigation District (Districts) for a major license to construct, operate and maintain a multi-purpose project on the Tuolumne River,[1] designated Project No. 2299, and known as the New Don Pedro project, to replace Districts' existing Don Pedro project located immediately upstream from the site of the proposed New Don Pedro development. The application was filed under Part I of the Federal Power Act (Act).[2]

The Districts are two of the largest irrigation districts in the State of California and are public agencies of that State. They have been engaged in the irrigation business since 1894 and the power business since 1924—following completion of the existing Don Pedro dam and power house. They

---

[1] The Tuolumne River rises in the Sierra-Nevada Mountains, the highest point from which drainage flows west into the Hetch Hetchy Valley being Mt. Lyell at elevation 13,000 feet. Other streams such as Cherry and Eleanor Creeks join the main river from the surrounding area constituting a total drainage of approximately 1,540 square miles at the point where the river flows past the Districts' La Grange diversion dam located below the New Don Pedro site. At this point the river, having dropped to about elevation 175, flows about 50 miles between the two Districts to its confluence with the San Joaquin River. The river has a highly variable annual runoff, making it necessary to provide storage to regulate the river for substantial beneficial use.

[2] The Federal Water Power Act of June 10, 1920, which created the Commission, was amended, expanded and made Part I of the Federal Power Act of 1935 by Title II of the Public Utility Act of 1935 (49 Stat. 838).

Under Part I of the Act it is unlawful to construct, operate or maintain any dam over which the Commission has jurisdiction except under and in accordance with a permit or valid existing right-of-way granted prior to June 10, 1920, or a license granted pursuant to the Act.

Part I of the Act, providing a comprehensive scheme of national regulation for the improvement or navigation, the development of water power, and the use of public lands in relation thereto, vests in the Commission jurisdiction over the licensing, regulation and control of hydroelectric projects on streams subject to Federal jurisdiction and on public lands or reservations. The act gives preference to States and municipalities; limits licenses to not more than fifty years; and reserves to the United States the right of recapture at the end of the lease period. Upon expiration of franchises the Government has the option of (1) taking over the license upon payment of the net investment not to exceed fair value, plus reasonable severance damages; (2) renewing the old license; or (3) granting a new one. In short, the Act "proceeds on the theory of private development with ultimate public ownership possible" (Senate Rep. No. 180, 66th Cong., 1st Sess. (1919)).

With the establishment of the Commission in 1920 it was no longer necessary for Congress to consider each and every proposal separately and enact special legislation in granting the consent of Congress, where appropriate, to construct and operate each individual hydroelectric project. Once the Commission's jurisdiction to issue a license has been determined (as it has been with reference to New Don Pedro since it will occupy public lands), the only questions remaining are whether a license should issue, and, if so, the conditions under which it should be issued, the intention of the Act being to assure, through the imposition of conditions, if necessary, the accomplishment of the purposes of the Act. All licenses are conditioned upon the acceptance by the licensee of all the terms and conditions of the Act and such further conditions as the Commission may prescribe in conformity with the Act.

"The grant of a license under the act is a gratuity, a privilege from the sovereign, and can only be justified on the theory of the benefit to inure to the public" (*Clarion River Power Co. v. George Otis Smith et al.*, 59 F. 2d 861, 863, cert. den. 287 U.S. 639.)

own and operate extensive facilities for the distribution of irrigation water and electric power in Stanislaus and Merced Counties in the vicinity of Modesto and Turlock, California, an area once stunted by water shortage but now vigorous and strong, having made great advances agriculturally and industrially because its inhabitants had the foresight and determination to make beneficial use of its water resources.

The history of the Districts dates back to 1887. They are pioneers in California irrigation through the use of the La Grange diversion dam completed by them in 1894. This diversion dam is located about three and a half miles below the site of New Don Pedro. New Don Pedro will enhance but not change the function of the La Grange dam. That is to say the La Grange dam will continue to raise the waters of the Tuolumne River (below New Don Pedro) to a sufficient height to be carried by gravity's free delivery through extensive canals and connected irrigation systems to the fertile area irrigated by the Districts.[3] Such area, nourished by the irrigation water diverted from the Tuolumne River—and also by low cost power—that brought it to life, is extremely prosperous and in a high state of improvement and cultivation, producing under irrigation highly profitable and important agricultural products and income from substantial industrial and other sources. The economy of the area is based on irrigated agriculture with virtually every job, livelihood and activity being totally dependent upon water. New Don Pedro, by making much more of the Tuolumne River water usable, will improve the base of this economy in a real and important way. It will, in short, better rearrange and retime nature to more adequately meet the water needs of those served by the Districts. And, as will be shown, the project is also designed to enable San Francisco to meet its estimated water needs and to provide for flood control. In fact it clearly appears that San Francisco's desire to have the project constructed is a dominant, if not the dominant, purpose for its construction.

The Tuolumne River, on which the New Don Pedro dam and powerhouse are to be located, flows through the two Districts and is their common source of supply. The headwaters of this stream is also one of the primary sources of water supply for the San Francisco Bay area[4] through the Hetch Hetchy system constructed and operated by the City and County of San Francisco, California (San Francisco) pursuant to Congressional authorization—at least in part, viz.,

---

[3] Turlock's irrigation system begins with a main canal extending 9 miles from the left end (facing downstream) of the La Grange dam to its offstream reservoir having a capacity of about 50,000 acre feet, with water being carried below this point by a canal and subsidiary laterals comprising a 250-mile system which in turn feeds some 1,600 miles of community pipelines and ditches.

The Modesto system, beginning at the right end of the La Grange dam, extends 21 miles to the Modesto offstream reservoir, with a capacity of about 28,000 acre feet, and beyond through a system of canals and laterals with a combined total length of about 165 miles, which system feeds community ditches and pipelines in the same fashion as in the Turlock District. The Waterford Irrigation District, an adjacent small irrigation District, draws its Tuolumne River water from six points on Modesto's main canal.

The Districts serve water to some 9,200 irrigators. The annual water requirements of the farms within their boundaries can vary from over 1,000,000 acre feet to 1,200,000 acre feet, depending upon climatic conditions, the type of crops and the acreage under irrigation. The present insufficient regulatory storage of the Districts has rarely made it possible for them to come within this range of river diversion.

[4] The service area of the San Francisco Water Department includes all the northern end of the San Francisco peninsula; extends south along the shores of San Francisco Bay to include the Cities of Mountain View and Sunnyvale, easterly to include the City of Milpitas and northerly along the eastern shores of the Bay to include the City of Hayward. More than 30 other cities, districts, and agencies are supplied with water from the San Francisco system.

38 Stat. 242 (Raker Act of December 19, 1913). The Raker Act, however, prohibits San Francisco from ever interfering with the water rights acquired by the Districts under California law,[8] and from selling Hetch Hetchy power to a private individual or utility. That Act also requires San Francisco to conform to the laws of California relating to the control, appropriation, use, or distribution of water and vested rights acquired thereunder. Therefore, in this case the Commission is dealing with the use and diversion of water and the generation of power concerning which the Districts and San Francisco—which are acting in friendly cooperation insofar as the construction and operation of New Don Pedro is concerned—already have fixed rights and obligations under the Raker Act. Thus this case presents not only the question of fact as to the benefits to be derived from the construction of New Don Pedro, but also the legal question of whether what is proposed conforms with the rights, duties and responsibilities arising by virtue of the Raker Act.

While the needs of the Districts and San Francisco call for the fullest possible assistance on the part of the Commission, it is apparent that for them to attain their goal, new rights, new obligations, new machinery, not contemplated by the Raker Act, must be created to give effect to their updated experience, thinking and arrangements. Although the intent of their proposed arrangement is clearly to improve, make more effective and less costly the whole of their undertaking, and reflects the natural diligence of reasonable, prudent and responsible officials, it must nevertheless likewise reflect complete consistency with, and not be a departure from, the obligations of San Francisco under the Raker Act.

The Districts and San Francisco treat the rearrangement here proposed as being wholly consistent with the Raker Act, their position apparently being that the changed arrangement is simply the selection, after thorough study in the light of their needs, of an economical and effective means for accomplishing a greater diversion and use of water of the Tuolumne River. That is to say, they appear to be proceeding upon the assumption that the present and prior method of operation is not the exclusive method permitted by the Raker Act.

---

[8] Subsections (b), (c) and(d) of Section 9 of the Raker Act (1) require San Francisco to recognize the rights of the Districts to 2,350 second feet of water measured at the La Grange diversion dam (the existing Don Pedro project not being constructed until ten years after the passage of the Raker Act); (2) required San Francisco to release the the necessary amount of water to assure the flow of 2,350 second feet included in the priorities of the Districts; (3) recognized the rights of the Districts to take free of charge 4,000 second feet of water out of the natural flow of the river during the 60 days beginning April 15 of each year; and (4) requires San Francisco to sell to the Districts, under the various conditions and circumstances recited in Section 9(d), additional "amounts of stored water as may be needed for the beneficial use of said irrigation districts at such a price as will return to [San Francisco] the actual total costs of providing such stored water."

House Report No. 41, 63d Congress, 1st Session, which accompanied H.R. 7207, that became the Raker Act, explains that "The provision relating to the 4,000 second-feet above referred to is to provide for the beneficial use by the irrigationists of water which otherwise goes to waste. In the period mentioned, April 15 to June 15, the Tuolumne River is a torrential flood. Fifty miles of watershed intervene between the Hetch Hetchy Dam and the dam of the irrigationists at La Grange. It is proposed that the irrigationists may take up waste waters, store them, and thus lessen the possible draft upon stored waters of the city. It should be borne in mind that San Francisco does not contemplate interfering with the natural flow of the Tuolumne. The intent is to store flood waters which come from melting snows and leave the normal flow of the river uninterrupted. The benefit to the irrigation districts in this provision is that the landowners will receive the benefit of an investment of approximately $50,000,000 without being compelled to put up any part of the cost, and the construction of the system will insure the priorities of the irrigationists and they will receive water in the dry period when it is most needed. Without the construction of the Hetch Hetchy Dam there can be no flow in the river during the summer and fall."

The Raker Act authorization for the construction and operation of the Hetch Hetchy water supply and power system, located in the Yosemite National Park and the Stanislaus National Forest, was given at a time when San Francisco faced a water famine and in recognition of the fact that any alternative water supply would cost millions of dollars more, with no credit for power development.

It is claimed that New Don Pedro, through the exchange storage arrangement proposed herein, will enable San Francisco to meet its increasing municipal water requirements—again becoming a matter of urgency—until the year 2015 when it is anticipated that demand will have reached 400 mgd. It will also make it possible for San Francisco and the Districts to generate and sell greater quantities of hydroelectric power. The Districts expect to recover their portion of the capital cost of New Don Pedro through the sale power generated by this project and have demonstrated its economic feasibility on this basis. San Francisco may also be able to recover its contribution to the project's cost through the sale of additional power.

As indicated, the increased diversions to the San Francisco water system will not be made physically from the New Don Pedro reservoir. Rather San Francisco's maximum storage space of 740,000 acre-feet in the New Don Pedro reservoir[6] will be operated to store water credited to San Francisco, thus permitting San Francisco to make additional diversions upstream to the extent that a credit exists in the reservoir, such exchange arrangement enabling San Francisco to divert water which the Raker Act obligates it to release for the Districts' use.

The problem now faced by the Districts and San Francisco is that since they cannot add water to full cups they need a new and larger cup—the New Don Pedro reservoir which will have seven times the 290,000 acre-foot capacity of the existing Don Pedro reservoir—to catch and hold water in times of abundance and release it in times of storage.[7] This new venture requires the issuance of a license to the Districts and San Francisco's continued adherence to the terms and conditions of the Raker Act until modified by Congress. The requirements and Congressional policy embodied in that Act are therefore to be considered as being superimposed upon any license issued by the Commission for New Don Pedro.

Based on project completion by November 15, 1965, and using April 1962 prices, the estimated cost of New Don Pedro is $92,415,850. The construction period will cover about three years. The site selected for the project is located about a mile and a half below the existing Don Pedro dam and about three and a half miles above the Districts' La Grange diversion dam. This site was chosen for two reasons: (1) It permits the optimum reservoir. (2) The geologic conditions were found to be superior. The plans for the structure conform to accepted engineering and standard practice. Some additional testing and design analysis will, however, be necessary to establish the final design for the structure.

New Don Pedro will consist of a dam 580 feet high; spillways; a reservoir with a gross capacity of 2,030 acre-feet[8] with the water surface at elevation 830, such reservoir to extend about 22 miles upstream and to flood approximately 12,960 acres at full pool; a power tunnel about 2800 feet in length; a powerhouse containing three 69,000-horsepower turbines connected to three 45,766 KVA generators; a switchyard; and transmission lines extending to receiving stations near Turlock and Modesto, California. It will have an installed capacity of 130,440 kilowatts and a plant capacity of 150,000 kilowatts (15 percent overload). The hydraulic capacity of the powerplant will be about 4,500 cfs which corresponds to that of the Districts' canals extending from the ends of the La Grange dam. The maximum gross head will be 530 feet (elevation 830 to elevation 300); minimum gross head will be 300 feet at maximum drawdown.

---

[6] There will be available to San Francisco in the New Don Pedro reservoir 570,000 acre feet of exchange storage space, plus one-half of the 340,000 acre foot flood control space whenever such space is available under flood control criteria.

[7] Construction of the 580-foot New Don Pedro project immediately below the existing Don Pedro dam will result in the top of the 284-foot existing Don Pedro dam being more than 200 feet below the surface of the enlarged reservoir.

[8] An acre foot is the amount of water required to cover one acre to a depth of one foot. One cubic foot per second (cfs) flowing continuously for one day equals slightly less than 2 acre feet.

New Don Pedro will make available to the Districts a substantially greater, more predictable and longer lasting water supply for irrigation and domestic uses and for power generation. In addition to recreational benefits, the project, as proposed would accomplish four purposes: (1) Power generation—with a plant capability of 150,000 kilowatts. (2) 811,000 acre-feet of irrigation storage. (3) 340,000 acre-feet of flood control storage. (4) A maximum of 740,000 acre feet of exchange storage (see *supra*, p. 538, note 6).[9]

Because of the uncertainty of future construction costs the precise contribution which it is contemplated San Francisco will make to the project's cost is presently unascertainable. However, on the basis of current cost estimates, San Francisco's contribution is calculated to be $43,181,790—less the applicable portion of the Federal payment for flood control space.[10] San Francisco proposes to make this contribution in consideration for the exchange storage and other benefits which include additional revenue from the sale of power.

The facts relating to the flood control purposes to be served by the project are hereinafter set forth (see *infra*, pp. 548, 550). The costs of providing this flood control have already been paid by the Federal Government in substantial measure through the payment to the Districts of $4,600,000 and to San Francisco of $4,400,000, all of which monies were applied to the construction by San Francisco of the Cherry Valley dam and reservoir completed in 1956 without, insofar as the Examiner is able to ascertain, a license from the Commission or expanded Congressional authorization under the Raker Act (see *infra*, pp. 548, 550). The total to be paid for flood control on the basis of present estimated costs is about $14,200,000, leaving a balance of approximately $5,200,000—deducting the $9,000,000 already advanced. These monies, according to an agreement entered into between the Districts and San Francisco, may be utilized by San Francisco in meeting its portion of the cost of New Don Pedro. In this regard it should be borne in mind that the total payment to be made for flood control was made for the purpose of 340,000 acre-feet of flood control space ultimately to be provided in the New Don Pedro reservoir. No agreement between the Districts and San Francisco can alter this fact which becomes of some significance in the subsequent determination of the actual legitimate cost of this project to the Districts.

---

[9] Although ownership and control of New Don Pedro will be vested in the Districts, it is to be constructed and operated under a cooperative arrangement with San Francisco and the Federal Government.

[10] San Francisco's portion of the cost is to be based on the ratio of the cost to San Francisco to build a dam having a reservoir capacity of 1,200,000 acre-feet as related to the 2,030,000 capacity of New Don Pedro, which 1,200,000 acre-foot capacity comprises the present storage of the existing Don Pedro (290,000 acre-feet), the desired flood control storage of 340,000 acre-feet and San Francisco's exchange storage of 570,000 acre-feet (see *supra*, p. 538, note 6). According to the evidence, San Francisco's commitment to pay for the assumed 1,200,000 acre-foot reservoir is firm. The Districts proposed to pay for the increment of storage in excess of 1,200,000 acre feet and for the project's power facilities, their contribution being presently estimated to be $49,234,060.

The project cost estimate of $92,415,580 was made by the Bechtel Corporation and appears to be reasonable. It includes $10,100,000 on specific construction costs of $60,471,350 for omissions, contingencies, engineering and management of construction; $7,494,500 for land and rights together with a contingency figure of $5,000,000 to cover the possibility of increased highway costs; and monies for general expense as well as $4,350,000 to cover interest during construction.

There is more to this case than meets the eye at first glance. On the surface it seems to be only a soundly conceived cooperative plan, substantially aided by a Federal contribution for flood control, to maximize the quantity of water the Districts and San Francisco will be able to appropriate and put to beneficial use. But other issues relating to San Francisco's rights, obligations, etc., under the Raker Act lurk in the record. What San Francisco was authorized to do in the way of construction, the volume of water Congress intended it to divert, the disposition it makes of its power, and its obligations to the Districts and others are matters governed by the provisions of the Raker Act to the extent it is applicable—not the terms of private contracts between the Districts and San Francisco. Moreover, insofar as the issuance of a license for New Don Pedro is concerned, such private contracts must yield to regulatory authority and can be given only such force and effect as sanctioned by the Commission.

It is necessary to condition the license to be issued herein so as to provide that construction of New Don Pedro may commence only after a firm agreement, acceptable to and approved by the Commission, has been entered into by the Districts and San Francisco and obligating San Francisco to pay its proper portion of the cost.[11]

As stated, to the extent that the cost of New Don Pedro is not borne by the Federal Government, it is to be shared by the Districts and San Francisco. Issuance of general obligation bonds in the amounts of $34,000,000 (for Turlock) and $18,400,000 (for Modesto) have already been approved by the voters of the Districts for use in financing their respective portions of the project cost. The voters of San Francisco have also approved the issuance of $115,000,000 in general obligation bonds for utilization in connection with the Hetch Hetchy water supply system, with approximately $45,000,000 thereof being earmarked for use in connection with New Don Pedro. The project financing is therefore already assured even though the details of the agreement to be executed by the Districts and San Francisco have not been finalized.

---

[11] The following colloquy occurred at the outset of the hearing between counsel for the Districts and the Presiding Examiner:

> MR. MCCARTY. * * * I think the governing organizations of all three entities involved feel that it is necessary to have a license and know what is in that license before consummating the final agreement as to the cost.
>
> PRESIDING EXAMINER. Well, wouldn't you think the Commission would have to know the same thing, otherwise maybe they wouldn't know what they were licensing.
>
> MR. MCCARTY. I think that is correct * * * but I think what has happened on the river in the past indicates the good faith of the parties involved.
>
> PRESIDING EXAMINER. I don't think the Commission would question the good faith. I think they would like to be advised as to the final understanding.
>
> MR. MCCARTY. It may be possible that it would be necessary to condition a license * * *. We would have no objection to that.
>
> PRESIDING EXAMINER. The Commission could do that.

The issuance of a license upon conditions requiring a licensee to firm up its arrangements prior to commencement of construction and in a manner acceptable to the Commission in both practical and legal. To use the words of the court in *Panhandle Eastern Pipe Line Co.* v. *F. P. C.*, 169 F. 2d 881, 883 (CADC, 1948), Congress has not confronted the Commission "with a dilemma like that created by the famous municipal ordinance requiring that when two trains approach a grade crossing at the same time, both shall stop and neither shall proceed until the other has proceeded. * * *"

The Districts would be unable to finance the construction of New Don Pedro without (1) the contributions to be made by San Francisco and the Federal Government, and (2) power revenues. The power will be produced, however, only from water released for irrigation or flood control uses or when not inconsistent with the primary water conservation purposes.

History of Proceeding

The joint application for license to construct the New Don Pedro project was filed by the Districts on May 9, 1961 and was thereafter amended and supplemented. Public notice was given (26 F.R. 5340).

On January 30, 1962, the Commission issued an order fixing hearing and prescribing the specific procedure to be followed with reference to the service of all testimony, exhibits and motions by specified dates in advance of the hearing "to eliminate any cause which might otherwise exist for a protracted hearing."

The hearing on the application, initially set for May 21, 1962, was continued from time to time, being finally set for October 16, 1962. It commenced in San Francisco on the latter date and continued for nine hearing days ending October 26, 1962. The record made consists of 2108 pages of testimony of 24 witnesses and 223 exhibits, including two exhibits rejected by the Examiner and one withdrawn.

In addition to the intervention of the State of California (acting by and through its Department of Fish and Game), which had petitioned to intervene within the period set by the Commission in its public notice, the Commission by separate orders issued October 15, 1962, granted limited intervention out of time to the Secretary of the Interior; Tuolumne County, California; and Banta Carbona Irrigation District (Banta Carbona), their participation being restricted to "an opening statement of position, participation in the cross-examination of witnesses, and the filing of briefs and exceptions to the Presiding Examiner's decision." The Commission ruled that to have granted the Secretary of the Interior, Tuolumne County and Banta Carbona "full participation on the eve of the hearing and after filing of elaborate prepared direct testimony by applicants and the California Department of Fish and Game would frustrate the procedures prescribed in our order of January 30, 1962" which was designed to, and did, avoid a protracted hearing.[12]

Briefs have been filed by counsel for the Districts, Commission Staff, California Department of Fish and Game, Secretary of the Interior, Tuolumne County and Banta Carbona. The final brief of the Districts was filed on March 4, 1963.

History of the Irrigation and Power Activities of the Districts

Until completion of the existing Don Pedro project in 1923,[13] the Districts owned and operated only the La Grange diversion dam, the offstream Turlock and Modesto reservoir hereinafter referred to, and the related irrigation systems.

Because the La Grange dam has no significant storage capacity it must be kept full, or nearly so, when the main canals of the Districts are diverting irrigation water from the Tuolumne River. Accordingly, to cope with growth and to be effective in a substantial beneficial way the La Grange reservoir must be implemented through increased storage. Within limits, the larger the other storage facilities and the greater their number the more effective is the function of La Grange dam.

---

[12] Counsel for Banta Carbona state in their brief that while "Banta Carbona's permission to intervene out of time does not permit it to introduce evidence. We have no complaint. We are grateful for the hearing accorded us under the circumstances."

[13] The existing Don Pedro project is covered under a minor part license, No. 1086, issued by the Commission in 1930. Staff counsel states that in 1930 "lands of the United States were inundated as a result of construction of spillways."

Following completion of the La Grange dam (constructed in 1894 at the site of the then Wheaton dam which had been purchased by the Districts in 1890 along with water rights and properties held by the prior owner),[14] and as ditch and lateral construction advanced bringing irrigation water to more acreage within the area served by the Districts, the inadequacy of a simple diversion dam became apparent, for after the feast came the famine—the dry months. Nature's schedule was decidedly wrong for the Districts' needs. Crops would be out of irrigation water by August, making it essential that a means of storing at least a portion of the heavy river runoff—usually occurring in the spring of the year—be provided by the Districts to supplement natural flows during low-flow (sometimes no-flow) periods. Accordingly, offstream reservoirs were constructed downstream from the La Grange dam by Modesto in 1911 and by Turlock in 1914, such reservoirs having capacities of about 28,000 and 50,000 acre feet, respectively, enabling the collection and holding of waters in reserve during the early part of the season for use in the dry periods. But much more was required to utilize the excess runoff to the maximum extent.

In passing it should be pointed out that it was during the period of construction of the Modesto and Turlock reservoirs to provide storage for waters diverted at La Grange that Congress considered and passed the Raker Act permitting San Francisco to develop the Hetch Hetchy water and power system on the Tuolumne River headwaters. That system increased the storage on which the Districts could rely (see *supra*, note 5, p. 537).

In 1924, following completion of the existing Don Pedro project, which now has an installed capacity of 37,500 kilowatts, the Districts expanded their business to include the generation, distribution and sale of power.[15] Construction of the existing Don Pedro project five miles above the La Grange dam not only provided additional storage capacity for growth and a more predictable irrigation supply through the better leveling of seasonal extremes but also enabled the Districts to use the water for power generation[16] before its re-use for irrigation purposes, thus achieving the most economic operation.

---

[14] Upon organization in 1887 the Districts had a combined total of about 257,000 acres, with about two-thirds thereof being in the Turlock District and one-third in the Modesto District. The water diverted at La Grange dam was, by agreement, divided two-thirds Turlock and one-third Modesto, inasmuch as this was the ratio of lands between them. This ratio also controls the financing of the project, making it necessary for Turlock to contribute about two-thirds of the cost to be borne by the Districts. It further accounts for the project's power output being divided two-thirds for Turlock and one-third for Modesto, notwithstanding the fact that Modesto's electric load is more than 50 percent greater than that of Turlock.

At the present time the combined acreage of the Districts exceeds 279,000 acres, largely as a consequence of including within their respective boundaries the lands of each covered by the Don Pedro, Turlock and Modesto reservoirs.

[15] The power systems of the two Districts, although operated independently, are connected at the Ceres Substation just south of Modesto and there is a free interchange at this point whenever necessary. In addition, the Districts have connections to San Francisco transmission lines from the Hetch Hetchy system power plants and presently purchase all of their power requirements, beyond those generated at the Don Pedro and La Grange facilities (see note 16, page 543, *infra*.). There are two connections with the P. G. & E. power system resulting from the fact that prior to 1924, when the Districts commenced distributing power themselves, the area was served by P. G. & E. and its predecessors. Such connections are maintained for emergency purposes only. The San Francisco system is also connected to the P. G. & E. network at two points. The significance of these connections is that if a failure should occur on the Hetch Hetchy lines it will be possible for the Districts to get emergency power from the P. G. & E. system.

The Districts purchase power solely from San Francisco.

The Districts began distributing electric power in 1924 with about 8,000 customers. They expanded with general growth and now serve in excess of 51,000 customers. They anticipate that the number of their power customers will double by 1985.

The combined loads of the Districts have increased from almost zero in 1924 to an existing combined peak requirement of about 141,000 kilowatts in 1962. Their combined peak load requirement is expected to increase at a rate of about 8 percent annually, reaching almost 180,000 kilowatts in 1965. The situation is similar in connection with the combined electrical energy requirements of the Districts.

The population within the power service area of the Districts has grown from an estimated 29,500 in 1930 to 135,590 in 1960. The population is estimated to increase to 189,000 by 1970, 260,000 by 1980 and 385,000 in 1990.

Because of the great variation in annual stream flow, construction of the existing Don Pedro project did not provide the necessary carryover storage, through the lean water years, adequate for demands ranging from 1,000,000 to 1,200,000 acre feet of irrigation water each year. And although the storage then on the river assisted in reducing the variations in flow occurring under natural conditions, it did not accomplish complete regulation of the monthly variations and has had a negligible effect on the annual variation. Thus the idea of a larger reservoir grew to firm up the irrigation and power supply. As stated above, the well-conceived New Don Pedro project will significantly amplify and improve the purposes now served by the existing Don Pedro project. The enlarged reservoir capacity is designed to permit the Districts, among other things, to carry over waters from wet years to dry years to provide the maximum possible dependable annual irrigation supply.[17]

The Districts have been the sole distributors of power within their power service area since 1940, that being the year in which the Supreme Court, in *United States* v. *City and County of San Francisco*, 310 U.S. 16, held San Francisco's sale of power to P. G. & E. to be unlawful under Section 6 of the Raker Act.[18] In that case the Court affirmed the judgment of the District Court which had—

---

[16] Water in excess of irrigation needs which passes La Grange dam is utilized, to the extent possible, in a small power plant located on the left bank of the river downstream from the dam. This plant, of 4,300 kilowatt capacity, was constructed by the Turlock District in 1924 and is owned and operated solely by that District. Water taken through the plant is not diverted directly from the dam but is taken from the Turlock main canal, downstream from the dam. There is no connection between power production at Don Pedro and La Grange.

[17] The generally favorable weather conditions in the area irrigated by the Districts allow a growing season of approximately 270 days out of the year, permitting double cropping in some instances. The area is, however, deficient in rainfall, the average annual precipitation being on the order of only twelve inches, roughly ninety percent of which occurs in the months of November through April. Accordingly, to take advantage of the favorable climate and valley soils, irrigation is essential to successful agriculture, the irrigation season usually beginning in March and terminating in mid-October. It is pertinent to point out in this regard that if the hydrologic cycle which New Don Pedro planning must anticipate repeats itself, there will still be years in which the farms will not have the water they require.

Agricultural activity in Stanislaus County to which the Districts contribute the major share has ranked that county among the top ten in the nation in agricultural production, major crops being peaches and other tree crops, grapes, crops associated with the dairy industry, and livestock and poultry and products thereof, the acres of crops raised under irrigation totaling 267,000 acres in 1961.

[18] The grant to San Francisco of certain lands and rights in the public domain was made subject to the prohibition contained in Section 6, acquiesced in by San Francisco, that San Francisco shall not sell or let to any corporation or individual, except a municipality or a municipal water district or irrigation district, the right to "sell or sublet the water or the electric energy sold or given to it or him by" San Francisco. The Supreme Court therefore held that the sale of Hetch Hetchy power by San Francisco to P. G. & E., for resale by the latter, was an evasion and frustration of the purposes of Congress.

The Raker Act was drawn for the benefit of the people of California, it being intended for use by San Francisco as a means of supplying water and the distribution and sale of power. It contemplated that San Francisco would sell the power at cost to consumers in order to bring it into direct competition with power sold by private utilities. As the Supreme Court pointed out (310 U.S. at p. 26), "Congress clearly intended to require—as a condition of its grant—sale and distribution of Hetch Hetchy power exclusively by

> * * * concluded that the City was violating § 6 by the sale and distribution of Hetch-Hetchy power through the Pacific Gas & Electric Company, a private utility. Accordingly, the City was required by injunction alternatively to discontinue such disposal of the power or cease further use of the lands and rights granted it under the [Raker] Act for generation and transmission of electric energy. * * * [310 U.S. at p. 19.]

In so doing the Court stated (310 U.S. at p. 30):

> * * * Congress may constitutionally limit the disposition of the public domain to a manner consistent with its views of public policy. And the policy to govern disposal of rights to develop hydroelectric power in such public lands may, if Congress chooses, be one designed to avoid monopoly and to bring about a widespread distribution of benefits. The statutory requirement that Hetch-Hetchy power be publicly distributed does not represent an exercise of a general control over a public policy in a State but instead only an exercise of the complete power which Congress has over public property entrusted to it.

Faced with the above described alternatives, San Francisco ceased selling power to P. G. & E. and began selling the output of its plants to the Districts. It is contemplated that by 1972 the Districts will be able to absorb not only the full output of New Don Pedro but also the total output of San Francisco's system.

The Districts estimated that the annual costs of the New Don Pedro power output, including the loss of existing Don Pedro generation, over a fifty year period, would amount to $3,535,000; that the estimated cost at market value of the power to be produced based on alternative cost of steam generation would be $3,952,000; and that the resulting net annual value of the power production of the project for the fifty year period would be $417,000, which is $101,000 more than the net annual value computed by the staff.[19]

The Districts, which now look to even greater usefulness in the future, have expanded their usefulness over the years by taking advantage of water and power opportunities. In so doing they have followed the fruitful path of raising the horizons of individual and collective progress, playing a full part in the ever-increasing requirements of the area's growing population, expanding economic activity, and rising standard of living.

San Francisco's Development of Tuolumne River

As previously pointed out, San Francisco's Hetch-Hetchy system is located in the headwaters of the Tuolumne River. The total watershed area tributary

---

San Francisco and municipal agencies directly to consumers in the belief that consumers would thus be afforded power at cheap rates in competition with private power companies, particularly Pacific Gas & Electric Company. It is not the office of the courts to pass upon the justification for that belief or the efficacy of the measures chosen for putting it into effect."

[19] The Commission staff believes that the annual net benefit should be shown as $316,000 instead of $417,000, pointing out that the cost of money used by the staff in determining the value of power was 4.5 percent whereas the Districts used a cost of money of 4.25 percent. They point out that in order to be comparable, the total fixed charge should be computed using 4.5 percent per annum for both the cost of the alternative steam plant and the hydroelectric plant; that when the Districts' cost figures as so adjusted (to add .25 percent to the cost of the project) for a 50-year period, the cost of money is increased annually by $101,000, thereby reducing the Districts' estimate from $417,000 to $316,000.

Throughout their economic analysis the Districts used at-market annual power values furnished by the Commission staff. Those unit values were based on the cost alternative steam electric generation at an assumed 4.5 percent cost of money. The unit values so determined were $19.55 per kilowatt year and 4.06 mills per kilowatt hour.

to San Francisco's dams is about 713 square miles and includes the constituent watersheds of the Cherry Valley, Lake Eleanor and the Lower Cherry Diversion watershed, Hetch-Hetchy Valley and the Early Intake watershed.[20]

The dams constructed by San Francisco, the year in which each was completed, the names of the reservoirs they form, and the seasonal storage capacity of each, are:

Dam name	Reservoir name	Year completed	Seasonal storage capacity (acre-feet)
Cherry Valley	Lake Lloyd	1956	268,200
Eleanor	Lake Eleanor	1918	27,100
O'Shaughnessy	Hetch Hetchy	1923	[21] 360,360
Lower Cherry	None	1918	
Early Intake	None	1925	
Total			655,660

San Francisco presently generates power at two plants (Moccasin and Cherry). A third plant (Intake) has been on standby since completion of the Cherry plant in 1960 and an additional plant (Canyon) is under construction.[22] Data relating to these plants are as follows:

Plant	Water diverted from—	Design head in feet	Installed in kva	Capacity in kw
Cherry	Cherry Valley and Eleanor Dams	2,230	150,000	135,000
Canyon	O'Shaughnessy Dam	1,245	75,000	67,500
Intake	Lower Cherry Dam	320	3,800	3,600
Moccasin	Priest (on aqueduct)	1,250	80,000	70,000
Totals			308,800	276,100

San Francisco's Moccasin power plant, completed in 1925, has been in continuous operation except for occasional periods of shutdown due to maintenance or water shortage. Cherry is the newest of San Francisco's operating power plants.

San Francisco constructed the Early Intake diversion dam in 1925 about 12 miles downstream from the O'Shaughnessy Dam. It is at Early Intake that San Francisco's main diversion from the Tuolumne River takes place. At Early Intake the water is diverted into the 19-mile Mountain Tunnel. This tunnel, driven between 1917 and 1925, has a capacity in excess of 400 mgd[23] and carries the water to the Moccasin power plant. From Moccasin the water enters the

---

[20] The Tuolumne River watershed and the various dams, reservoirs, etc., to which frequent references are made herein, are shown on the map at the end of this opinion.

[21] The O'Shaughnessy Dam was completed in 1923 to a capacity of 206,000 acre feet. This storage capacity was increased to 340,360 acre feet during the 1935–38 period and was further increased to 360,360 acre feet in 1949.

[22] The Canyon power plant now under construction will take advantage of the power drop from O'Shaughnessy Dam to Early Intake. Water used in the Canyon plant will be returned to the stream at a point just above Early Intake and will be diverted at that point, as at present, for the 130-mile journey to the Crystal Springs Reservoir in the San Francisco Bay area.

[23] "mgd" refers to "million gallons per day." Equivalents for mgd quantities to which reference will be made are as follows:

1. 210 mgd equals 325 cfs equals 235,000 acre feet/365 day year
2. 295 mgd equals 456 cfs equals 330,000 acre feet/365 day year
3. 400 mgd equals 619 cfs equals 448,000 acre feet/365 day year

16-mile Foothill Tunnel,[24] driven in the 1926-1929 period, which also has a capacity of 400 mgd. This tunnel extends to Oakdale Portal near the San Joaquin Valley floor. The Canyon power tunnel, now under construction between the O'Shaughnessy Dam and Early Intake, will likewise have a capacity in excess of 400 mgd.

At Oakdale Portal water enters two pipelines to cross the San Joaquin Valley. These lines have a combined capacity of about 160 mgd. The first section of a third pipeline across the San Joaquin Valley is now under construction and will raise the combined capacity of the pipelines across the valley to about 295 mgd by 1968. Another line to increase the capacity to 400 mgd is projected for installation when required. At the Tesla Portal, the western terminus of these lines, the water is taken through the 28-mile Coast Range Tunnel into the Bay area. This tunnel, driven during the 1927-1934 period, can carry about 300 mgd. Current plans embrace either driving a parallel tunnel or the adjustment of the hydraulic gradient so that the existing tunnel will carry about 400 mgd.

According to the Districts' evidence there is no plan, and indeed no possibility, for San Francisco to obtain water from other sources, such as the South Bay Aqueduct, which involves the State of California's Feather River project, or the East Bay Municipal Utilities District. The anticipated supply through the South Bay Aqueduct is already substantially committed and the needs of the area intended to be served through this facility require more than double the facility's expected capacity.

San Francisco's Water Requirements and Rights

San Francisco's local water supply, developed in the 1885-1925 period, has a safe yield of about 36 mgd including carryover storage. It is claimed that in a very dry year no water can be derived from local sources. It was the insufficiency of this supply which caused San Francisco's development of the Tuolumne headwaters through the enactment of the Raker Act in 1913. In that year San Francisco had a population of about 500,000 as compared with the present population of its water service area of approximately 1,650,000. The estimated ultimate population of that area is 3,370,000.

Water consumption in San Francisco's service area was about 90 mgd in 1944. Ten years ago the average daily consumption from the system was approximately 110 mgd. The system demand in the fiscal year 1961-62 of almost 178 mgd is close to the existing sustained capacity of the system of 180 mgd. This situation will be alleviated when the pipelines now under construction across the San Joaquin Valley are completed in 1968.

Demands on the San Francisco water system are estimated to reach 210 mgd in 1968, 295 mgd by 1984, and 400 mgd by 2015.[25] San Francisco's existing storage in Hetch Hetchy, Lake Lloyd and Lake Eleanor, presently totaling 655,660 acre feet (see *supra*, p. 545), will support diversions at the rate of about 210 mgd (approximately 86 mgd of which is provided through the completion of the Cherry Valley Dam and reservoir in 1956). Diversions to San Francisco's water system beyond 210 mgd must be supported entirely by the exchange storage in the New Don Pedro reservoir. As previously explained, San Francisco, while storing water in its headwater reservoirs and diverting water into its aqueduct, would release water from its exchange storage at New Don Pedro to satisfy the Districts' water rights to Tuolumne River flows.

---

[24] Water in the Foothill Tunnel not presently needed for consumptive uses in the San Francisco system is returned to the Tuolumne River at a point above the present Don Pedro reservoir.

[25] San Francisco will need an additional 340,000 acre feet of storage for a diversion of 295 mgd, and 674,000 acre feet of additional storage for a diversion of 400 mgd. The New Don Pedro reservoir could provide this additional storage. San Francisco anticipates that if New Don Pedro is constructed it will be able to obtain a maximum diversion of 571 mgd from the Tuolumne River watershed (528,000 acre feet per year).

The Districts' claim that "San Francisco was authorized, pursuant to the Raker Act of 1913, to utilize public lands and rights of way in the development of a water supply on the Tuolumne River which would permit the ultimate exportation of 400,000,000 gallons daily (400 mgd) to the Bay area for domestic and urban uses." The Examiner finds this contention to be untenable. In fact counsel for the Districts effectively and completely remove the underpinning for their contention by admitting that San Francisco's "present storage without New Don Pedro will permit only a 210 mgd diversion." Congress never intended the Raker Act, which contains many limitations, to be a grant without limitation, nor did it anticipate that the diversion of water to San Francisco would ever exceed the capacity of the reservoir facilities it authorized to be constructed, that is, the capacity of those facilities after providing for the water rights of the lower appropriators. Such facilities, including the increased capacity of the Hetch Hetchy reservoir (see *supra*, p. 545, note 21) and the recent construction of the Cherry Valley reservoir, are admittedly capable of delivering only up to 210 mgd to San Francisco's water system.

The Districts claim that San Francisco has obtained State water rights which would permit it to divert 400 mgd. However, such water rights, to the extent that they exceed 210 mgd, are useless without New Don Pedro. It is not the extent of the State water rights San Francisco acquired but rather the capacity of the facilities Congress authorized that is controlling. Moreover, one will search in vain for any reference in the Raker Act to an ultimate diversion of 400 mgd by San Francisco. Under no circumstances can San Francisco's planning for an ultimate diversion in excess of 400 be construed as Congressional authorization therefor.

New Don Pedro had not been conceived at the time of the passage of the Raker Act which envisaged an entirely different approach to meeting the then demonstrated needs and rights of the Districts and San Francisco. What San Francisco is here seeking is a right it does not now possess, namely, the right to divert all the water it stores in the Tuolumne River headwaters—to the extent it is needed and possible to do so. It is clear that the purpose of New Don Pedro is, *inter alia*, to avoid depletion of San Francisco's reservoirs as Congress directed they should be depleted to provide water to the downstream appropriators. It is the ceiling imposed by the Raker Act that is wholly responsible for San Francisco's present problem which it seeks to overcome through the contribution of millions of dollars to the New Don Pedro construction cost. Stated another way, the Congressional concept embraced in the Raker Act, to which San Francisco acceded, placed the water rights of the Districts and others on San Francisco's back and this, together with the limited capacity of San Francisco's reservoirs, has led San Francisco to a dead-end. It now faces the necessity of bypassing this dead-end to meet future needs. This confronts San Francisco with the realization that it must embark upon a considerably different and better approach. But any reorientation to meet its ever-changing requirements must take into account the hard facts of the Raker Act and the Commission's regulatory power.

Wholly consistent with the ceiling Congress placed on San Francisco's diversion is the fact that Congress viewed the storage rights it granted would enable an ultimate development of only 115,000 horsepower, or about 85,790 kw (which is 12,190 in excess of the combined capacity of the Intake and Moccasin Power plants completed in 1918 and 1925, respectively). This contemplated ultimate power development of 85,790 kw is to be contrasted with the total of 276,100 kw capacity San Francisco will have upon completion of its Canyon power plant and the use of the greater water supply resulting from the recent completion of the Cherry Valley reservoir (Lake Lloyd) and the proposed exchange storage arrangement at New Don Pedro.

The purposes to be served by New Don Pedro and its proposed operation were not only conceived after the passage of the Raker Act, but there appears to have been nothing in the then existing conditions, size of population, and irrigation, industrial and other activity which would have justified its constructon or enabled its financing. Thus the facilities that the Districts and San Francisco then planned to and did rely upon were considerably less than those they now claim are required for their future use.
